His nerve, however, served a good purpose, since it brought forth from Winston Churchill a withering rejection. The Prime Minister went out of his way to tell Franco that Great Britain was not interested in maintaining his tyrannical regime in Spain, that London could support only governments which "draw their stability from popular support."

This is a heartening clarification of the traditional British stand against the enemies of democracy. It is doubly welcome because, during the course of the war, London has maintained a rather close relationship with Madrid. Of course, this has been largely a matter of expediency—a matter of maintaining opportunities for preclusive buying and other devices calculated to prevent Hitler from having his own way altogether in Spain. Yet, sometimes a troubling question arose as to whether or not some of the British Tories hoped that it might mean rather more than that. Churchill's rebuff ought to end that doubt.

Since the English Prime Minister sent copies of Franco's letter and of his reply to Joseph Stalin, one may also hope that the incident strengthened British-Russian relations and, therefore, contributed to the solidarity of the United Nations as a whole.

Of course, it is inconceivable that the British—who have moved immeasurably beyond the appeasement policy of Chamberlain's day—should have given a serious thought to an alliance against their puissant Russian ally. That he deemed it possible serves as a measure of Franco's brass. Friends of freedom can rejoice because Winston Churchill has smitten that base metal with a mighty hammer-blow of indignation.

[From the San Antonio (Tex.) Express of February 11, 1945]

CHURCHILL CUT THE GROUND FROM UNDER FRANCO

Prime Minister Churchill must have been a great disappointment and surprise to Spain's double-dealing Franco. When, last November, the corrupt Fascist stooge wrote to Mr. Churchill to propose (1) that Spain and Britain join in a western European bloc against Russia, and (2) that Franco act as mediator between Germany and the Allies, he presumed that Britain's and Spain's interests were intertwined. Moreover, he had ample ground for that presumption—a quarter century, no less, of British antagonism to the Soviet Union, climaxed by British complaisance while Franco assassinated the Spanish people's legal, established republic. He even had heard Mr. Churchill speak kindly words for Spain to Commons earlier that year.

One can only imagine Franco's chagrin and amazement, therefore, when Mr. Churchill curtly and coldly about-faced in November and informed him that Britain now must align itself with Russia and the United States to preserve world peace. What is more, Mr. Churchill—taking no chances—sent copies of his reply to President Roosevelt and Premier Stalin. It was a fierce British-lion roar at the Spanish jackal—and it would have been terribly impressive 9 years ago.

Thus Mr. Churchill contributed to Franco's political maturity. What the latter had not realized was the extent to which realism and de facto force always have shaped British foreign policy. In 1936, Franco had the force at his disposal, and Britain and France thought that force worked to their benefit, regardless of moral issues and even ultimate realistic ends. Now, Franco has no force—and beyond any possible question, the Soviet Union has plenty.

Moreover, it may be just possible that Mr. Churchill also has learned a lesson. It may be that he now perceives the fact that British stubbornness in backing reaction everywhere no longer is acceptable to a majority of the world's peoples. It may be that part of the veil was lifted from that fact in Italy, part in Greece, another part in Poland, more in Belgium—whose British-supported Premier Pierlot recently resigned, with his cabinet—and even some in China, where the British have gained popular antagonism as intense as that in India.

It could be, in short, that Mr. Churchill and his kind see the writing on the wall. Or it could be that the only writing he perceives is that being scribed by Soviet Union power. A British diplomat has asserted that Britain would make a pact with the devil if it would further the Empire's interests. Whether Britain still regards the Soviet Union as the devil, or whether it has discerned the end of exploitation, is a question which only time can answer.

Chicago Considers Its Parks for Public, Not for Tourists

EXTENSION OF REMARKS

OF

HON. WILLIAM A. ROWAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1945

Mr. ROWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Christian Science Monitor of March 10, 1945:

CHICAGO CONSIDERS ITS PARKS FOR PUBLIC, NOT FOR TOURISTS

(By Dorothea Kahn)

CHICAGO, March 10.—A modern attitude toward parks, which looks upon them as play centers for the neighborhood to be located where the people are, and not as municipal decoration to be shown off to visitors, is implied in a bond proposition which is to go before the voters here in the June election.

The Chicago Park District is attacking the problem of "the forgotten neighborhood." It has surveyed the city to find out what areas are too far from existing parks for their residents to make good use of them, and now proposes to give every such neighborhood convenient access to a recreation space with trees and gardens. It proposes acquisition of 43 new small parks.

This is in line with the ideas of other planning agencies here. The Chicago Plan Commission has pointed out a need for more small parks. And already a considerable number of them have been established. Aside from the well known big parks—Lincoln, Garfield, Humbolt, Jackson—there are numbers of smaller ones making up a total of 135.

There are also 41 municipal playgrounds, 12 playlots, 7 playfields, and 69 playgrounds attached to schools and operated by the board of education and the county forest preserves. You'd think that with all this Chicago would have enough place to play, but the Chicago Park District study revealed a great many areas too far from any park to be classified as having park service.

PARKS IN SLUM AREAS

The plan which the district now offers for civic consideration calls for new parks ranging in size from 8 to 23 acres. Some would be right in the slums.

Lack of recreational areas is one thing that has helped make these areas slums, say the park people. They hold that the districts might not have become blighted if they had been supplied with a good neighborhood center, a field house where adults could meet and play games, learn crafts, hold contests,

and where youngsters could find after-school recreation. The slum areas which the city hopes to rehabilitate after the war will have a first call on the new parks.

But the plan does not neglect those better neighborhoods which are also without park service. It proposes providing them with parks to help them maintain their present standards. Then there are new sections in outlying districts which also need play spaces if they are to get off to a good start.

Not all of the 135 older parks are up to standard, either, as the Chicago Park District measures standards, and it intends to include them in its new park plan. There are to be new field houses, swimming pools, and other improvements for old parks which lack them.

HOW PROGRAM FIGURES OUT

All this will cost some $60,000,000, the Park District estimates. And how will the district get the $60,000,000 when taxes are already burdensome? There won't need to be a cent of new taxes levied, R. J. Dunham, president of the Chicago Park District, promises.

Here's how he figures it. Park finances are now in good shape, he reports. Each year the district pays off $6,000,000 in bonds. If the voters approve the new bond issue, it would be possible to issue $6,000,000 in new bonds each year as that amount of old ones is paid off. The debt would thus remain stationary. In 10 years, the entire $60,000,000 program would be financed.

At that point the Park District could resume debt reduction. Since new bonds can be financed at a lower rate of interest than the old ones, there would also be a reduction in interest payments, and this would offset increased maintenance costs, according to Mr. Dunham. By 1974, expenditures for the new park plan would be paid off, he states.

Chicago's existing park system is excellent in many respects, but it is felt now that the lake front has been somewhat overemphasized. There has been a tendency to add new parks where land could be acquired easily by the process of filling in the lake. The time has come, therefore, the planners feel, to pay more attention to the city's interior.

This does not mean that there will be no more lake-front development. Lincoln Park, on the north side of Chicago, which has been growing steadily by the "made land" process, is to be further extended. About $8,400,000 in the new park plan has been earmarked for extension of this lakeside park to the north city limits.

'Mid the Ruins of Garapan

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1945

Mr. HOEVEN. Mr. Speaker, Pvt. (1st cl.) Jackson Hospers, of Orange City, Iowa, in my congressional district, recently composed a war poem entitled "'Mid the Ruins of Garapan." Until June 1944 Garapan was the capital of Saipan.

This poem is one of several writings by Jackson Hospers, who enlisted in the Army 2½ years ago. For the past 1½ years he has been on board an Army troop transport in ship's complement and has touched nearly all the Pacific island groups.

The sight of Garapan, the blasted capital of Saipan, has especially impressed him. In this poem he has expressed his deep and innermost feelings of the despair and the resurging hope experienced there.

Private (1st cl.) Hospers voices the thoughts of uncounted numbers of fighting and praying boys everywhere and adds emphasis, we believe, to those who have already spoken and who have made the supreme sacrifice. The poem is dedicated to the freedom-loving people of the United States of America, and it is with a great deal of pride that I present it as a part of these remarks to the Congress and to the Nation so that all who love liberty and freedom may read it and drink in the lesson it attempts to tell.

The poem follows:

'MID THE RUINS OF GARAPAN

(Until June 1944 Garapan was the capital of Saipan)

Here, in ashes, is an image of hell itself,
A story of ruin, told in expanses of rubble,
A city in shambles, eclipsed by the forces of destruction,
A bleak and despairing picture of desolation,
Where one perceives a sordid, dark'ning vision
Of battle and horror, blood, mud, and death,
A released intensity, expressed in final issue—
An orgasm of hate and terror, bitterness and fear.

One actually sees but little things—
Painted china cups in a garden of flowers,
Broken to bits;
A well at the end of a pleasant path,
Its windlass and wooden bucket smashed, its opening
A bomb crater;
An oriental painting, detailed and colorful,
Split and torn;
An arch to a Shinto temple grounds,
Strangely unharmed.

This was the white-faced city of Garapan,
An oriental citadel, a fortress of death,
A succor for an empire's life and breath,
A capital for the ugly designs of Japan.

Here on this tortured plain of blasted hopes
An ironic pride wells within the soul—
This beautiful, precise destruction,
This mission of war,
Was accomplished by men who believe in peace,
And ask no more, except that peace endure.

The civilization and blood of Japan,
Its factories and wheels,
Its planes and machines,
Hold but a single meaning to its autocratic rulers:
Control of the earth—
With freedom a word but dimly remembered;
Regimentation in its stead,
With all completely subservient
To a nation entirely given
To a studied refinement of savagery;
With every member of every race
Obsequiously bowing to the Emperor of the Rising Sun,
The vain, inhuman ruler of a servile world,
Where men become
But chattel.

And here is our answer—
Here is Garapan;
Let them see—those who presume
So to lower
The dignity
Of man.

The appalling spirit of waste and death which imbues this place,
Becomes a monstrous specter of challenge and accusation
Of the perverted intelligence of men, and nations, and the human race,
Which conceives in prodigies and miracles, yet fails in its own salvation.

This lurid, ghastly phantasm extends a possessive hand
Over us, the dead, over this razed city and wasted land,
And to us, this image of war, this specter of humanity's cancer,
Queries in scornful tones of the peoples of freedom for answer:

"How do you presume
To prevent such destruction,
In a world completely torn
By perpetual injustice and greed?
You babble of world cooperation—
But what nation has fought for anything
But for itself?
What is war
But an inexorable pattern of human nature?
What beginning has not ended in this?
What path is there to follow,
What course to chart,
What hope
Of avoiding such ruination
In every generation?"

Strongly incensed, strangely impelled,
We now answer this weird hallucination—

"The imbuing light of freedom points the way,
The practical measure, the motion and direction,
With the right of men to be men, not perfection,
As a criterion for the policies of the day."

And thought goes on:

We who believe in freedom
Must resolve from scenes like this,
To know what to fight for,
And when to fight.

We must know
That when the women and children of China
Are burned to death in the streets of Nanking,
It is of our immediate concern!

And we must know
That when any nation
Enforces prostitution, and concentration camps, and slavery
Upon another nation,
This, too, is of our immediate concern!

First in our hearts is to save our own—
The ones we love, the land we've known,
Our right to choose, our joy in play,
Our right to speak, a time to pray—
These we have held are the soul of life;
These we have held thru time and strife.

But this is not enough
To those who have known the meaning of freedom;
Theirs, too, is the cause of justice,
Without which freedom cannot grow
Or be maintained;
We, ourselves, must represent these things,
So that, from us, others may know their meaning
And be encouraged—
For in this lies our contribution
To the true progress
Of man.

Nor is a larger plan beyond our conception,
If first we perceive our inevitable obligation
To the fundamental right of all nations and men to live
With the means to create their own economic salvation.

In this America has the strength to give
A further support to a constitution of nations
Creating a supreme authority to render decisions,
And the immediate military force to perform them with emphasis.

The larger plan may fail again,
But never again let us hear the report:
"It failed for lack of American support—
The hand was not strong which fought for all men."

Let us prepare for the challenge, if we do not succeed,
Formulate and act on this plan, again and again,
Until, with vigilance, we attain a workable security,
And man has defeated the perversity of man.
And we turn to face the apparition,
To say again,
"The imbuing light of freedom points the way—"
But the specter fades,
The spell is gone.
Here is this field of rubble!

—*Jackson Hospers.*

Resolution Filed in Massachusetts Legislature

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the following resolution relative to the San Francisco Peace Conference, sent me by Mr. Thomas Dorgan, clerk, Superior Court, Suffolk County, Commonwealth of Massachusetts, filed in the Massachusetts Legislature March 12, 1945:

Resolution relative to the San Francisco Peace Conference April 25, 1945, to invite all legitimate neutral countries and the legitimate Polish Government to the conference

Resolved, That the House of Representatives and the General Court of Massachusetts affirms its conviction and belief that the Atlantic Charter and the "four freedoms" were not only to take care of the big nations but the small nations as well, and they are indispensable to the maintenance of any modern civilization, and views with alarm any violation of these sacred principles; and be it further

Resolved, That copies of these resolutions be forwarded by the secretary of the Commonwealth to the presiding officers of both branches of Congress and to the Members thereof representing this Commonwealth.

Caliber of Administration Keymen

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1945

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Frank R. Kent from the Washington Evening Star:

CALIBER OF ADMINISTRATION'S KEYMEN IS DECREASING STEADILY, OBSERVER ASSERTS

(By Frank R. Kent)

It has been contended that the real trouble with the Roosevelt administration is more the caliber of its keymen than the basic unsoundness of its policies. An argument can be made both ways on this, but certainly the percentage of competency at the start not only was below average but the trend has been down.

Attention to this again has been drawn by recent Roosevelt appointments. Take, first, the case of Mr. Jesse Jones, whose splendid service was stressed by the President in the same letter in which he explained he was naming Mr. Wallace as a reward for his political support.

Mr. Jones is by no means perfect, but no one has ever seriously questioned his competency. On the other hand, none save his partial friends pretends to believe Mr. Wallace a competent Administrator. He now seems in a position for which he is unfitted by taste, temperament, and experience.

Even after he had ousted Mr. Jones from the Commerce secretaryship, it might have been possible for Mr. Roosevelt to have kept him as head of the Federal loan agencies, with which Congress had refused to trust Mr. Wallace. If competency had been an objective, Mr. Roosevelt must have made that effort. Instead, he read Mr. Jones wholly out of the Government service and transferred Judge Vinson from Economic Stabilizer to Federal Loan Administrator.

RECOGNIZED FACT

Mr. Vinson had a good record as Economic Stabilizer. He had shown ability and firmness in resisting labor pressure. Probably he will make a good head of the F. L. A. But Mr. Vinson would be the first to admit that neither his training nor ability put him on a par with Mr. Jones in this field.

This is said not to disparage Mr. Vinson but simply as a recognized fact.

Following the shifting of Mr. Vinson to the F. L. A., Mr. Roosevelt shifted Mr. William H. Davis from Chairman of the War Labor Board to Economic Stabilizer. Here again the trend is down.

Just as Mr. Vinson is not up to Mr. Jones, there is no reason to believe Mr. Davis will be as good as Mr. Vinson. Nothing in his record on the W. L. B. justifies the hope. As one critic expressed it, he has an inclination toward "rubbery floors and wavery ceilings." He has incurred the enmity of the labor bosses without gaining the confidence of industry. He is a sincere and honest man but apparently not gifted with the power of quick decision and strong stands.

But for the firmness of Mr. Vinson, the labor sabotage of the Little Steel formula would have been far greater. It is disturbing to see Mr. Davis stepping into a new post which requires fast thinking and an ability to say "No"—and mean it.

Then the President had to fill Mr. Davis' place. This he did by naming as Chairman of the War Labor Board, Dr. George Taylor, who has been, like Mr. Davis, one of its public members.

WANTED TO GO HOME

Dr. Taylor did not aspire to the place. He wanted to go home—and it is hard to blame him. He has kindly feeling toward the labor bosses and has been in tune with Mr. Davis' policies. He is expected to function along the Davis lines.

With Mr. Davis, instead of Mr. Vinson, holding the veto power this would indicate more concessions and a further weakening of the anti-inflation lines. Adding to all this his effort to make Mr. Aubrey Williams, the former social worker and favorite of Mrs. Roosevelt, head of the Rural Electrification Administration, where he would control $600,000,000, support is given the idea that Mr. Roosevelt is less concerned with competency now than before.

And when it is considered how quickly competent men like Mr. Lewis W. Douglas, Mr. John W. Hanes, and the late George Peek eliminated themselves from his previous administration it can well be argued that competency never was a prime requisite with Mr. Roosevelt.

In these appointments it hardly can be claimed the President sought the most available competent men. On the contrary, once he had displaced Mr. Jones he obviously took the easiest way, which was to shift things around.

Thus he got the whole business off his mind and was able again to concentrate on the international problem in which he takes such delight. These are the only things that interest him now. Domestic affairs have become an increasing bore.

Whether the men selected for domestic posts are the most competent to be had seems to him now of trivial importance. His place in history will be measured by what he achieves in global war and global peace, not in the domestic field.

That is said to be his attitude, and perhaps it is a natural one. His lowered vitality (due to advancing years) and his increasing deafness enhance his tendency to push aside controversial home matters—particularly those concerning finance and economics, in which fields he was never happy.

What thrills him these days are international conferences. Upon these he thrives. They are a tonic, mentally and physically. By contrast, domestic affairs are dull and drab, a strain on his patience, depressing to his spirit.

All of which is easy to understand but unfortunate for the Nation as a whole. After the war our domestic problems will be great, grave, and acute. If they are not effectively dealt with, the consequences could be only less disastrous than military defeat.

After the war will come the most critical peacetime period in our history. That, then, we should be in the hands of incompetents is an appalling thought.

Delegation of Power by Congress

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1945

Mr. SCHWABE of Oklahoma. Mr. Speaker, the following letter is typical of hundreds of letters I have recently received from my constituents expressing in their own language their feelings and attitudes on the subjects discussed in this letter:

PRYOR, OKLA., *March 12, 1945.*

Mr. SCHWABE.

DEAR SIR: I am only an Oklahoma farmer and Jersey milker. Am not supposed to know very much. However I have one matter I wish you to ever keep before the House. Here it is. Please don't all you statesmen give over to the President. Keep the power where it belongs. Don't give the reins into the hands of any one man. Any one man who wants everything under his thumb is not fit to have it that way. Don't give in to peacetime drafting. We have never had it that way, and still don't want it so.

If farm production is vital don't take any more of our young farmers away. A city guy is no more good on a farm than a farm lad is in the President's chair.

This is the way one Oklahoma farmer looks at it. No, not only one but many. Thank you and good luck.

BALDWIN MILLER.

Chester Bowles' Mimeographed Letter to All Congressmen Was "Like the Voice of Jacob but the Hand of Esau"—Evidently Mr. Bowles Fails To Practice What He Preaches—He Should Change His Ways or Quit

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1945

Mr. MORRISON. Mr. Speaker, Mr. Chester Bowles in a letter to all Congressmen wrote with such tender affection that it amazed one to think that this was the same Mr. Bowles who treats the rank and file of Congressmen with contempt when they wish to see him or his departments on behalf of their constituents' business. The following letter is in answer to his:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., March 13, 1945.

Hon. CHESTER BOWLES,
Administrator, Office of Price Administration, Washington, D. C.

DEAR MR. BOWLES: This is to acknowledge receipt of your mimeographed letter to all Members of Congress of March 10 with regard to the recent action in refusing to admit three Members of Congress to a strawberry hearing. Being one of those Members, I feel that such action was arbitrary, unpardonable, unreasonable, and that you should take immediate steps to do something about the whole situation.

Frankly, I believe that if you would spend your time cooperating with Congressmen and trying to unravel and untangle stupid blunders made through maladministration of many of your departments, instead of trying to impress Congress and the rest of the country with your arrogant and dictatorial methods, I feel sure that the people of this Nation would be better off.

As an example, in my State the meat situation in New Orleans is in a horrible, deplorable mess, and with the hundreds of thousands of war workers, the situation is growing more tense each day. The whole mess is laid at your door and for 2 weeks the O. P. A. has done nothing about it. The same condition exists in Baton Rouge, La., capital of the State, where high octane refineries, synethetic rubber plants, chemical plants, and many other war plants are located. They have been without sufficient supply of meat for the past month and consumers, producers, and butchers all place the blame squarely on the O. P. A.

Getting back to your letter, I cannot help but feel that it is the voice of Jacob but the hand of Esau. You evidently do not practice what you preach as in the letter your words are so tender in your affection toward Congressmen that one would think after reading same you welcome them with open arms when they call on you for cooperation or help in connection with the problems of their constituents. As a typical example of how you fail to practice what you preach, how can you make anyone believe that you are sincere or consistent? You said in your letter how much you cooperated with Congressmen, yet your actions are completely opposite. As an example, I was at a meeting with two other Congressmen—one from Louisiana and one from Texas—concerning the stupid, unfair, and arbitrary ruling on the sweetpotato industry. That was more than 4 weeks ago and your department heads have yet to send a letter, give us a telephone call, or do anything except completely ignore us on a matter which is vital to our constituents and which should have had a decision within a week or, anyhow, 10 days at the most.

Unfortunately, all of your arbitrary and dictatorial policies are stupid sins which you and your arrogant heads do not have to pay for, but which react to the discredit and harm of the Democratic Party. Unfortunately, we Congressmen, who have to face the people every 2 years, have to answer for your stupid, unwarranted, and blundering sins of mismanagement and chaos.

I think it is high time you either changed your policy or let somebody step into the O. P. A. that will put up a sincere effort in trying to do a good job for the people of this Nation at such a trying time. Frankly, from your actions I cannot help but feel that you are taking advantage of a high position of trust and honor that this administration has given you and that you have not only imposed upon but taken advantage of the trust and latitude that has been bestowed upon you by a liberal and generous Congress.

Sincerely yours,

JAMES H. MORRISON,
Member of Congress.

Proposed Missouri Valley Authority

EXTENSION OF REMARKS

OF

HON. FRANK A. BARRETT

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1945

Mr. BARRETT of Wyoming. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial from the Miles City Star, Miles City, Mont., of March 11, 1945, on the proposed Missouri Valley Authority:

IS MORRIS L. COOKE ON FEDERAL PAY ROLL?

Morris L. Cooke has been boomed by the St. Louis Post-Dispatch as a great engineer in connection with that inherited paper's attempt to put over a program of something akin to totalitarianism. At the moment they are concentrating their efforts on the Missouri Valley, but the national socializers say:

"We need not even stick to rivers. * * * The Tennessee Basin is not the only section of the South that is amendable to regional treatment. Upper New England is a region. California is a region. Or we can make regions in terms of cattle, or cereals, or mines, but of course, above all, in terms of people and the way they earn their livings."

You'll find that dogma of totalitarianism in The Valley and Its People—A Portrait of T. V. A., written by one R. L. Duffus and collaborated in by Charles Krutch and his associates of the Graphics Department of the Tennessee Valley Authority. (This last quotation from the front cover of the book, itself.)

Behind this totalitarian movement you will find such great inherited fortunes as that of Mr. Pulitzer who owns the St. Louis Post-Dispatch and its twin, the Star-Times; that of Marshall Field III and his Chicago Sun, recently established by him with that inherited wealth; that of the Biddle family, represented by Fiddle-Piddle Biddle, now gracing the Attorney General's office of the United States; the Carnegie Foundation, operating on the willed wealth of Andrew Carnegie; and even our own Senator MURRAY of Montana, who inherited his fortune from an uncle who made it in Butte.

Behind it you will also find the Farmers Union (from which first came the cry about 60,000,000 jobs—a figure "sound economists" say cannot be reached without taking the wives out of the homes and putting them to work). The C. I. O. unions are also plugging for this spread of totalitarianism.

Now, then why do we find inherited fortunes linking up with organizations like the Farmers Union and the C. I. O.? It could be that inherited wealth in America sees what happened to inherited wealth in Europe and England during the last 25 years. The inherited wealth of Europe has disappeared. The landed aristocracy of England is as poor as an aristocracy of church mice. They will never be rich again, unless they go to work. The same is true of France, Italy, Belgium, and Holland. In Germany the thieving Nazis of the Goering-Goebbels type robbed and pillaged the inherited wealth of the Fritz Thyssen and Krupp gang; the Junkers of Prussia lived off the country much as the landed aristocracy of England lived. The few great families of Japan controlling the finances and trade of that nation are headed for the scrap heap.

All their money has been swept away. Can it be that the inherited wealth of America is trying to work out a totalitarian form of government in which it will reign supreme, with the Farmers Union people and the C. I. O. followers plowing the fields and turning the wheels of industry to maintain this wealthy aristocracy of America?

Doesn't it strike you strange that the Carnegie Foundation and the Rockefeller Foundation have to interest themselves in such things as studies of Montana to see whether we are enjoying the abundant life, when the country is full of orphanages trying to rise and support thousands and thousands of ill-fed, ill-kept children? Doesn't it seem strange that they would be throwing their money away on socialistic book writers and dreamy-eyed professors in Montana, who could earn a living for themselves if they really wanted to work? That is what is going on in Montana at the present moment, for the purpose of converting our people over to a totalitarian way of thinking. But our orphanages in this State are not getting any of that inherited wealth to put life and vitality into the bodies of the unfortunates who are there through no fault of their own.

All of which brings us around to this man, Cooke. We can't find out whether or not he is on the Government pay roll at the moment, but somebody is financing him in his efforts. Furthermore, we do know that he has been a Government pay-roll rooster in the past. At one time he was Rural Electrification Administrator (this is the job for which the "pinks" have been shoving Aubrey Williams off on us). Later, Brother Cooke was technical consultant to the Labor Division of the Office of Production Management. (The title ought to have been good for at least a salary of $25,000 a year.) More recently he has been chairman of the Water Resources Committee of the National Resources Board. He was one of the birds, along with Rex Tugwell, who advocated depopulating this country back in 1936 and giving it back to the Indians. So we may well assume that Mr. Cooke is still resting on a fat Government job somewhere in Washington, while he sends out letters by the thousands on a letterhead called Friends of the Missouri Valley. Said letterhead also bears the information: "Dedicated to the creation of a Missouri Valley Authority."

In his letter this missionary to the underprivileged of the West doesn't ask for any money with which to finance his organization. Now, that is strange, or is it? A fat Government job at the taxpayers' expense would do that. Or even the Carnegie Foundation or any of the other inherited wealth structures mentioned might provide the

funds. (We understand he and our Senator MURRAY are very intimate.) But at any rate Mr. Cooke just wants "the privilege of listing you among our sponsors with the understanding that it involves no commitment other than your personal approval of an authority for the Missouri Valley."

We think it is time Congress looked into the activities of Mr. Cooke. We ought to know if Mr. Cooke is sitting on the Government pay roll. We ought to know if entrenched government, represented by this bare-faced effort of Mr. Cooke, is engaged in a movement to socialize or nationalize this country. We ought to know if the Fritz Thyssens of America have teamed up with the dreamers and crackpots to put over the totalitarian form of government in America that has wrecked all the world, with the exception of England and the United States.

We should also remember that we do not find the great family fortune of Henry Ford engaged in any of this shenaniganing. Mr. Ford is too busy making weapons to win the war. Mr. Ford is too busy trying to give his workers the full benefit of their efforts without tying them to a family foundation. Henry Ford's grandson said the other day: "No wages are high that are earned."

If you are one of the middle class of America—and most of us are—which is being ground to bits between the inherited wealth of the Marshall Fields and the Jim Murrays on the one hand and the "I don't wanta works" on the other hand, we suggest you get busy and start writing Senators and Congressmen. First write your own Representatives, but then pick out some of those you read about from day to day in the newspapers and write to them. A good one to write to first, about this fellow Cooke, would be Senator KENNETH MCKELLAR, of Tennessee, who seems to know a lot about Aubrey Williams. He might know just as much about Cooke.

Concerning Independence for India

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 7, 1945

Mr. COFFEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpts from speeches at India Independence Day meeting, January 29, National Press Club auditorium, auspices National Committee for India's Freedom, by Dr. Syud Hossain, chairman, National Committee for India's Freedom; Hon. John M. Coffee, Member of Congress from the State of Washington; Dr. Krishnalal Shridharani, author, My India, My America; Dr. Anup Singh, editor, Voice of India; Louis Bromfield, author. Guest of honor was Vijaya Lakshmi Pandit, foremost Indian leader, first woman Cabinet Minister, sister of Nehru:

EXCERPT FROM REMARKS BY THE CHAIRMAN, DR. SYUD HOSSAIN

Dr. HOSSAIN. India has become America's problem and by the same token every decent, educated enlightened man and woman in America must acquire a factual and authentic knowledge of India—of her historical background, of her present policies, and of her spiritual need and aspirations.

I want to read to you one sentence from the first American envoy to India broadcast on the soil of India. Colonel Johnson said:

"There is no goal for us and for you except victory and in that victory, may I say on behalf of the President of the United States that we propose to bring to the problem of eventual peace no less than to the battlefield of the immediate war, an aroused conscience, our highest resolves and our loftiest ideals. To those high ends we are dedicating our lives, our fortunes, and our sacred honor."

These solemn words constitute the covenant between the peoples of India and the peoples of America, and we are met together tonight, among other things, to bring home to you the reality of that relationship.

I want also to make it clear to you that we the people of India have not now, and have never had, any kind of unkindness toward the people of England. I claim that we have treated the people of England with greater forbearance than any people with whom they have been associated in their recorded history, including the United States of America.

On the other hand, I don't want to leave any doubt that we in India look upon the British Tories and upon the British Imperial system and upon this unholy system of colonization which has been the ruination of the world and is today involving the United States of America in deadly tragedy as a wrong thing and foul thing, irrespective of who practices it.

India asks and seeks nothing from America except understanding and certainly, representing an eternal and righteous cause of human freedom, we are entitled to your moral support and sympathy.

I want to call upon the first speaker tonight, the Honorable JOHN M. COFFEE. He is a very honored and beloved man, not only among Americans, but among many of us, because he is a man who has stood for principle and is standing for love of India. He is here primarily because he is a good American, a forward-looking man, and a liberal in his instincts. Furthermore, we have a personal relationship to him. He did us the great honor a year ago to preside in this same hall over the celebration of the India Independence Day.

Congressman JOHN M. COFFEE. Ladies and gentlemen, some of you were here a year ago, I hope, and some of you were not. I hope this will be the prelude to your visiting many other meetings dedicated to encouraging and supporting freedom-for-India movements. This is not the first time in which I participated in mass meetings designed to bring aid and comfort and practical support to the struggling people of India.

I have fought for the peoples of Yugoslavia and I stayed with the fight until I was finally able to help persuade democratic peoples of the world, and particularly the United States, that there was another Messiah and another Saviour in the person of Marshal Tito, who was really carrying the fight against the enemy. I have been on the side of the democratic peoples of Spain ever since the Civil War commenced, crusading to the end that the United States should recognize that they have an enemy over here in the Fascist Spanish Government in the person of the Falangists and Franco, and that we should sever diplomatic relations with Spain and stop appeasing fascism in any form.

I was one of those who was opposed to shipping scrap iron and material of war to Japan. I introduced the first bill in Congress in 1937 to interdict the shipment of war materials and the granting of credits to Japan, and I am bold enough to assert that we would not be engaged in a war with Japan today if these things had been done. This is not an isolated fight in India. India is only a part of the pattern of oppressed peoples throughout the centuries, fighting to attain their freedom. I quote one thing which is the theme of our meeting, and that is the statement made by Lord Birkenhead to students of Oxford University during 1927. I think it well for us to hear some of the statements made by leading English conservatives. I am quoting Lord Birkenhead in his advice to the students:

"India is our prize possession. We in England who have to live on the Indians must live in it. It is the task for you younger generations of Englishmen to hold India to the last drop of your blood."

That is the theme about which we are going to hear some discussion tonight. India has been the so-called gem in the British Empire. It is the source from which comes, they think, much of their wealth. Actually, it is but a relative handful of Englishmen, who are sent down to India to exploit the unhappy people who reside there. There are 390,000,000 citizens of that subcontinent, who have been kept divided along lines of ostensible religious schisms for 150 years to prevent them from getting together so that the Englishman may be able to present a picture to the world of division in India. Those divisions are not real or genuine, but are fostered and encouraged and stimulated for no other purpose than to be able to present a picture to the world of a disunited India, so that the British may be able to say, "How are you going to give the Indian peoples independence when the Moslems and the Hindus themselves cannot get together?" We in America believe in freedom for all people. Vice President Wallace said this is a people's war, and this is the people's century—the twentieth century—and that is the keystone of this war. The underlying principle of the war may be summed up by the statement that we are fighting for a free world versus a slave world.

You will recall that the late Wendell Willkie wrote a rather notable book called One World. He spoke about the reservoir of good will in Asia, and he spoke about the need for an end of colonization in the world because that has been the main source of wars in the last 300 years.

The American people are in essence opposed to the exploitation of peoples, whether at the hands of the Germans, Russians, Italians, Japanese, British, or any other country, whether of the United Nations or of the Axis group, because we don't believe in the subjugation of peoples. We believe in according them true freedom, and over in Asia we are feeding the flames of discontent and revolt when we refuse to lend a helping hand and give our sympthy to the Indian peoples. How can they believe that we adhere to the Atlantic Charter when they see us apparently standing supinely by, and witness continued exploitation of the Indian people. Yes, the British Conservatives have a great deal to answer for in India. Our quarrel is with the Tory who would continue to exploit the citizens of India and not with the British people.

We are here to welcome some distinguished guests in the Nation's Capital. We are welcoming two of our colleagues in the Congress. We welcome one of the most distinguished women in the world, and, incidentally, India has produced many distinguished women, and distinguished and cultured men, but the Orient is marked by the two outstanding and distinguished women, Madam Chiang Kai-shek and Madam Vijaya Lakshmi Pandit—our own honored guest who is the final speaker on the program tonight. I hope you ladies and gentlemen will notice the culture and perfect diction which characterize this speaker and her speech. I regard her as one of the outstanding and most most cultured women prominent in the world affairs today, and she is only typical of a large number who are associated with her

in this great work, upon which she is engaged and it gives me a great honor and great privilege to be invited as one to participate in the effort of 390,000,000 people. Just think. Three hundred and ninety million people out of a world population of only 2,000,000,000—20 percent of the world population, who are still exploited in the year of our Lord 1945, and who ask only our help and sympathy and our backing that they may continue this crusade until success is theirs. Their ambition is to achieve independence for India. Thank you.

Dr. SHRIDHARANI. A full-dress conference of the United States is in the offing. Who will represent India? The Indian officials who have recently cluttered up the official Washington? Most of them are regarded as Quislings in India. They are the hand-picked puppets of the British. The only people—the only leaders who can really represent India are the leaders, and I believe that by your adding your voice to the others, that these real representatives of India will be invited to the confines of the mighty. I believe that in you cooperating with us, and we with you, we can insist on a better peace. I believe that democracy is the first victory to be won in India.

Dr. SINGH. I shall read one or two statements that Mr. Churchill made long before he became the Prime Minister; and need I say that he has not changed his point of view. Some time ago Churchill stated, and I quote: "The loss of India would mark and consummate the downfall of the British Empire. That great organism would pass at a stroke out of life into history. From such a catastrophe there could be no recovery." Referring to Mr. Gandhi, Mr. Churchill said: "I am against this surrender to Gandhi. I am against these conversations and agreements between Lord Irwin and Mr. Gandhi. Gandhi stands for the expulsion of the British from India. Gandhi stands for the substitution of Brahmin domination for British rule in India. You will never be able to come to terms with Gandhi."

I would like you to remember the observation that your great humorist, Mark Twain, once made. "The trouble with most of the people," he said, "is not that they don't know enough, but most of what they know ain't so." And most of what you hear about India ain't so.

Mr. LOUIS BROOMFIELD. The day of imperialism, of the large, scattered, far-flung empire is done. It is done for a practical and physical reason. That kind of empire can no longer be held together or protected because the peoples in those dominions, commonwealths, and colonies are going to go their own way in this new world.

India is geographically a self-contained nation, with unlimited manpower. The future of the world belongs to those nations. It cannot be otherwise.

I am glad to have lived my 48 years today. There is only one reason why I would wish I were 25 years younger, and that is because I would today be in India, side by side with Mrs. Pandit and the other leaders, carrying on the fight for what is going to be and is already one of the great adventures of humankind. It is the awakening, the struggling, the rise of a very great people and a very great civilization.

Dr. HOSSIAN. The man who read out the Declaration of Indian Independence was Mrs. Pandit's brother, who is president of the Indian National Congress, on January 26, 1930, he read out this declaration. I am not going to read the full text of it, but perhaps a sentence or two, which may bring home to you the implications and the intrinsic characteristic of that declaration.

"We believe that it is the inalienable right of the Indian people, as of any other people, to have freedom and to enjoy the fruits of their toil, and have the necessities of life so that they may have full opportunity of growth.

"We believe also that if any government deprives a people of these rights and oppresses them the people have a right to alter it or abolish it.

"The British Government in India has not only deprived the Indian people of their freedom but has based itself on the exploitation of the masses, and has ruined India economically, politically, culturally, and spiritually."

Mrs. PANDIT. We are meeting tonight partly in celebration of India's Declaration of Independence. Dr. Shridharani has just mentioned to you that the reason why a nation still struggling for freedom observe their independence was partly due to your influence over us. Well, that is a happy idea and I am glad of it, but another reason why we observe a day of independence before the independence has been achieved is because it is so essential to those who suffer for a cause to have some one day in the year marked out from the rest in which they can rededicate themselves to the cause again with fresh strength, and you know the road we have to travel, and you have to travel, is a very weary road. The revolution in our country is not one in which we use force. We don't have armies; we don't have guns and ammunition and airplanes and armament. Our revolution is along peaceful lines and therefore we have to do again and again and again acts which have to be done in cold blood, and which lead to sacrifices and tragedy.

And today, when we see this spectacle in India, that while the whole world is engaged in a war supposed to be a war for freedom, a war for security and happiness and peace, we have in India no security, no peace, and no happiness. India is a land which for many years now has gotten accustomed to living in a state of apathy. There is no happiness in our hearts; there is no energy that can make us take part in the work of the world; in the joy and inspiration that free peoples have. The only thing we can do is to carry on this struggle of will for our freedom, because freedom in itself is desirable, and we want it for ourselves, but also because we realize very keenly the fact that Indian independence is something much larger than the issue of independence being given to 400,000,000 people It is a question of the independence of all those suppressed people in all parts of the world, and therefore, when we fight for our independence, we link it up also with the question of independence everywhere. Understand, I am speaking of freedom, and when we talk of freedom for India we link with it the freedom of the world, because we understand the great force for good India can be if she is free. On the other hand, an India enslaved will mean bitterness and discontent for a very large portion of the globe, and, no matter how many Dumbarton Oaks you have sitting here in the United States, they will not be able to solve the peace that they seek, because you cannot expect to put large portions of the world territory into cold storage and forget about them.

Thus in India thousands of men and women have been thrown in prison without a trial. We have seen young boys and girls arrested merely for going out in a peaceful procession carrying banners, shouting slogans, demanding release of their leaders. We have seen groups consisting of girls and boys from 16 and 17 to 23 and 24 years shot at. I have picked up the bodies of boys who have fallen, and subsequently died.

We don't want freedom given to us by way of charity. We are paying the price, but I want you to know how heavy that price is, because so often you are given a picture of India as a land, a disunited land, with so many problems that one cannot understand them; so many languages that you can't count them; so many religions that the people are steeped in prejudice and can't see the light of reason. I am not going to contradict any of these things. There is not enough time to go on contradicting things so utterly stupid that they don't require an affirmation or contradiction; but I want to point out to you this fact, that in a country as vast as India, in a country with a population as large as that of India, how do you expect it possible to have this vast majority of people to live together amicably? It is not possible in any country claiming to have democratic ideals. It is not possible for a people to work toward democracy to so attune themselves to one pattern that there is no difference between them at all. That can only happen in a Nazi country, and God forbid we should have a swastika in order to achieve freedom.

We were one of the first countries to point out the tragedy toward which fascism was leading the world. We threw our weight against fascism at a time when the leaders of Allied nations upheld that policy. When an explanation was demanded many years ago in the House of Commons regarding Britain's policies toward Japanese aggression toward China, we recognized it as a menace which would lead the world into the situation in which you and I find ourselves today. So, when you hear of the differences in India, the troubles and fights and quarrels, please remember that none of these differences, none of these quarrels, none of these religions and languages are such that they need hinder the freedom of India even for 1 day, and I will tell you another thing, and perhaps something new for you. There is only one religion in India today, which is above all other religions, and every self-respecting man and woman and child in India adheres to that religion, and that is the religion of India's freedom.

And there is only one slogan in India today, and that is, we say to the British, "Quit India as quickly as you can and leave us to our fate. You have borne the white man's burden long enough. For God's sake, put it down."

And so, I have come to America not to paint any lurid picture of India's suffering, but to tell you how much the people of India are looking toward America, not for help, because that would really be valueless, but we do want and what we do expect from you is your understanding of our problems. I know that sympathy exists in the American mind. I had enough evidence of it even before I came here, and since I came here the warmth of the American people, their generosity, their eagerness to know about what is happening in other lands, has been such a heartening and reassuring experience that I have no doubt in my mind that the people of this country do stand for something more than the mere winning of a war, but I warn you, when you think of India, to know the real India, not that of an arrogant young man who spends 3 weeks in India's culture of 500 years, and writes his impressions. Not the India of Beverley Nichols.

India stands for the democratic idea. She tries to weld her people together to work in such a way that they not only make themselves fine and strong and free, but also so that they may help wherever freedom is attacked, and join up with the forces of progress; and this picture is one which strengthens us today, which helps us to bear any sort of tragedy or difficulty which may come in our path. The problem of India is actually a very simple problem. You have been told about the division existing in India. I will tell you of the similarities. In India the main political party, to which I have the honor to belong, has always worked for the people, and we have just heard part of the declaration of independence read out to us, which shows the ideals we have for the future of India, and if you will bring your mind back to the declara-

tion of independence, you will see that the terms are similar, the ideals are similar, and our object is similar to yours. But over and above this, we have another thing which is known as the declaration of rights. By this declaration the Indian National Congress has made it possible for anybody within the Congress, and we hope later on within India, irrespective of class, creed, or section, to rise to their full capacities. Men and women work in our organization side by side. There is no bar against section. We have women in India today, not that woman of which one reads lovely, intriguing American stories; the dainty, fragile, little woman with a beautiful form, and anklets and bracelets and other lovely things, but the new woman, because there is no use for a clinging vine—there isn't any place to cling to any more. The Indian woman today symbolizes India. She is a fine, free, strong comrade to the man of India, and this is one of the changes that has taken place in India. Another is the comradeship growing up between all peoples that think alike. The main thing is the freedom of India, and we don't bother whether I go to a temple and my friend goes to a mosque.

Some of you are aware that for two and a half years India had autonomous government in 7 out of 11 government provinces. These provinces were run by congress governments, and for two and a half years the Congress worked for the people through representatives selected by the people, and during that short period of two and a half years you will be surprised to know what we have achieved. You are told that the literacy of India is 7 or 8 percent; I think it is. Recently I mentioned this to somebody, and this lady said to me, "Oh, but isn't it a fact that if the British had not been there, you wouldn't even have had that much." So I said to her: "The British have been with us for 200 years. For two and a half years the people have tried to rule themselves, within a limited constitution, and within those two and a half years the literacy went up 100 percent." The same with other questions. India has no medical aid, barring big cities, and the villagers work in the good earth all day, and at night they lie down; sometimes there is a shelter, and maybe there is no shelter; and if he and his family are lucky, they live, and, if not, they die, and nothing very much is done. There are several reasons for this. There are high salaries that have to be paid to Government servants especially brought to India to rule. And why bother to save people anyway, for goodness sakes, with such a big population which goes on increasing. That is the divine way of ending matters as painlessly as possible.

I was traveling in Bengal, and that whole area is in charge of your boys. The actual railroad is run by American boys, and for 2 or 3 hours it was just a military station. There were American boys there and a few Britishers. They didn't know who I was, and I asked some of them to tell me how they were doing, how they liked being in England. One young Britisher, about 25 years or so, was talking diligently, and I said to him, "Are you socialistic?" "I damn well am, and I'm fed up," so I said, "Why, why are you fed up? Didn't you want to enlist?" He said, "I'm fed up with fighting these blankety-blankety wars for the benefit of Churchill's grandsons. We want to go home and live in peace."

And that is why India demands her freedom, so that people may go back to their homes and demand peace. Enough of exploitation, of colonization. These words are beginning to stink and no decent people want them, and yet, when the time comes to raise our voices against them we just don't. The human race is an apathetic race. We have power, we have votes, there are many things in our hands which we can use, many weapons, but we just don't want to arouse ourselves. We prefer the dangers we know to the dangers unknown, and if there are a few countries in which there is trouble brewing, we think, "Well, if there is no war in my time, that's good enough."

We want equality in the world. We want equality for the individual and only on those grounds can the world be built up. I am not interested in whether Mr. Churchill goes in a consultation with Mr. Roosevelt, or Stalin, or whoever the Big Four might be. I am not interested in them. If we understand the problem and raise our voices, we can make these big four or five bow to our decision, and this is the time, because the war is drawing to a close, and any day we may find ourselves facing issues which demand an answer.

Proposed F. E. P. C. Legislation

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1945

Mr. HOFFMAN. Mr. Speaker, a jurist in the New York Herald Tribune of March 4, 1945, gives his reaction to the effect of the enactment of the Ives bill, which recently became a law with the approval of Governor Dewey, as follows:

SEES FLAWS IN IVES BILL—JUSTICE O'BRIEN OF THE DOMESTIC RELATIONS COURT IN JAMAICA FINDS SERIOUS OBJECTIONS

To the New York Herald Tribune:

The "antidiscrimination" label pinned on the Ives-Quinn bill undoubtedly deceived many citizens.

The label of the bill secured the wide support of an unsuspecting American people traditionally opposed to any kind of discrimination; it diverted public attention away from its real objectives, and finally it checked, if not altogether destroyed, opposition.

The American people do not know the dangerous provisions of the bill, since its details have not been printed in any newspaper—a major strategic triumph.

Americans of all religions have fallen into the trap. At one blow, in one single bill, it controls education, religion, employers, employees, labor unions, and the entire business structure.

Politically its passage by the assembly is a major communistic triumph. To overawe the Democrats, to split the Republicans, was a master stroke of vast advantage to the Liberal party.

The bill deprives the employers of trial by jury, it eliminates the protection of the age-old rules of evidence. It gives the commissioners power to judge not only actual "discrimination" but also the "intent" to discriminate as well as the failure to "cooperate."

It authorizes full power over education, superseding our entire educational program not only in public schools but in parochial and all other schools.

It gives the commissioners full power over employers, the unions, and permits them to up-grade or down-grade the vast number of workers now fully protected by their unions. The wording of the bill so indicates. The bill reads that the commission is authorized "to take such * * * affirmative action, including hiring, reinstatement, or up-grading of employees with or without back pay."

One can well imagine the chaos and disorder that will ensue when the commissioners attempt the "up-grading" of employees. One may well envision the resulting disruption of the employer's business as the up-graders step up and the ungraders step down.

The bill creates a vast bureaucracy. There is no limit to the number of paid agents, attorneys, clerks, etc.

The bill not only permits the appointment without any limit all over the State of paid agents, but provides also for an unlimited number of "advisory" agents and conciliation councils.

Significant is the power of the commission permitting these unpaid agents to collect money for their "actual and necessary traveling expenses."

Not only this, but the commission is to supply these volunteer or nonpaid agents with a paid technical and clerical staff. This opens a veritable floodgate of expenditures. The bill also authorizes the printing of unlimited publications and other research data.

Is all of this American? Many of us do not believe it is. These are but some of the dangerous features of the bill. Haste is a mistake. The bill requires further careful consideration and study.

HERBERT A. O'BRIEN.

JAMAICA, N. Y., *March 2, 1945.*

A Labor Leader Pleads for New Enterprises

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1945

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Matthew Woll from the Reader's Digest of December 1944:

A LABOR LEADER PLEADS FOR NEW ENTERPRISES

(Condensed from Future)

By Matthew Woll

One of the most important things this country must do is to foster a healthy birth rate of new businesses, if we are to be ready for the great change-over from war work to peaceful production. There is always a high death rate; recorded business failures range between 12,000 and 15,000 a year in normal times, and many more thousands of enterprises quietly fold up without going through a formal legal process. Every death of a business throws people out of work, reduces by a few or by thousands the number of available jobs.

In the past we could count on a business birth rate which, like our human birth rate, would more than offset the deaths. After the war I do not think we can count on this, unless we wipe out some of the restrictions which add up to throttling birth control.

This is the way businesses are born: An ingenious and industrious mechanic devises a new and better way of doing an old task, or he invents a new product. With his own savings, and perhaps the savings of some friends, he sets up a little shop of his own. He employs a few men, eventually hundreds of men; and not infrequently his little enterprise becomes a great industry giving work to thousands.

We have always thought of this as a typical American story—this system of opportunity for individual enterprise—despite its admitted imperfections. It has worked, in the main; it has, over the years, provided an ever-improving standard of living for an ever-increasing number of workers.

But now our Federal tax system, which has grown up haphazardly, and besides has been distorted by war necessities, strongly discourages anyone from bringing a new business into the economic world.

For example, if the mechanic I mentioned wants to start his own shop now, the tax outlook is enough to deter him.

New business ventures do not commonly make money from the outset. The little shop probably will lose money for 3 or 4 years. Then, its early mistakes corrected, its reputation established, its clientele built up, the shop begins to earn profits. Thereupon the tax collector steps in. Taking no reasonable account of the losses incurred in the struggle to get established, he taxes the earnings heavily. "Heads, I win; tails, you lose," says the tax law.

Suppose the new shop does somehow keep out of the red from the start, manages to break even, or a little better, and at the end of the inevitable lean period of the early years begins to earn a reasonable return on the capital invested. The tax laws do not call such earnings reasonable at all; they call the increase over the meager returns of the early years excess profits and soak them—soak them hard.

In spite of this, our ambitious mechanic perseveres, puts earnings back into the business, buying new and better machines, hiring more and more people. Eventually, because he is old and wants to retire, or maybe because he wants to start another business, he sells out. Then he is taxed on capital gains. He originally put in perhaps $10,000; he sold out for $100,000; most of this represents income he denied himself over the years, sacrifices he made to build up his business. But the tax laws treat him just the same as if he had won $90,000 in a lucky fling on the stock exchange.

Suppose he doesn't sell out. His corporation pays an income tax on its earnings. The stockholders get their dividends—and pay more income taxes on the dividends. This may not mean much to the man who has bought 10 shares of some big corporation as a place for some of his savings, but it is particularly discouraging to the smaller business, owned by the men who operate it. They and their business both have to pay taxes on the same earnings.

The giants of industry are not all of America by any means. They count for less, in the long run, than the little firms employing 15 or 30 people, managed by ambitious, imaginative employers, dreaming of growth. These are enterprises started by men who saved and borrowed capital while they were at the bench. Such enterprisers are the backbone of a free United States. Furthermore, this is the way most new things get their start, and without new processes and new products we are lost in the post-war world, on both the home and international fronts.

Lockheed Aircraft Corporation began to build planes in 1933. It had only a few thousand dollars, lots of borrowed money, liabilities far in excess of its assets. It fought its way ahead with venturesome courage. Now, as we all know, it employs thousands of workers and is an important part of our national strength. Harvard University's School of Business recently analyzed the history of the company, year by year, and showed that under present tax laws it could never have grown—or even survived. Yet, as Harvard remarks, "unless risk-taking of the type illustrated by Lockheed is multiplied many times over in the post-war economy, the Nation's hopes for peacetime prosperity, and high employment by private enterprise, will be tragically shattered."

But risk-taking won't be multiplied unless there's an incentive. It's human and entirely American to start a new business in the hope of profit. It's not human nature to risk money and effort with small chance of profit. To recognize this in our tax legislation is simple logic.

There are many steps which may be taken for expanding production and employment after the war without relying at all on Government help. All that Congress need say to business is, "If you take a chance with your money and go into a new line or broaden your present activities, you are doing your country a service. You're employing more people and giving your fellow citizens a new or improved product. So, as a reward for taking this risk, we'll give you some consideration in your tax bill."

New enterprises might be given freedom from all taxes for, say 3 to 5 years. Or these businesses might be taxed more lightly than old, less daring concerns, for a certain time. However, such special consideration should not be allowed a company that denies its employees equal consideration—that is, the right to promote their economic welfare.

Special provision might be made for the averaging of losses by new firms over a 5-year rather than a 12-month calendar. There is no lack of possible methods. Once our tax policy recognizes that we must encourage the birth rate of new business, the details can be worked out.

We shall win the bitterest war this Nation ever has known through the magnificent efforts of our fighting men and of the men and women who are producing the implements of victory. We shall win largely because of the qualities our way of life has developed in us—resourcefulness, ingenuity, individual initiative. These are the qualities which regimentation thwarts.

When this war is won the millions of men now in uniform, the millions of war workers, will need peacetime jobs. These energetic, intelligent, ambitious workers—the best in the world—will not tolerate a protracted period of idleness and frustration. They will demand and they will get jobs somehow from someone. The question is, How and from whom?

If business should fail in this greatest test I fear the result would be that the people would demand that the Government provide work. I, for one, do not want to see individual opportunity and freedom smothered by such state capitalism.

Payments on our wartime obligations, in addition to other services which will be the duty of our Federal Government, will increase our annual Budget to somewhere around $200,000,000,000. We shall be able to meet that Budget with normal taxation if we have a high national income which can come only from a high level of production and a high degree of employment. The graduated income tax should be our main dependence with every person making a contribution though for some people it might be only nominal. At the same time should come relief from the hidden burden of indirect taxation.

There is no time to lose. Overnight the problem of employing millions may be upon us, and when it arrives enterprising men and capital must not be in hiding awaiting a "favorable tax climate." The duty of Congress to act in time before the end of the war and before the job problem arises is inescapable.

Is There a Divorce Evil?

EXTENSION OF REMARKS

OF

HON. HOMER A. RAMEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1945

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from the Honorable Paul W. Alexander, judge of the Court of Common Pleas, Division of Domestic Relations, and Juvenile Court of Lucas County, Ohio, together with an article, Is There a Divorce Evil, contained in the April 1945 issue of the Ohio Magazine.

Judge Alexander has served as national president of Juvenile Judges of the United States of America and is one of the most constructive forward looking men of our country:

COUNTY OF LUCAS,
COURT OF COMMON PLEAS,
Toledo, Ohio, March 13, 1945.

Hon. HOMER A. RAMEY,
Congressman, Ninth District of Ohio,
House Office Building,
Washington, D. C.

DEAR HOMER: I was greatly rejoiced to read in the local papers not long ago a wire story to the effect that you had again taken up the cudgels in favor of uniform divorce and marriage codes. I remember when Senator CAPPER tried to start the ball rolling back in 1923. It's a long, hard row to hoe, and maybe you and I will never live to see the day it comes to pass, but that doesn't mean it shouldn't come to pass. No more does it justify any of us in quitting trying.

I was personally flattered to realize that I had been thinking along somewhat the same lines as you. I believe you are the first person in captivity who has given such national publicity to the evils of the traveling marriage. I am enclosing a little magazine with reprint of speech I made last fall before the Ohio State bar. At items 7 and 8, page 23, you will see how my thinking has gone along with yours. Hope you don't mind.

I am looking forward eagerly to hearing you when you appear before the bar association next Saturday noon.

With best regards, I am,

Yours faithfully,

Judge PAUL W. ALEXANDER.

IS THERE A DIVORCE EVIL?

(By Judge Paul W. Alexander, of Toledo)

It has been said that, strictly speaking, there is no such thing as a divorce evil.

This, in face of a national divorce rate that has doubled in the decade from 1933 to 1943, a rate that rose still more sharply in 1944, a rate that threatens to zoom out of sight immediately following the war.

And this, right here in Ohio where the divorce rate appears to be about double that of the rest of the Nation, where the metropolitan rate increased 15 percent from 1943 to 1944 (first 8 months), where the rate for the whole State increased 29 percent from 1940 to 1943.

And this in a State which, according to Judge Carl A. Weinman, of Steubenville, whose scholarly studies of the problem have received national recognition, has one-eighteenth of the country's population and one-seventh of her divorces, a State where the number of divorces sought in 1944 (on basis of first 8 months) increased over 1943 as follows: Franklin County, 23 percent; Hamilton, 20 percent; Summit, 20 percent; Lucas, 15 percent; Mahoning, 13 percent; Montgomery, 11 percent; Cuyahoga, 10 percent; Stark, 5 percent.

Strictly speaking, there is no divorce evil. This is true even in Ohio where there are more than twice as many divorce suits filed in common pleas court as all other civil actions put together; where the divorce industry has become big business to the extent that in 1944 (first 8 months), 80 percent of the cases filed in common pleas court in Montgomery County were divorce cases; 75 percent in Franklin; 69 percent in Lucas; 69 percent in Stark; 68 percent in Summit;

67 percent in Hamilton; 64 percent in Cuyahoga, and 54 percent in Mahoning.

Can anyone in the light of such facts and figures suggest there's really no such thing as a divorce evil, and still be in his right mind? To what weird theory has he fallen a victim?

We fellows who sit daily in the divorce courts, especially in the urban counties of Ohio, and listen to the devastating stories of hundreds, thousands, yes, tens of thousands of marriages gone on the rocks—we have no time for fancy theorizing.

JUDGES FACE REALITIES

We are up against plain bald facts of life, sordid details, stark realities. And, in course of time, certain elementary fundamental truths manage to penetrate our innermost consciousness.

First, let's glance at a few of these elementary truths, then figure out for ourselves whether there's really a divorce evil, and if so, the nature of it and what can be done about it.

People think divorces destroy marriages, break families, disrupt homes—that's why they speak of the divorce evil. And you can't blame them, for that's what they've always been taught by lawyers, judges, clergymen, editors, and teachers.

One learned professor puts it this way in a current law review:[1] "Divorce—a legal concept—may dissolve a legal status, but the results are a broken family."

I dare say not one person in a thousand would take exception to that statement. It is the commonly accepted view. But—well, here goes:

Elementary truth No. 1: The broken family is not the result of the divorce; the divorce is the result of the broken family.

Elementary truth No. 2 (another legal concept): Divorce is granted only for cause; ground for divorce must exist before the action can even be started.

Elementary truth No. 3 (a realistic concept): The parties in actual fact divorce themselves. "Divorce" comes from the Latin divortere, to turn apart, come to the parting of the ways, separate; and spouses separate themselves—the court doesn't separate them.

In the last 4,000 cases coming before me the parties had already been separated an average of 2.7 years before appearing in court.

Elementary truth No. 4: The divorce decree is primarily a finding of fact ("the court finds, etc."), an official recognition of a reality, a preexisting state of affairs created by the parties or one of them.

After the finding, the decree severs the legal tie which theoretically still binds the parties, and this automatically restores them to their status quo ante bellum.

Elementary truth No. 5: The right to remarry is not granted or created by the divorce. It is conferred by the substantive law of the state over which the divorce court has no control whatsoever.

Elementary truth No. 6: What really disrupts families, destroys homes, orphans children is not the law or the court or the judge or the decree, but drunkenness, cruelty, neglect, desertion, infidelity of one or both spouses.

Elementary truth No. 7: It is the marriage that has failed before the case reaches the divorce court. The marriage did not weld a union strong enough to withstand the inevitable stresses and strains and prevent the party or parties from destroying their own happiness and home.

Elementary truth No. 8: The marriage fails because of the inherent character defects of one or both of the individuals who married.

The drunkenness, cruelty, neglect, desertion, infidelity which are the apparent causes of the wrecked marriage are symptoms of manifestations of an underlying selfishness of character.

Frankly, many judges do not accept this view, preferring to hold that "sex incompatibility is the greatest single cause of divorce" and go no deeper than that. But that selfishness or inconsiderateness is the foremost single factor making for marital unhappiness is borne out by the most comprehensive scientific study of the question I know of: Terman, Psychological Factors in Marital Happiness.

Elementary truth No. 9: Countless individuals are born with or develop (or both) personalities such that they fail to get along with their employers, fellow employees, subordinates, neighbors, tradesmen, relatives. Yet we place them in the most intimate human relationship conceivable, one often requiring the most delicate and difficult personal sacrifices and adjustments—matrimony—and act surprised and grieved when they fail there too. Marriages have been failing since the days of Hammurabi.

Elementary truth No. 10: The parties themselves kill off the marriage; the divorce trial is merely the autopsy; the divorce decree is merely the legal interment.

Elementary truth No. 11: The individuals and the marriage having failed, the divorce comes along and it too fails.

It fails to attack the cause; it doesn't even attempt to cure the real evil or rectify the situation.

I doesn't give the marriage or the family a shot in the arm. It merely amputates the offending member.

Elementary truth No. 12: For the courts to "grant fewer divorces" is not the answer.

First, no court may arbitrarily deny a divorce. If the parties are legally entitled to it—and they almost always are—the court must grant it.

Second, the divorce judges of Ohio and of America, I am persuaded, are scrutinizing every case and doing everything they conscientiously can to put on the brakes. They are more painfully conscious than anyone else of the cancer gnawing at the vital spot of the Nation—its family life.

They are in the difficult position of dispensing daily something which public opinion permits and provides for, yet disapproves on general principles.

Third, since 1875 the divorce judges of Ohio with astonishing uniformity have granted only about 70 percent of the divorces sought; the rest are voluntarily dismissed, dismissed for want of prosecution, or denied.

Fourth, by the time the case gets before the court both parties want the divorce pretty badly, with few exceptions. Merely to deny it does not resurrect the marriage or reunite the parties in wedlock or restore the family—it usually makes a bad matter worse.

Elementary 13: It is useless to look to the courts themselves to stem the stampede to the divorce mill; they can't close their doors or regulate their intake.

Much more sensible to look to the source of the evil—to the cause rather than the effect.

You wouldn't try to stop a typhoid epidemic by calling on the hospitals to close their doors or slow up their treatment of the patients. You would look to the source of the infection.

Elementary 14: Last and most important of all: The problem presented each time a marriage goes on the rocks is so much more social than legal, that to try to find a practical and humane solution by means of our present antediluvian legal machinery is pretty much like trying to perform a surgical operation with hammer and chisel.

JUDGES CONCUR

I have never met a judge with any considerable experience in divorce court who did not more or less heartily concur in this view.

Well, how about it? Is there really a divorce evil? Or does the evil lie not so much with divorce as with the marriage; not so much with marriage as with the individuals who marry?

Is the greater cause for concern that so many spouses are seeking divorce or that so many spouses have ground for divorce? Figure it out for yourself.

Personally I do not subscribe to the defeatist attitude that nothing can be done about it. Obviously the point of attack should be the cause not the symptom.

ATTACK THE CAUSE

And we have no business to quit trying because the forces of religion, education, and all that is good have not exactly succeeded in eradicating from human nature the evil that lies at the root of the problem.

But in these remarks I propose to address myself solely to what can be done about the instrument employed by society to perform the operation, to cut the matrimonial tie—the legal machinery. This machinery originally came into being for quite a different purpose. In fact, justiciable divorce were still unknown for centuries after it was developed. It is now supported by statutory framework.

But we still insist on running our divorces through the same old mill. The fact is that many more progressive and beneficial improvements have been made in the rules of football in the last four decades than have been made in the rules we still apply to divorce cases in the last four centuries.

Studies have been made and books have been written, but suffice it to say here that our legal instrument is one of ineffable ineptitude.

LEGISLATIVE REFORMS

Improvement in the instrument, the statutory framework, are constantly being proposed. Among the possible legislative reforms that would at least bear looking into are the following:

1. Ohio has 10 statutory grounds of divorce. Some are anomalous, some vague. Authorities both inside and outside the State have long maintained the grounds should be fewer and better defined.

2. The interlocutory decree—a provision forbidding divorced parties to remarry until certain time has elapsed—has much to recommend it, although it is by no means a panacea.

It is in vogue in both conservative and progressive jurisdictions, for example, England and California.

3. A simple amendment would clear up the confusion in the minds of bench, bar, and litigants since the decision of the Supreme Court in the Tucker case concerning commencement of an action against an Ohio resident temporarily out of the State, for example, in military serice.

4. In 1937 England broadened her divorce laws but at the same time adopted an interesting provision possibly intended to curb hasty and ill-considered marriages.

The act provides that with certain exceptions one may not obtain a divorce until after at least 3 years of marriage. The war descended too soon afterward to permit any valid appraisal of the efficacy of this brake.

5. In pre-war Germany the domestic relations courts had a sort of prosecuting attorney to represent the State in each divorce action, make investigations, cross-examine witnesses, etc.

A former judge of the Berlin court tells me the idea was good but the operation not so good, due mainly to maladministration and political influence.

Most American law books say the State is a party to every divorce case. But the State is one party that is never represented in court.

Social theorists glibly say, "Why, the judge represents the State. First, the judge couldn't; second, he shouldn't.

He couldn't because he lacks the facilities, resources, and time of an attorney to do a

[1] Law and Contemporary Problems, X, 697.

good job of representing the State or anybody else.

He shouldn't because he is bound by tradition and ethics to be neutral, disinterested, impartial not only as between the parties themselves but as between the parties, or either of them, and the State.

6. Last summer Russia repudiated her easy divorce system, whereby spouses could all but legally divorce themselves at will, and issued a decree establishing a system similar to those in most of our States, and surpassing some.

One provision requires the presence of both parties in court at the hearing; another requires the court to attempt a reconciliation before proceeding.

Also, officials are required to make the marriage ceremony more solemn.

7. Migratory divorce, that is, establishing a residence in Reno and getting a divorce there instead of in Ohio, has received much publicity.

This is but one of many defects in the American divorce system that can be cured only by a nationally uniform divorce code.

8. Migratory marriage, that is, going some place else instead of staying home to get married, has received comparatively little publicity. Yet an undue proportion of such marriages wind up in the divorce court.

It looks as if this were one of the defects of the American marriage system that can be cured only by a nationally uniform marriage code.

9. Last spring Judge Weinman in a symposium of the Ohio State Bar Association advocated a conciliation docket in cases where minor children are involved. This appears to have many of the features of the Children's Court of Conciliation of Los Angeles County.

It was my privilege to sit with the founder of that court, the famous Judge Ben B. Lindsey, not long before his death, and to study its operation intimately. The ideas of Judge Weinman and Judge Lindsey seem to me to merit consideration.

10. Ultimately the divorce court will be socialized, all over the Nation.

OHIO SHOULD LEAD

Why shouldn't Ohio take the initiative?

We took the children out of the adult criminal courts and put them into a socialized court, the juvenile court.

It didn't stop juvenile delinquency. It wasn't supposed to.

It was supposed to handle the children only after they had become delinquent. And in the main it has turned in an excellent performance.

Since the problems in a divorce case are so much more social than legal, why isn't it logical to take the embattled spouses out of the antiquated old divorce mill with its creaking legalistic machinery and put them into a socialized court, as we have done with the juveniles?

This won't stop marital unhappiness, but it could handle the delicate and difficult problems presented by the spouses and their children more intelligently, humanely, and practically, with better results to both the individuals and society.

In the course as we now must proceed we compel the parties to engage in a kind of warfare, which in about 95 percent of the cases is a sham battle waged against the little man who isn't there, the absent defendant. Isn't it about time we got civilized and renounced war as an instrument of domestic relations policy?

OHIO'S DIVORCE COMMISSION

About 8 years ago the Governor of Ohio appointed a commission to draft modern marriage and divorce codes. The late United States Circuit Judge H. W. Arant, former dean of the Ohio State University College of Law, was chairman.

Six years ago the very scholarly results of the commission's long and thorough study were submitted to the general assembly. But the marriage and divorce problem was not acute at that time and the new codes were not adopted.

Today the problem is decidedly acute. And with the end of the war it will become definitely worse. The divorce rate increased 45 percent after the last war.

So, now is the accepted time to do something about it.

I therefore join with judges, lawyers and many good people of Ohio in the hope a new governor's commission may be appointed to make a new study and submit a new marriage and divorce code that will prove acceptable to an enlightened new legislature, and contribute something to the mitigation of the existing evil, whether you choose to call it a divorce evil, a marriage evil, or the evil of the individuals—or all three.

The Bread Crisis

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1945

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Northwestern Miller:

THE BREAD CRISIS

Since the beginning of this war, during the rationing ups and downs of virtually every other food, the bread and flour industries have been in the remarkable position of being able to serve this country and every nation that eats from its helping hand all the products of wheat that have been required.

Hungry civilians of liberated nations have come to consider the generous and immediate gifts of white flour and bread as symbols of American strength and willingness to help. More quickly than any other single thing, bread seems to refuel the flagging spirits of the hungry. It is a weapon of minor cost and exceeding great strength.

At home in America no one has thought since the early rush for flour that we ever would have trouble supplying any need that arose. It has been the one food that always has been ready to fill the grocery basket when other foods became scarce.

But today there is a great and imminent danger that conditions beyond the control or appeal of the miller will strangle the liberal production of flour and rob this country of its greatest material asset just when it could do its most effective work in implementing the war and strengthening the opportunity for harmony.

We summarize these conditions not as a complaint of the miller but as an appeal to those in power who may have overlooked the necessity of keeping flour industries high on the list of priority production. There is nothing in the situation that confronts the production of flour that cannot be remedied if those in control of manpower and transportation consider it important enough to solve.

THE PROBLEM OF TRANSPORTATION

Steady and maddening movement of boxcars away from the wheat country to the busy industrial centers, is the cause of the immediate crisis in milling. At the moment, mills are running on what little wheat they have left and shipping their flour and feed in the boxcars they can wheedle locally from friendly agents. But no wheat of consequence is coming in as the flour goes out. Many mills are down to a few weeks' production. Their wheat stocks are getting out of balance to the extent that few are able to supply their trade with the exact type of flour contracted. Weeks are being shortened to extend the run and retain labor. Even if boxcars were rushed to the wheat country today, they would not arirve in time to keep many mills from sharply reducing their production.

Emergency action to send boxcars into the wheat country is needed to get wheat to the mills and flour to mills' customers. This transportation is needed also to make way for a new wheat crop less than 4 months away. It is needed at the moment, as well, to carry millions of bushels of wheat to seaports to satisfy the special and undoubtedly vital demand of the military forces.

Half measures tried in the last few weeks to bring empties into this critical area have failed because of high priority demand all along the route. Each war industry has its own high place to fill in the demands of the war, and War Production Board officials who have gone all out to satisfy every Army requisition have perhaps failed to balance this demand with a common-sense knowledge of the need for equitable division of transportation among the vital industries.

THE PROBLEM OF MANPOWER

If transportation were to be provided tomorrow to the many mills that already are on short wheat rations, most of them would be able to step their production up only fractionally before labor shortage would level them off again. In fact, the shortage of labor is becoming so acute in some mills that customers who are normally served out of the warehouse must wait until loading help can be obtained, while the "big bag," easy-to-load flour goes out first.

In this regard, flour millers have faced a lack of sympathetic interest in the United States Employment Service and War Manpower Commission, which have such important and dramatic jobs to do in filling the needs of new war industries that they forget the status of the flour mills. So few men are needed to produce this basic food that the milling industry could well be taken care of among the top priority manufacturers without causing a drain on any of the users of great numbers of workers. The W. M. C. could afford to march along in this food production crisis to the extent of emphasizing to its local employment offices the simple fact that producing needed flour is just as important as making bullets.

THE PROBLEM OF THE SUBSIDY

If these functional problems of producing flour are solved, millers still cannot offer flour freely until they get a clearance on the subsidy question. It is likely that a decision on the extension of the subsidy will be delayed, and for the same reasons that these other problems have not already been attacked and solved. Few realize the importance of the manufacture of flour until it no longer is obtainable.

It is obvious that the subsidy extension will be made or that the price of flour and bread will be permitted to rise to equal the market price of wheat. But until that time millers are as effectively tied in their ability to sell flour as they are by the shortage of wheat, cars, and men. This purely synthetic road block cannot be permitted to stay in the way of flour sales too long. It should be apparent to Congress and certainly to administrators who now have savvy of flour milling that the subsidy question cannot be decided late in June without causing a great upheaval in the production of flour.

THE PROBLEM OF RUNNING A BUSINESS

Should the administration give the "all clear" to flour milling by achieving an immediate and satisfactory solution to these prob-

lems, millers still would have their heads and hands full of a multitude of troubles, many that may become serious.

Difficulty in obtaining sacks for flour daily becomes greater. Bag companies are selling and rationing with good judgment, and at the moment stand with flour millers among the industries that have done an unusually good job in the face of heart-breaking handicaps. But the makers of bags must also have additional recognition from authorities to continue this record. They, too, should get a higher manpower priority with local U. S. E. S. offices in many cases where their importance does not appear as great or dramatic as that of the munitions plant down the street. It is obvious that flour cannot be shipped without bags. Lack of them would be as serious a bottleneck as the shortage of transportation.

A miller, to explain briefly his problems in matters not of general interest, can show where hedging his flour sales now is impossible. He can point to the great hazard that confronts him where he has sold flour 3 months ahead and has wheat only for 1. Yes; he has wheat bought, but it may not arrive in time to grind before June 30. He may have futures bought, but the insecurity of that mechanism already has been demonstrated. Actual wheat is needed to cover a flour sale. The uncertainty of getting the wheat, no matter in what form it is now purchased, presents a business and financial hazard that has never before faced the milling industry.

A PROBLEM FOR THE FLOUR BUYER

To the multitude of flour buyers who have rarely experienced a time when money would not buy for them the kind of flour they wanted, we express these dangers not to encourage wild and unreasoned flour buying at a time when millers are in no position to take care of it, but rather to ask their indulgence while the Government takes cognizance of this situation and together with the milling industry works out of an extremely difficult situation.

Those who understand the science of milling know that careful blends of wheat are necessary to make the kind of flour bakers and family flour merchants require. In the press of milling flour literally from the bottom of the bin, no longer can these exact blends be achieved. Flour in these times simply must be made in many cases out of the wheat that is there to mill, if, indeed, any is there at all.

Tolerance in asking for shipment, tolerance in using flour that heretofore has been unquestioned but now may wander from the established quality line, and patient cooperation are necessary if we are to succeed in working out of this bread crisis. Not even rushing of transportation to the milling industry will avoid further shipment and quality trouble. No flat and uncompromising demands from the flour buyer will help. His greatest assistance will be in adding his request to that of the milling industry to give the production and movement of flour an ace-high priority.

Now while the white heat of clinching a victory is getting most of our attention, and while the immediate high priority work of helping distressed countries leaps up to even greater importance than in the past, it is possible that many emergency demands will cut across other important functions and in doing so jeopardize the over-all program. It is our function not to argue exclusively for flour and bread, but to add our insistent counsel to the voices of others in achieving balance at a moment when serious neglect would have tragic consequences.

To those who may have access to the ear of government, we suggest these punch arguments:

Flour is converted from wheat into food more quickly and efficiently than any other product. From a practical standpoint, it uses men and equipment more efficiently than any other food processing operation.

Flour is by long odds the most welcome of foods both to fighting men and to the hungry populations we are attempting to feed.

Although it is necessary to bring wheat to the idle mills of Europe, the lag in restoring the operations of these mills is necessarily so great that wheat should not realistically gain a priority over flour simply to hurry those industries back into operation.

Lack of flour would cause a more serious food disturbance in this country than we have had heretofore.

It would also rob our occupation forces of a weapon of great value.

It would suddenly bring the American public face to face with an unexpected shortage that inevitably would result in a wholly needless rationing of flour, and at a time when wheat supplies never have been more plentiful.

The crisis is upon us. It must be met at once.

THE NORTHWESTERN MILLER.

Address by Secretary Morgenthau at Minneapolis

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, March 15 (legislative day of Monday, March 12), 1945

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Secretary Morgenthau before the Foreign Policy Association and the Minneapolis Civic and Commerce Association, Minneapolis, Minn., on March 12, 1945.

There being no objection, the address was ordered to be printed in the RECORD as follows:

These last few weeks have been filled with tremendous events. Besides the stirring news from the fighting fronts, we are beginning to see the outlines of the post-war world. A program for peace is taking shape before our eyes.

Following the general acceptance of the Dumbarton Oaks proposals we have had the great news of the Yalta meeting and the increased Western Hemisphere unity portrayed at Mexico City. Now we look forward to the meeting which we hope may prove most fruitful, the conference of the United Nations in San Francisco next month.

I have come here to talk about an essential segment of the peace program, prepared at another conference of the United Nations held at Bretton Woods, N. H., last summer. There, representatives of 44 nations drew up agreements to establish an international monetary fund and an international bank for reconstruction and development.

I have been in close touch with every stage of the progress of these agreements, through 2 years of preliminary work, through the conference itself and through the discussions since then. I can assure you that they are definitely good business for the United States.

They are more than that.

Unless they are put into effect the strides toward peace and security at Dumbarton Oaks, at Mexico City, and at Yalta, as well as the further steps that will be taken at San Francisco, may end only in frustration. Peace to be secure must rest on the firm foundation of thriving industry within nations and profitable and expanding commerce between them.

The Bretton Woods agreements deal with two great problems. One is the problem of providing capital to repair the devastation of war and for development purposes. The other is the problem of establishing a system of fair monetary practices that will promote trade instead of hindering it. The solution proposed is the creation of two institutions, the fund and the bank. Early in our discussions, we considered joining the functions of the bank and the fund in one establishment. We found good reasons for not doing that. I think you may want to know what these reasons were, now that the question has again been raised.

The two deal with entirely different problems. They will need staffs with entirely different training.

The bank will be concerned exclusively with long-term investments for productive purposes—loans for 20 to 30 years, or even longer. Its staff will have to study the long-term debt positions of various countries, their places in world trade, the worth of the project for which the loan is intended. The bank will have only investment problems. The fund is not an investment institution at all. It will be concerned exclusively with fluctuations in the exchange markets, with seasonal and other factors affecting the exchanges.

Whether to join the fund and the bank in one institution is not a question of form. It goes to the very heart of the stabilization problem. Those who argue for one institution think of currency stabilization as a matter of making loans. That is not our conception of the problem at all. We think the issue goes much deeper. We believe the essential aspect of the fund to be the setting of standards for fair dealing in our money rates. Giving help to some countries to maintain the standards once they are set is incidental to the attainment of this main objective. Long-term stabilization loans to a few countries would be a poor substitute for broad and constant cooperation in meeting international currency problems. That can be secured only through a fund which is concerned exclusively with bringing all countries together to work for currency stability.

The fundamental reason for monetary disorder after the last war was failure to understand the necessity for international cooperation in dealing with this problem. Each country was left to its own devices. Before 1922, only eight countries were on the gold standard. By 1928, through real sacrifices, about 45 had made a precarious return to gold—some with the help of stabilization loans. But the first serious pressure was too much for them. The wolf pack of exchange speculators was on the prowl, seeking our weak currencies to destroy, and adding immeasurably to the difficulties of the countries which sought individually to maintain currency stability. One by one countries were forced off the gold standard until by 1936 only seven were left. The world was back where it had started 14 years before.

But that doesn't tell the whole story. This was an era of economic warfare. The weapons were currency manipulation and other forms of discrimination. The aim of each country was to save itself at the expense of others. The bilateral clearing agreement was the most destructive of these weapons because it was in fact part of Germany's preparation for war.

This is how it worked: In 1932, when everyone found markets very scarce, Germany agreed, for example, with some Balkan countries, to buy most of their wheat and raw materials at good prices in marks. But the Balkan merchant did not get marks. These were paid into the reichsbank. The Balkan countries then had to buy goods in Germany to get the value of those marks. The

Balkan importer paid into his central bank the price of the German goods, and only then could the seller of the wheat or other raw material get his money.

As a matter of policy, Germany bought much and sold little. She was generally a year behind in meeting clearing obligations, and then frequently forced the Balkans to take articles they didn't need or want simply so they could pay their own exporters. Too often they got harmonicas and aspirin when they needed locomotives and dynamos.

Through these agreements Germany tied the economy of neighboring countries to the German war machine, so that when she began her war she would have access to raw materials. In self-defense other nations were forced to adopt similar measures.

A tangle of discrimination and preference spread over Europe, and even to the Western Hemisphere, to the great cost of American exporters and the peace of the world. By 1938 Germany alone had 36 bilateral clearing agreements, Italy and Greece 28 each, Turkey 23, and so on. The only country in Europe that had none was Albania.

The fund, through international cooperation, will deal with the situation that led to this confusion. Each member country will define its currency in terms of gold and undertake to keep it stable. A country which runs into trouble will not have to act alone. It will not need to use devices that spread depression. It will be able to consult with others through the fund and get help to maintain stability.

To sum up in simple terms: The fund is a means of getting countries to work with each other and not against each other on currency problems. The fund sets standards for exchange practice and rules for fair dealing. You can see that essentially this is not the business of a lending agency.

Now I want to talk to you about the bank.

There is the same contrast between foreign loan operations under the bank and those under the system in use before the war. In the past when countries needed foreign capital they too often had to give away some of their independence to get it. And they usually paid high interest rates in the bargain.

For instance, a great many of you will remember Kreuger and Toll. Frequently when a European country was seeking foreign loans, Kreuger would turn up in the finance minister's office. He was glad to oblige with quite a large loan. All he asked was the country's match monopoly, and of course profitable rates, too. Kreuger then sold not only the bonds he took for the loan, but in some instances forged duplicate sets of them as well. Some of you in this audience may still hold Kreuger and Toll securities. You know what they are worth.

Kreuger was not the only operator in those days. Undeveloped countries seeking foreign loans frequently secured from other sources loans that cost them too much and were often tainted with fraud. Many of them were squandered on projects which could never pay off. There was little or no supervision to make sure the money was spent for productive purposes. In too many cases there was little prospect that the investor would get his money back.

That was the system under which Americans used to lend money abroad. By 1939, not counting the World War No. 1 loans, more than 40 cents of every dollar they had lent to foreign countries since 1919 had gone into default.

The International Bank will make it possible for countries to obtain capital for worthwhile, productive projects. The bank will guarantee loans for such purposes so that they will be attractive to the private investor on reasonable terms. And there will be no need for a country to give the lender a match monopoly or a salt monopoly, or to pledge its sovereignty in the form of an assignment of custom revenues. There will be no need for these methods because the bank will undertake loans only where the project is productive, only where the charges are fair, and only where the borrower can service the loan.

There is urgent need for such productive investment. We cannot have a prompt restoration of the producing and consuming power of the world while Europe lies in ruins and great areas of the earth remain undeveloped.

To sum up in simple terms: The bank is a cooperative method of providing capital for productive purposes to countries that need capital for reconstruction and development. Its purpose is to safeguard the interests of the borrower and the investor. That's what the bank is and what the bank does. And you can see that the bank's business is lending, not monetary stabilization.

The Bretton Woods program offers currency stability to facilitate trade, and credit protection for sound international loans. Both will benefit the American people through an increased and more stable market for their products.

The experience of our generation has proved to us that a well-balanced prosperity for our country depends on a vigorous foreign trade. Ten percent of our jobs in agriculture and industry depend directly upon international commerce. That was true in the high employment years of 1929 and 1937, but the sharp decline in foreign trade in 1932 had much to do with the severity of the depression. Now let's see what discriminatory exchange regulations and fluctuating currency meant to the Twin Cities and the Northwest. Countries abroad found it impossible to buy your wheat and flour, and the same was true of exports of hardware and of machinery.

No major commodity lost so large a part of its foreign market as wheat. In the years 1925–1928 the United States exported $239,000,000 worth a year, which was 21 percent of production. In 1931–34, the era of exchange discrimination, this had fallen to $38,000,000, which was only 8 percent of our production.

As a result, wheat growers were forced to dump their crops at any price. The farmer in the Red River Valley was being squeezed, as truly as if he had caught his hand in a threshing machine, by the exchange rates of the rupee and the yuan and the peso. The instability of foreign currencies was one of the chief reasons why No. 1 Dark Northern, which sold for $1.64 a bushel in Minneapolis in May 1928, brought 49 cents in December 1932. It helps explain why flour sold here for $8.68 a barrel in May 1928, and $4.02 in November 1932.

Of course, the Bretton Woods agreements by themselves are not going to restore our foreign markets for wheat or anything else. But they are a necessary first step toward getting and keeping those markets for thousands of American products. New exchange restrictions anywhere in the world can close them.

We have all seen it happen. Our exports of commodities and of manufactured goods reached a high point between the two wars, but in the thirties our farmers and our manufacturers alike fought a losing and hopeless battle to restore their export sales in the face of depreciated currencies, quotas, and other barriers set up against us. The men thrown out of jobs because of this lost trade became very poor customers for all the products of American industry and agriculture. All these restrictions had much to do with intensifying and prolonging the great depression.

To prevent this chain of disasters being repeated after this war is it not perfectly plain that the first thing we need is a sincere desire on the part of all governments to work together to prevent them? The Bretton Woods agreements are the expression of a unanimous will on the part of the 44 United Nations to work together to that end.

I wish it were possible to describe the manner in which that will was expressed at Bretton Woods by representatives of 44 nations covering the whole range of the world in size, stage of industrialism, customs, and economic conditions. They succeeded in shaping a thoroughly workmanlike program because they knew that we must either create an orderly system now or sink back later into the chaos of individual expedients and devil take the hindmost. They were animated by the new international spirit.

Let me give you perhaps the most dramatic example that occurred. In the list of subscriptions to the bank Russia had been put down for $900,000,000. This is a tremendous sum for a country whose richest area—bigger than any other country in Europe—has been ravaged with the utmost brutality by the Nazis. On the last day of the conference, after the subscriptions were closed and all countries had agreed on the allocation of subscriptions, Russia announced that she would increase her subscription to $1,200,000,000; Russia assumed that additional $300,000,000 obligation, not because there could be any direct advantage to the Soviet Union but in order to create a stronger bank with a larger capital—able to contribute that such more to the rebuilding of the world. This is a symbol of her determination to cooperate wholeheartedly with us and the other United Nations in the task of reconstruction and development.

The Bretton Woods agreements were conceived in the very practical spirit of cooperation. They represent the first such set of resolutions presented to our people for achievement of the ideals for which we are fighting. They can be an inspiration to all the other meetings of the United Nations and an example of how the most difficult problems can be overcome through mutual good will.

The legislation to carry out the Bretton Woods program is now before Congress. Its approval will show that the United States is thoroughly in earnest about joining with other nations to achieve international security.

At Bretton Woods we proved that delegates from the governments of most of the world could meet together and consider ways of helping each other. This is the international spirit of the United Nations, the ideal for which Americans are dying today. It is our task at home to live for that ideal.

It is because I feel deeply that the Bretton Woods agreements are so much a part of this new spirit, are so essential to its development, that I have been urging their acceptance. We are called upon in these times to express and to act upon our faith in mankind. At Bretton Woods we set our hands to a very real expression of our faith in the capacity of men to work together as partners in peace.

I believe the American people are determined for their part to do just that. Our generation has been given a new vision of the world. It is as though we were seeing the earth whole for the first time. Perhaps you remember how it was when you made your first long airplane trip. Soaring over our country, you got a new perspective of it, a new glimpse of its magnificence and the interdependence of its people. And it might have been that as the plane flew in from the West you were in darkness, but ahead you could see the dawn.

We of the United Nations know that, although the night is still all around us, we will come out into the light of a new day with its new opportunities for creating a better and safer world.

Congressional Control of the Public Service

EXTENSION OF REMARKS
OF

HON. ESTES KEFAUVER
OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1945

Mr. KEFAUVER. Mr. Speaker, all Members concerned with the strengthening of Congress will find the article by Leonard D. White, president of the American Political Science Associations of interest. I especially recommend it for the consideration of the earnest and useful group composing the LaFollette committee. The article was prepared for delivery at the presidential address at the fortieth annual meeting of the American Political Science Association. The meeting, on account of travel and hotel congestion, was canceled. The article is as follows:

CONGRESSIONAL CONTROL OF THE PUBLIC SERVICE

Since the English Revolution of 1688, it has been a part of the Anglo-American tradition that elected representative assemblies control the policies and acts of the executive branch of the government. This doctrine was firmly embedded in the American State and Federal constitutions. With some wartime reservations, it has been universally accepted throughout our country. At the present time, however, there is an uneasy feeling that practice does not square with theory. There is even a suspicion that practice contradicts theory—that a vast body of officials has in fact escaped the possibility of control by the people's representatives.

The trends of the last half-century have certainly complicated the problem of congressional authority over administration. This has occurred in part because administration has made impressive gains in effective organization and operation, while relatively Congress has stood still. Within the administrative system there has developed a capacity for self-direction which might well challenge the dominance of Congress, if Congress continues to be the laggard partner in the governmental team.

The fact that Congress has declined in public esteem and in comparison with the executive branch is so apparent that Congress itself is preparing to take reformatory steps. I do not propose to discuss the difficult problem of congressional organization. I merely argue that reform is essential if Congress intends to control administration. I must, however, make some assumptions about the future organization of Congress, since if it remains unreformed I despair of effective and intelligent control over the public service. For the purpose of this discussion, I therefore assume (1) that the majority party in each House will assert more effective power to control its own members and the business of Congress; (2) that congressional committees will be reduced in number and made responsible to each House; and (3) that the seniority rule will be abolished. These are minimum requirements, however difficult of realization.

Some contend that no improvements in Congress are likely to be enough; that the range and complexity of public administration are such that its control by a representative assembly has become impossible. The author of The Managerial Revolution argued that officials have already usurped the very essence of congressional power by determining public policy. Officials are certainly active participants. Some believe that Congress has lost the capacity to arrive at a formulation of policy except under compulsion from outside, especially the compulsion of the executive branch. There is much in the record to support this view. Some claim that the "bureaucracy" has acquired a capacity for resistance which puts it beyond the reach of amateurs. There is evidence to sustain this contention. We can all agree that the mere existence of a Federal civilian Army probably destined to remain at not less than a million and a half, armed with wide discretionary powers and possessing both intelligence and a sense of direction, presents a problem of control. If we intend to remain citizens of a republic and masters of our future, we may well take note.

I assert, nevertheless, that congressional control of the administrative system is not only democratically essential but also technically feasible. It is not feasible, however, on the pattern of the eighteenth and nineteenth centuries, projected into the twentieth. The forms of control which Congress now understands and tries to use are not especially good for control and are sometimes bad for administration. They need to be thoughtfully reconsidered.

The indictment against the existing system of congressional control is impressive. It is basically control over details, not over essentials. It is negative and repressive rather than positive and constructive. It reflects fear rather than confidence. It is sometimes irresponsible. It is based on no rational plan, but is an accumulation of particulars whose consequences are seldom seen in perspective. Congress has done both too much and too little in trying to discharge this phase of its responsibilities. It needs a Committee on Congressional Management to do for it what the President's Committee on Administrative Management did for him.

Without presenting the specifications of the indictment, a few particulars may be suggested by way of illustration. The Statutes at Large and the annual appropriation acts are cluttered with a mass of detailed prohibitions and limitations upon administrative action. They represent in part a process of legislation by exasperation. Unfortunately, these often petty restrictions tend to continue and to accumulate. They hamper good administration and miss the mark as a means of control.

The mass of legislation governing the housekeeping activities of Government departments became so great by 1930 that escape was necessary for the pioneering ventures of the New Deal. Congress deliberately released the Tennessee Valley Authority and some other Government corporations from part of the restrictions placed upon older established agencies. The General Accounting Office and Congress itself have both looked upon this freedom with a jaundiced eye, and it tends gradually to disappear. One may take the view that a degree of freedom was good for the T. V. A. and would also be good in due measure for the whole Federal system. Congress has apparently taken the view that freedom is progressively less good for the T. V. A. and is dangerous in principle.

Obviously, Congress is in error when it asserts control by making particular administrative decisions. This temptation, however continues to be strong. For example, Congress requires senatorial confirmation of appointments of certain middle management officials. This is an invasion of an area definitely administrative, not policy making. It is motivated either by a taste for patronage or by the natural desire of Congressmen to protect themselves against the political consequences of administrative bungling in their States or districts. The attempt of Congress to force the removal of three named persons—Messrs. Lovett, Dodd, and Watson—is an example of congressional interference at its lowest level. In still another direction Congress recently invaded the proper field of administrative decision by reserving the right to decide from time to time how much oil could be produced from certain naval reserves. The President protested this action, but was forced to yield.

These criticisms of some of the forms of congressional control of the administrative system are not intended to cast any doubt on the desirability or necessity of such control. I would argue, indeed, that we need increasingly effective supervision by Congress as the powers of officials increase, their discretion expands, and their numbers multiply. My argument is that we are likely to get progressively less effective supervision unless Congress changes its tactics and strengthens its own position.

The task is to devise a system of congressional control which will be adequate to democratic purposes without at the same time impairing the capacity of public officials to operate efficiently. This balance cannot be attained by any simple formula. A solution is complicated by the fact that Congress (the controlling body) is "a numerous assembly" unaccustomed to close internal discipline, with a changing personnel periodically absent from the seat of government, whereas the public service (the agency to be controlled) constitutes a vast permanent hierarchy of trained, professional, and relatively disciplined officials.

The two essential objects which Congress must achieve are, first, to insure that its mandates on public policy prevail, and, second, to insure that the execution of public policy avoids waste, incompetence, and unnecessary public inconvenience. I propose to explore each of these essentials in turn.

II

Congress in theory has, of course, complete control of public policy, at least in the domestic field. Some Congressmen believe that they are losing control of policy, because bills originate elsewhere, because departments and agencies are developing their rule-making powers on an ever-increasing scale, because they suspect their policy is not always fully observed in the course of administration, and because they fear administrative action may foreclose a future policy decision by Congress.

Although it is important to conserve congressional control of policy, it is not necessary or desirable to require Congressmen to originate all the bills. Congress first shared this duty with officials in September 1789, when it asked Alexander Hamilton to bring in recommendations on the public revenue and discharged its own committee from further consideration of this subject. In recent years, the administrative agencies have carried an ever larger part of the task of policy initiation and first formulation, and properly so.

The need for effective coordination of administrative rules with statutes presents a more important consideration. One of the most effective means of securing an appropriate control of the rule-making power, without hampering administrative operations, is to follow the procedure applied in 1939 in connection with plans for administrative reorganization. Here the initiative lay with the President, who was authorized to prepare plans for submission to Congress. Each plan was to lay on the table for 60 days and to become effective unless, within this period, the two Houses disapproved by a concurrent resolution.

Except in emergency cases, Congress might properly require basic administrative rules

imposing obligations upon citizens to be reported to it in this manner, and to be subject to a legislative veto. This practice has long been accepted by the British House of Commons in dealing with provisional orders.

It is also important to insure that administrative action accords with congressional policy and to give Congress a more effective sense of participation in early stages of policy formation. The policy conferences which Secretary Hull held with members of the Senate Foreign Relations Committee suggest a useful line of experiment. A large part of the major issues of public policy could be included within a small number of such conferences: For example, foreign policy, including military and naval programs; fiscal policy; social-security policy, and veterans' benefits; business policy; and resources policy.

This proposal assumes, let me repeat, that the committee system has been reformed, that the seniority rule has been abandoned, that the majority party has accepted effective responsibility for directing the business of Congress, and that consequently confidential discussions of policy will not be reported to the press. Policy conferences would be seriously handicapped as long as the seniority rule prevails; length of service on a committee is no guarantee of party confidence or personal restraint. Such conferences would be devoted to broad policy orientation rather than to the terms of a particular bill; indeed, they should normally precede the stage of bill drafting. They would occur at frequent intervals, and would be participated in only by members of the majority party. On the administrative side, the participants would include department and agency heads and their policy advisers; members of permanent staffs would be present only to furnish data, for otherwise their status would be undetermined with a change of party.

It is unnecessary to argue that Congress can secure firmer control of policy by enacting laws which are neither vague nor ambiguous. These criteria are impossible to achieve when the mind of Congress is confused or divided. Unfortunate is the lot of the official who has then to decide his course of action; he must make his own contribution to policy with the high probability that he will offend one section of congressional opinion. To Congressmen may be commended the moral virtue of charity as they review the decisions of their agents.

Apart from the gains arising from greater precision in drafting legislation, I would therefore argue that Congress may be better assured of genuine control of policy by adopting the provisional-order technique as a means of reviewing administrative rules, and by cultivating policy conferences with top executive officials in the most important and most controversial areas of public action.

The House Select Committee to Investigate Executive Agencies recently recommended another type of policy control, a permanent joint standing committee to ascertain whether the laws are executed according to the intent of Congress. I doubt whether any single committee can advise the departments and agencies of the intent of Congress throughout the length and breadth of public policy as stated in Federal legislation. There are other and better ways of determining the intent of Congress; and it is not necessary to set up a standing committee to prevent deliberate neglect or defiance of the will of Congress by any administrative agency.

III

The second major objective of congressional control is to insure that public policy is executed efficiently without waste, and without undue public inconvenience. Congress has a duty to watch the course of administration, consult with officials, criticize administrative policies and performance, and conduct formal investigations. But it can make its contribution to efficiency only by a substantial degree of abnegation—by giving up the practice of criticizing details in favor of a genuine over-all supervision achieved through a few really effective administrative controls within the executive branch.

If Congress must, in its own interest, forego control of details, what form of action can it undertake to compel high standards of performance? The answer is, it must concern itself with the improvement of the administrative system, and with creating the conditions of employment which attract a superior type of public official. Congress needs to face the task of creating a system which tends to produce competence rather than incompetence, responsibility rather than irresponsibility. If incompetence does occur, the essential question for Congress to ask is: What is wrong with the system of administration or the quality of management which permitted it to develop? The essential remedy for Congress to apply is not to discipline individuals or agencies (although discipline may sometimes be necessary), but to insist upon the improvement of the system and the quality of management. Only by bringing the administrative system to a high point of perfection can official stagnation or incompetence be reduced to the minimum which an imperfect world must tolerate.

The historic instrument of congressional criticism and investigation is the standing or special committee. The Interstate Commerce Committee of the Senate, the Civil Service Committee of the House, and the Truman committee illustrate what can be achieved under favorable circumstances and with stable leadership. These forms of legislative control are pervasive and important. An intelligent public official proceeds on the assumption that he may have to explain his every act before a congressional committee. While this is a salutary climate for official life, it can quickly induce an insidious form of sleeping sickness unless Congress exercises its power with restraint, and constructively. A hostile remark by a Congressman in a committee hearing, or even worse on the floor of the House, induces tremors throughout the official world. But congressional wrath is not necessarily control, and official trepidation not necessarily conformity. The problem remains of translating undoubted congressional influence on administrative performance into intelligent ultimate control of standards of administrative excellence.

It has been proposed to increase the influence of the present committees by attaching to each of them a small staff of experts, who could balance the influence of the experts who speak for the departments and agencies. The proposal to equip committees with technical staffs raises some serious questions. It would probably increase the potential rivalry between the subject-matter committees and the Appropriations Committees. It would also lessen the probability—remote enough at best—of substituting joint committees for separate, independent, and sometimes hostile committees of the two Houses. It would set the stage for conflict between two sets of "experts," or potentially three—one in the House, one in the Senate, and one in the department. It would incur the danger of administrative management by a committee chairman and his experts. Much worse, it would fasten the present committee structure upon Congress; for the existing vested interests of chairmen would be buttressed by those of technical staffs. I do not, therefore, favor staffs for congressional committees until the committee system itself has been reformed. A rational committee system, however, would strengthen the case for small committee staffs. I do not need to add that a system which allotted one committee to each department, agency, authority, office, corporation, and commission would not be rational; it would be positively dangerous.

Parenthetically, one improvement is greatly needed in committee contacts—an improvement too subtle to be subject to legislation or standing orders. I refer to the need for protecting officials and citizens against the unintelligent and intemperate attacks to which they are sometimes subjected by committee members. Two instances will illustrate my point: The attacks upon officials of the Tennessee Valley Authority at hearings in the Senate, and the recent investigation of the Federal Communications Commission in the House. Congress can ill afford to allow such displays of arrogance or such punitive expeditions. They impair respect for Congress and for Congressmen, and raise questions about congressional powers which ought not to be open to discussion.

IV

The apparent dilemma presented by the need for legislative control of a powerful public service and the need for relative freedom of official action to secure sound management is in truth a perplexing one. As a student of public administration, I probably am more sensitive to the need for a free hand for officials, at least in the service functions of government. But Congress must have ultimate control of policy and its execution. I urge that it settle on principle and avoid detail. To control policy as it is defined in administrative rules, the provisional-order technique deserves attention. To participate in policy in its formative stages, the device of congresional-executive policy conferences might be useful. To insure high standards of administrative performance, Congress can make its greatest contribution by building up the administrative system and by depending largely on its internal controls. A reformed committee system would continue the function of consultation, criticism, and occasional investigation; but as committees become more powerful, they need to be on guard lest they take over in fact some of the responsibilities of administration. The greatest single asset of Congress to guarantee sound administration might be a transformed General Accounting Office, restricted to an audit but strengthened to become an office of administrative intelligence acting on behalf of the two Houses. These innovations would, in my judgment, help achieve a satisfactory balance; they would go far to strengthen Congress without impairing the necessary authority of the executive branch of the Government.

In closing this paper I reemphasize familiar ground—the great objectives to be secured by congressional control of administration. They are close to the heart of democratic institutions, since an uncontrolled body of permanent officials and employees would almost certainly degenerate into a bureaucracy, with all the unpleasant connotations of that word. It is the duty of Congress to be ever on guard against official sloth, stupidity, arrogance, or corruption. Apart from the courts, the elected representative is the principal protection of the humble citizen against abuse of the great powers which officials possess. We must always remember, however, that power may be beneficent; and in a democracy it is presumed to be directed toward beneficent ends. Congress faces, therefore, a delicate problem of balance—it must control with enough certainty of touch to guarantee a responsible and responsive public service; but it must refrain from impairing the capacity of the public service to achieve the great social purposes to which it is dedicated.

Address by Hon. John L. McClellan to the General Assembly of Arkansas

EXTENSION OF REMARKS

OF

HON. JAMES O. EASTLAND

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Friday, March 16, 1945

Mr. EASTLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able and informative address delivered by the senior Senator from Arkansas [Mr. McCLELLAN] to a joint session of the General Assembly of the State of Arkansas on February 26 of this year.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Governor Laney, Mr. President, Mr. Speaker, members of the general assembly, and friends, 2 years ago yesterday, in response to an invitation extended by concurrent resolution, I had by first experience and very great pleasure of addressing a joint assembly of the Arkansas Legislature. I cherish the memory of that delightful occasion, for I can never forget the many fine manifestations of friendship, expressions of confidence, and words of encouragement so generously accorded to me by those of you and others who were then serving as members of these two legislative bodies. So, I am most happy indeed to have the privilege again and to tell you that I am deeply grateful for the honor you have conferred by your invitation and by your presence here this afternoon.

I can think of no group or audience among my people whom I might address that could possibly have keener appreciation and a more sympathetic understanding of the services I try to perform as a United States Senator than do you. As members of the State legislature your duties and responsibilities are substantially and correspondingly the same to our State that mine are to the Nation. Although we labor in legislative fields of separate and distinct jurisdictions, you and I have much in common in the nature of the duties and the services we perform to our State and to the Nation respectively.

In view of the established separate jurisdictions of State and Federal Governments to which I have referred, and which we all recognize, I think it would be unpardonably presumptuous of me if I should attempt to make use of this occasion to inject my own opinions into your deliberations or try to influence unduly your decisions respecting matters and issues which you have under consideration and which involve exclusively laws and functions of State government. I certainly would not purposely or knowingly encroach upon any prerogative that is yours nor in any way usurp authority or power that is by law vested in the governor as the chief executive of our State. I deem it far more appropriate that I should undertake to confine my remarks to subjects and issues more directly related to policies and problems of the National Government and with respect to which all our citizens have a common and profound interest.

It is impossible to talk to you about affairs of state without referring to world affairs and the awful war in which we are engaged and which is of paramount concern to all of us.

Never in all time have two words been more significantly poignant in all languages and on every tongue as are now the words, "war" and "peace." These words in stark reality have taken on import and meaning broader in scope and more fateful in consequence than our intellectual and spiritual cognizance has ever reckoned with in the past. The ultimate destiny of what we proudly acclaim as modern civilization is embraced in and will be determined as a result of our labors and living as human beings in one state and condition or the other, either in war or in peace.

For the past 4½ years the bloodiest, deadliest, most brutal and destructive war has raged upon the earth with ever-increasing ferociousness and intensity—a war not of our making and not of our choosing but from which we could not escape and in which we inevitably became involved. Like other peaceful peoples and nations, we were, without offense or provocation, treacherously attacked by the damnable and savage forces of tyranny and would-be world conquerors. We had no alternative. It was either surrender and die or fight and win if we were to survive. We chose to fight, we are going to win, we shall survive. And here and now let me state with all emphasis and without reservation or equivocation, we owe and shall owe our continued existence as a nation of free peoples to the men and women in our armed services on land, on sea, and in the air who have actually marched into the jaws of death and spilled their blood and risked and given their lives to save America and the world from the awful, unthinkable fate that would have been imposed on us by a victorious Germany and Japan. I do not mean to minimize or disregard the sacrifices and miraculous achievements of our people on the home front. We can take justifiable pride in the accomplishments of our people—in the magnificent contribution made by all classes and groups of labor, of agriculture, of business, of industry, and of all other segments of our people. We have startled the world and surprised ourselves in the results achieved. But, notwithstanding all that we have done on the home front, I am sure that we all feel that to the personnel of our fighting forces, both to the dead and the living, belongs all credit, all glory, and all honor for winning this war.

The time for decision on the issue of "war" and "peace" with its influences on and consequences to the future hopes and aspirations of mankind has arrived. We cannot evade or postpone it until a more propitious time or favorable season. If the people and governments of the world elect to continue the barbaric practice of settling international disputes by war, and further pursue the dangerous and destructive philosophy that "might makes right," we shall certainly doom the whole world to chaos and civilization to rapid and irrevocable extinction. We shall simply again, figuratively speaking, crucify the Christ and Saviour of mankind on a cross of brutal heathenism and rejection.

On the other hand, if the nations and governments of the world will universally adopt and pursue the philosophy that "right makes might," and rigidly adhere to it, and practice it by collaboration and cooperation, we can for many centuries to come remove and eliminate, on a broad scale at least, the scourge of war from the face of the earth. The choice is ours, and by use of the word or term "ours," I mean and include all of the civilized peoples of the world. The choice is "ours"—yours and mine—your country's and mine. Not that we have all the responsibility or all power in compelling the right choice or to determine the fate of the whole world. We do not have—but I do say without fear of successful challenge from any source, that the major and primary responsibility is ours. I make the assertion that the responsibility rests primarily upon us simply because we, of all peoples, have been more richly blessed and are now endowed with more material and, I hope, more spiritual power than any other country. We must recognize that if we are to continue to be the beneficiaries of the advantages and progress that have been so bountifully dispensed unto us as a Nation, then we must accept and meet intelligently and courageously the challenge of world leadership in the establishing of justice among nations and enduring peace on the earth.

It will be said that wars cannot be prevented. We hear talk now that in some quarters of the world plans are already being made for World War No. 3. But I am persuaded that by the time this war ends, and certainly if we go on through with it to decisive victory and "unconditional surrender" with the complete destruction, insofar as it is humanly possible, of those forces that have instigated wars of aggression, all people including those of aggressor nations, will hunger for peace as never before, and if the United Nations in the wake of victory will provide the instrumentality of an international organization to preserve peace, it can be done—we can succeed and then, and only then, can we truly say in the fullest sense that our brave boys have not died in vain.

There will be some few among us who will say that all of our efforts in that direction will be wasted and futile. I am hoping they are wrong. It should by now be recognized by everyone that unless the civilized nations do resort to other and different means than those employed in the past, there will be another war. We have to try something else—something different. I am fully convinced that if the three big powers—Russia, Britain, and the United States—will work together after victory in the same spirit of unity and cooperation that has dominated their actions in fighting the war against the common enemy, world peace can be maintained, and if necessary enforced for the next century, at least, and possibly indefinitely. With Russia, Great Britain, and the United States working and cooperating together and keeping would-be aggressor nations disarmed, there will not be another war of any magnitude. No power or combination of powers could possibly rise against these three great countries. They now have and will continue to have the combined power to insure the peace of the world. If they do not work together and do not use their joint powers to build a lasting and permanent peace, then a third world war will be inevitable.

We have made a start. We have begun laying the foundation for the structure of peace. I think we may say that the first contribution in that direction was the Atlantic Charter, the principles enunciated by President Roosevelt and Mr. Churchill during their conference at sea in August 1941. The next step was the passing by the House and Senate resolutions favoring the establishment of an international organization for the preservation of the peace of the world. Further progress has been made in the Conference of the Big Three at Tehran, the Dumbarton Oaks Conference, and the recent Conference at Yalta. All of these have been steadily building toward an international security program. We have, soon to come, and we can certainly look forward to it, I think, with great hope the Conference to be held in San Francisco next April, at which time representatives of the governments of all the United Nations will participate and will attempt to write a charter and put into concrete form the fundamental or basic agreement for this international peace-preserving and security organization.

We do not expect the work at that Conference to be perfect. Doubtless, no country

or government will find, when it is finally drafted, that it meets their every expectation. No doubt, it will have flaws; it will have some provisions with which we may disagree, but I am sure we all hope that there shall not be cause for such disagreement that would compel the rejection of the plan by either of the three big powers. If we can produce at the San Francisco Conference in April a basic charter of agreement to which all peace-loving peoples and governments of the earth can repair with confidence, then all humanity can take on new hope and renewed faith and move forward in progress, in peace, and security; yes, move onward and upward in paths of constructive pursuits rather than go backward and downward in the destructive and horrible enterprise of war.

This job of constructing permanent peace may be regarded as transcending all other objectives of all nations and all peoples. That which is next in importance for us is the preservation in America of our own freedom, of our democracy, and our way of life, and the system of government that has been tried and tested and which made it possible for us to develop into the strongest Nation in the world. After winning this war and after starting on the right road to lasting peace, it is possible that we could so far forget what made our country great, and by carelessness and indifference fail to protect and preserve the fundamentals of our own system of government as to endanger and maybe lose much of what we have in the past regarded as our precious and priceless heritage.

There are some who want to make over our Government. They would disregard the fundamental laws of the land, our Constitution, and contend that this great document has long since served its usefulness. They would so radically and basically change our system that we would be governed more and more by men rather than by laws. There is much evidence of a strong trend in that direction. No doubt, the Congress is partly to blame for this, but it must be remembered that in general the Congress reflects the will of the people.

As an illustration of this trend of which I speak, through February 6 of this year the 27 war-related agencies of the Government had issued 32,500 directives, regulations, or orders which have the effect of law and which regulate business activities and the lives of our people.

Of this number, 14,053 were issued by O. P. A. alone. In addition to the directives, orders, and regulations issued by war-related governmental agencies, the President of the United States has issued 3,793 Executive directives having the force and effect of law. Of course, we attribute all of this to the war, and we might readily conceive that the war is wholly responsible for the use of this method and the extent of the regulations imposed by this process rather than by acts of Congress, but that is not altogether true and when this war ends, this practice must be stopped or, at least, tremendously curtailed, and the Congress must again assume its full functions and the responsibility that is reposed in it by the Constitution. For that reason, I shall want to see the Congress act promptly, just as swiftly as conditions will permit, to reclaim its powers and to cease delegating to administrative agencies many of the powers and duties that the Congress should perform itself by writing into the law, into acts of Congress, insofar as it is practicable and possible, the rules and regulations by which the lives of our people are to be governed. Bureaucratic rule must be checked. Liberties cannot be preserved if this trend continues and is permitted to flourish and operate extensively in the post-war period.

We are all concerned and anxious about full employment for our people. Much is said today about the Government providing 60,000,000 jobs to take care of our returning soldiers and our war workers and others in the post-war period. So far as I know, sixty million may be an arbitrary figure. I do not say that many jobs will not be needed, but whether it is fifty million or sixty million, what we have in mind is full employment so that everybody who is willing to work may be given the opportunity to work at fair wages and under good working conditions.

Frankly, I believe that this obligation can be met, and that we can reach the goal of full employment without destroying or materially impairing our system of free enterprise. I believe this goal can be attained without extensive Government control of business, and without continuous and indiscriminative deficit spending of taxpayers' money. We all recognize that there are just two ways that full employment can be provided. One is by the investment of private capital, by the enterprise of the individual citizen, and by the industrial and business institutions of our country both large and small.

The other alternative to insure full employment is for the Government to assume full responsibility and provide made-work jobs by pursuing a policy of continuous heavy borrowing and deficit spending. We must decide which of these two policies and programs we shall pursue in the hope of providing full employment and prosperity.

I favor the former. I believe every effort should be made to preserve our system of free enterprise. I recognize that some governmental assistance to business, and some Government spending on worth-while projects is and will be necessary. But, such Government spending and Federal assistance should be limited to the real necessities of the situation, and restricted to that character of projects and public improvements that build our country and add something of material value. I have in mind such improvements as roads, the development of our water resources, flood control, navigation, hydroelectric power, soil conservation, forest preservation, and such other public improvements of a character that is primarily the Federal Government's responsibility, and which, when constructed, adds to the capital wealth of the Nation.

In other words, we should try to make any deficit spending on the part of the Federal Government in the post-war period the exception rather than the rule.

I have faith that private enterprise can still be the instrumentality through which we can provide full employment and reasonable prosperity for our people and by that process continue to raise our standard of living and build America stronger year by year.

We shall begin the post-war period with a greater reservoir of private capital available for investment than ever before in the history of our Nation. We have some $26,000,000,000 of money in circulation. There is more money in banks, in War bonds, in savings, and more money belonging to, and in the possession of, individual citizens of this country than ever before. Taxes, we know, will of necessity have to be kept high to meet the cost of Government. I do not anticipate that we shall be able to operate this Government, service the national debt, meet the additional costs of caring for veterans, and maintaining a two-ocean Navy, a large Army and Air Force for less than twenty-five or thirty billion dollars annually. This means too that we must keep the national income high. We cannot pay $30,000,000,000 in taxes to the Federal Government except that we have a high national income. That means that wage rates must be maintained somewhere near their present levels. The price of agricultural products must also be maintained. We have to face these realities and deal with them realistically.

We shall need to revise our tax laws—stabilize Federal taxes so that our industries and businesses can safely and accurately reckon with this factor in planning investments, production expansion, and business operation. By so doing we will stimulate initiative on the part of individual citizens and encourage the investment of private capital. Perpetual deficit spending on the part of government is not only wrong but, if persisted in too long, it will lead to disaster. Certainly, I know that we can provide 60,000,000 jobs or more by pursuing that policy. By borrowing and spending enough, we can insure and guarantee it for a time—just how long, I do not know; maybe for 10 years; maybe for a quarter of a century—but some day and possibly sooner than we would want to admit we will face a real crisis that could result in the loss of individual liberty and the end of free enterprise. In other words, our system of government would undergo a change from a democracy, where men are free, to an autocracy, where the individual would become substantially the property and servant of the state.

Not only will the pursuit of the policy of continuous large deficit spending endanger our liberties but it is morally wrong. We can make America synthetically prosperous by spending to insure a standard of life beyond what we of this generation can pay for out of our own labors and ingenuity. But with a $300,000,000,000 national debt at the end of this war every dollar of deficit spending thereafter to make ourselves prosperous will be charged against the next generation. I do not believe we of this generation have any moral right to spend from the earnings, the sweat, and toil of children yet unborn simply to provide ourselves with more comfort, security, and prosperity.

The outlook for business and employment in the post-war era is not so dark and dreary as some would paint it. There will still be great opportunities. Our domestic needs and the demands of our people for domestic services and goods, necessary and essential to rehabilitate us to our peacetime standard of living, will be immense, and will within itself insure opportunities of employment for millions of our people. There may be a brief period during the time of reconversion that there will be unemployment, but within a reasonable time the wheels of industry should again be rolling and producing at substantially full capacity.

We, of course, should strive every way possible to implement our own markets with trade in foreign countries. The peoples of those countries that have been overrun, pillaged, and plundered, and whose homes, shops, industries, and cities have been destroyed in this war will need to rebuild. Only our own country will have the productive power and capacity to provide most of the goods and services that they will demand and have to acquire. Above all, they are going to need tools with which to rebuild and to expand their own industries and productive facilities. They will buy from us; there is hardly any other market to which they can go. We shall need to find a way to make it possible for them to pay for what they get from us. In many instances, and with most countries and governments, I believe we, to a very large extent, can exchange our products for goods of theirs, primarily for raw materials that are not abundant in our own country. It is possible for us to make loans to many of those countries on a sound basis and on terms that they can meet. Some risks will be incurred and some losses sustained in this operation, but losses need not be great if our Government will adhere to business principles in these transactions rather than proceed on the theory and with the intent of trying to be a Santa Claus to the world.

With the heavy demands of our own people for goods and services that they need, and which our own industries can supply, coupled with what foreign countries will buy from

us, there will be the opportunity to provide full employment and reasonable prosperity in America without the necessity of our Government pursuing fiscal policies that will lead to certain financial ruin and the ultimate loss of democracy as our system of government in this country.

Is This Joint Action?

EXTENSION OF REMARKS
OF
HON. JOSEPH F. RYTER
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, March 16, 1945

Mr. RYTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Hartford Courant of March 15, 1945:

IS THIS JOINT ACTION?

The Yalta declaration on liberated Europe lifted the world up on wings of a new hope that a way out of that troubled continent's political problems might be found. It substituted for the unilateral power politics practiced by Russia in Poland and by Britain in Greece last fall agreement by the United States, Britain, and Russia to "concert during the temporary period of instability the policies of these three Governments." The Big Three together would assist the people of the liberated countries and former Axis satellites "to solve by democratic means their pressing political and economic problems."

This agreement to concert the actions of the Big Three Nations was the keystone of the new arch of peace. On it depended the Yalta promises of enabling the liberated peoples "to create democratic institutions of their own choice," to establish "conditions of internal peace," to form interim governments "broadly representative of all democratic elements in the population" and to speed "free elections of governments responsive to the will of the people."

What is now happening in the Balkan and central European countries, alas, contradicts these bright promises. In Rumania, Russia enjoys a controlling position, with British and American representatives on the Commission of Control cast largely in the role of spectators. In Bulgaria a similar situation exists. In Greece the Moscow radio is announcing that the Plastiras government plans to annihilate all left-wing departments of the state machinery. In Yugoslavia the leftist forces under Marshal Tito, while still cooperating with the old democratic parties, hold a dominating position in the provisional government. In Czechoslovakia, now about to resume an independent life under President Eduard Benes, a Slovak Communist spokesman is talking of a virtually autonomous Slovak State. In Poland we have yet to see that reorganization "on a broader democratic basis" of the Moscow-sponsored government that was promised at Yalta.

All this points to a future situation as ugly as that which the Yalta Conference supposedly ended. Continued lone-wolf action by Russia will lead to renewed doubts and suspicions that will endanger the prospect of a European peace that is as democratic and orderly as the post-war chaos will allow, and will threaten the general security organization to be drawn up at the San Francisco Conference as well.

The Crimean Conference, said President Roosevelt in his report to Congress, spells, or at least ought to spell, "the end of the system of unilateral action and exclusive alliances and spheres of influence and balances of power and all the other expedients that have been tried for centuries, and have always failed." "If, as it seems, Russia's present and contemplated actions contradict the plain meaning of the Yalta declaration on liberated Europe, it is clearly incumbent upon Mr. Roosevelt to burn up the wires and air waves between Washington and London and Moscow before the hope of a decent peace once more vanishes.

Meat Shortage Could Have Been Avoided

REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, March 16, 1945

Mr. JENKINS. Mr. Speaker, the meat situation is desperate in the country and will get worse. Were it not for the patriotic patience of the people, the complaints would be louder. Some of the large cities are protesting and the governors of some States are claiming discrimination against their people.

This is largely due to the New Deal philosophy of scarcity. The New Deal never loses an opportunity to regiment. Many things have happened to show the fallacy of this unwise doctrine.

The Republican congressional food-study committee has for months protested against this policy. It has repeatedly pointed out the reason for the shortage of beef. It is due to the failure to permit the meat producers to produce to the maximum capacity.

The feeder is a most important factor in the production of beef. He is the man who puts the last and best two or three hundred pounds on the live animal. The feeder has been practically put out of business and meat production has been reduced by millions of pounds.

The New Deal program has disorganized the whole meat-producing industry from the rancher to the butcher, who distributes the meat to the housewife.

WHERE NOBODY IS SATISFIED, THERE MUST BE SOMETHING WRONG

A few days ago representatives of the slaughterers and butchers of the Eastern States met in Washington and complained against the conduct of the O. P. A. A representative of one of the largest groups insisted that authority and responsibility should be placed in one single agency.

The Republican congressional food-study committee introduced legislation in the last session of Congress seeking to establish one central agency for the handling of food. This bill was approved by the Committee on Agriculture of the House. The bill was reintroduced.

Pork, poultry, mutton, and lamb production is being reduced rapidly. Fish is about the only meat left.

Black markets flourish everywhere. The people are told to be patient. That does not solve the serious problem.

Veteran's Social Security Payments

REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, March 16, 1945

Mr. WEICHEL. Mr. Speaker, some few years ago, the Congress passed the Social Security Act compelling employers to pay into a fund for the future benefit of employees.

Since the enactment we have gone to war, with the Government now the employer of millions in the armed forces.

However, the Government, even though compelling employers to pay into this fund, does not, itself, take the place of the former employer and pay into the social-security fund, even though these men in the armed forces were obliged to lose their former employer, who paid into the social-security fund.

In order that these men now in the armed forces may be protected in their social-security payments, I have introduced the following bill:

A bill amending title II of the Social Security Act to provide for crediting service in the armed forces for old-age and survivors' insurance benefits.

Be it enacted, etc., That title II of the Social Security Act, as amended, is amended by adding at the end thereof a new section as follows:

"MILITARY SERVICE

"SEC. 210. (a) Any individual who has attained the age of 65 and who served in the active military or naval service at any time after December 6, 1941, and prior to the termination of the present war as declared by Presidential proclamation or concurrent resolution of the Congress, and was honorably discharged therefrom, shall be deemed for the purposes of this title to have been paid on and for each day in the period of his active military or naval service occurring after September 30, 1940, and prior to the one hundred and eightieth day after such termination, wages at the annual rate of $1,600, except that if such individual began such service after September 30, 1939, and was paid in the four quarters immediately preceding the quarter in which he began such service, total wages in excess of $1,600, such annual rate shall be the amount equal to such total wages: *Provided*, That the amount of wages deemed to have been paid in any calendar year under this section shall not in any case exceed such amount as would make his total wages in such year (including any wages, as defined in sec. 209, paid him in such year) more than $3,000.

"(b) As used in this section (1) the term 'military or naval service' means service in the land or naval forces of the United States, including the Coast Guard, the Women's Army Corps, the Women's Reserve of the Naval Reserve, the Women's Reserve of the Coast Guard Reserve, and the Marine Corps Women's Reserve; and (2) the term 'quarter' shall have the meaning assigned to such term in subsection (g) of section 209.

"(c) There are hereby authorized to be appropriated to the trust fund, out of any money in the Treasury not otherwise appropriated, such amounts as may be necessary to meet the additional costs of payments under this title, and of administration, arising by reason of the provisions of this section."

Amendment to Servicemen's Allowance Act of 1942

REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 16, 1945

Mr. PHILBIN. Mr. Speaker, I have today introduced a bill to amend subsection (b) of section 210 of the Servicemen's Dependents Allowance Act of 1942, as amended, as follows:

In case of the desertion or imprisonment or other disciplinary proceedings of any enlisted man or woman under such circumstances that pay allowances to dependent or dependents are discontinued, the secretary of the department concerned shall be authorized and empowered, upon a sufficient showing that the discontinuance of said pay and allowances is working a hardship upon the said dependent or dependents, to reinstate such pay and allowances, in full, in the same manner as originally authorized and to the fullest extent of the entitlement except that nothing herein shall prohibit any department for disciplinary reasons, from terminating or suspending in whole or in par, direct pay to said enlisted man.

Abraham Lincoln was against the Army and Navy practice of punishing a soldier by withholding his pay or the allowances that were due his dependents. When the Army failed to act on his recommendation for relief in these matters, he settled the situation with a three-word admonition to the then Secretary of War, Edwin M. Stanton, as follows: "Please do it."

As bearing on this important subject, I read from a recent newspaper excerpt from the Washington Star:

Abraham Lincoln was against the Army practice of punishing a soldier by withholding his pay, and when the Army failed to act on his recommendation for relief, he settled the matter with a three-word admonition to the then Secretary of War, Edwin M. Stanton, March 1, 1864. Lincoln stated the case: "A poor widow, by the name of Baird, has a son in the Army, that for some offense has been sentenced to serve a long time without pay, or at most with very little pay. I do not like this punishment of withholding pay—it falls so very hard upon poor families. After he had been serving in this way for several months, at the tearful appeal of the poor mother, I made a direction that he be allowed to enlist for a new term, on the same condition as others. She now comes and says she cannot get it acted upon." Then the President concluded his letter to the Secretary of War—"Please do it."

The Crimean Conference

EXTENSION OF REMARKS

OF

HON. JOSEPH F. RYTER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, March 16, 1945

Mr. RYTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following declaration of the supreme board of the Polish Women's Alliance of America relative to the Crimean Conference:

DECLARATION OF THE SUPREME BOARD OF THE POLISH WOMEN'S ALLIANCE OF AMERICA RELATIVE TO THE CRIMEAN CONFERENCE

After a careful study of the policies agreed upon at the Conference at Yalta, we women of Polish extraction approaching this subject from an American point of view cannot understand how a country as liberty loving as the United States of America could agree to the overwhelming demands of Russia for Polish territory, and through this directly aiding and abetting her in extending her influence throughout Europe and the world.

If we study the map of Europe after taking into consideration a defeated Germany and the occupation of the Reich by the American, English, and Soviet Armies, we can see from a geographic position a Poland firmly in the clutches of Russia. This position is as dangerous as was her German neighbor and starts her off to slow extermination.

We are profoundly disturbed by this gross injustice to the people of Poland not because we share a common heritage of blood but because, like the average American woman, we demand a better solution to this problem, which we believe, as it stands now, will plunge the world into another war. We ask, Is this the reward that awaits the Polish soldier for his daring on all the fighting fronts?

Is this the reward that awaits the Polish mothers for sending their men to battle in defense of the rights of others?

We ask again, Is this the reward awaiting the Polish nation for defending her lands and other lands at all times when freedom was at stake?

The Polish people fought their German aggressor; can it be that the world now condones the invasion from the east and at the same time condemns the invader from the west?

Our position is very clear. We shall never acknowedge the aggression and the outrages committed upon the land of our forefathers, nor upon any other lands. In anticipation of any changes favorable to the Polish nation we are at the same time prepared for even a greater disenchantment, to which we shall react not with tears and supplications for mercy but shall expend our energies in building a resistance with such strength of character that even the mightiest enemy cannot tear down.

We admit today we are weak and are no match for brutal force, but we solemnly promise the American Nation though they deal us even a deadlier blow than this that we shall not waver in our obligations as pledged in the allegiance to her flag, under whose stars and stripes millions first saw the light of day, and under whose stars and stripes countless numbers of our members and their loved ones are fighting all over the globe.

We implore our women in this time of sorrow and national mourning to persevere in dignity Teach the children to love the United States of America as the land of liberty, and spread this gospel of love until it permeates the hearts of all Americans who believe in the principles of freedom from want, freedom from fear, freedom of speech, and freedom from superior forces in religious, political, and moral life.

Tell the children that these ideals must serve as a beacon light to this Nation or else she will become a tool for hidden crimes and a bargainer for evil.

Tell them "to err is human" and that the nation eventually will follow in the footpaths of her founders and makers of the Constitution, and that in love, great love beyond measure, there is also strength.

Teach the little ones to love truth, freedom, and beauty though there be none around them.

Teach them to sacrifice their blood and fortunes for their country. Tell them of our flag—that the lights in the stars have not gone out, that they are dimmed, and that great love and devotion will make them more brilliant again.

Teach the children thrift; tell them to save their pennies and dollars for bonds to win the war, and when they ask innocently if these bonds will purchase bullets to strike at the hearts of our loved ones across the ocean, assure them that he who breaks faith with our American ideals shall be judged by history and future generations for this treacherous act.

Preserve dignity and honor to the end and let not malice enter your hearts. The destiny of this world is in the hands of God and not in the hands of the dictators.

POLISH WOMEN'S ALLIANCE
OF AMERICA.

CHICAGO, ILL., *March 1945.*

A Just Wage Increase

EXTENSION OF REMARKS

OF

HON. WILLIAM H. STEVENSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 16, 1945

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following item from the National Rural Letter Carrier:

A JUST WAGE INCREASE

The Federal Government's most neglected group of employees—the men and women in the Postal Service—may at last receive a long-delayed measure of justice.

During the last Congress more than a score of bills was presented to increase the salaries of these workers and to correct inequities in overtime compensation.

One of these bills was passed unanimously by the House of Representatives.

It failed of action in the Senate before the Congress expired.

Meanwhile, however, Representative THOMAS G. BURCH, of Virginia, chairman of the House Post Office Committee, was working on a comprehensive bill to effect a complete reclassification of postal employees—the first such general reorganization to be proposed in 20 years.

This bill has now been completed in conference of the Post Office Department, representatives of the employees and members of the congressional committee, and has been introduced in the House.

The Burch bill combines various benefits proposed in the 26 separate bills that were offered last year.

More important, it changes the entire wage structure that has been in effect.

The bill has three main provisions:

1. All classifications of postal workers would be upgraded. A clerk now in the $1,700–$2,100 grade would be raised to $2,700 minimum.

2. Overtime payments, which are now computed upon obsolete and inconsistent bases, resulting sometimes in an employee receiving less pay for overtime work than for normal time, would be regularized at time-and-a-half for overtime on a 40-hour-week standard.

3. "Longevity" increases—annual automatic salary raises which tend to keep workers in the service—would be granted for 11 years, instead of 5 years, as at present.

Representative BURCH'S bill will not only give postal workers better pay from the low-

est to the highest brackets—it will substitute an orderly general law for what has become a mass of piecemeal measures because of frequent amendments to the 1925 law.

Any benefit that it may confer is well deserved by the postal workers.

The Government has no employees who are more loyal in its service or of whom higher standards are required.

The manner in which they have been financially neglected, while virtually all other classes of workers have had large pay-envelope increases and while the costs of living have been ascending, has been discreditable.

The Burch bill is the best legislation proposed in their behalf since 1925.

Mailmen are now receiving, as a wartime concession, a temporary cost-of-living bonus of $300 a year.

This arrangement will terminate on June 30.

Congress should pass the Burch bill without fail before that date.

A Soldier's Letter to His Dad

EXTENSION OF REMARKS

OF

HON. WALTER A. LYNCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 16, 1945

Mr. LYNCH. Mr. Speaker, under leave to extend my remarks I am including a letter from Lt. Robert Hardart which appeared in the Fordham Ram, the college newspaper of Fordham University. To my mind the letter deserves the widest publicity, because it unconsciously depicts the courage of our American troops and tells us, who are at home, how victories are won. I confess that tears were in my eyes before I read the concluding line of this letter, for young "Bob" Hardart, when he was still a boy in college, was a visitor, on occasions, at my home.

It is hard for me now to realize that this handsome young chap, who had before him everything the world could give, who cheerfully chatted with me in my home, who was the friend, pal, and trackmate of my own son, now serving in the A. A. C. S. in Egypt, is the veteran who so bravely faces the future.

While at Fordham University, Lieutenant Hardart was the collegiate boxing champion, cheer leader, and captain of the cross-country team. By his classmates he was voted the "most likely to succeed." I believe that "Bob" Hardart will still succeed—his is the hero's courage. To those at home who gripe at the inconveniences and petty annoyances that come as a result of the war, I commend this letter from this soldier and hero, Lt. "Bob" Hardart, to his affectionate father:

Lt. Bob Hardart, '42, former boxer, cheerleader, captain of cross-country team, voted "most likely to succeed" in senior poll, wrote the following letter to his father:

DEAR POP: Here we are again. Things are coming along fine. It's slow work, but I'm improving daily. Just had a long talk, yesterday, with my nurse, and she convinced me that I should tell you what I'm going to. You will have to know it eventually, but I was going to put it off as long as possible.

First of all, I want you to know that I'm really cheerful and looking forward to getting home and learning to live a kind of new and different life. Instead of being blue and discouraged, I am very happy and have plenty of faith in a happy future. Now I'll tell you what happened to me. So kind of brace yourself.

My legs were pretty badly wounded, but in time will be as good as new. However, I lost my right arm just below the elbow. Right now I can't see, but with the facilities in the hospitals at home, the eye doctor here tells me there is a slight chance that they can make me see. However, I'm not really counting too much on that, because I feel that I will remain this way.

Well, dad, that is the story. I hated to tell you, but I know you would have wanted to know. For "gosh sakes," please don't feel sorry for me. If you could see me here in the hospital, and all the fun I'm having—kidding the nurses and talking with all the swell visitors we have, you would say: "there is nothing wrong with that guy, send him back to duty." I've still got a lot to live for, and that plus my faith will probably make me the happiest fellow in town.

By the way, a British major visited us the other night and we chatted for 2 interesting hours. Next day we got a box from him with a quart of milk, a bunch of apples, and two bottles of beer. Wasn't that swell of him?

Say, I'm running overtime. You are getting more than you deserve. In closing, besides sending my love to all, I beg you to believe me when I say I am happy and contented and have a great faith and hope in the future.

Lovingly,

BOB.

Address by Herbert Brownell, Jr., at Lincoln, Nebr.

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 13 (legislative day of Monday, March 12), 1945

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech delivered by Herbert Brownell, Jr., chairman of the Republican National Committee, at Lincoln, Nebr., on Thursday, March 8. Lincoln is the home town of Herbert Brownell and he was welcomed with a great reception. He delivered a speech which I think is of interest not only to Republicans but to Democrats as well.

I have been informed by the Public Printer that it will cost $130 to print the address in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, Governor Griswold, Governor Blue, Governor Vivian, and members of the Lancaster County Republican Committee, my return today to Lincoln, where I spent so many years of my life and where I attended the public schools and State University, has been a most happy and heartening one. The hospitality and enthusiasm which Nebraska Republicans have shown here tonight indicates why they win elections so often. It is a great honor to meet here with three of the Republican Party's great leaders in public life—the governors of three Middle Western States which went Republican from the top to the bottom of the ticket in the historic Presidential campaign of 1944. Each one of these Republican governors is an asset to our party and a vigorous and successful leader of public opinion here in the heart of America. One reason I am proud to serve as chairman of our Republican National Committee is that our party is presenting to the Nation an increasing number of able, progressive statesmen such as the distinguished chief executives who are with us tonight.

Here in my native State I wish to pay tribute to the Representatives whom the voters of Nebraska have sent to guard their interests and present their point of view in the Congress at Washington—a solid Republican delegation. My political duties require me to spend a good deal of time in Washington these days, and I can say without hesitation that the leadership displayed in the United States Senate by Senator KENNETH S. WHERRY, Republican whip, and Senator HUGH BUTLER, is a credit to this State. I sincerely appreciate the support they are giving to the program of the Republican National Committee. In the House of Representatives, this State has splendid representation in four public servants of character and ability, CARL CURTIS, HOWARD BUFFETT, KARL STEFAN, and A. L. MILLER.

On behalf of the officers and members of the Republican National Committee, I wish to thank the Republicans and all anti-new dealers of this State, and of the adjoining States for the overwhelming support which they gave to our party last November by voting for our great standard bearers in that campaign, Gov. Thomas E. Dewey and Gov. John W. Bricker.

By leading the way to victory in your States in that election, you have earned the right to a leading role in the formulation of policy for our party in the months ahead. Accordingly, it is most fitting that I shall present for your consideration this evening some of the organization plans of the Republican Party for victory on a Nation-wide scale in 1946 and 1948.

The Republican Party is one of the great unwritten institutions of government in our country. Our political evolution has been such that our two major political parties are today as much a part of government, in an institutional sense, as are any of the governmental institutions which are spelled out in the Constitution. We, as members or supporters of the Republican Party therefore have obligations and responsibilities extending far beyond those of any social organization because it is through the party machinery that the Nation governs itself. Particularly is this true if you believe as I do that the Republican Party will soon be called upon to assume broader national responsibilities.

One preliminary, but very important, step has already been taken to enable our party to function energetically and successfully. Our party leaders and the great rank and file of 22,000,000 voters who supported our ticket in the November election agreed that a full-time, all-year-round national party organization is needed to win. Too often our headquarters has "shut up shop" after a Presidential election and merely marked time until the nominating convention 4 years hence. Then a flood of volunteer workers and a hastily improvised and financed central headquarters spends 4 feverish months assisting our candidates in presenting our case to the voters.

I am pleased to be able to state that the Republican National Committee, meeting in January in Indianapolis, voted unanimously to place the activities of the Party organization nationally on a full-time, all-year-round

basis, with an enlarged staff of trained personnel, to conduct an intensive 2-year campaign with the immediate objective of winning control of the Congress in 1946.

This calls for increased organizational strength of the national committee in the fields of radio, press and magazine publicity. It is being built up. It calls for an adequate and competent research department. It is being built up. Above all it calls for the development, and the full understanding throughout the party and the country, of the ideas and principles for which we stand. No business is better than the products it makes. No political party is better than the ideas for which it seeks the support of the people. I am now able to announce that our new organization will be set up and the key personnel selected by the 1st of April. I think you will agree with me that this is very good news.

Time doesn't permit me to detail all of the measures taken and proposed to be taken to carry out the mandate of the national committee. I shall, therefore, limit myself this evening to a brief discussion of the thoughts of some of us about the ideas which our party stands for and through which it proposes to achieve not just political victory but a better nation for all the people. As I said at Indianapolis, what is best for the United States is best for the Republican Party. We do not propose or desire to win elections at the expense of the welfare of our country.

The temptation of the opposition party to confine itself to criticism of the party in power is hard to resist. It is sometimes the easier path to follow. I do not minimize the importance of such criticism. It is a primary function of the opposition party. Of course, we intend to follow closely and criticize, where justifiable, the policies and actions of the New Deal.

But the Republican Party cannot be content to sit by and simply snipe at the New Deal. It must be a party of opposition in the broadest sense of the word. It must not only oppose unsound doctrines, practices, and policies; it must go much further. It must produce for the benefit of the country the best possible program around which all of our people, particularly our youth, can rally; a constructive, inspiring, forward-looking program; a program worthy of a party whose spirit is young, healthy, vigorous, and confident; a program worthy of a party desirous, able, and prepared to take on its full measure of State and National responsibility; and a program which is so sound, so intelligently designed to meet the new and vast problems engendered by the war, and so forthrightly honest that every thoughtful, self-reliant citizen, young or old, can proudly say, "That's the kind of political philosophy I want and our country needs; that's a program I want to fight for."

That program will deal with all of the important national and international issues of the day—notably world peace, reemployment, provision for our veterans, taxation, progress in science and education, agriculture, honesty in government, social security, and world trade. But to bind it all together—to give it character, vitality, and substance—we must set forth and emphasize the basic Republican philosophy.

The first step in developing such a program is to formulate and express the spirit that gives it life and inspiration; the keynote with which the whole score must be in harmony; the yardstick by which its individual elements will be measured.

There are three main principles upon which there may be some misunderstanding or some misinformation but on which I believe the domestic welfare of our country depends, namely, (1) a representative, constitutional form of government, (2) a creative and productive free enterprise economy, and (3) a government dedicated to the efficient assumption of its social, humanitarian, and economic responsibilities. All my remarks are based on the certainty of a complete military victory whose only uncertainty is one of time. But with the advent of peace, we will again face some basic issues which war silenced but did not settle. In addition there will be vast and complex new issues resulting from the war.

Even a modest knowledge of recent history indicates that two diametrically opposed philosophies of government exist in the world today. In some countries, one doctrine is in the ascendency; in some, the other. But the contending influences of both pervade all nations including our own.

One doctrine seeks to make the central government supreme in all matters. It proceeds from the thesis that the government is all-important and that the individual exists only as a statistical cipher and as a pawn or servant. It assumes that ordinary people are weak, foolish, ignorant, and helpless, and in need of close and constant guardianship and guidance by the state. It undertakes to plan in detail for the whole national economy and to regiment the people into its master plan—always, however, from the point of view of creating citizens who will be of greater service to the state. It goes on the theory that the omniscient and omnipotent government can best provide food, shelter, occupation, and security for its citizens, and it makes the grievous error that this is all they want or need. Assuming that men live by bread alone, it offers no food for the spirit, no hope for the soul.

In contrast with the great regimented mass of the people who bear the burdens there are assumed to be a comparatively small group or party who will direct this state machine and who will enjoy most of the benefits. They are the self-styled wise, the powerful, and the privileged ones. They undertake to think for the rest, to plan for the rest, to direct and regiment the rest as they see fit—in the name of the national welfare. This is the totalitarian doctrine, the doctrine of regimentation and of privilege. Of course, these privileged few do not describe their government to the common man quite as we have described it here. They speak only of the fact that the common man will gain more security under such a system. When the privileged few in power promise, for example, that the government will guarantee jobs, they willfully omit to point out that if the government guarantees jobs then everyone must, as a permanent proposition, submit himself or herself to the bureaucrats of government who will tell him what job he shall take in order to receive this security, where his job is to be located, what hours he shall work, what pay he shall receive, and what working conditions he shall endure, and what assessments he shall pay out of his pay envelope to support activities which the government decrees are for his benefit.

The other doctrine proceeds from the theory that the human being is all-important and that the government exists to serve his welfare. It is based on the conviction that there is a tremendous reserve of wisdom and creative power in the people. It maintains that the amount of government necessary to create fair and stable conditions is the right amount of government for the general welfare. It assumes that the people themselves are competent to select their government, and, in a broad sense, to select their national and individual goals and to plan the road by which they choose to reach them. It charges government with the obligation of carrying out the wishes of the people, of serving them wherever government must and should serve but always as a helpful and useful friend. It means a government insistent on providing that all citizens have full and equal opportunity—not privileges for the few and obligations for the many. This is the doctrine of creativeness, liberty, and of opportunity.

These two doctrines are as far apart as the poles of the earth and as different as oil and water. They will not mix. There can be no compromise between them. Our reason tells us so. Our experience confirms it. We will have to make our choice on one side or the other.

I do not pretend, particularly in my present position, to possess the impartiality of a philosopher, but as I observe our two parties, I perceive that the New Deal is fast becoming the party of regimentation and special privilege. During the New Deal years tremendous new instrumentalities of power have been given to our Federal Government. It is almost inevitable that the administration in power so long, with these new instrumentalities of power, should become the party of regimentation and privilege. New evidences of privilege under the New Deal crop out every day in the news headlines. Special privileges in appointments to high offices for those who walked the New Deal chalk line in the campaign. Special trips to Moscow for the city bosses. Special exemptions from wartime regulations to the Petrillos. Special and excessive red-tape regulations and taxes which put small business and small agriculture at a competitive disadvantage. Special favors to bureaus which propagandize for the New Deal. Special financing to war contractors who head up campaign committees. Special privileges to bureaucrats to do the thinking and planning which rightfully belong to the people themselves. Taken together, these privileges form barriers to equal opportunity and to individual initiative which are insuperable. The list of privileges is a long one, and when the war pressure eases, it becomes increasingly clear that the American electorate will turn thumbs down on the party of regimentation and special privilege.

The New Deal tried to work both sides of the street and failed. One day it professes to be for free enterprise. The next it appropriates millions for Government competition with private industry. Yesterday it was for planned scarcity. Today it talks about programed abundance. The result in the past was increasing confusion and discouragement of our people accompanied by an overwhelming volume of unemployment, terminated only by the outbreak of war.

Maybe a purely totalitarian or State-directed economy could prevent unemployment. It has never yet done so apart from war. But we know that a Government which tries to be for one doctrine today and for the other tomorrow—or even for both at the same time—cannot accomplish it. On the other hand, we know that the creative enterprise system has raised the standard of living of man beyond anything ever known before in history.

The position of the Republican Party on these issues must be made clear to all beyond the shadow of a doubt. We stand for the freedom of choice of the individual. We stand for the obligation of the Government to create and maintain conditions which afford the widest individual liberty and freedom of choice, and we stand for the fullest possible opportunity for the individual to develop his capabilities for his own good and the good of the community. The vigorous, liberal leaders of the Republican Party in the Halls of Congress and the State capitols furnish the brightest promise in all the country for progressive Government, under Constitutional safeguards, with full realization that creative enterprise—not regimentation and privilege—will bring greater wealth, happiness and liberty to our citizens.

Those who came to this country in the early years, or even throughout the nineteenth century, did not come here in quest of privilege. To them America, above all, spelled liberty and opportunity.

American had, and still has, great natural advantages—tremendous territory, vast natural resources, great agricultural fertility blest with salubrious and varied climate,

long coast lines opening the gates of commerce across the seas to the east, the south, and the west. Our population has drawn its strength from the most courageous, venturesome, and enterprising people of many lands. But it is not our area that has made us great. Some other nations have larger territory. It is not the size of our population. Some others are more populous. It is not our resources. Some others may even have more of these. What is unique in America, and that to which we owe our greatness, is the combination of all these with a full measure of liberty and opportunity, and an effective utilization of the enormous creative energies of our people. This has enabled our people to develop our resources and to raise our standard of living beyond anything ever known in the history of mankind.

We Americans have an inherent aversion to privilege wherever we see and recognize it. It is opposed to the most basic elements of our tradition. It contradicts our Declaration of Independence, our Constitution, our Bill of Rights. It is the enemy of progress, whether it raises its ugly head in Wall Street, in big business, in bureaucratic centralized government or in labor unions or otherwise. We don't like racial privilege, religious privilege, economic privilege, or political privilege. We don't like the man who cuts in at the head of the movie line, the cigarette line, or the economic or political line. We know that privilege is not creative, that it is not productive, that it does not raise the general standard of living one iota. It is the exact opposite of all of these. It is the Maginot Line of the greedy and the incompetent. It vests in those who have not earned and do not deserve, that which others could earn and deserve.

Conversely, they want opportunity. They know that opportunity is the exact opposite of privilege. That it is creative, productive. That it offers every man a chance to expand his abilities to the utmost of his just deserts. Every town and hamlet in the country has its story of some home boy who seized his opportunity and made good. He is the hero of his community. Americans want opportunity for themselves and for their children, just as their parents and their grandparents had it. Their fervent hope is that at the end of this war, opportunities may be opened to all, particularly to our young people, our returning veterans, and even to all of the oppressed, afflicted, and unfortunate. For in this, they see not only our own peace and prosperity, but that of the whole world.

We want a kind of society in which our ablest people, regardless of the station of life into which they were born, may rise through their own creative efforts. Our Nation has become and will continue great only to the extent that it makes possible the rise of talent in every field of endeavor. A free and creative society makes this possible. No single man and no small group of men even though in possession of the vast machinery of the modern state can hope to rival the material and spiritual productiveness of a people left free to develop their own energies and talents. Then and only then can we achieve the full security that only a prosperous society can achieve. A prosperous and healthy nation, like a prosperous and healthy family, is alone capable of caring for its sick and unfortunates.

Our opportunities for the future may be different in kind from those of the past, but they will be no less in degree. On the contrary, they will be even greater. It would be tragic indeed if by our great advances of the past we had built toward restriction rather than toward expansion of opportunity. Fortunately, this is not the case. I invite your attention to the great new opportunities and brilliant future in the chemical industry, in aviation, in electronics, in building, in agricultural methods and products, and in countless new service industries—big and small. These will make new chances available to office, factory, mine, and field workers—to management and investor alike—if only we free our productive powers of the shackles of regimentation and privilege. And in the wake of this development can come the most important achievement of all—a culturally and socially fuller and richer life for all the people.

The key to prosperity in our way of living and in our tradition, has been liberty and opportunity, not regimentation and privilege. Each passing year has brought new revelations of the wisdom, the initiative, and the creative power of our people. No small group of bureaucrats has ever had, or will ever have, anything to equal it. It is humanly impossible for any group of bureaucrats to think of or regulate the millions of details which constitute the fabric of a modern society. Our future does not lie in the restraints and restrictions of regimentation and privilege which kill the aspirations of men. It does depend upon loosening the energy, the resourcefulness, and the ingenuity of our people by removing obstacles to expanding opportunity.

Accordingly, as we develop our legislative programs for our party, I am confident that they will be geared to individual initiative, creative enterprise, and expanding opportunity. The only privilege the Republican Party will advocate will be the sacred privilege of liberty and opportunity for all. The only privileged class that we will tolerate will be the underprivileged. To them we will endeavor to afford greater opportunities for health, for education, for self-improvement, and for economic betterment. But the great majority of our people, many statements to the contrary notwithstanding, are not underprivileged. All they want is to see their white alley and the chance to move down it as a result of their own efforts.

I do not mean to say that government—National, State, or local—should abandon its many proper functions. Quite the contrary. It is the business of government to see that those basic economic and social conditions exist that are essential to the development of equal opportunity. This is not abdication by government. It is the exact opposite. It is the exercise of its highest and most difficult functions. This is the type of government toward which the Republican Party aims. We want to see every statute, rule, and regulation on the books tested by such doctrine. We want to see every plank in our platform tested by such doctrine; and we want to see every law and action that takes place when we come into power, conform to such doctrine.

Some political philosophers have found difficulty in reconciling the concept of liberty with security. In many ways superficially they appear contradictory. I think it can safely be said that security, like true happiness, cannot be obtained by direct approach, but is a byproduct or result of other conditions. Strangely enough, in this country, whose people and traditions have in years gone by, laid least emphasis on security, security has been found in greatest measure. Security is the byproduct of economic and social surpluses. We want far greater security for all our people than they have ever had before. We will fight for a fair and equitable allocation of the wealth our Nation can create if given the opportunity. But we maintain that security is not achieved by dividing up the production of a throttled economy but by the equitable distribution of the products of a creative, healthy, and prosperous society.

I believe that in this observation lies the truth that security is the offspring of liberty and opportunity, and that unless we can maintain our liberties, unless we can maintain our opportunities, the pursuit of security will be in vain.

The history of American progress—indeed the history of all human progress—is the story of the expanding circumference of human liberty and opportunity. The Republican program must be, and will be, in harmony with the march of progress.

This, then, is the essence of the spirit of the program of the Republican Party. We want no doctrine of regimentation and privilege; we want no part of antiquated or reactionary doctrines. Out of the crucible of years of depression, suffering, and tragedy, we must and will distill an inspiring program of new hope based on basic truths, a program pointing the way to recapture that progress, that unity, that creative power, which belongs to Americans as a heritage of the past and a promise of the future.

That is what you want. It is what I want. I believe it is what the American people want—and so far as it is within my power by reason of my party position, the Republican Party program for the future shall be designed to expose every superficial plan which is a step consciously or unconsciously made up the road toward regimentation and privilege, and to promote affirmatively measures for a rebirth for all our people of American liberty and opportunity on a vaster scale than ever was known before.

Home, Strange Home

EXTENSION OF REMARKS

OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1945

Mr. GRANT of Indiana. Mr. Speaker, we are well aware that many long and hard battles lie between us and the end of the war, but it is never too early to plan for the peace. Demobilization of our armed forces will bring its problems and we as a people must be prepared to meet them. The problem of readjustment for some eleven or twelve million Americans will be most difficult at best, and we as a people should do everything we can to help lighten the shock of this human reconstruction and rehabilitation.

The current issue of the Army and Navy Journal contains a very worthy and thought-provoking article by Admiral William H. Standley, United States Navy, retired. That same issue of that authoritative journal comments editorially upon the suggestions made in Admiral Standley's article.

Admiral Standley has urged that every American soldier or sailor, who has seen service abroad, be given at least 1 month's leave with pay prior to his discharge from the service. In support of his suggestion, he cites his own personal experiences when he had his first month's leave from the United States Naval Academy. He recalls how the month's leave at home, while still in uniform, went a long way to help him toward a realistic adjustment of his lot.

Based upon the quoted comments of General Hershey that the fall of Germany will release one or two million men from the armed services, and his further statement that "if we let out 1,000 men

an hour, it will take 10 months to get rid of 2,000,000 or 2,500,000 men." There is every reason in the world why favorable consideration should be given Admiral Standley's proposal. All of these men will be anxious to get back home and their famillies will want them home. If leave can be given them while they are still in uniform, while they are awaiting the orderly processes of demobilization, it will, I feel certain, go a long way in relieving the demands of the man in uniform and their families, and at the same time, lessen the shock to them of their sudden release back to civilian life. There may be some cases where immediate and final release is possible and desirable, but in a great majority of cases, I feel that the recommendations that are made in this interesting article could well be followed by the War and Navy Departments. The article by Admiral Standley and the editorial comment thereon follow:

HOME, STRANGE HOME

(Not the least of the problems of post-war readjustment, is that of the serviceman in returning to his civilian pursuit and surroundings. Awaiting take-off at an African port, Admiral Standley, who has seen the problem in action, pondered the subject. The following article records his thoughts. Admiral Standley, who has been through three major wars, was formerly Superintendent of the United States Naval Academy, Commander of the Battle Force, United States Fleet, Chief of Naval Operations, and Ambassador to Russia, is now serving with the Office of Strategic Services.)

(By Admiral William H. Standley, United States Navy, Retired)

I was sitting in the waiting room of the Naval Air Transport Service at Port Lyautey waiting for the take-off of a Navy transport plane C-54, upon which I was to return to America.

Waiting is typical of air travel; one is never sure he will take off at the predicted hour. We had arrived the previous afternoon and expected to take off within the hour. This was extended to 2 hours, then the time was set for midnight, but the incoming plane had not arrived so the time was advanced to about 6 a. m. We would be called in time. We were called at 7:15 and hurried through breakfast, to be told that the departure was delayed until 10. When we received this news I was looking at a sign over the door of the restaurant which read, "It takes time to spare to travel by air, by Harry Gair," and I thought "How true!" Our departure was delayed for one thing or another for periods of 20 minutes to an hour until we finally got away at 2:24 p. m.

I had been away from America some 3 weeks, during which time I had seen and heard much. I had visited the Allied activities in north Africa and Italy. I had been given an audience by the Pope and by Marshal Badoglio; and lunched with Marshal Tito and the Prime Minister of Yugoslavia; had dined with Commissioner and Lady McMillan, with Ambassador Murphy in Naples, with Ambassador Kirk in Rome, with the High Command Generals Sir Maitland Wilson, Devers, Patch, Alexander, Lemmtzer, Barr, and Air Marshal Siesser; and finally had tea with our Ambassador to the Vatican, Ambassador Taylor, and Mrs. Taylor, and with my good friend Bishop Spellman. I had been in contact with soldiers and sailors of the Allied Nations—G. I. boys from America, including loyal Japanese, Britain, Canada, South Africa, France, Poland, Greece, and Italy—all in this comparatively restricted area, working feverishly but in deadly earnest to the same end—victory. I had seen the men of the services doing a grand job, and my trip was made possible by the efficient transport services operated by the Army and the Navy.

To while away the time while waiting, I was absently thumbing through the pages of the August 14 issue of Life when the picture and caption of the half-page advertisement of Time, on page 79, suddenly stood out like a sore thumb. It treats of a subject to which I have given much thought, for example, the unexpected difficulties which will beset our boys on their return home.

The opening lines of the advertisement are expressive of my thoughts concerning the return of these boys, and I shall take the liberty of quoting—

"He dreamed of home and longed for it, day and night for years. And now * * *

"There's something wrong. He's changed * * * or it's changed * * * or else it hasn't when it seems to him it should have changed.

"The folks who haven't gone through what he's been through or seen the things he's seen * * * who haven't lived his life with its terrific extremes of hairstrung responsibility and fatalistic waiting; how can they understand?

"They want to help; they hover over him with a frustrated, loving, puzzled concern that can find no outlet."

General Hershey recently stated that the fall of Germany will release "between one and two million men from the armed services," that "when the war is over people want their boys to come home," and that "if we let out 1,000 an hour it will take 10 months to get rid of two million to two and a half million men."

The foregoing advertisement continues to voice my thoughts when it says that we must not wait for the boys to come home before we act; we must do something now. And I offer that urge as my excuse for this effort. As a first step in our desire to help our boys readjust themselves to changed conditions and viewpoints, I urge that Congress enact a law requiring that every American soldier or sailor who has seen service abroad be given at least one month's leave with pay prior to discharge from the service. In support of this suggestion I offer the following experiences incident to my own military service.

Prior to leaving to take the entrance examinations to the Naval Academy, I had hardly been beyond the limits of the county and had never been away from mother, family, and friends for more than a week at a time. The parting was a terrible wrench to the heartstrings, and throughout my plebe year at the academy I was looking forward to my first leave in anticipation of the grand time I would have when again with home and friends. The reunion was all that I anticipated; my old friends were glad to see me and I was delighed to be with them again. But in a few days something seemed to be out of adjustment. My friends were all busy and, in the main, pursuing the same objectives they were before I left. They had time for entertainments and amusements in the evening and their days were fully occupied as of old. With me, however, it was different. I had acquired new interests, new objectives. In the the day time I was unoccupied and lonely, and having passed out of their orbit of activities and interests I could not fully appreciate and enjoy the evenings with my friends as I had formerly done. As a result, before the month was up I was tired of doing nothing and was anxious to get back to the routine duties at the Naval Academy.

Many of our boys will be in exactly the same status as I was when I had my first month's leave from the academy. A month's leave at home while still in service, in uniform, will not only help them toward a realistic readjustment but will prevent them squandering whatever bonus they may receive on discharge.

When this war is over, there will be, as there was at the end of the last war, a grand scramble to get home. The boys will all want their discharges immediately, and, of course, this will be impossible. Inevitably there will be much dissatisfaction and annoyance at the delay, and when finally discharged many will leave the service with a feeling of frustration and bitterness which could be avoided if, as their services could be dispensed with, they were given a month's leave and furnished transportation to their homes immediately upon their arrival in the United States.

When the armistice was signed at the end of the last war the Secretary of the Navy was quoted in the evening papers with the statement "Now the war is over we can all go home." I was commandant of midshipmen at the time, and when I arrived at my office early the next morning a midshipman was waiting to see me. He said he wished to submit a request and handed me a paper which proved to be his resignation as midshipman at the United States Naval Academy. I sensed an epidemic as a result of the Secretary's statement and sparred for time. The young man said he had his father's permission, as required by the academy regulations, and that now the war was over he wished to continue his pre-war studies. Usually I would have forwarded the request with a recommendation that it be approved, but an inner voice seemed to warn me to take time to think it over, so I told the young man that I would give the request careful consideration and inform him later of my decision. It was fortunate that I did this, for by office hours the next morning I had over 30 midshipmen's resignations on my desk. After carefully checking each one, I sent for the group. I pointed out to them that when they entered the academy they were of draft age, that, of course, no one believed they entered the academy to avoid the draft but that they entered in good faith with every intention of making the Navy their career. I stated that if, however, they left the academy now there would surely be some of their buddies who had not escaped the draft who would point the accusing finger and utter with contempt the words "draft dodger." I told them I was sure they had not realized this, but at any rate I did not intend to let them place themselves in such a position so I would not forward any of their requests but would return them to the signer instead. That cured the epidemic, and as to the soundness of my decision the following will testify.

Some months later, influence in the higher echelon prevailed upon the academy authorities to permit the son of a prominent official to resign. This resignation had no effect on the other students, except that it brought on fisticuff. A classmate met the ex-midshipman in the corridor with his resignation in his hand. The news having spread, the classmate as he passed hissed "draft dodger," and the ex-midshipman demanded satisfaction for the insult, which he got in the way of a good licking.

At the closing out of the war I was in command of the battleship *Virginia* at the Boston Navy Yard. We had orders to discharge the eligibles as rapidly as possible. There were some 300 men to go out. With a reduced and also vanishing clerical force, we could not handle more than 10 discharges a day, so the men were arranged in a priority list based on conditions as nearly equitable and fair as we could make them. This list was published and the men, knowing to the

day when they would be discharged and free to plan accordingly, were satisfied and content to wait. However, political pressure became very heavy, and in a few days orders began to come from Washington to make a special case of John Doe, who was probably well down on the list, and give him discharge immediately. This upset the order of discharge and resulted in discontent all down the line, usually causing displaced boys to write home about it, and then would come more special order discharge. Because of this, many youngsters left the service with feelings of disgust and bitterness.

All this would have been avoided and can be avoided when the boys come home from the present war if they are given at least a month's leave immediately after their services can be spared—a month's leave to go home, in uniform and with full pay, to see their wives, their children, their mothers, and their sweethearts. Such a respite would give them a chance, without the necessity of trying to plunge right back into civilian life, to see what conditions are, what has to be done, what they can do; so when they do get their discharge they will be far better fitted in every way to resume their places as useful citizens of the United States of America.

[From the Army and Navy Journal of March 10, 1945]

The plan for helping to ease the veterans of this war in their transition from service ways to civilian life, as presented by Admiral Standley on the first page of this issue of the Army and Navy Journal, should commend itself to Congress and the military and naval authorities by the very simplicity of its operation and administration as well as by its effectiveness and economy. The mechanics of issuing final discharges from the armed forces are not simple. There are many steps which must be taken to safeguard the interests of the individual and the Government, many records which must be assembled and financial transactions to be completed before the man is legally out of the service. Even if the decision to reduce the services to a peacetime basis were made at once and 1,000 men were discharged per hour, it would take 10 months to complete the discharge of 2,500,000 men, as Admiral Standley points out. During the period between the termination of hostilities and the time of actual discharge the men are restless and dissatisfied, long for home and the return to civilian pleasures and pursuits. Then, plunged directly into the home atmosphere, so different from camps and stations, with all his old friends busy with their tasks of earning a living, there follows a period of difficult readjustment. Under Admiral Standley's plan, the servicemen would be given a month's furlough to go home as soon as feasible after their return to the continental United States. This would be no loss to the military organizations, which would themselves be involved in a period of transition, and would be of comparatively small expense because the pay of the men and their subsistence would have to go on, anyway. Its advantages would be legion—it would satisfy the longing of the men to get home as soon as possible, would give them 30 days to be around their community in their uniform and on active duty, would enable them to renew business contacts or look for new ones. Furthermore, their return to their organization to await final discharge would afford an opportunity to consider their civilian life and business from all angles, make plans based on late and intimate knowledge, so that when they finally break off their military attachments they would know exactly what to expect in picking up the threads of their old civilian life. The plan is so simple and sound that we hope it will be put into operation.

Opposition To Changing the Two-Thirds Rule as to Treaties

EXTENSION OF REMARKS

OF

HON. RAYMOND E. WILLIS

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, March 16, 1945

Mr. WILLIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Two-Thirds Rule as to Treaties—A Change Opposed," delivered by Edwin Borchard, Hotchkiss professor of law at Yale University. The estimate of the Public Printer for printing this address is $221.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE TWO-THIRDS RULE AS TO TREATIES—A CHANGE OPPOSED

(By Edwin Borchard, Hotchkiss professor of law, Yale University)

The Committee on International Law of the New York State Bar Association has recommended, by a majority of 11 to 2, that the Constitution of the United States be amended to enable the President to conclude treaties, provided he obtains the advice and consent of a majority of the Members present in the Senate and the House of Representatives.

To this recommendation I shall address this paper. Its purpose will be to show that the recommendation is unsound and that it should be disapproved.

I

The proposed amendment has one advantage over other recent plans to change the two-thirds rule of the Constitution—it is a lawful method of making the change. That is more than can be said for the frequently misused Executive agreement,[1] which is characterized by some proponents of the suggested amendment as an evasion of the Constitution.[2]

The proposal to make the change finds its most recent source in the grievance, assumed to be valid, that the Senate of the United States prevented this Government from adhering to the Covenant of the League of Nations and thus contributed to the present disaster. It finds its current motivation in the apprehension that the proposed peace treaties or the Security League to Enforce the Peace, might not be promising enough to command the support of two-thirds of the Senate, and that to facilitate the adoption of these still unknown treaties a less cumbersome legislative approval is required. Charges are made that the two-thirds rule is undemocratic, obstructive, and inefficient.

To determine the validity of these objections and charges, some inquiry is required into the historical reasons for the treaty-making rule, into the record of the Senate, into the probable effects of the new proposed rule, and some discussion is necessary of the reasons advanced in the report of the House Judiciary Committee, December 13, 1944,[3] adopted in the report of your committee, as to why a change in the Constitution becomes necessary or desirable.

II

The modern movement to reform the Constitution may be said to have begun shortly after the Treaty with Spain of 1898 was approved by the narrow margin of one vote.[4] Perhaps the minority, in opposing the Philippine annexation, was better advised. It received special impetus after 1905 from Secretary Hay's denunciation of the Senate for substituting the word "treaty" (requiring Senate approval) for the words "special agreement" in the proposed arbitration treaties of 1904, a change which Theodore Roosevelt rightly thought, in view of the reservations of "vital interests," "independence," and "national honor," was of no special importance. Perhaps it would have been preferable to leave the arbitration treaties unamended, although an agreement to arbitrate everything except that which is important does not add much to the judicial function. It cannot be said to have prevented the submission of any dispute which the Department of State wished to arbitrate.

As to the present grievance of the proponents, found in the unwillingness of the Senate to adhere without reservations to the Covenant of the League and in attributing to the Senate responsibilities for the current crash, no assumption could have less substantive foundation or do greater injustice to the Senators who made an effort by the reservations to protect the interests of the United

[3] H. Rept. 2061, 78th Cong., 2d Sess., to accompany H. J. Res. 320. "Amendment to the Constitution with respect to treaty ratification," submitted by Mr. KEFAUVER.

[4] R. Earl McClendon in his article, The Two-Thirds Rule in Senate Action Upon Treaties, 1789–1901 ((1932) 26 Am. Jour. Int. Law 37 at 39), lists the following efforts to amend the treaty-making power or abolish Senate control:

"Twice in 1899, shortly after the close of the Spanish-American War, an effort was made in the House of Representatives to have adopted a joint resolution offering a proposed constitutional amendment which would allow the President and a bare majority of the Senate to make peace treaties. In March 1920 there was introduced in the Senate itself a joint resolution proposing an amendment whereby the President and "a majority of the Senate present" would be permitted to conclude all types of treaties. A similar resolution was offered in the House of Representatives the following December. Neither proposal proceeded beyond the committee stage, but subsequently the attempt was made two separate times in the Senate. Meanwhile other and more radical changes in the treaty-making power were suggested. On July 28, 1919, there was introduced in the lower house of Congress a resolution looking toward an amendment which would permit the House of Representatives to share with the Senate the power of approving treaties. No action was taken, but within the following 9 years it was introduced no less than four more times. Finally one proposed change would necessitate a popular vote for the approval of 'certain' treaties."

These proposals were advanced before the current crop in 1943–44. Cf. Herbert Wright in (October 1944) 38 Am. Jour. Int. Law 642, note 1, and Colegrove, *op. cit.* 170.

States.[5] To ask the United States willy-nilly to support without precautions an unprecedented scheme which might entail ruinous and unknown obligations is to ask too much.

Three votes on United States adhesion to the League covenant were taken. The first, on November 19, 1919, rejected the Lodge resolution of ratification with the Senate reservations by 39 in favor and 55 against, and on reconsideration, 41 to 51; the second, the Underwood resolution of unconditional ratification was defeated, 38 to 53. In the next session of Congress, on March 19, 1920, the Lodge resolution was again submitted to a vote. This time it received 49 yeas and 35 nays.[6] President Wilson, who throughout had exhibited very little capacity to cooperate with a coordinate branch of the treaty-making power,[7] exhorted the Democratic membership to disapprove the treaty with its reservations, although Earl Grey had written a letter to the New York Times [8] expressing the belief that Great Britain could safely accept the reservations. Many Democrats voted against the resolution. Had President Wilson not insisted upon opposition to the reservations, it is probable that the covenant would have been accepted.

[5] Roscoe C. McCulloch, The Truth Will Keep Us Free: Who Defeated Ratification of the League of Nations, Columbus (Ohio), 1944, *passim*.

Although the League of Nations was inherently incapable of performing the peace-preserving functions expected from it and is severely condemned by many publicists (see Sumner Welles, The Time for Decision, New York, 1944, *passim*), the United States Senate is still criticized for not having adhered. It would seem that the Senate deserves praise for its foresight and prescience. That the Treaty of Versailles laid the foundation for this war, see references to William C. Bullitt, W. D. Herridge, Robert M. La Follette, Mrs. Clare Boothe Luce, and F. A. Voigt, editor of the Nineteenth Century and After ((London) (November 1914) 30 Am. Bar. Assoc. Jour. 608).

[7] Forrest R. Black, "The United States Senate and the Treaty Power" (1931-32), 4 Rocky Mt. Law Rev. 1 at 9-10:

"Of all the treaties that have been negotiated by the Executive without the advice of the Senate, the Treaty of Versailles is the most notorious example. This treaty was negotiated in secret, and the Senate was kept in the dark during the whole period of the negotiation. Not only did the President, by his interpretation of the treaty clause make the word 'advice' mere surplusage, but he also attempted to interfere with the Senate in the exercise of its constitutional function of giving consent. Although posing as the exponent of open covenants, openly arrived at, when he finally decided to present the treaty in its completed form to the Senate he actually refused to submit, with the treaty, the discussions and minutes of the peace conference. * * * In the nominal interests of peace, we behold the spectacle of the Executive, attempting to bring unfair political pressure upon an uninformed Senate. After depriving a coordinate department of its constitutional right to the facts, he proceeded to appeal to the country, claiming to have a monopoly on the plans for the peace of the world. And in order that the emasculation of the coordinate power of the Senate might be complete, he so drafted the treaty and the Covenant, that they could not be separated and could not be voted on separately on their merits."

[8] Letter to the London Times, published in the New York Times, February 1, 1920. The letter was endorsed by the British and French press. See Denna F. Fleming, the United States and the League of Nations, New York, 1932, pp. 411-413.

Thomas W. Lamont, one of the attendants at Versailles and an important figure in the negotiation of some of its clauses, has recently remarked:

"As has been many times pointed out since 1920, had the administration at that time been content to accept American participation in the League on a somewhat more limited scale rather than on the basis of wholesale commitments, our Senate might well have accepted the League covenant. It was upon the administration's insistence that the Democratic Senators voted against acceptance of the covenant with reservations and thereby automatically voted to defeat the treaty." [9]

III

Historical reasons for the two-thirds rule

The Senate was expected to play a prominent part in the treaty-making power. Before the Articles of Confederation, unanimity of the States was required. Under the Articles, adopted in 1781, 9 States out of 13 had to approve treaties. It was therefore natural that the several plans under consideration at the Constitutional Convention made two-thirds of the Senators representing the States necessary for ratification.[10] Not until September 4, 1787, 13 days before final adjournment, was the President brought into the picture at all. The evolution of the compromise has been often discussed. The two-thirds rule on treaties was adopted by 9 States to 1, Delaware voting in the negative and Connecticut dividing. While Madison proposed an exception for peace treaties, this was not adopted. The motion of Pennsylvania's representative, James Wilson, to bring in the House as a coordinate approver, was defeated 10 to 1.[10a] Alexander Hamilton considered the clause "one of the best digested parts of the plan." [11] Story considered it a power which could not have been "better deposited, with a view to its safety and efficiency." [12] Many of the participants, realizing the importance of a treaty with a foreign power, considered two-thirds too small rather than too large a protection. That was the view in some of the ratifying States, particularly the small States, who did not wish to be overruled by a mere majority. Virginia valued the right to navigate the Mississippi which the Northeastern States were disposed to bargain away. Others valued the Atlantic fisheries. While some of the original reasons for excluding the House from participation in treaty approval—the necessity for secrecy and for speed, the short sessions, the short terms of House Members and the fluctuating membership—might not today be convincing, others are still valid and new reasons, such as the expansion of Executive power, have accrued.[13] With 298 House Members east of the Mississippi and 137 from the West, it is still possible for the small States to be outvoted on sectional issues.

The location of the word "advice" in the clause "by and with the advice and consent of the Senate," following the word "power," indicates that the President was to consult the Senate in the progress of the negotiations. While George Washington soon abandoned the process of oral consultation, his successors have on many occasions sought the advice of the Senate before concluding their negotiation.[14] Wilson's view that the

[9] Letter to the editor of the New York Times, Sunday, April 23, 1944.

[10a] For a summary of the debates in the convention, see S. B. Crandall. Treaties: Their Making and Enforcement (2d ed.), Washington, D. C., 1916, pp. 44-46.

[11] It was known to be a very broad power, hence needed to be carefully guarded by the two-thirds Senate approval. Said Hamilton, in one of his Camillus papers: But from the best opportunity of knowing the fact, I aver, that it was understood by all to be the intent of the provision to give to that power the most ample latitude—to render it competent to all the stipulations, which the exigencies of national affairs might require; competent to the making of treaties of alliance, treaties of commerce, treaties of peace, and every other species of convention usual among nations; and competent, in the course of its exercise for these purposes, to control and bind the legislative power of Congress. And it was emphatically for this reason, that it was so carefully guarded; the cooperation of two-thirds of the Senate, with the President, being required to make any treaty whatever. (The Works of Alexander Hamilton (John C. Hamilton, ed.), VII, New York, 1850-51, p. 518, quoted by Henry S. Fraser in S. Doc. No. 244, 78th Cong. 2d sess.)

[12] He considered the two-thirds rule "a sufficient guaranty against any wanton sacrifice of private rights, or any betrayal of public privileges." Joseph Story, Commentaries on the Constitution of the United States (5th ed.), vol. 2, Boston, 1891, p. 342.

Coming down to more modern times, John W. Davis closed his account of the treaty-making power with the following remark:

"Looking back upon a diplomatic history which is is not without its chapters of success, they feel that on the whole the scheme the fathers builded has served the children well. With a conservatism in matters of government as great perhaps as that of any people in the world, they will suffer much inconvenience and run the risk of occasional misunderstanding before they make a change." (Treaty-making Power in the United States (1920), 6 Am. Bar Assoc. Jour. 1 at 7.)

Representative Sol Bloom, who seeks a change in the treaty power (Treaty-making Power: Fourteen Points Showing Why the Treaty-making Power Should Be Shared by the House of Representatives, 1944), was last year an admirer. Bloom, Our Heritage, New York, 1944, p. 385.

[13] Mr. McClendon thinks the effects of the two-thirds rule have been "practically negligible" in the period covered by his study (loc. cit., pp. 55-56). Ex-Senator Gillette, who introduced several resolutions looking to an amendment, thinks the original reasons for excluding the House still cogent. He would oppose the amendment for House participation now under discussion. The American Forum of the Air, May 30, 1944, No. 22, p. 5.

[14] See Robert M. La Follette, The Treaty-Making Power of the Constitution (1919), 4 Marquette Law Rev. 167; Henry Cabot Lodge, The Treaty-Making Powers of the Senate (1902), 31 Scribner's Magazine 33; Forrest R. Black, The United States Senate and the Treaty Power (1931-32), 4 Rocky Mt. Law Rev. 1. Says Professor Black:

"It does not mean that the President must, in all cases, seek advice before he enters into the preliminary stage of a negotiation. The President, as the Chief Executive, may take the initiative in the field of foreign relations, but when a treaty is under negotiation the Senate has a constitutional right to know the facts and to give advice. It is implicit in the very idea of making the Senate an advisory body to the President, that the Senate shall have the privilege of being an informed adviser (p. 5).

"From this brief historical presentation it appears that, broadly speaking, there have been two interpretations of the treaty clause. The one, which we will term the Washingtonian, views the role of the Senate as an integral part of the treaty making function, which may be exercised at any stage of a negotiation; the other, which we will term the Wilsonian, considers the function of the Senate merely to give sanction to a treaty that is already drafted" (p. 11).

Senate could be confronted with a completed treaty, which he purported to make it difficult to change, is not the better view of the meaning of the constitutional provision.[15] It can be contended, as Senator Overton did recently, that the making of reservations or Senate conditions upon its consent constitutes advice to the President. At all events, even though the Senate is no longer the executive council originally contemplated, if the advice should be sought, as is proper, before the negotiation is completed, then it would be necessary, if the new amendment is to go into effect, to consult the House of Representatives as well as the Senate. That would not exactly make for speed, but adds a new encumbrance to the process. If, on the other hand, the House is merely to be added to the Senate in the approval of an executive fait accompli, the constitutional "advice" becomes a dead letter and is disregarded. The function of the House in any event would probably not be deliberative, as is the Senate, but would become perfunctory, which hardly adds to constitutional safeguards.

Record of the Senate

It might be supposed from the criticisms heard that the Senate had not fulfilled its constitutional functions or had so used the two-thirds rule as to obstruct the will of the Nation. This charge has little foundation. Even the alleged example of the Covenant of the League shows not a single Senator who lost his seat in the 1920 elections because of his position on that treaty. Public opinion is emotional. While it may once have seemingly approved the Covenant, not knowing its content or realizing its implications, opinion changed under better instructio ..

Nearly 1,000 treaties have been adopted, and of the 820 signed by the United States from 1789 to 1928, 24 were never submitted to the Senate and 9 were withdrawn by the President. Of the 787 submitted, 47 were never acted on, 15 were rejected, and 162 amended.[16] In other words, the Senate intervened in the making of 234 treaties,[17] and by and large either improved the treaty by so doing or saved the country from unfortunate commitments. Secretary Hay's remark that "but one thing is certain, (the treaty) will never leave the arena alive," is not borne out by the evidence. It is an interesting subject of speculation whether any better result would have been achieved had the House been added to a majority of the Senate as a "ratifying" body. Figures are sometimes adduced designed to show that a small minority of Senators from the populous States could block a large majority of the Senators from the less populous States. Such figures have no justification in experience. Senators rarely cast their votes according to the size of their States.[18]

It is not possible to prove that a considered public opinion has opposed a final Senate vote or that a minority of the Senators defied public opinion in voting as they did. The necessity of obtaining a two-thirds vote assures a good treaty rather than the hasty or emotional consideration which a bare majority might reflect. Had the oil agreement of August 1944 not been submitted in the form of a treaty, this vulnerable agreement, contrary to the interests of the industry and probably of the country, would have been adopted by executive agreement or approved by a majority possibly influenced by the Executive.[19] The fact, as reported,[20] that a new treaty will now be drafted is evidence that the Senate two-thirds rule has valuable functions to perform in the assurance of a treaty beneficial to the country. It is stated in some quarters that majority control by House and Senate means in fact Executive control, since the President can exert patronage and other pressures on a bare majority if necessary. The two-thirds rule places the Senate in an independent position beyond Presidential control even if his party should command a bare majority.

Effects of the change

It is said that the two-thirds requirement enables a minority to control the majority, which the new rule would obviate. It is also said that politics controls the minority one-third plus one. It is fashionable in certain quarters to believe that Senator Lodge's personal antagonism to President Wilson caused the rejection of the Treaty of Versailles. All these are myths. It may be true that occasionally politics has entered into the consideration of the question. This is not necessarily reprehensible and cannot be foreclosed in a popular government. Politics has in fact played a minor role, since most treaties are adopted with relative speed and not on party considerations.[21] From 1899 to 1909 the Democrats controlled less than one-third of the Senate. From 1932 to 1942 the Republicans had the same experience. While the role of politics is minor, antagonism to a particular President or Secretary of State accounts for some votes. If the Constitution should now be changed making bare majorities adequate, politics would be likely to become a much more important factor in the consideration of treaties. If the two Houses did not belong to the same party or to the President's party, the chances are that the defeat of the President's treaties would become a political issue, a fact which might defeat many treaties. The assumption that ratification would by the amendment become much easier, may be mistaken.

Besides, proponents have in mind just one treaty or a set of treaties, namely, the forthcoming peace treaties and the machinery for enforcing them. All human experience contests the view that peace among nations can be enforced by any one or more of them, that their will and the law are identical, or that any country can be guaranteed against the result of its own ineptitude. Demographic considerations enter. Yet on the gamble that experience is wrong, many would upset the Constitution of the United States for the long future.

The decisive control over the vagaries of an Executive exerted by the two-thirds rule is compatible with an unchangeable administration. Majority control might possibly be considered if this were a parliamentary government, in which the administration could be removed if it incurred the displeasure of the people. The proposed amendment includes no such proviso, and is therefore inadequate.

There is another fundamental reason why the two-thirds rule, a linchpin of the Constitution, and taken for granted in the matter of impeachment,[22] overriding a veto, and expulsion of a Member, should not be changed. A treaty is something quite different from a statute. A treaty binds the Nation and cannot be changed by an act of legislation. A statute can be. A treaty may deal with any power suitable to negotiation with a foreign country. A Federal statute can deal only with such powers as Congress possesses. But by making a treaty with a foreign country—say, Canada—like the Migratory Bird Treaty of 1918, Congress can obtain for itself the implementing power to enact legislation which could not rest on any other basis than a treaty.[23] A treaty overrides all State law.[24] By making the treaty-ratifying power of Congress equivalent to that needed for a statute, a bare majority of those present, Congress will thus be enabled to arrogate to itself not merely the limited powers named in the Constitution but the unlimited powers of a treaty, thus overriding the States and reducing them to innocuousness.[25] A treaty is the practical equivalent of a constitutional amendment, the submission of which requires two-thirds vote of the Senate. But

IV of Fleming, and McClendon, loc. cit. pp. 41 et seq., for an analysis of the rejected treaties. See the figures presented by McClendon, loc. cit. pp. 40, 55. Only seven treaties were ultimately defeated by the two-thirds rule. Fleming, op. cit. 50; McClendon, loc. cit., p. 55.

[17] Mr. Fraser, in his minority report, reduces the Senate record to percentages, concluding, on the authority of Mr. Herbert Wright, that 71 percent were approved without amendment, and 18 percent were amended. Of the remaining 11 percent, the Senate rejected a little over 1½ percent, took no final action on nearly 7½ percent, and a little over 2 per cent were withdrawn. Considering that for the most part the Senate had no hand in negotiation but only acted after a draft was submitted, this is a very creditable record, and not one indicating necessity for a new method of approval.

[18] Mr. Fraser shows that under the proposed rule, 50 Senators representing the 25 least populous States containing less than one-fifth of the total population, could adopt a treaty in the face of 46 Senators from the 23 most populous States, containing over four-fifths of the population. While theoretically possible, such a juxtaposition of votes is most unlikely to occur. Matters of this kind were considered by the draftsmen of the Constitutional Convention. Mr. Herbert Wright, loc. cit., p. 645, deals with the possibility of a minority blocking a majority of public opinion or population.

[19] See article by J. H. Carmical, "Foreign Policy Drawn Up by P(etroleum) I(ndustry) W(ar) C(ouncil)," New York Times, December 11, 1944.

[20] Raymond J. Blair, "U. S. and Britain Study Change in Oil Agreement," New York Herald-Tribune, December 27, 1944, p. 1.

[21] W. Stull Holt, Treaties Defeated by the Senate, Baltimore, 1933, is inclined to overemphasize the effect of politics in defeating treaties. McClendon, loc. cit., p. 41, considers that "party politics was a minor factor" in the rejection of the 16 treaties he notes down to 1901. Some of these were adopted on reconsideration, with or without changes.

[22] Andrew Johnson was saved from impeachment by 1 vote, 35 to 19. It would have been unfortunate if a bare majority could have impeached him.

[23] *Missouri* v. *Holland* (252 U. S. 416 (1920)). See comments of Julian P. Boyd, "The Expanding Treaty Power," (1928) 6 No. Car. Law Rev. 428 at 441 et seq., and Chandler P. Anderson, "The Extension of Congressional Jurisdiction by the Treaty-Making Power," (1920) 14 Am. Jour. Int. Law 400.

[24] On the supersession of State laws by treaties, see Boyd, loc. cit., p. 436.

[25] This is what is accomplished by the proposed oil agreement with Great Britain (New York Times, Aug. 9, 1944), submitted to the Senate Aug. 24, 1944. The Federal Government obtains the power—not warranted by the Constitution—to fix production quotas in the States, to make market allocations, to fix prices, to regulate conservation, to regulate the domestic oil business, to regulate "the production, processing, transportation, and distribution of petroleum" throughout the United States. It takes these powers from the States. Carmical, loc. cit. See also the objection of the house of delegates of the American Bar Association to the creation by treaty with Mexico of an administrative agency in perpetuity and escaping the control of Congress, (November 1944) 30 Am. Bar. Assoc. Jour. 629, 647, 659.

the proposed majority-approved treaty, reducing a treaty to the congressional requirements merely of a statute, has nevertheless the force of an amendment, while escaping the two-thirds requirement and ratification by three-fourths of the States.

The proposed amendment could thus serve to arrogate to Congress complete legislative power over the internal affairs of the Nation and would thus distort the Constitution in a most fundamental aspect. No other reason is necessary to indicate the unwisdom of the proposed amendment.

IV

Let us now examine the considerations advanced in the committee report in support of the proposed amendment. Relying on the House Judiciary Committee, your committee repeats that—

"The maintenance of the two-thirds rule, instead of working to maintain a great power in the Senate, is actually taking that power away from the Senate.

"Congress should act as a check upon the treaty-making powers of the President, but by maintaining a rule which prevents negotiations which the people desire, the Congress is on the road to eliminating itself from this important function of government."

It was the Senate and not Congress which was to act as a check upon the treaty-making powers of the President, and there is no evidence that the two-thirds rule prevents negotiations which the people desire. But the point of these two paragraphs is that if the Senate insists on its constitutional prerogative, the President will circumvent both Senate and Congress by making his compacts with foreign countries in the form of executive agreements. During the last 7 years this has in fact largely taken place. But this is not in accordance with the Constitution; it is directly contrary to the Constitution. The inflaton of the Executive power and the deflation of the Senate is, in addition, a departure from the constitutional duties assigned to these public officials.

The gist of the argument of the two paragraphs is that unless the Senate abandons the Constitution and consents to a change, an unconstitutional form of executive government will replace the Constitution. This argument may appeal to some gentlemen as a sound one, but I should think most Americans would repel the suggestion. Mr. Fraser has mentioned the statistics which are reiterated in a footnote.[26] I have devoted an article to the question whether the Executive agreement shall replace the treaty, and will not here repeat the argument.[27] It is a danger without a doubt. But the willingness of the Senate to abandon its constitutional prerogatives will hardly be promoted by the suggestion that an unlawful method of change will overcome their reluctance.

[26] Number of treaties and executive agreements published (to January 1, 1945):

Year of official printing	Treaties	Executive agreements
1930	25	11
1931	13	14
1932	11	16
1933	9	11
1934	14	16
1935	28	10
1936	8	16
1937	15	10
1938	12	24
1939	10	26
1940	12	20
1941	15	39
1942	6	52
1943	4	71
1944	6	71

[27] "Shall the Executive Agreement Replace the Treaty?" (September 1944) 53 Yale Law Jour. 664.

Here it should be said that the recent method of sending an executive agreement to the Congress "for its information"—where congressional support is deemed desirable—is particularly vulnerable to constitutional attack. The agreement is not "submitted" to the Congress and cannot be changed or amended in the slightest degree. By a separate bill it is approved or disapproved by reference. This is an unsustainable method of evading the Senate's concurrent power over treaties, which at least can be considered with a view to amendment.

The third argument in support of the amendment reads:

"The record of the Senate in handling treaties of peace is long, and it is disturbingly bad."

The record of the Senate is necessarily nearly as long as the history of the Nation, for which fact we should be grateful and for which the Senate can hardly be held responsible. As to whether its record is bad, a consultation of chapter VI of the book of Professor Denna Frank Fleming, [28] a severe critic of the Senate's two-thirds rule, indicates no such record of inefficiency or impropriety in dealing with our treaties of peace as the report might indicate. Beginning with the Jay Treaty of 1794, not technically a treaty of peace but more important than the peace of 1783, the record of the Senate is amazingly good. It amended comparatively few treaties and generally to their advantage. Had Senator Hoar succeeded in eliminating from the Treaty with Spain the provision for acquisition of the Philippines, we might have been even more grateful. The Senate actually did not balk at the terms of the Treaty of Versailles, as well it might have, but concentrated its objections and reservations on the obligations imposed on the United States by the experimental Covenant of the League of Nations. The reason for the failure of that treaty was the device of tying the covenant and the League together in one document, and the President's objection to approval of the reservations by the Democratic Senators.[29]

The fourth objection cited in support of the proposed amendment reads:

"From the moment the United States became a world power as a result of the Spanish-American War, the Senate has frustrated every significant move to make it possible for the country to participate in settling international disputes."

Nothing could be more misleading than this paragraph. The United States was a world power from the beginning. It simply did not become imperialistic until 1898. It is true that from 1897 to 1911 the Senate was somewhat skeptical about the conclusion of grandiose agreements for the arbitration of future disputes, except those that are important. They rejected the first Hay-Pauncefote treaty; and they attached important reservations to Secretary's Hay's treaties, reservations which Mr. Hay considered fatal. Secretary Root met the Senate's objections in 1908 by submitting to it the compromise of any particular arbitration, whereupon 22 arbitration treaties were signed. They made amendments to the Taft-Knox treaties of 1911,[30] which President Taft declined to accept. These arbitration treaties were a response to the predilections of the period, which found it fashionable to propose abstract agreements to arbitrate future disputes, which on negotiation had to be narrowed to a point where the commitment weakened rather than promoted arbitration. They were not agreements to arbitrate a specific issue. No evidence can be cited of cases in which the Senate frustrated in a specific case, by disapproving a protocol or compromise, the American practice of arbitrating legal questions. The draftsman of the report must be able to cite cases in which the State Department was willing to arbitrate specific issues, a willingness which was frustrated by Senate opposition. It is believed that no such evidence exists.

[28] Op. cit., p. 117.

[29] Supra.

[30] Fleming, op. cit., ch. V, pp. 77 et seq.

Under the Root treaties of 1908, the important fisheries arbitration was held with Great Britain at The Hague in 1910, and the claims arbitration under the convention of August 18, 1910. Other arbitrations have been held under the Hague Convention before the Permanent Court of Arbitration or by individual agreement for an ad hoc tribunal. The 1922 Washington treaties were approved. An arbitration convention with the Latin-American countries was signed in 1929.[31] The Rio agreement of 1933 was promptly ratified. The Kellogg Pact was uncritically accepted. If the report refers to the Senate objection to the Permanent Court of International Justice it may be said that few American questions could have been submitted to that tribunal. The Senate's objection to the covenant and court statute related to the procedure for soliciting advisory opinions by the council of the League. The court was largely concerned with construing the meaning of doubtful clauses in the peace treaties and deciding other European questions. I know of no case which was refused arbitration because of the Senate's objection to adherence to the court protocol. But I have a nostalgic regret that we shall never return to the good old days when the signature of an abstract arbitration treaty excited the Nation.

V.

We come now to other considerations advanced by the report in support of the proposed amendment. It speaks of the "need for promptitude in decision." Reference to Mr. Dangerfield's table on page 104 of his book "In Defense of the Senate" [32] discloses that from the time of President Washington to that of President Coolidge, the long delays of a treaty have occurred in the Department of State before submission to the Senate or after action by the Senate. The Senate delays, strange as it may seem have been relatively short. On one day, Mr. McClure states that 13 treaties were approved without change.[33] While a few treaties have lingered long, one of President W. H. Harrison having been in the Senate for 361 days, the average is about 30 to 60 days. The charge of excessive delay cannot legitimately be laid at the door of the Senate.

It is true that lack of cooperation between the executive and legislative branches of our Government is accountable for some of the objections. The objection of the Senate to Secretary of State Seward and Secretary of State Hay had something to do with their failure to enlist the cooperation of the Senate. Nothing can change such possibilities of friction—not even the amendment. But the "practical impossibility of a unified party control over two-thirds of the Senate" seems to me a desirable rather than an undesirable feature of the American Government. Majority control in foreign affairs would expose the Senate to the influences of patronage, purge, logrolling and other kinds of pressure noticeable in ordinary legislation. The two-thirds rule helps to place Senators above such influences. The provisions of treaties, notably those of a treaty of peace, are as fundamentally important as the provisions of the Constitution itself, and should not merely represent the views of the party that may have a bare majority in Congress.

In all constitutions of which I am aware, important decisions must be made by two-thirds or greater majority. The Dumbarton Oaks draft, chapter V, section C, provides:

[31] Treaty Series 886.

[32] Dangerfield, op. cit., p. 104.

[33] McClure, op. cit., p. 377. See also, Wright, loc. cit., p. 650, note.

"2. Important decisions of the General Assembly, including recommendations with respect to the maintenance of international peace and security; election of members of the security council; election of members of the economic and social council; admission of members, suspension of the exercise of the rights and privileges of members, and expulsion of members; and budgetary questions, should be made by a two-thirds majority of those present and voting. On other questions, including the determination of additional categories of questions to be decided by a two-thirds majority, the decisions of the General Assembly should be made by a simple majority vote." [34]

It is no objection to a legislative body that it has a "natural tendency" to debate. That, I thought, is one of its main functions. If we are to deprive a legislative body of the power to clarify, object, and debate, it would be more feasible to abolish it entirely.

Reference is also made to specific treaties, the failure to approve which is criticized. In most cases many considerations enter into the Senate's refusal to approve a particular treaty. The annexation of Texas by a treaty of 1844 [35] failed because it was feared by northerners that Texas would become a slave-holding territory, because President Tyler was unpopular in the Senate, and because Mexico had threatened to make the treaty a casus belli. Under Polk's Administration in 1845, Texas was annexed by joint resolution of Congress. But for the controversy concerning slavery there would have been no appreciable opposition to the treaty acquisition of Texas.

The Virgin Islands were offered to the United States by treaty in 1867, for $7,500,000. The treaty never was discussed in the Senate.[36] Historians attribute opposition to the treaty to Senate hostility to Secretary Seward. President Grant did not renew the proposal. But in 1902 a treaty for annexation was concluded at a price of five millions, Denmark to assume a series of obligations. It was the Danish Parliament, not the American Senate which frustrated that treaty.[37] Purchase was not finally effected until August 1916,[38] when the Panama Canal made possession of the Virgin Islands seem imperative. They then cost twenty-five millions. But in 1867 their acquisition did not seem important, and the opposition to imperialism was great.

The Bayard-Chamberlin treaty of 1888 [39] was defeated because the Committee on Foreign Relations advised rejection, denied presidential power to negotiate the treaty without previous consent of the Senate, and raised other intrinsic objections to the treaty, particularly the belief that it would lead to free trade. But the particular reason the citation appears inappropriate in this connection is that it was defeated by a vote of 28 for and 30 against, so that even under the proposed amendment it would have been lost. The two-thirds rule had nothing to do with its defeat.

Mr. Fleming lists in chapter IV of his book the few treaties rejected by the Senate,[40] and explains the variety of reasons which militated against their acceptance. He says that only seven had a majority, but not the required two-thirds, and the treaties defeated comprise but a very small percent of those considered. He adds [41] that "five-sixths of all treaties laid before it (the Senate) have been approved unconditionally."

An argument advanced in support of the change is that Congress declares war and should therefore have the power to pass on the treaties of peace. Apart from the fact that Congress seems to have had difficulty in extricating itself from the 1917 war, as witness the Knox-Porter Resolution of July 2, 1921, there is no analogy between the two powers. Congress is supposed to initiate a declaration of war. When war impends there is little time or opportunity for debate, since the foundation has been laid by diplomacy. Nor are the issues at stake often of a controversial nature. But treaties of peace are drafted by the Executive after long negotiation. They need the check of Senate control. They fix the conditions of future life and are usually exceedingly controversial. It is necessary to debate them at length and in detail. The two-thirds rule prevents the ill-considered or hasty adoption of a treaty before the public can be fully advised of what is under consideration. Submission to the House would add only confusion and probable delay, if debated, or be perfunctory and subject to political pressures, if not.

This paper has intentionally avoided thus far any discussion of the practical feasibility of adopting the proposed amendment. It has confined itself to the merits. It should be said, however, that in addition to House Resolution 320, reported out by the Judiciary Committee, resolutions for the proposed amendment have been introduced in the Senate by ex-Senator Gillette [42] and others. Some advocate as a substitute for the two-thirds Senate approval a majority of the Senate or a majority of both Houses. These resolutions cannot command even majority support in the Senate committee to which they have been referred, for as yet they have not been reported out. Recently the New York Times took a poll on this question among the Senators who were candidates for election to the new Senate.[43] The results were not encouraging. Among the 62 senatorial candidates polled, 24 did not answer the inquiry, 18 were in favor of the amendment, 8 were against it, 10 were noncomittal, and 2 agreed to submit it to the votes of the States. It is apparent that it will be difficult to enlist the votes of two-thirds of the Senate for submission of such an amendment.

Nor does there seem to be a sufficient public demand for such a change in the Constitution to justify a belief that three-quarters of the States will ratify the proposed amendment. Indeed, as former Ambassador Gibson points out,[44] if an amendment is to be considered it must be much more fundamental than the present proposal, which merely adds the House to the Senate as a ratifying body and substitutes a majority for the existing two-thirds. We should find a method analogous to the old French system, by which an informed group of the Senate Committee on Foreign Relations and perhaps of the House should be called into conference by the Department of State and participate as an executive or advisory council in the making of treaties. This might insure a sounder and less vulnerable treaty with probable legislative support.

On the whole question of an amendment, it seems likely that the nature of the problems which will confront the new Congress and its successors for the next few years will be of a character so profound that there will be little opportunity to consider such a formal change in the Constitution as is embodied in the proposed amendment.

Is Admiral Ramsey, Chief of Aeronautics, Willing To Protect the Consolidated Aircraft Corporation in the Production of Defective Navy Planes?

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 16, 1945

Mr. O'KONSKI. Mr. Speaker, on January 6, 1945, a San Diego coroner's jury rendered this amazing verdict in connection with an investigation of a Navy-type plane that had crashed, killing the test pilot and five of his crew members:

We, the jury, find that any criminal negligence would rest with the Consolidated Vultee Aircraft Corporation due to gross negligence and lax and haphazard methods of inspection. (Source: San Diego Union, January 6, 1945.)

This jury found that 96 bolt holes out of a total of 116 had never been filled in splicing the panel to the inner wing of the ill-fated airship that was being tested for purchase by the Navy Department.

On November 28, 1944, Joseph Leib, Washington writer, called the original newspaper clipping of the accident to the attention of the Navy Department. Here are two interesting letters from Admiral D. C. Ramsey, Chief of the Bureau of Aeronautics:

DECEMBER 4, 1944.

MY DEAR MR. LEIB: The Secretary of the Navy had referred your letter of 28 November to me as a matter under the cognizance of the Bureau of Aeronautics. The Bureau of Aeronautics representative at the plant of the Consolidated-Vultee Aircraft Corporation, San Diego, Calif., informed the Navy Department immediately following the accident to which you refer and stated that an investigation was under way to determine the cause and sequence of events leading to this crash and the fatalities involved. In addition, a further investigation has been initiated to check in detail the functioning of the contractor's inspection system in order to insure structural integrity of all aircraft which reach flight status. The official report of the accident has not yet reached the Navy Department, and, therefore, the full details are not yet known here.

Thank you for your interest in this matter. With best wishes,

Sincerely yours,

D. C. RAMSEY,
Chief of the Bureau of Aeronautics.

DECEMBER 29, 1944.

DEAR MR. LEIB: Thank you for your letter of December 19 and your continuing interest in air safety.

Your partial quotation from my letter of December 4 was accurate. Apparently, however, you draw an inaccurate conclusion from the words quoted.

The contractors' inspection system is a regular procedure applied to each plane during its construction. There was no intention of suggesting that any inspection was or is to be initiated after a crash instead of being a regular procedure before flight.

Existing inspection procedures are the result of long experience. When an error does occur in the functioning thereof, appropriate remedial action is taken promptly.

As stated to you in my letter of December 4, immediately after the crash the Navy Department started two investigations, one seeking to determine the cause and results of the crash, another to check in detail the functioning of the existing contractors' inspection system.

I will be glad to discuss this matter further with you in person if you desire..

Sincerely,

D. C. RAMSEY,
Rear Admiral, Chief of the Bureau of Aeronautics.

Now, according to a letter from the San Diego, district attorney addressed to Governor Warren, of California, the Navy Department refused to take any further action against the aircraft corporation and apparently was satisfied with conditions at this plant.

However, during the coroner's jury investigation Lt. Robert A. Burbick, Navy senior engineering officer assigned to the plant, testified that 98 bolts for which holes were provided in the steel splice frame never had been installed.

Burbick said, under questioning of Coroner Floyd F. Jones, that he examined the plane within 15 minutes after the crash and found omission of splice bolts to be the cause of the crash.

Arlie L. Anderson, civilian inspector employed by the Navy, told the jury that he was required to make only "spot checks" and that his work-sheet stamp did not signify that he had examined an entire plane.

Clarence R. Alexander who was a swing-shift foreman when the plane was assembled, testified his stamp "FM32" appeared on an assembly station work sheet that indicated the splice had been inspected. With his stamp appeared a plant inspection stamp "1025" and a naval stamp "USN-162."

This testimony, obviously, does not speak well for the Navy's own inspection system and it might be worth while for Admiral Ramsey to initiate a study of his own investigators.

On January 23, 1945, the Washington Star carried a story announcing that Joseph H. Famme, acting chief designing engineer for the Consolidated Aircraft Corporation, had returned to the United States from England after having been loaned to the Army Air Forces to make a comprehensive study abroad in the hope that something could be done to reduce the startling number of crashes of the B-24's. These ships cost the American taxpayers $300,000 each.

In this connection I have a letter from an official of the Consolidated-Vultee Aircraft Corporation charging that the production situation at the San Diego factory is very unfavorable and if not immediately corrected will affect the safety of aircraft produced by this company for the armed services.

I shall be pleased to submit this amazing document to a proper and responsible congressional committee for further study. It is reprehensible that an official of this corporation should find it necessary to appeal to Congress to correct this deplorable situation. I have been asked to hold his name in confidence but I have permission to turn it over to a congressional committee. Here is the letter:

JANUARY 21, 1945.

I desire to provide you with pertinent information regarding the aircraft manufactured by Consolidated-Vultee Corporation; and unless measures are taken to correct certain existing conditions, aircraft accidents will continue to occur at the same rate, if not greater than in the past.

Since the fatal accident of last November, caused by a wing breaking loose on a Navy PB4Y-2 bomber on its first flight, I would especially like to mention facts pertaining to other airplanes.

On one of the 4Y-3 type airplanes (a transport version of the PB4Y-2) lend-leased to the British, recently put into operation by the Royal Air Force Ferrying Command, the following was noted on January 11, 1945:

Before installing additional fuel cells for overseas operation, after all original test flights had been made, the internal wing splice bolts (same as those missing in the wing of airplane that crashed) were inspected for proper installation.

Approximately one-half of them were found to be loose, not only in one but both wings. Those bolts were loose enough that they could be turned just by the weight of a wrench. This indicates that when the original installation was made someone had only tightened or torqued part of them and forgot to tighten the nuts on the others. Also, the inspector had not checked all of them and was not performing his duty in this case. I think it is easy to realize how serious this may have been had the necessity arisen for any violent maneuvers during the test flights of this airplane. The bolts which were properly tightened carried all of the load; if they had broken, it is quite likely the others would have broken, too, when receiving the shock.

(At this point this official gave the British serial number of this plane.)

As you know, our company is building the B-32 bombers, and an assembly line is being set up for that purpose. Several of these planes were built some time ago in the experimental department of the San Diego division, and our plant at Fort Worth has recently completed a number of the latest model, one of which was flown to San Diego a few weeks ago. Through a reliable source I have received information that this airplane was very poorly assembled, requiring practically an overhaul before airworthy.

Many rivets throughout the airplane were improperly installed and large numbers of them were omitted entirely. In some places where holes had been drilled for rivets the fasteners were still in them. (These fasteners are only for the purpose of holding the material together while assembling and must be removed to install the rivets, as they have no strength value.)

The exhaust system on one of the engines had not been correctly installed and the area around it not properly protected, part of which had burned through and may have caused a serious fire while in flight.

Altogether, I have been told there were about 2,000 discrepancies found on this airplane by the inspection department. With this information it isn't difficult to determine the elements responsible for this deplorable condition.

In my opinion, I believe the management is responsible for the existing situation. Apparently not enough emphasis is made to influence the employees to do a good, thorough job. Instead, they are encouraged to do just enough to get by inspection. Cases arise when an inspector's judgment is overruled by the management of the production department.

In other words, the inspection department does not have the authority they should and are controlled by the production department which is responsible for the lowering of the general aircraft standards. Both Army and Navy inspectors seem to be restricted in many respects which is detrimental, also.

The condition can be remedied by requiring management to encourage the employees to improve their workmanship. Of course, management will say this will slow down production, because they seem more interested in getting out the planes than improving the quality of them.

However, I know that this improved method would result in increased production in a very short time because there would be very little rework required, as has been necessary in the past.

For example, the air lines require their personnel exercise care and diligence in the performance of their duties and there is no reason, why this method could not be just as successful in the aircraft industries.

Another unfavorable situation exists in the flight department. Not only is the quality of workmanship low, but there is a great deal of waste of both material and manpower.

Employees are encouraged to work overtime, when it is not necessary. I have seen men idle half of their regular hours and still be asked to work overtime.

Being that many like to receive time and one-half pay for hours worked overtime, they gladly accept this request.

In my opinion, orders should be given the company at once to cut out this needless expense to the Government.

I believe this information is sufficient for the present time to enable you to take steps to rectify this deplorable situation.

For further details regarding this case, see Appendix of the RECORD, pages A517-A518 and A823-A824.

Labor Views Patent Abuses

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1945

Mr. WOODRUFF of Michigan. Mr. Speaker, Matthew Woll, vice president of the American Federation of Labor, president of the tariff group of that body and one of the finest of the labor leaders in this country, addressing the New York Patent Law Association, March 13, 1945, directed attention to the fact that America is the only major nation which permits goods or articles, protected by home patents, to be produced in foreign countries under labor conditions declared substandard by their own laws, and shipped into home markets.

Those who are posing as friends of the American working man and who boast of the beneficial legislation which has in the last few years been enacted to better our standards of living should stop, look, and listen. Surely, if we deny the right of transportation in interstate

commerce to goods which were produced in American factories, under substandard conditions, there is no good reason why we should permit competitive goods, produced under what we have legislatively defined to be substandard conditions, to be shipped into our American markets in order that a comparative few should secure larger profits.

It is gratifying to note that the intelligent and constructive leadership of the American Federation of Labor, as represented by Matthew Woll, no doubt realizing the need of protecting the job opportunities of America's workers, are mindful of the fact that trade barriers against our goods, which are in fact embargoes, exist in these potential foreign markets, and that they are far more effective trade barriers than any tariff rates which might be imposed by us.

The question of patents and patent legislation has many angles, and is one which requires deep study before one can arrive at a definite conclusion.

The question as to whether or not alleged authorities, who for many years have engaged in foreign trade, now holding high public office, should be allowed to continue to mislead the American people by promises of increased export trade into markets where legislative embargoes now exist, is one the answer to which is clear. This deliberate misleading of the American people by paid propagandists over the radio and through the press in the interest of those who would sell America down the river should be stopped.

I deem it a privilege to include the address of Matthew Woll as a part of my remarks, and I recommend to each of my colleagues a careful reading of the same:

Until recent years American workers have given little attention to the subject of patents. Lately, however, they have shown an increasing interest in this subject. Presently they are seriously concerned about future possibilities in the realm of world commercial relationships. Exclusive grants of the right to prohibit or exclude others from making, using, or selling an inventor's creation or discovery necessarily are included.

The National Patent Planning Committee, in its report of 1943, stated quite accurately that "the strongest industrial nations have the cost effective patent systems."

We may rightfully claim to be the strongest industrial nation in the world. We have become a great industrial nation because of our spirit of free enterprise and our national zest for striving toward new horizons. Those who, in the early years of the Republic, pioneered against most difficult odds, toiled principally with their hands.

FREE ENTERPRISE—FREE LABOR

As a result of this free pioneering spirit, and as a consequence of the desire to lighten the burden of fellow workers, as well as to benefit themselves, new devices, productive machinery, and industrial and commercial relations were developed laying the foundation upon which was built the greatest nation in the world. Ours, truly, is a land of free enterprise and free labor—the wellspring of an industrial capacity which has outstripped the productivity of all other nations, especially those using feudal, slave, or totalitarian, which includes forced labor.

The miracle of the twentieth century is that American workers toil fewer hours for more wages, work under better, more humane conditions, and still outproduce the industrial plants of any other country of the world. This miracle was made possible by the genius of the inventors whom our forefathers sought to encourage and protect under our patent system.

Without benefit of extensive laboratories, and often the victims of exploitation, pioneer inventors received small compensation for their creations or discoveries, altogether all out of proportion to the sacrifices entailed. However, this was the joy of creation—the immense satisfaction of creating that which did not exist before.

Americans always have been an inventive people. It is said that more than three-fourths of the industrial wealth of our country is attributable directly or indirectly to the inventive genius of our people, as represented by patent rights. Many instances might be cited wherein craftsmen conceived and developed processes and mechanical devices which have revolutionized production and transportation and have laid the foundation for the remarkable rise of our industrial and agricultural life. Workers may rightfully claim to have made great contributions to the phenomenal progress of America.

PUBLIC INTEREST TO BE SERVED

Because of the importance of invention and discovery to the industrial progress of the country, the authors of the Constitution delegated authority to Congress to promote the progress of science and the useful arts by securing for a limited time, to authors and inventors, the exclusive right to their writings, discoveries, and inventions. On this foundation our patent system is based. Regardless of whether a patent right is considered a public franchise, in the broad powers delegated to it, Congress may well regulate the use of exclusive grants to be exercised under patent authority in the public interest.

The welfare of the country as a whole, not the welfare of the individual inventor, is of primary consideration. The inventor is presumed to have produced something of public value. It is only in consideration of a public service rendered or to be rendered that the Government has provided extraordinary privileges for the inventor.

It is said "like begets like." So every invention carries with it the seeds of further inventions, not only because of improvements upon the original invention but because of the new knowledge which every invention gives the public. Inventions, too, are unlimited. It is not possible that inventions can keep stride with knowledge, nor that science applied to industry may keep abreast of pure science. The field of inventiveness and of discovery, like pure science, is limitless.

EMPIRES BUILT ON PATENTS

However, great economic changes have taken place since the present patent laws first were enacted. A technological revolution has taken place. Then, too, new and larger forms of industrial organization have been evolved. Corporate, rather than individual, enterprises abound today in our industrial and commercial life. Vast industrial empires have developed and constantly have extended their influence and control and patents have contribute largely to that end. Consequently, earnings and incomes have risen to undreamt of heights. It is estimated that prior to the present war at least 50 patents have each yielded in profits more than $1,000,000 a year, that 300 have each yielded more than $500,000 a year; 500 to 800 have each yielded from $250,000 to $500,000 a year, and between 15,000 to 20,000 have each yielded more than $100,000 a year. Many of our patents are said to produce for their owners fortunes larger than they could ever hope to earn in salaries or wages. It is evident, therefore, that we have entered a new era in the field of patents which requires a new appraisal and evaluation both from the standpoint of the individual inventor and the public to be served.

In our employment relations it is rather noticeable and regrettable that the rights of employer and employee, with regard to inventions, are not more fully and more accurately understood and more fairly administered. The law would seem quite clear that there is no obligation on the part of the employee to assign to his employer patents obtained for inventions made in the course of employment. Such an obligation can be created only by voluntary agreement, expressed or implied. Nevertheless, we find an increasing tendency of patent agreements being required of employees as a condition incidental to employment.

These agreements commonly cover all employees and require the employees not only to disclose all or any inventions made or conceived along the lines of the company's work and investigation but to execute documents essential and required to vest exclusive rights to ownership and use in the company.

While there seems to be a trend toward liberalization of compensation policy in this regard, nevertheless, such requirements as a condition precedent to employment are wholly unwarranted. In most instances they do not express the free will of the employee. Such requirements fairly may be said to involve an undue, if not coercive, element in our employment relations. This practice does not permit that freedom of contract which rightfully should prevail.

UNFAIR LABOR RELATIONS

Patent laws designed to protect the individual inventor against exploitation and promote the public good may and, in many instances, have had contrary results. In some instances they have been used to exploit the general public by circumventing the antitrust laws. Obviously, patent laws are designed to protect the owners of patents, as well as the inventors. Thus, it has become possible for an entire industrial organization to own all the patents necessary for an entire industry. It can then license others on terms which give it control of prices, as well as production. Naturally, limitations come to be placed upon such practices by legal decisions and limitations, as is well evidenced in the confused line of decisions on the pooling of patents.

It is urged that the disclosure of agreements dealing with patents would minimize the abuses which arise by virtue of secret, improper, and even illegal agreements. Undoubtedly, the recording of all such agreements would lessen the abuses now practiced. It is doubtful, though, whether such recording would in itself prevent these evils and abuses.

In addition, it never was made clear just what constituted a patentable invention. This has led to much confusion and adroit maneuvering. Infringement suits are costly and uncertain. Operating under forces which make it one of the instruments of organized control over industry, this uncertainty as to what is or is not a patentable invention, and, the possibility of infringements upon it has become a combination of law and of mechanics under which almost any results might be achieved. Certainly the public good is not advanced or protected under such circumstances.

To prevent such abuses and manipulations it is urged that the term of patent be reduced to 20 years from date of filing in the Patent Office. While the reduction in the term of patent protection may lessen some evils due to these practices, it is questionable whether such reduction would go to the root of the evil.

PATENT ABUSES

Then, again, the practice of corporate enterprise hiring men to make inventions as their agents has increased in recent years.

Thus the patent laws, designed to protect individual inventors have become effective instruments in evading the real objective of these laws and have provided an effective means of escaping the disorganizing force of too logical an application of the antitrust laws.

It was also alleged, at one time in the councils of the American Federation of Labor, that under guise of protective features of our patent laws, many useful and valuable inventions were either unused or misused and that monopolies thus had come to profit a comparative few of our citizens instead of benefiting the many. It was urged that our laws be so amended as to require holders of American patents to so work and operate them as would result in actual production within the United States of the article disclosed in such patents in reasonable quantities and within a reasonable time. The American Federation of Labor, while quite unprepared at the time to reach a definite and final conclusion, did direct further study, inquiry, and improvement.

COMPULSORY LICENSES

While it is alleged that practical considerations made such a requirement undesirable, nevertheless some 35 nations of the world do require that patents issued by them must be utilized. At least they require that patented articles must be produced in the country which issues the patent. Failure to do so can lead to revocation or the issuance of a license to others to manufacture or produce under such patent.

It is interesting to note here that while the National Patent Planning Commission, in its report of 1943 states that "it would not be advantageous to incorporate such a general system in our patent laws," meaning compulsory licensing, nevertheless the Commission recommended a statutory provision as being essential and necessary to the national defense, or required by the public health or public safety. This is a direct admission of the validity of the principle involved, and indicates that its application is a matter of discrimination and judgment. If, therefore, such a principle and practice is sound and is required by the public health and safety, may it not also be said to be sound and essential as applied to our public economy—the public welfare—the public well-being?

It is being recognized generally that industry the world over is becoming more and more Americanized. The penetration of European industry by American inventions is one of the outstanding features in recent years. To a great extent this penetration has been made possible by the protection accorded inventions. It is said in some cases that Europe has held more promise to American inventors, or owners of patents, than America itself.

JOBS TRANSFERRED TO FOREIGN NATIONS

It is alleged also that because of compulsory license features of patent laws of other nations American manufacturers and owners of patents have found it desirable, if not necessary, to manufacture abroad. Surveys made and statistics compiled by Government agencies indicate that branch factories have been built in foreign countries, that licenses have been issued to producers in foreign countries to produce articles, the patents upon which were granted in the United States. Regardless of whether this practice is attributable to foreign patent laws, the fact remains that such developments do have a deleterious effect upon our own economy, and do affect our domestic investors as well as our workers.

With the world demoralized from an industrial point of view, and with the greatest world demand for durable goods for machine tools ever experienced; with practically no financial resources to assure prompt purchase payments, either by foreign governments, groups, or individuals, or a combination of the two, it is reasonable to assume that American capital will be attracted primarily in the establishment of original or branch factories abroad, or will associate itself with foreign capital in so doing. Undoubtedly one of the outlets for international investment will be the supply of foreign demand. It is equally certain that in time such investments and establishment of factories abroad will be used to market the goods so produced in foreign countries, in our domestic market which, in the final analysis, is the most lucrative market in the world.

Such a situation is not inconceivable. This sort of development had its origin even before the war, and has made considerable progress up to Pearl Harbor. With impoverished labor throughout the world, the danger of such dormant tendencies is greatly increased.

Labor of America is fully aware of these possible consequences inherent in post-war developments and in which the patent laws of the world will play an important part.

Together with these features of our patent laws, inhefently related to them exist American tariff provisions which, at present, restrict the importation into our country of any trade-marked article without the written consent of the owner or holder of the trade mark. Under these provisions, the owners or holders of American or European trade marks not only may deprive American workers of opportunities of employment, but the American public may also be required to pay a greater price for the foreign produced article than the owner of his license may require for the same article by peoples of other lands.

Furthermore, America now is asked to enter an era of surplus production in order to meet the immediate demands of a devastated Europe and Asia. We have been told that a surplus production economy will provide employment approximately to 60,000,000 of our working population. Surplus production for the next few years will be welcomed by these devastated lands. It may prove helpful in meeting our own immediate reemployment problems, due to reconversion. Nevertheless, with foreign industries newly equipped with automatic machinery, managed by modern American methods, with low labor standards prevailing abroad, we may well, in subsequent years, find that foreign patent laws with their compulsory license features will contribute greatly to the curtailment of the foreign market for surplus American production.

Organized labor is not unmindful of future disastrous results likely to follow. It is seriously disturbed by the possible consequences of some of our proposed post-war plans, in which patents as well as other trade barriers are involved.

Perhaps the most important of all questions is the one embracing the future world of patents in the changing relationships taking place among the governments of the world. There is no doubt that post-war Europe will become increasingly collectivist. Private capitalism, as we Americans understand the term, is on the decline in the rest of the world.

TOTALITARIANISM PROMOTED

As collectivism grows in strength, so parliamentary and democratic governments diminish in power and influence. Undoubtedly exports and imports as well as patents will come under even greater governmental control. With more strict government limitation, if not restriction, imposed on private ownership, what condition will govern? It is evident that our system of patents will be seriously affected and must be modified to meet changing world conditions and relations.

In this regard, the Russian situation is particularly interesting. The Russian patent system, like all Russian activity, is designed to strengthen the totalitarian controls which obtain in that country. To that end all the resources of the country are exploited. There is no room in the Soviet system for investment of foreign capital. Its requirements from the outside world are limited to obtaining assistance in organizing its industries and in setting up its factories in accordance with the best known practices for organization and operation of business establishments.

The industrial system, then, is dominated by the government so that there is no opportunity for private individuals to engage in privately-owned enterprises, and to make a private profit. All profits accrue to the government.

While the Russian patent system may follow in form the patent system of other countries, this is probable only because Russia has not yet devised a patent system entirely satisfactory to Soviet domestic economy.

Like any other patent system, it is designed to encourage invention by its own people, and to encourage foreigners to disclose their inventions to Russia and to make them available to it for use.

The Russian patent system embodies one feature not found in systems of other countries, in that it provides means to enable inventors to exploit such of their inventions which are considered of utility to the national economy.

A planned national economy such as that of Russia does not provide for private economy. This patent system which, by its very nature, sets up private enterprise, is designed to put the Central Government in control of any rights which are granted, so that no power over industrial organization can remain in the hands of private individuals who might thereby guide, to some extent, the natonal economy. This has been accomplished by a series of simple expedients, harmless enough in appearance, but, which readily can be administered in such fashion as to gain the desired result.

If a patent holder in Russia is to dispose of his patent rights, he must do so to a Government-owned industry, there being no other industries in Russia. If a foreign citizen or industry is to dispose of his or its invention, they can only dispose of it to a Government industry only if the Soviet Government deems it necessary or useful to the national economy, and then it must be done within 3 years. Otherwise, a compulsory license will be granted and the price of the invention is fixed by a Government board of arbitration.

Where the Government industries are unwilling to wait 3 years to acquire an invention, they may arrange for its purchase or terms satisfactory to the patent owner. However, this system precludes the possibility even of preventing the use of the invention for any length of time; for example, to permit the patent owner to import materials into Russia or to prevent the Russians from duplicating it if they saw fit.

AMERICA ALONE PERMITS IMPORTATION OF FOREIGN-MADE PATENTED GOODS

In other words, the patent system of Russia, which will serve as a pattern and guide for other countries, particularly those coming within the sphere of influence of Russia, will leave a foreign person or industry entirely to the tender mercies of Russia. Foreigners only can deal with Russian industries at their own risk. Only where Russia is anxious to acquire foreign technical service, patents involving material or processes used in connection with such technical assistance may Russian-controlled products be sold under negotiated and, in instances, fair terms. Likewise, where an article is imported and not manufactured in Russia, a foreign patent holder in Russia gains an advantage over a competitor attempting to sell an infringing article. On the other hand there is no possible way in which he can prevent the use of his patent, or even dictate the manner in which it may be used.

Conversely, we here in America are the only nation which offers freely and without limitation to Russia, and to all other nationals the opportunity for exclusive production rights. We also grant them the opportunity for the exclusive control of our home market in which to exploit patented inventions to the great detriment of our home industries, workers, and the public generally.

In the light of post-war possibilities it would be well to reappraise the whole of our patent system.

FREE ENTERPRISE SHOULD BE PROTECTED

We quite agree with the National Patent Planning Committee in its comments upon our present patent system, when it says, "as with any system of long standing, conditions arise which were not foreseen at the time of its establishment." We concur in the recommendation of the Commission that "the American patent system should be adjusted to meet existing conditions without destroying its basic principles."

We urge, however, that the basic principles should be so applied as to assure the distribution of benefits of patented inventions to all of our people and not permit manipulation and abuses which result in the enrichment of a comparatively few. We urge also that our patent system be so constituted and administered as to assume the perpetuation of our free-enterprise system and not permit of its use as a means of developing great private monopolies or empires which, with tendencies of unrestraint, ultimately can result only in undermining and destroying our American democracy and our American way of life.

The security and perpetuity of our freedom, free enterprise, and our free labor must not be sacrificed for immediate profits.

To that end we favor a thorough, unbiased, and unprejudiced study and inquiry of this whole subject and the enactment of laws which will provide for a constructive and progressive system of patented enterprise.

Limit on Lend-Lease

EXTENSION OF REMARKS

OF

HON. ROBERT B. CHIPERFIELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 16, 1945

Mr. CHIPERFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Evening Star, of March 15, 1945:

LIMIT ON LEND-LEASE

In its overwhelming vote extending the life of the Lend-Lease Act for another year, the House has adopted a wholly pertinent amendment barring use of the act for post-war relief, rehabilitation, or reconstruction. The size of the vote—354 to 28—is a tribute to the excellence of lend-lease as a weapon essential to victory, but the restricting provision makes clear at the same time that congressional sentiment is strongly opposed to having the measure operate beyond the point of military need.

Enacted originally to promote the defense of the United States, lend-lease, both in intent and function, has been a military project from the start, and as such, operating reciprocally among the Allies, it has played a powerful and decisive role in making certain the ultimate defeat of the Axis. But though its purpose and application have thus been clear, there have been some misgivings of late that it might be employed in such a way as to make this country a kind of "lady bountiful" in the immediate post-war period. The amendment passed by the House serves, accordingly, as a timely restatement of what the measure is meant to be, so that neither here nor abroad should there be any mistaken notion about it.

Though advanced by Republicans, the amendment was promptly accepted by administration leaders. Actually, the administration itself has declared on more than one occasion that the act will cease operating as soon as hostilities come to an end, and just a few months ago a joint London-Washington statement announced that lend-lease shipments to Britain would probably be cut in half this year and that the British would pay cash for supplies not related to the prosecution of the war. The fact that Japan still will remain to be beaten after Germany goes down tends to complicate the situation, but the rule applying to Britain is presumably meant to apply generally, with lend-lease being adjusted among all the United Nations in accordance with changing military requirements.

This is as it should be. The vast job of relief, rehabilitation, and reconstruction belongs to U. N. R. R. A., the projected world bank and similar agencies already existing or being planned. Lease-lend, as its own formal title declares and as the new House amendment reaffirms, is strictly a war measure designed to last no longer than the war itself. To use it as something more than that would be to violate its avowed purpose, play Santa Claus and delay the return of normal international economic processes.

Investigations of Military Affairs Committee of House of Representatives

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. BROOKS. Mr. Speaker, many formal public documents are issued from time to time concerning the work of the Committee on Military Affairs, and, although some publicity is achieved in the press and over the air, as a member of that committee, I want to give you a short but comprehensive outline of some of the praiseworthy accomplishments of the committee. In making this possible the Military Affairs Committee has functioned with the able assistance of its general counsel, H. Ralph Burton and his active staff.

Investigations which have engaged the attention of the committee during the Seventy-eighth Congress have ranged from safeguarding the lives of military aviators to protecting the interests of American taxpayers. Many matters have been presented for consideration, the mere presentation of which has often been speedily followed by agency rectification, making further congressional action unnecessary. Thus the investigative activities of the committee have prevented as well as cured unhealthy bureaucratic condition. Some investigations of the national war effort have included those in the category of military secrets which, because of the nature of the subjects involved, cannot be publicized while the war is in progress.

A painstaking and exhaustive investigation of airplane accidents was prompted by reported questionable practices of a company enjoying a monopoly in the sale to the Army of fueling systems of the type known as "hydraulic," operated on the theory that water and gasoline do not mix and whereby gasoline is forced into planes by the upward pressure of water against it. Favoritism shown by certain Army officers for a particular fueling system was halted; payments of inordinate commissions to salesmen were ended; better and safer fueling systems were assured for the future; and military aviation hazards were decreased as the efficiency of the air arm was increased.

A shocking glider fatality at Lambert Field, St. Louis, in which the mayor and other important officials were killed, resulted in a thorough investigation by the committee. The accident was caused, apparently, by faulty construction which had not been detected because of nonexistent or wholly inadequate inspection service. Assurances were given to the committee that corrective measures, including complete and rigorous inspection service, would be instituted at once. To make doubly sure, a committee investigator conducted another inquiry about a month later from which it was established that all assurances given the committee had been faithfully carried out and the methods adopted were adequate and effective.

The Military Affairs Committee entertained charges which were brought to its attention in reference to certain corporations engaged in the manufacture of military aircraft. This investigation revealed that vast sums of Federal money were being spent in experimental aircraft projects. They also revealed that the War Department had entered into contracts supplementary to these experimental projects for the manufacture of plywood planes, and the Defense Plant Corporation had spent vast sums of money in the construction on behalf of these contractors. Only six airplanes were built and none of them fully met specifications, and all were refused by the Army. In all, there were something like $400,000,000 in contracts for the building of wooden cargo planes, and the committee investigations resulted in convincing everyone that this experimental project was not practical. In its abandonment, it resulted in the saving to our people of sums exceeding $300,000,000.

An investigation by the committee grew out of charges that gambling, prostitution on the premises, equipment-renting rackets, the burying of scrap metal, and general waste were prevalent at the Orangeburg Staging Area, Rockland County, N. Y. The staging area—later named Camp Shanks—was constructed for the purpose of housing troops prior to service overseas. The committee investigation was suspended with the understanding that the Department of Justice was to take the matter in hand through the institution of criminal proceedings. However, some 8 months later, hearings were held before the committee at which several witnesses

formerly connected with the camp construction were heard. Impressed greatly by revelations of the committee, the Department of Justice authorized the impaneling of a Federal grand jury to probe the situation from every angle. The grand jury is now questioning witnesses.

As a result of the committee's investigation of the British Operational Training Unit, Nassau, British West Indies, numerous irregularities were to a large extent eliminated and millions of dollars saved to the taxpayers. The irregularities were connected with rentals of equipment, auditing of accounts, purchase of materials, storage of gasoline, sales of Government property, dismissal of employees, misuse of Government transportation equipment, leasing of a yacht and a hotel, and extraordinary privileges according to personnel, all connected with the construction of airfields and auxiliaries by the United States Corps of Engineers with lend-lease funds. On completion, the installations were turned over to the British Government.

Inquiries relating to accounting in war contracts, particularly to the cost allocation of salaries and bonuses paid to administrative officials in industry, engaged in the attention of the committee for a protracted period. The importance of its study was emphasized by the discovery that inordinate increases in salaries in addition to bonuses were being paid to executives in both upper and lower ranks of industrial enterprises, apparently in defiance of instructions contained in the Auditors' Manual issued by the executive accountant and auditor of the Army Air Forces. Increases in salaries ran as high as 400 percent, while increases given to those earning less than $10,000 a year seldom went above 25 percent. A large portion of the increased salaries was charged to Government contracts. Many executives connected with organizations now operating on war contracts had formerly been paid high salaries because of ability to procure commercial business and to promote the sale of their organizations' product to civilian buyers, but such talents were not at all essential to the work they were currently performing. As a result of this investigation and the committee's recommendations prompted thereby, efficient and constructive measures have been instituted and inestimable savings in war production costs effected.

Growing out of a number of investigations made by this committee into sales of surplus property were savings of considerable sums to the Government, the admonishment and disciplining of several officers for failure properly to protect the Government's interests, and the institution of changes to insure a more rigorous supervision of these surplus sales activities and the enforcement of all regulations governing the sale and disposal of salvaged property. The idea firmly implanted in the minds of authorities in control of salvage, that the committee is alert to sales activities, has been highly salutary in assuring more careful disposals of surplus. It may confidently be stated that the savings to the Government resulting from the watchfulness of the committee over this single activity, far more than balanced the dollars expended by the committee for all its investigations during the Seventy-eighth Congress.

An investigation by the committee forestalled what might eventually have proved detrimental to allied occupational procedure and strategy. It saved Federal funds appropriated for specialized training from diversion to subversive use. It served as a warning to some educational institutions. During November 1943 a series of articles appeared in the public press alleging that certain teachings not in accord with the American philosophy of government were being incorporated in the curriculum at Cornell University in connection with a new Army specialized training program schedule. A careful study of the allegations was made, with the result that the teacher who was the chief offender soon afterward severed his connection with the university.

Studies and investigations of the Selective Service System were long, detailed, and arduous but resulted in a general clarification of this complex subject. Particular consideration was given to the growing practice, both in Government and industry, of deferring men of draft age, by which the Nation's manpower pool had been dangerously depleted. Throughout the testimony of various Government officials on the subject of occupational deferments—classes II–A and II–B—which had been requested by the agencies, there was evidence that a great many Government employees had requested their own deferment without the knowledge of the agency involved or were put in deferred classifications by their local boards after they had filed impressive-looking applications. These and kindred irregularities were halted. An exhaustive search of existing statutes containing provisions affecting the various manpower problems at issue and applicable to the question before the committee resulted in the conclusion by the committee that the Selective Service System, the Army, the Navy, and the War Manpower Commission in cooperation were legally empowered to meet all of the exigencies presented in relation to the manpower situation.

The initiation of an investigation by the committee was followed by official action which forced the termination of an activity strongly resembling a racket calculated to mulct indirectly the Federal Government of sums which ultimately would have run into hundreds of millions of dollars. Furthermore the efforts of the committee earned and received the unstinted commendation of outstanding national organizations, many of whom held as their cardinal tenet that labor is not a commodity for sale on the auction block or in the market place. The investigation concerned itself with the growing practice, engaged in by so-called engineering service companies, of enticing employees having certain specialized skills from plants engaged in war production and subsequently selling their skills under contract to the same or other war contractors at exorbiant rates, resulting in an unjustifiable increase in the costs of war contractors. Apparently the practice began as early as 1940, but it was not until late in 1943 and early in 1944 that any attempt on the part of responsible Government agencies was made to put a stop to it, and no definite action was taken to do so until after the committee had begun its investigations in industrial centers. Eventually the Office of War Information announced a program adopted by the National War Labor Board, the War Manpower Commission, the War and Navy Departments, and the Maritime Commission for combating on several fronts the so-called engineering service companies. A recapitulation of five agreements of one company alone with these employment agencies shows an ultimate cost to the Government of the United States for war labor renting of $1,384,000.

Reports of racial animosities and labor unrest culminating in an unauthorized work stoppage on D-day, and numerous complaints received were considered sufficiently important to require an immediate first-hand investigation of conditions at the Wright Aeronautical Corporation, Lockland, Ohio, which is engaged in the manufacture of aircraft engines. It seems that some action on the part of the management in changing personnel in the plant and placing seven Negro men in a shop with white employees, both men and women, resulted in a strike. Some twelve to fifteen thousand white employees left their work, and temporarily crippled production at the plant. The mere fact that a representative of the Committee on Military Affairs was on the premises contributed in considerable measure to the resumption of normal conditions there.

Hearings before a special committee brought out the fact that in August 1943 a Puerto Rican corporation chartered a War Shipping Administration cargo vessel for the purpose of shipping 1,359,000 gallons of molasses to New Orleans consigned to the shippers only. The cargo was unsold practically up to the arrival of the ship at its destination, whereupon it was offered for sale to a private trader in the United States. The purchase was made at 18 cents a gallon for the entire cargo at the suggestion of the Molasses Section of the War Production Board. This same cargo could have been purchased by the Defense Supplies Corporation, a Federal agency, in Puerto Rico at 5 to 6 cents a gallon plus 6 to 7 cents a gallon for transportation if any means thereof had been made available by the War Shipping Administration. Complaints had been made that, at the instance of the War Production Board, cargo ships for the transportation of molasses from the Caribbean area were being assigned to private industry, while shipping facilities for the same product were denied the Defense Supplies Corporation, a Government agency. Had this practice been permitted to continue uninterrupted, it is probable that tremendous profits would have been made at the expense of the Government and would have been added to the costs of living in the United States.

Covering an extended period prior to final passage of the Contract Settlement

Act of 1944, a careful study of the procedures by the War Department, as well as other agencies, occupied the attention of the committee. Illustrative of distinct benefits resulting from a limited survey of negotiations preceding final settlement of terminated contracts is the case of the K. B. Noble Co., of Hartford, Conn. Upon cancelation of a contract with this company by the War Department, it developed that the contractor was left with a surplus of electrical equipment and parts to the approximate value of $58,000, which, under War Department regulations, must be disposed of either by the contractor or the Department. Of this amount, $8,000 was absorbed by the contractor, leaving $50,000 worth of equipment to be sold. After following established procedures, it was sold to the highest bidder, a junk dealer, for $6,000. Within a period of about 2 weeks thereafter this junk dealer was able to sell a very small portion of this equipment, having a very high priority, to a manufacturer for about $12,000, leaving the greater part of the material still to be sold, thus inordinately increasing his gains, since, regardless of sale price, it would all be profit. Although there was no evidence of fraud in the sale of this equipment, the transaction very definitely did show, as in other instances, that the procedures which had been established by the War Department were not sufficiently precise to protect the interests of the Government in the disposition of surplus property. When this matter was called to its attention, the War Department gave assurance that remedial measures would be instituted.

Charges were filed with the committee that the construction of the Gopher Ordnance Plant at Rosemont, Minn., was characterized by excessive personnel, incompetence, extravangance, and waste. All instances of irregularities found by the committee representatives were called to the attention of the Army officers in charge and the officials of the contractor, E. I. du Pont de Nemours & Co. Corrective measures were promptly instituted and assurance were given to the committee that others would follow. The plant was designed to produce 300 tons of smokeless powder a day, but no powder was ever produced. On April 10, 1943, after spending nearly $78,000,000 on the project, the War Department ordered construction work discontinued on 3 of the 6 production lines, and the remaining 3 put in stand-by condition, on the ground that existing plants could meet all requirements for the remainder of the year.

Early in the year 1944, when military operations in the European area were increased in tempo and intensity, the numbers of battle casualties brought to our shores showed a pronounced and steady increase. The thought occurred to countless patriotic citizens that if hospital facilities here were not keeping pace in mathematical precision with the steadily augmenting needs, something should be done about it promptly. Rumors of a disquieting nature had been current for some time that sick and wounded soldiers in many instances were being crowded into crude, uncomfortable, makeshift hospital buildings, often inadequately equipped and insufficiently staffed with doctors, nurses, and attendants. Committee investigators visited and inspected 89 Army hospitals in 20 States and the District of Columbia prior to the expiration of the Seventy-eighth Congress. Whatever may have been the situation prior to the committee's investigations, with few exceptions the results following the investigations have been decidedly reassuring. The committee has made it a point to report needs instantly to the proper authorities in Washington for appropriate action, and the appropriate action has been salutary. The survey is being continued for the Seventy-ninth Congress. Its purpose, of course, is to make assurance doubly sure that our hospitalized soldiers from overseas combat areas are receiving the best possible care and treatment.

Rumors having become widely circulated that prisoners of war in the United States were being coddled, that there was too much hobnobbing between prisoners and civilians, and that escapes of the former were too frequent, a thorough investigation of the whole subject was undertaken in November 1944, at which time nearly 335,000 war prisoners were held in the continental United States. More recent figures indicate a total of nearly 360,000. The investigation also considered available information concerning American prisoners of war in the custody of Germany and of Japan. Briefly the following points were developed by the committee:

First. That the provisions of the Geneva Prisoners of War Convention of July 27, 1929, to which the United States is a party, and Germany and Japan are signatories, although the latter has never ratified it, have been observed punctiliously by the United States, and in the main by Germany and in a lesser degree by Japan. Germany has adopted a less liberal interpretation of some portions of the convention than has our Government, due, possibly, to the exigencies of its own situation. The same may be said of Japan in greater degree, 56 percent of whose 16,000 war prisoners are held in the Philippines and 39 percent in Japan proper, the China mainland, and Manchuria. Japanese living and dietary standards are extremely hard on American soldiers.

Second. Prison posts in the United States provide comfortable quarters, good food, freedom of worship, somewhat restricted entertainment and recreation, and firm discipline. Medical care is excellent. German prison quarters lack sufficient heat. Recreational privileges are good. There is freedom of religious exercise. Medical care is excellent. Japanese prison housing is substandard. Heating, ventilation and sanitary facilities are lacking. Bedding is painfully inadequate and food is scanty with a rice base. Various churches and religious organizations provide some reading and recreational equipment. Religious activity is of necessity something of a hybrid type with Japanese priests occasionally officiating. Medical care is Spartan in its simplicity.

Third. There has been no coddling of prisoners in American camps, but they are humanely treated. In one or two instances there was rather too much fraternizing between prisoners and civilians. That has been stopped. Needless to say, the brutal militarism of both Germany and Japan admits of no coddling of American prisoners.

Fourth. Labor imposed by American authority on prisoners of war is beneficial to themselves, by way of their savings and maintenance of health and mental cheerfulness, and to the Government which has paid much of the expense of prison maintenance with payments made by employers for this war-captive work, about 70 percent of which is in agriculture. The prisoners work slowly but efficiently and thoroughly. They are never sent into any community to work unless there is a labor shortage and the need therefor is certified by the War Manpower Commission. Prisoner labor is utilized in agricultural, pastoral, food processing, forestry pursuits, a dozen of the trades, and repair work. Wages paid war-prison labor by American employers average about $3.50 a day of 9 hours. Of this wage the Government reserves all but 80 cents or its equivalent, which is paid to the worker who also gets 10 cents a day whether he works or not. American privates at labor in Germany receive the equivalent of 28 cents a day in addition to food and housing. In Japan they receive the equivalent of 2½ cents a day with rice and straw mat. They are utilized in mechanical industries, factories, roads, airfields, docks, and mines.

The provisions of the Geneva Convention of 1929 are being carried out by us to the letter and it is well indeed that such is the case, since the slightest deviation therefrom on our part might instantly result in more than retaliatory measures on the part of our enemies against American prisoners of war in their hands. Such a contingency must not be overlooked.

Ample information has been made public by the committee to reassure those whose fears and susceptibilities had been harrowed by rumors and tales which may have been manifestations of enemy propaganda.

The foregoing is a brief résumé of the high spots in the investigation made by the Military Affairs Committee of the House of Representatives under joint resolution of this body. I have not thought to go into minute details regarding this investigation, nor have I sought to cover every subject which has been a matter of investigation under this authority. The matters referred to are largely those of general public interest throughout Congress as well as the country.

It is needless that I emphasize the tremendous savings of money resulting from these investigations. The investigations have been handled in such a way as not to impede or embarrass the war effort. The committee has not strived to develop news of sensational interest or those things which necessarily make headlines in the columns of the daily press or which blares over the radio. The committee has in every case attempted to

exert a corrective restraint when correction was found to be possible, and in this respect the committee has largely received the support and cooperation of the War Department. From reading even this short statement, the tremendous savings to the United States as a result of these continued and at times very vigorous investigations are obvious to anyone making even a cursory investigation of the work of this committee. It is not possible to put down with reasonable exactitude the definite figures indicating the savings. Regardless of this fact, these savings run well up in comparison with the gigantic figures such as we see in appropriation bills of this Congress, and, in my judgment, the country should feel justifiable pride in the knowledge that the House of Representatives is making a forthright vigorous and unsensational effort to correct abuses and reduce expenditures in the war program—without hurting the war effort.

I would not want this House to feel that the entire field of fertile investigation has been covered by our committee. In my judgment the surface has hardly been scratched. Many of the investigations cannot be pushed thoroughly and vigorously at the present time due to the imperative need of winning this war. Many of them come to the surface only with the further development or determination of the war program. Others will come to light as further time passes. Investigations of this character involve matters which should be pursued vigorously, fearlessly, and relentlessly.

I think the report to date is such as to have merited the commendation and approval of this body as is indicated by the continuation of the investigations authorized of the Military Committee for another 2 years. I think the House can take this record of investigatory accomplishment to the country as one of the real achievements of the House of Representatives during the extremely distressing times of the great war. I hope that these investigations in the future will proceed with even more vigor and aggressiveness than has been their course in the past.

Air Power Is Peace Power

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 16, 1945

Mr. McDONOUGH. Mr. Speaker, the aircraft industry is a vital and important part of the economic life of the Nation and especially of southern California. Mr. Donald Douglas is a pioneer in the industry and one of the principal manufacturers of airplanes. His genius and skill have been an invaluable help to winning the war. The Douglas Aircraft Co., Inc., has plants located in Santa Monica, Long Beach, and El Segundo, in California; Oklahoma City and Tulsa, in Oklahoma; and Chicago, in Illinois. Two hundred and fifty thousand employees had to be trained to man these plants.

Mr. Douglas and the aircraft industry as a whole are concerned about the future of aviation and about the reconversion to peacetime production.

The Members of the House of Representatives should also be concerned about the future of this vital industry. I hope all Members will read the following excerpt from the speech Mr. Douglas made recently at the Aeronautical Chamber of Commerce at the Commonwealth Club of San Francisco, Calif.:

How well we of the aviation industry continue to serve air power depends on how clearly the American people and Congress see that air power is peace power. Under existing conditions the industry, itself, cannot write the answers. It cannot of its own right make the blueprints of the post-war period. It could not, while war production came first, take the time, it could not spare the energy and effort, to plan and prepare for the future while more and better airplanes were needed for victory.

Not until our enemies are completely crushed and the Government gives the word, can we relax our production efforts for war and begin to work on peacetime projects. A limited amount of discussion has been held, but most of our attention in this direction has been strategic only—we found it necessary on occasions to tell our workers something of the possibilities of the future to make them stay on the job now.

We, in the aircraft industry, must stick to our posts. We must be in the vanguard of progress, and at the same time protect the very last batch of rearguard of production, holding the fort until the last shot is fired.

This places extra responsibility on the Government and on the American people to see that air power, guardian of liberty and progress in aviation, is not lost in the shuffle. The Government should see to it that no unreasonable or unnecessary obstacles are placed in the path of the aircraft industry when it finally gets the green light for the post-war start.

Congress and the American people should see to it that the industry, which after all is only men and women, their savings and their jobs, is not tangled up with red tape, with long debates, with political witch hunts and accounting inquisitions. We have had little time or opportunity to work on new commercial designs, on airport developments, on international agreements, on special surveys—on all the things you do when the world is at peace and individual initiative and enterprise can have free play.

Before we can make the most of post-war possibilities, for our own workers and for preservation of air power, before we can translate into everyday life of all peoples the dearly won accomplishments of aviation in this war, there must be intelligent and sympathetic understanding, and action, on such matters as surplus disposal, contract terminations, and a hundred and one related subjects involved in a transition from an all-time high mark in war production to a reasonable and financially sound basis of peacetime pursuits.

In the dark and doubtful days of the war, when the current slogan was, "It is later than you think," and Hitler's great war machine thundered irresistibly across Europe and Africa, war production, very properly, had the right-of-way.

"Plenty and on time" was the keynote. Everything else was of secondary importance. Every department, every division, every bureau, every official in the Government stood ready to help industry slide into high gear. It was an up-hill pull, and everyone was ready to put his shoulder to the wheel.

The job was started, organized, accelerated. It is rolling in high gear today, rolling beyond all expectations, rolling hand in hand with victory, because private enterprise and labor under necessary wartime regulations still managed to retain most of the original spirit of typical American teamwork.

When war ends the aircraft industry will find itself on peaks it can never hope to occupy permanently. The curve of sound reconversion will be downward. Our national economy cannot support production of $20,000,000,000 in airplanes a year. The journey downward from production hill will be fraught with difficulties and hazards. National welfare, if not appreciation for a job well done, demands that the industry be helped in this perilous journey. National Government cannot say to us and to industry generally, "From here on it's everyone for himself".

We think our wartime accomplishments, our record, and our task in days to come entitle us, as an industry, to fair and friendly treatment. We seek no special rewards. We have done our job well and on time, but so have many others. Compared to the sacrifices and deeds of the millions who endured hardships in thousands of camps and battles, of the men who stormed the beaches and paid with their sweat and blood for victory already achieved and still to come, our part was small, indeed. Yet the men at Midway, in the Solomons, on the Salerno and Normandy beaches, on Tarawa, Saipan, Luzon, Guam and Iwo Jima—the Americans on the Rhine and in liberated countries, our own troops and naval forces everywhere had a better chance to survive because American-built aircraft—fighters, bombers, and transports—were overhead on a thousand battlefronts and horizons.

Scores of thousands of our boys, your kin and mine, are back with us today, and hundreds of thousands of others will come back to us in the future, alive and ready to play a useful part in the new world of tomorrow, because American built air power drove the enemy from the skies and from the oceans.

The millions who will come back and those who will never return have a right to expect that in exchange for what they gave, we do not falter or fail in years to come to make air power real peace power.

Utah House of Representatives Passes Important Bill

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 16, 1945

Mr. VOORHIS of California. Mr. Speaker, every time the subject of money is mentioned, a seriously large number of people say "that is something I do not understand. It is too complicated for me." I have never believed it was too complicated for the average person to understand. The main difficulty has been that the important facts regarding money have not been made generally available to the American people. Therefore the action of the House of Representatives of the Legislature of the State of Utah in passing the following bill by a vote of 37 to 16 is, in my opinion, a most encouraging and constructive sign.

It will be noted that under the terms of this bill, the text of which follows, there would be instruction in the schools in the State of Utah on the fundamental matters regarding the monetary system of the United States.

H. B. 99

A bill providing that the State school system include a course of instruction in all junior and senior high schools, colleges, and universities on the subject of money and its relationship to economic and political affairs and prescribing the duties of the State superintendent of public instruction in relation thereto

Be it enacted by the Legislature of the State of Utah:

SECTION 1. All junior and senior high schools, colleges, and universities in this State, including city schools of the first and second class, shall hereafter include in their curriculum and course of study the subject of money, including its history, philosophy, functions, and relationship to economic and political affairs, and all other subjects concerning its operation and use in the United States of America and elsewhere.

SEC. 2. For the purpose of this act, the State superintendent of public instruction shall prepare, not later than September 1, 1945, teaching materials and materials of instruction, bulletins, courses of study, and visual educational aids, such as in his judgment will best explain to the understanding of students the following popular theories on the issue of money:

(a) An explanation of debt-money (bank credit) which is created by banks operating under the Federal Reserve Act, and loaned into circulation at interest.

(b) The theory of 100 cents on the dollar back of all demand bank deposits which could mean money issued by the Treasurer of the United States to take up Government bonds.

(c) Labor monetary educational committee's theory of money, which is that money issued by the Treasury and paid to labor, and for material in the building of public highways, power dams, flood-control, and such other public projects as may be authorized by Congress, thereby adding new wealth to the Nation, in like number of dollars created.

SEC. 3. Pursuant to the provisions of section 75-16-1, Utah Code Annotated 1943, the State course study committee is authorized and directed to prepare material on the money question for study in the public schools. Said committee shall call upon experts who have made a thorough study of the money question for assistance in compiling such material.

SEC. 4. The State superintendent of public instruction shall act as administrator, exercising all executive functions in connection with the carrying out of the purpose of this act. No extra compensation shall be paid to him for his services; and he shall make a detailed report of his activities hereunder to the legislature of 1947.

SEC. 5. It shall be mandatory upon the superintendent of public instruction to enforce the provisions of this act.

Blast Hirohito

EXTENSION OF REMARKS

OF

HON. E. H. HEDRICK

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 16, 1945

Mr. HEDRICK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Charleston (W. Va.) Gazette:

BLAST HIROHITO

It must come with considerable surprise to our Army, Navy, and marines to hear that the bombing of the royal palace in Tokyo is being carefully avoided. They must wonder how anyone would want to protect the person of the Japanese Emperor and leader.

Yet, it is a fact that our Air Forces have been carefully instructed to avoid damaging the palace or any of the grounds lest they might hurt the Emperor. One wonders if the crew of a B-29, that was so careless as to drop a bomb near the palace stables recently, caught hell for it.

We have seen no adequate explanation of why any such orders should have been given. It has been suggested that if the Emperor, who is supposed to be a sacred personage, should be killed or even injured, that would awaken the Japanese to fanaticism. Also, it has been suggested that Hirohito and his military staff must be preserved so that the Allies will have some authorities to deal with when the time comes to dictate the peace terms.

Whose shallow thinking is this? Members of our State Department? If so, by what authority does the State Department give orders to our Army and Navy? By what right does it thus interfere with our fighting forces? By what course of reason does it arrive at the conclusion that it is wise to regard the Japanese Emperor's person as something sacred?

All over America and Britain goes up the demand, "Bomb Hirohito and the imperial palace." And there certainly is not a soldier, sailor, or marine who does not cry out for that action. All want to know how it would be possible to make the Japanese more fanatical than they are already, and why it should be necessary to deal with any part of the Japanese Government when we are ready to go in and take the country over.

Regardless of what the policy of our State Department may be, this is a war, and the military and naval forces should conduct it with free hand. They know what has to be done and how to do it. Why, in the name of all that is holy, should the State Department have a right to interfere?

Have you talked with a marine who has seen action in the Pacific? If not, then do so at the first opportunity. He will tell you that the Japanese are, without exception, the lowest order of beasts. He will, confidentially, reveal the fact that the marines take no prisoners, that they look upon the Japanese are venomous vipers that must be exterminated. These marines speak with authority, for have they not heard—some of them experienced—the most horrible cruelties and utter debaucheries practiced by the brown skunks?

Is the State Department getting ready to appease the Japanese after we have chastised them? Remember, the State Department has a disgraceful record of appeasement that goes back long before we got into the war and has continued since. For instance, look up the record of appeasement of General Francisco Franco, Spanish dictator, who seized power without authority and holds it against the desires of a great people.

The British Foreign Office has taken the position that Hirohito and his palace and grounds must be protected. Our State Department has backed it up. Again we ape the British Foreign Office. Are our State Department and the British Foreign Office wiser than the vast majority of the American and British people?

We say with all earnestness that if our State Department wants to run this war then:

To hell with the State Department.

International Cooperation To Prevent War

EXTENSION OF REMARKS

OF

HON. AUGUSTUS W. BENNET

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 16, 1945

Mr. BENNET of New York. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter directed to the President of the United States under date of February 28, 1945, by all of the newly-elected Republican Members of the United States House of Representatives, as follows:

FEBRUARY 28, 1945.

Hon. FRANKLIN D. ROOSEVELT,
President of the United States,
The White House,
Washington, D. C.

DEAR MR. PRESIDENT: As newly elected Republican Members of Congress we desire to express our conviction that the American people seek more than anything else assurance of freedom from future wars.

We believe that the people will support a sound program of International cooperation which gives reasonable promise of preventing war and of promoting understanding and good will among nations. It seems to us that the policy outlined by our party at Mackinac offers the basis for such a program.

We are sure that the American people will much more readily approve the proposals for a lasting peace if reports of progress are made from time to time. We therefore urge you to inform the people as fully as possible of the plans that are being discussed.

You may be assured that we will consider any plan for permanent world peace which may evolve from these conferences strictly on its merits and without partisanship.

Respectfully yours,

ROBERT K. HENRY, Wisconsin; SHERMAN ADAMS, New Hampshire; JOHN W. BYRNES, Wisconsin; EWARD J. ELSAESSER, New York; HOWARD E. CAMPBELL, Pennsylvania; RALPH W. GWINN, New York; GORDON L. MCDONOUGH, California; HENRY J. LATHAM, New York; JAMES G. FULTON, Pennsylvania; T. MILLET HAND, New Jersey; CLIFFORD P. CASE, New Jersey; EDGAR A. SHARP, New York; JOHN W. HESELTON, Massachusetts; JAMES I. DOLLIVER, Iowa; ALBERT M. COLE, Kansas; AUGUSTUS W. BENNET, New York; GEORGE B. SCHWABE, Oklahoma.

Lend-Lease

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1945

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial, entitled "Lend-Lease," which appeared in the New York Times of March 15, 1945:

LEND-LEASE

By an overwhelming majority of 354 to 28 the House of Representatives has voted to extend lend-lease for another year. Its act of approval carries a proviso that no funds appropriated under this program shall be used for post-war relief, rehabilitation, or reconstruction. This reservation, adopted on the initiative of Republican committee members, is a perfectly proper one. Lend-lease is a war measure. There will be need of large post-war contributions by the United States for purposes of relief, and of wise lending for purposes of rehabilitation and reconstruction; but these activities can and should be managed independently of lend-lease and under the auspices of other agencies. The President himself said in his most recent report to Congress on the operation of this fund that "lend-lease and reverse lend-lease are a system of combined war supply," and that "they should end with the war." The bill as passed by the House and now sent to the Senate extends the life of the original act until June 20, 1946—there will have to be an additional extension, of course, if the war with Japan is not finished by that time—and provides a clean-up period until June 30, 1949, under which agreements can be fulfilled.

Lend-lease is so important to the whole war effort that the wonder is that 28 Members of the House—1 Democrat and 27 Republicans, mostly from the Middle West—could be found to vote against it. What do these Members mean by their opposition? Plainly they mean that they do not want weapons made in American factories to be used against Germany and Japan by the armies of the nations which we have made our Allies. But the necessary corollary of this is that all of the fighting done with American weapons on all of the fronts against Germany and Japan must be done by young American boys. What does this profit us? How does it shorten the war? How does it save American lives? How does it save even American dollars?

The votes of these 28 are evidence that in some quarters the delusion still persists that lend-lease is a favor to other nations. It is no favor to other nations. It is a way of making use of the good efforts of willing allies for the purpose of helping us defeat in the shortest possible time two savage enemies who made war on us.

Meat Situation in New Jersey

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, March 16, 1945

Mr. CANFIELD. Mr. Speaker, I desire to present to the House today a telegram just received from my constituency. It presents a real challenge to Government in the meat crisis we are now experiencing. The telegram reads as follows:

Meat situation in northern New Jersey very serious. Have not been able to purchase 1 pound of fresh pork, poultry, or veal for the past 3 weeks for our 23 meat markets serving Passiac, Bergen, Morris, and part of Essex Counties. Meat packers claim between 60 and 30 percent of products being set aside for Army and lend-lease. Beef and lamb supply approximately 15 percent of our supply based on 1942 purchases. The only source of supply left appears to be the black-market beef available at from 15 to 20 cents per pound above the wholesale ceilings. It is time to call a halt to the mismanagement of the civilian food supply and to the drastic demand of the O. P. A. point values. Butter sale practically stopped. Consumer does not have the points to buy.

V. S. GRASSEY,
President, Great Eastern Stores.
PATERSON, N. J.

I desire to compliment the Sundstrom committee for probing this matter and I hope that the Government will move promptly to help both industry and consumer beat the black market. Defeat in this fight is unthinkable.

Representation of Veterans at Peace Conference

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 16, 1945

Mr. BECKWORTH. Mr. Speaker, I desire to extend my remarks and include in the RECORD a resolution which was introduced by Representative Cousins and others in the Texas House of Representatives and adopted by that body March 5, 1945:

H. R. 128

Whereas a resolution has been presented to the House of Representatives at Washington, voicing a plea that veterans of World War No. 1 be represented at the World Peace Conference; and

Whereas the American veterans of World War No. 2 are interested in, and have asked for, this same representation at the Peace Conference; and

Whereas the men who do the fighting should be the men who make the peace, as they know the situation vastly better than someone who has not been at the front or even in uniform; and

Whereas Texas now has almost 800,000 men in the service, many of them fully qualified, both by experience and ability, to sit at this conference table for peace: Therefore be it

Resolved by the house of representatives, That we do ask our Congressmen in Washington to support this measure and use every effort in their power to see that representatives of veterans of World War No. 2, as well as World War No. 1, be at the Conference for World Peace which meets in San Francisco; and be it further

Resolved, That a copy of this resolution be sent to our Congressmen in Washington, and that a certified copy, signed by the chief clerk of the house of representatives, be sent to the secretary of the American Veterans of World War No. 2, and it is so resolved.

Problems of War and Peace

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, March 19 (legislative day of Friday, March 16), 1945

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered before the Foreign Policy Association, at a luncheon in New York on last Saturday.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, ladies, and gentlemen, I deeply appreciate the invitation which brings me here on this occasion, as well as the opportunity which it affords to all of us to discuss with frankness and objectivity the problems of war and peace which now face the United States and the whole world.

For more than a century we have been accustomed to the use of the historical injunction "in time of peace prepare for war." This is undoubtedly the foundation of a wise foresight and precaution intended to guard us against surprise or impotency in the event of an attack upon our Nation or in the event of the necessity for defending our interests at home or throughout the world.

It seems to me that in the present circumstances which confront the world it would be equally wise to adopt an additional slogan: "In time of war prepare for peace."

Our Nation and all the United Nations are engaged now in the greatest war in all history. I think it is true beyond question that none of these United Nations desired this war, and it is equally true that none of them were prepared for it. In spite of the obvious preparation of the Nazis in Germany and the war lords in Japan for an aggressive war toward which they were looking, the peace-loving nations were so anxious to avoid war that they were unwilling to gird themselves by suitable preparation either to avoid it or to defend themselves when it should come. This is certainly true of the United States and of Great Britain, and of Russia, and of China, and it is equally true of the victims of aggression located nearest the seat of danger.

All of our national energies and all of the cooperated energies of the United Nations are now concentrated on the winning of this war and the defeat of the brutal aggression which has accompanied it at the earliest possible date and in the completest manner. It would be stupid to consider any other program at present except the total defeat and the total surrender of the Nazis and the Japanese and all that they represent, both in theory and in practice.

There is no alternative that any sensible or patriotic American can contemplate.

However, the necessity for the earliest and most complete victory over our enemies should not be allowed to blind us to the obligation which confronts us as a Nation and as a world to bring out of this war the organized processes by which a similar catastrophe may be avoided in the future.

It would be futile to occupy your time and mine in recounting our mistakes in this regard in past years unless we may profit by them. It has always seemed strange to me that in this Christian world and this Christian era of man's history mankind could not organize for peace as well as for war. Indeed, organize for peace instead of war; and if we have not learned our lesson by our present experiences, it would be difficult to understand what sort of disaster might overcome the people of the world that would teach them that the world should organize for peace instead of war. The attempt to do this in various parts of the world and in various stages of human history I need not now attempt to recount. The most notable effort previous to the present program occurred a quarter of a century ago. That effort failed. It failed in this country because, unfortunately, the issue became involved in partisan politics. I say this without impugning the motives of anybody or questioning their sincerity. Nevertheless, it did happen.

Fortunately, we have sought, and thus far succeeded, to lift the proposal for world organization for peace above the petty considerations of partisan politics, and we have sought to elevate it to the high level of consideration which embraces all political faiths, all colors, all creeds, and all nationalities.

This has been the spirit in which the Dumbarton Oaks proposals were conceived and carried out. Under the leadership of Secretary of State Cordell Hull, Democrats and Republicans in equal number were constantly in conference in a solemn effort to work out a program which would not only meet the approval of the American people, but which would also find support among all the United Nations and would be effective in accomplishing the purpose for which it was intended.

Following these preliminary conferences and efforts, running through a period of more than a year, the Dumbarton Oaks Conference was initiated, and the results of that conference have been made public.

It was impossible in these preliminary stages to have all of the United Nations represented at that conference. It was obvious then and is obvious now that certain great and powerful nations upon which rests the responsibility of defeating the Nazi program would have to assume the responsibility of first proposing a world organization that would avoid another similar infliction upon mankind. The Dumbarton Oaks Conference for 6 weeks labored in the spirit of solemn responsibility and in a desire to produce a program that would save humanity from another war. I feel that all those who participated in it, without regard to politics or nationality, are entitled to the commendation and the thanks of all lovers of peace for producing a formula around which it may be possible for all the United Nations and, ultimately, the world to rally.

This formula was not perfect and cannot be expected to be perfect when it is submitted to the San Francisco Conference, or when it emerges from that conference. No human document that ever formed the basis for cooperative action among peoples or nations was a perfect document. The Constitution of the United States, under which we have lived for a hundred and fifty years and have grown into one of the greatest Nations in all history, was not a perfect document. The first Congress that met after its ratification submitted 12 amendments to the States. Ten of them were adopted and are now known as the Bill of Rights of the American people. Altogether we have amended that document some 21 times, and we may amend it in the future as conditions and circumstances require, for, as Jefferson said, "No live generation is compelled to be bound by a dead generation." This is not only true in government, but in science, religion, education, and economic development of a people.

It is a tribute to the unselfish desire of all the nations involved to hand down to future generations a program that will preserve them from war and economic chaos that they were able to agree upon about 90 percent of all of the different questions that arose for discussion in the Dumbarton Oaks Conference. Some of the problems not there settled were solved at Yalta, and others by negotiation and international communication, and all of them will be submitted to and will, in my opinion, be formulated at San Francisco in a document that will constitute one of the great charters of human liberty and liberation of human history.

It is impossible in the time allotted to me on this occasion to go into any details with respect to the machinery through which the peace of the world may be preserved. We do know that in spite of its high resolves and its notable ambitions for peace and the serious work in which it engaged to that end, the League of Nations of a quarter of a century ago fell short of the requirements essential to the preservation of a peaceful world. The extent to which these failures may be attributed to our failure to enter that organization is now an academic question and ought not now to serve for the creation of any prejudices or preconception of ideas regarding the new effort to preserve peace.

We all recognize now that unless the new organization is entered into wholeheartedly by all of the great powers of the world, it likewise will fall short of success. We all realize now that any such organization must be equipped with power—a degree of power not possessed by any previous international organization. Of course, it must have the facilities and the machinery for negotiation, for peaceful conference, for diplomatic persuasion, and for the opinion of mankind to be brought to bear upon any recalcitrant nation which seeks again to bring war and chaos to mankind. These facilities are provided in the Council of Safety and in the Assembly set up in the Dumbarton Oaks program, but beyond this machinery for negotiation this organization must have power to enforce its decisions in whatever action it may decide to take against aggression in its incipiency.

And it is a matter for congratulation that all the nations now involved in this tremendous effort recognize the need for bringing to bear against an aggressor not only the united opinion of mankind but sufficient power and force to make it impossible for another aggressor to get very far in his designs for world conquest.

As I have already indicated, it would be fantastic to have expected that either at Dumbarton Oaks or at Yalta or at San Francisco a perfect document could emanate. Undoubtedly conditions will arise in the future which will require modifications in the light of experience, but the only alternative to the formation of such an organization is the prospect of another war in another generation, or sooner, and another era of economic, social, and political chaos which might destroy civilization itself.

Heretofore, arguments have been advanced to the effect that our part of the contribution to maintain such a world organization would be greater than our Nation ought to bear. We are now spending for war purposes alone approximately $90,000,000,000 a year. In the last 3 years we have authorized the expenditure of approximately $300,000,000,000 and we are now in the process of raising the debt limit of the United States to the incredible sum of $300,000,000,000. This represents a sum equal to the total wealth of our Nation two or three decades ago. This sum would be sufficient to maintain our share of the expenditure involved in the maintenance of a world organization for peace for a thousand years.

Similar comparisons can be made by the other nations which have been required to assume the burden of throwing back the hordes of brutality and world domination. If all the money expended by all the nations since the 1st of September 1939 as a result of this war could be devoted to the development of our natural resources, the education of our people, the advancement of the arts and sciences, and the effort to bring to every human being in the world life, liberty, and the pursuit of happiness, it would be impossible to visualize the high standard of living and of life that would come to our people and to the world.

Undoubtedly disagreements will arise, as they have arisen, over questions of boundary between nations, spheres of influence among nations, and the share of world trade and commerce which all nations will be seeking. But the ultimate question of boundaries need not deter us in bringing about at the earliest possible moment such a united effort among all the nations as will rescue mankind from all the horrors of war.

There is, according to my judgment, an unbroken line of progress and of determination from Dumbarton Oaks to Yalta and to San Francisco, together with intervening stations such as Quebec, Teheran, and Malta, which we cannot afford to break. Neither should we allow any shades of difference over voting procedures in the international organization to appall us with fear. One of the arguments against the last effort of mankind to organize for peace, and one of the arguments against our entering into that effort, was the claim that we would be outvoted by other nations where our interests were vitally involved. Certainly the agreement as to voting procedure which was reached in Yalta is as much a protection to the United States as it is to any other nation, and it certainly dissipates the argument or the claim that our Nation would be subject to the will of other nations without the power of veto where our vital interests of a military or economic standpoint will be involved.

In brief, looking at the plight of mankind all over the world at present, looking at the threatened destruction of civilization itself, looking at the universal hope of a vast and overwhelming majority of all the people of the world for a respite and a deliverance from the fear which they have been forced to endure and the sacrifices which they have made and are making, and must continue to make unless our present efforts succeed, I cherish the hope and the belief, and I think our people cherish the determination, that we shall accept as a Nation and as a people the responsibility of sharing in the guidance and direction of mankind toward a goal loftier than the sordid brutality of war, and loftier than the purely selfish contemplations of any nation or any group of nations which may conceive it to be within its power to thwart the peoples of the world and thus thwart the ambitions of 2,000,000,000 human beings for the happiness which comes to the peaceful life and the security in which that peaceful life may be preserved.

Why Fool Ourselves?

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1945

Mr. HOFFMAN. Mr. Speaker, altogether too many of us believe, or act as though we believed, all our problems here at home and abroad would be solved if we would furnish all people everywhere comfortable homes, a good living, and what clothing they wanted. We have gotten into that frame of mind because we are naturally charitable. That is an American characteristic. On top of that, a group of so-called intellectuals, people with more education than experience and common sense; people who have not had to earn a living the hard way, who are capable of expressing themselves plausibly, have, through press and radio, painted a glowing picture of a future world in which everyone will be happy.

The solution is not so simple. It is a physical impossibility for us to feed, clothe, and shelter everyone. Neither our productive ability nor our resources are sufficient to accomplish that very

laudable purpose. Nevertheless, the administration is putting on the heat to compel Congress to establish a world bank and a world monetary fund, into which we will immediately pour $5,925,000,000, which we will be forced to borrow—most of which the returning veterans and their children for many generations will be repaying—the money to be used to aid in rehabilitating war-damaged nations.

Here at home, we have been kidding ourselves into the belief that we can get something for nothing. To prevent inflation, Congress gave the President authority to create O. P. A., whose duty it is to hold down prices. O. P. A. established price ceilings on merchandise and instituted rationing. But it did not work, because some of the prices, when the cost of labor was taken into consideration, were so low that the food or merchandise could not be produced except at a loss, and people try to avoid doing business at a loss.

Then, to get production, the Commodity Credit Corporation was given money to pay the producer a sum equal to the difference between the cost of production and the ceiling price established by O. P. A. When it was found that farmers would not sell milk to make butter because the butter could not be sold at a profit, the Government spent $120,000,000 on butter roll-back subsidies; on flour, it spent $90,000,000. The Defense Supplies Corporation last year allocated $25,000,000 for sugar.

The roll-back on beef is 2 cents a pound, and has already cost the Federal Government $650,000,000, and we are now paying over $40,000,000 a month to take care of the roll-back on meat. The Defense Supplies Corporation paid $6,500,000 per month for subsidies on butter which went abroad. On meat, which was shipped abroad, we are paying a monthly subsidy of $2,500,000.

THE CATCH

The catch is that those who eat the beef and the butter and those who produce the milk and raise the cattle are taxed to make the payments to themselves, and, in addition, they pay a tidy sum to the bureaucrats for administrative expenses; and—in addition—many a taxpayer who does not receive the benefit of a roll-back still is taxed to pay those who do.

AMERICA FIRST

Some of us have vigorously and consistently insisted that a super-structure cannot be erected without a firm foundation; that we will not be able to help others unless we maintain ourselves in fighting and productive condition, think of America first.

But the President and his advisers still seem to feel that a sound foundation here at home is not necessary, or that in some mysterious way the United States will be able to feed and care for everyone everywhere in the world, for, on March 16, after the statements hereinafter quoted were made on the floor of the Senate; after it was charged that, in England, there are from 100,000,000 to 700,000,000 tons of food supplies, he told his press conference, as reported in the Washington administration paper, that the "decent" people of the United States would tighten their belts to feed others, meaning that those of us who did not agree with administration policies were not "decent."

The President said he did not think the American people had suffered greatly in the war thus far and the First Lady is purported to have said, in substance, that she had not noticed any shortage in food. That last statement is probably true, for an outfit that will request priority on a plane for a dog, when there are thousands of wounded Americans who might be returned from England, would not be likely to suffer for food or anything else.

The President's statements that he did not think the American people had suffered greatly in the war or that they would suffer from lack of food, that those who did not agree with his policy were not decent, were typically Rooseveltian, and carried the implication that our people are selfish, when, as a matter of fact, 75 percent of the fighting men on the western front are American boys; when we are carrying on the Pacific war almost alone. Iwo alone cost the lives of 4,189 of our boys, and this administration proposes, when the Pacific war is over, those islands which the Japs took from the British Empire and from the Netherlands will be given back to them, with all the fortifications and facilities for which we have paid so dearly in money and in that most precious thing of all—the blood and the lives of our young boys.

We have been, we are, pouring, and it is now proposed, after the war is over, to pour, billions upon billions of dollars worth of food and material into foreign lands. The truth is that the New Dealers having started, long before the war, on a campaign of spending and regimentation; on remaking America because they insist that government under the Constitution belongs to the "horse and buggy" days; upon imposing their ideas and their form of government upon other people, just will not stop. They now seek to use the whole world as a field for their experiments in every phase of human endeavor, with American youth and the American taxpayers paying the cost.

Prices have gone so high; necessities of life—food and clothing, for example—so scarce that some of the internationalists are frightened. U. N. R. R. A.—against which I voted—with American dollars has been trying to make the people of other countries happy and comfortable by giving them not only food, clothing, but many things they were not accustomed to have.

But a Democrat from Mississippi apparently has enough, for in the Senate he served notice that he would introduce legislation to see that America is fed first. Among other things, he said:

> A deplorable condition exists in the South, where one of the main staples of the farm workers' diet is salt meat. Practically the entire salt-meat supply has been going to Russia, and there is none available in America.

He said:

> We all believe in giving Russia, China, and Europe all the food we can spare.

Then asked:

> How can we feed them when the diet of the farmers who are expected to produce food is inadequate?

Speaking about the shipment of unnecessary food to Ethiopia; pointing out that it was a "fertile land, capable of feeding itself," he asked:

> When did Ethiopia come into the war? Why should America go without adequate food to supply Ethiopia?

It was further threatened that, unless Foreign Economic Administrator Leo T. Crowley dammed the flow abroad of food needed in the United States, legislation would be introduced to see that America was fed first.

All of which leads to the thought that possibly—just possibly—we are on the way back to sane, sound thinking. That as to our foreign policy, we finally realize, in view of the statements of Stalin and Churchill, of Senator VANDENBERG and Governor Stassen, that, unless we want to sacrifice not only our natural and accumulated resources, but our young men and women in continued war, we will be forced, not only to first feed America, but to keep her interests ever first in our minds in our international dealings.

Here at home, we gain little or nothing by taxing everyone to give special benefits to a favored class. That policy, followed long enough, will make paupers of many of us; establish what we have always protested—a privileged, favored class. Why not, here at home, have first in mind the interests of the whole country, rather than the interests of this or that minority pressure group?

Justice Unit Scored on Corrupt Elections

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 14, 1945

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by David Lawrence:

JUSTICE UNIT SCORED ON CORRUPT ELECTIONS—DEPARTMENT WON'T ENFORCE LAWS AGAINST OWN PARTY, SAYS WRITER

(By David Lawrence)

Although the Senate Committee Investigating Campaign Expenditures wrote a 250-page report, it did not put its finger on the real reason why American political elections are corrupt.

That reason is the failure of the prosecuting arm of the Government to enforce the law against members of its own political party.

So long as the Justice Department is responsible to a successful candidate for the Presidency, no questions will ever be pursued which touch the supporters of that candidacy.

The Senate committee has reported, for instance, that existing statutes are construed by the Justice Department to mean that labor unions are banned from making contributions during a campaign, but that they can

expend out of their treasuries any amount they please which has been accumulated before a campaign or during a campaign.

FINE DISTINCTION DRAWN

A fine distinction is being drawn by the Justice Department between contributions and expenditures—something that somehow never emerged until labor unions wanted to spend their dues to carry on political campaigns.

Yet the Congress, in the Smith-Connally law, specifically added labor unions to the scope of the Federal Corrupt Practices' Act, putting them on a parity with corporations and banks. Does anyone believe that if the corporations in the last campaign had spent out of their treasuries money to advance the candidacy of a Republican and there had been no ban on labor-union contributions, the Justice Department would have found no basis for a prosecution?

The answer is that corporations know the laws will be enforced against them and it is doubtful whether any such expenditures were made by them. Individuals prominent in business did contribute, as the law permits, out of their own pockets.

The Justice Department ought to be made a separate and independent agency of the Government, just as is the office of the Controller General, where the executive in charge is appointed for a term of 15 years and is subject to removal only by Congress.

The Justice Department is related to the judicial branch of the Government, which, under the original concept of the Constitution, was to have been independent of the executive or legislative branches. Law enforcement, broadly speaking, is a Presidential function, to be sure, but Congress may by statute delegate to commissions or boards or departments special enforcement tasks.

OTHER LAW AGENCIES

Thus, while the general public may not realize it, all the law-enforcement activities of the Federal Government have not, by any means, been vested by Congress in the Justice Department. Even detective agencies exist in other departments because of a desire to have a staff familiar with the enforcement problems related to particular laws.

There is no reason, therefore, why Congress should not entrust to a special agency responsible only to the legislative branch of the Government or else to the courts the task of enforcing laws relating to elections and campaign expenditures.

There would be fewer violations of law and fewer quibbles and circumventions if the political parties and groups knew that the election laws would really be enforced. Often, too, because it is not politically desirable to proceed against the supporters of the party in power, the opposition party likewise derives a certain immunity.

It certainly is ironical to see the American Government attempting to advise liberated countries in Europe how to handle so-called free elections when the election laws of the United States are so flagrantly flouted.

Congress Has Appropriated and Made Available Sixty-four Billions for Lend-Lease

---

EXTENSION OF REMARKS

OF

HON. JOHN M. ROBSION

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1945

Mr. ROBSION of Kentucky. Mr. Speaker, the so-called Lend-Lease Act was passed by Congress and approved March 11, 1941. The bill (H. R. 2013), before the House for consideration, provides for the fourth extension of that act.

When the original bill was considered by Congress it was urged by the administration and the Democratic leaders of the House and Senate that this measure was necessary to keep the United States out of the then World War that was raging in the various parts of the world. The bill was passed, but it did not keep us out of war. Some favoring the legislation were frank enough to admit that we were taking a step that would likely involve us in the war by taking sides and furnishing war materials to some of the warring nations. It should not have been named lend-lease—we did not lend or lease. We have been and are giving nearly all of these billions away—the debt will never be paid nor materials returned.

Our former distinguished Secretary of State, Mr. Hull, urged that we pass the so-called reciprocal trade-agreement law, and if that were passed it would bring about world peace and we would avoid war. Of course, we know now how dismally this prophecy failed.

The President in 1935 urged Congress to pass the Neutrality Act and stated that if that act were passed it would keep us from being involved in another world war. At the behest of the President this act was strengthened by amendments adopted by Congress in 1936, 1937, and 1938. However, about November 1939 the President called Congress into extraordinary session and urged Congress to greatly amend and to repeal in many respects the Neutrality Act. He stated that this should be done in order that our country might be neutral and sell war supplies to a group of warring nations. Our country would make profits out of these war transactions, and this repeal of the Neutrality Act would keep us out of war. Of course, it sounded cockeyed to me then, and it has ever since. How could we strengthen our neutrality by furnishing war materials to one group of warring nations and how could we keep our country out of war in this way? And in the long run how could we hope to make any profits by being involved in the world conflict?

Some Democratic spokesmen admitted that the repeal of our Neutrality Act was a long step toward war. Mr. Churchill, Prime Minister of the British Empire, stated that all they needed was equipment to fight, that they had the manpower, they did not need American boys. He also stated that they would buy, pay for, and take title for American war supplies. But we all know now that the repeal of our Neutrality Act did not keep us out of war and that we have not made any profits out of those transactions, and we have up to this time given directly to Great Britain and the British Empire approximately twenty-five billions in munitions of war, food, clothing, services, and so forth, and through the Army and Navy Departments we have given additional large amounts of munitions, other war materials, food, clothing, and so forth. These include locomotives, railroad cars, steel rails, tools, and almost everything.

It is claimed that Great Britain and other parts of the British Empire have given to us in reverse lend-lease approximately four billions; but a lot of the items on being examined bring a blush to our faces. Some time ago we discovered that the British had made one claim of approximately one hundred and seventy-five millions when the American officials estimated that the claim should not have been more than ten millions. It is a difficult matter to find out just how much has been given away under this lend-lease program and what each country has received of these benefits.

On page 2122 of the CONGRESSIONAL RECORD of date March 13, 1945, in order to secure the information as to just how much Congress has appropriated and made available under lend-lease up to June 30, 1945, I asked Mr. VORYS, of Ohio, a very able member of the Foreign Relations Committee of the House that had this bill under consideration, the following question:

Mr. ROBSION of Kentucky. What sum of money in the aggregate has been appropriated up to the end of this fiscal year, June 30, 1945?

Mr. VORYS. We have already appropriated and made available through transfers sixty-four billions.

Some other members of the Foreign Relations Committee insist that the amount is 68 billions.

Approximately 36 billions of this sum have been transferred directly from our Government to the Allied Governments. Ninety-eight percent, according to the report of the Foreign Relations Committee, has gone to the British Empire—Great Britain, Australia, New Zealand, India, and to British South Africa, and to Russia, France, and China.

The British Empire has received directly more than twenty-five billions of this sum; Russia about eight billions; China approximately one billion; and approximately three billions to France and some other Allied countries.

The President, through the Army and Navy, is authorized to disburse the balance making up the sixty-four billions, to Allied countries.

It is urged that we must continue lend-lease in order to expedite the winning of the war. I have all the time and I do still favor our country doing her full share in the winning of the war. We are in the war. Every loyal American citizen should do all in his power to bring the war to a speedy and successful conclusion.

My objection to the bill before us is that our country is not protected. The administration and the American people generally feel that this lend-lease give-away proposition should cease when the war ceases. We expect the war in Europe to end by July 1, 1945, or before, and this lend-lease to Europe should end when the war in Europe ends. Lend-lease should not then go to any country that will not give us active aid in the war in the Pacific. This bill would extend the lend-lease for at least 1 year, with other provisions that would permit lend-lease operations to continue until

1949. Those who are in favor of restricting the lend-lease to countries aiding us and up to the end of the war, agree that this bill does not protect our country. There are big loopholes and we know how this administration takes advantage of all loopholes and sometimes they break through when there is no hole at all. There are other programs to help to take care of needy after the war.

If lend-lease or give-away is necessary to win the war, let us confine these operations to winning the war and when the war is over, stop this tremendous burden upon the taxpayers of our country. We are the sworn Representatives of the American people and it is up to us to see to it that the bond and tax money of the American people is used for winning of the war and not to be Santa Claus to at least a billion people in all parts of the world.

HAS OUR COUNTRY DONE AND IS SHE DOING HER PART?

Every measure that comes up, some persons in and out of Congress who have never worn their country's uniform and have given no sons and daughters for service in this great war insist that we should vote every proposal that is brought before us, and approved by these superpatriots. If we refuse they tell us who have boys in the service we are not interested in our boys.

Those in the service must desire us to uphold the Constitution of our country, preserve the freedom of the American people, and protect our Nation from bankruptcy and economic ruin. To hear some of these persons speak you would think that the United States has been niggardly in aid to our allies. I wish to repeat that our country has been and is spending more money than all of the Allied Nations and our enemy nations put together in this war. We had about 5,000,000 men under arms in World War No. 1 and nearly two and a half million were sent overseas. Our country spent, up to the signing of the armistice, according to the reports of the Treasury Department, approximately twenty-one billions. The United States Congress has already appropriated and made available for lend-lease 3 times that sum, and the end is not yet.

The other day the House increased the debt limit of this Nation to three hundred billions, and we were told by the representatives of the Treasury Department that they would be back in February or March of 1946 and urge Congress to raise the debt limit to perhaps three hundred and fifty billions; and that may not be the end. Our national debt has increased more than the combined national debts of all the Allied Nations.

During the present year the American people will pay in Federal revenues and taxes over $45,750,000,000. This is more than will be paid in taxes by the people of all the Allied Nations. In World War No. 1 the American people paid in a single year approximately twelve billions in taxes, but this year the American people will pay nearly four times that sum.

Under the 8 years of President Wilson, the American people paid in taxes $24,375,781,688, and there were expended in the 8 years of his administration, including expenses of World War No. 1 and the loans we made to our allies, $46,938,260,143.

In the 12 years of President Roosevelt's administration the American people paid in Federal revenues and taxes $160,073,270,770 and there have been expended $359,791,966,466. In other words, the Roosevelt administration in 12 years expended nearly two hundred and ten billions more than it has taken in.

I wish to repeat another comparison that I made on the debt-limit bill Thursday, March 8, 1945: In all of the administrations of all the Presidents through 144 years, from Washington down to F. D. R., the total receipts of the Federal Government were $91,586,706,120 and the expenditures were $112,203,367,065, and in those 144 years there was a total deficiency of $20,617,290,935.

On June 30, 1945, the estimated deficiency will be approximately two hundred and fifty-eight billions.

SACRIFICE OF MEN

We have been discussing dollars, but the greatest contribution our country has made in this war in behalf of our allies has been in men.

We had voted to free the Philippine Islands before this war started. Practically all of the fighting that has been done since we became involved in this war has been on the soil of our allies and as direct aids to them. Our casualties in dead, wounded, and missing will soon reach the 1,000,000 mark, and the chances are that they will reach 1,500,000 before the war is over.

We have 5 armies on the western front; France has 1 small army; the British Empire has 2. Mr. Churchill stated recently that we have more than twice as many men on the western front as the British Empire. We have put approximately 14,000,000 men in uniform. We have provided practically all of our equipment, and we have furnished tons of billions of dollars' worth of equipment and supplies to our allies. We have spent billions in constructing air bases, helping build railroads and furnish equipment, building highways, and rebuilding ports and utilities and transporting hundreds of millions of tons of supplies to our allies, and spent other billions in repairing and reconstructing ships and other equipment belonging to our allies; and one can scarcely estimate the amount of food, clothing, and other supplies that we have sent to the Allies. We have provided at least 85 percent or more of the men, ships, and equipment in the Pacific war and in recovering territory of our allies, and we have had very little help from Great Britain and no help from Russia, in the Pacific. Our allies have much more at stake in the Pacific than we have. While our main allies, Britain and Russia, have made secure their great empires for the future. Very little has been done for our own country.

I am merely pointing out that the American people have played their part well. They have not only been just; they have been generous to a fault with our allies. While British ships are in the Indian Ocean and near to the possessions of Great Britain in India and in China, she has not yet helped us to make an assault on Japan. And while we have been pouring supplies into Russia, she has not so much as raised her hand in our behalf against the Japs. She has, however, from year to year renewed the Japs' fishing rights in Russian waters and enabled the Japs to get ample fish supplies with which to feed her armed forces and civilian population to fight this war.

According to the words of the President and other high officials, we have not the slightest intimation from Russia that she will help us fight the Japs. Mr. Churchill has assured us that Britain will help us fight the Japs; but when the war is over, Great Britain will have made India secure for herself and her interests in Burma, and she will have recovered control over Singapore, Shanghai, and Hong Kong. Russia has gobbled up Latvia, Estonia, Lithuania, and parts of Poland, Finland, Rumania, and control in other countries.

If we are to secure any concessions or benefits from our allies out of this war, it has not been made known to the American people.

We have done and we shall continue to do all in our power to help win the war as speedily as possible; but at the same time we must not destroy the economic structure and bankrupt our country. These millions of American boys and their children will have to pay a large part of the debt and the interest that is being piled up. This will mean a tax burden almost unbearable. Many parts of the British Empire boast of the fact that they do not have conscription of their young men and do not have O. P. A. regulations.

Our young men have not been spared. We have stripped our farms, factories, shops, and mines. We have given to our allies in the way of foodstuffs such enormous quantities as threatens a food shortage in this country. I tremble to think what the result would be if we were to have a general drought in this country in 1945 or 1946.

We have sent to foreign countries for relief and for purposes other than military, in the last 22 months, approximately 3,000,000,000 pounds of meat and 300,000,000 pounds of butter, as well as hundreds of millions of pounds of other food products. These did not go to our armed forces or to any of the armed forces of our allies.

There are estimated to be 30,000,000 families in the United States. This meat and butter would have furnished 100 pounds of meat and 10 pounds of butter for each American family.

I wish to repeat my opposition to this bill is that it does not limit lend-lease or give-away to the end of the war but will permit large commitments to be made within the next year and they will have until 1949 to carry out these commitments.

Let lend-lease for Europe end when the war ends in Europe and then confine lend-lease to those who aid us in winning the war in the Pacific. Great sums of lend-lease have gone to Turkey, Spain, Central and South America without substantial aid from them in our war effort.

In addition to all of these supplies and services that we have rendered to our allies, the American people have given huge sums of money, clothing, and equipment through the Red Cross and various agencies to the people of our allied countries. Those who have recently visited France, including Fulton Lewis, Jr., state that the French have plenty of food except in Paris and the shortage there is due to lack of transportation, and that they have plenty of food in Belgium. American soldiers reported that they found the French farmers had plenty of food. Let us help all we can; but let us not forget that we are borrowing the money, issuing bonds that must be paid by the American people through a hundred or more years of sacrifice and denials to themselves, to their children and children's children, including those who are fighting our battles throughout the world. There are many groups of so-called liberals, I mean liberal with the taxpayers' money, going over this world giving away our resources and making commitments involving billions of dollars after the war. Congress and the American people should be on the alert and save something for our defenders and their dependents and for all of our people. We have already granted pensions to 350,000 disabled veterans of World War No. 2. We shall have many big obligations to meet. We must not waste a dollar and spend only what may be just and necessary.

The Crisis in Technical Manpower

REMARKS

OF

HON. CHARLES L. GIFFORD

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. GIFFORD. Mr. Speaker, one of our colleges reports that out of a normal class of 100 members studying chemistry and the sciences, they have now one girl, two IV-F's and two I-A men. I am a member of that very justly famous Cosmos Club in Washington. Several noted scientists and educators in the last several months have often appealed to me to express to the House their fears and anxieties over the present situation. Other countries have conserved the number of their scientists and engineers and even increased their numbers during this war period. A decade will follow before we will have completely recovered our former position. Will you please read these remarks concerning the subject entitled "The Crisis in Technical Manpower"?

The United States today faces a crisis that has seldom been equaled in its history. It is deliberately wasting one of its precious heritages and wantonly destroying a resource that should be utilized to its fullest extent in fighting the war, a resource that would provide new industries for industrial expansion after the war is won. That raw material is trained manpower in the scientific fields. I have spoken to several authorities on this subject and they agree that the crisis in the supply of trained men is most serious to the security of the Nation. Technical personnel are vital to a Nation at war as can be seen in the two reports, one from Field Marshal Kesselring at the end of the campaign in Africa when he said that the superiority of the American tanks was the determining factor in the victory of the Allies in the desert battle. The other report is from American soldiers, as quoted in the papers recently, that the German tanks in the present battle in Germany were so superior to ours that they felt it is not worth the bother of giving tanks a pet name because they knew that the life of the tank would be a short one against the superior German machines.

There is a little moral to that story—development of war weapons never stops. The Germans entered this war with a deadly plane—the Stuka. The Allies soon developed planes that conquered that menace, only to find that the Germans had something better in the Messerschmidt. Then when we exceeded the Messerschmidt, they came out with jet-propelled planes that are reported, in the public press, to fly rings around the Allied planes. When the perfected bomber defense for the British Isles made it practically impossible for the enemy to successfully raid the city of London, the Germans sprang on the shocked world, not one, but two models of the flying robot bomb. Now we in turn are overcoming these and other new weapons with radar and our marked superiority in rockets and their new propellants. Let us not forget for one moment this unpleasant fact—we are fighting a clever, scientific, enemy. They never have stopped inventing and perfecting. When one model is deemed unfit, others are made to take its place and to do this Germany must obviously have a reserve of trained capable scientific men. The question in my mind today is simply this—what are the Germans concocting in their laboratories now—what horrible weapon will they spring on civilization today, tomorrow, or even in the next war which many are convinced they are planning. And if today we were to receive news from the front that they had unleashed some new and terrible invention, what could we do about it?

We might point to diplomatic agreements and war covenants. Our writers could speak of the inhumane Germans, editorials would cry out against this new violation of the human spirit and freedom, but these effusions would not for the least fraction of time stop the enemy from using the weapon. All we could do would be to go to a little band of men known as scientists and ask them to pull something out of their hats to stop the new destruction. And these new measures would not be devised by some jockey who has been forced out of his occupation into a defense plant. If complicated organic chemicals were needed in the research, they could not be made by an ex-bartender, no matter how good he was at cocktail mixing. The men who pace invention and development are, in the main, trained men—men who have put in years of study in college and who have been doing research work or running plants since their graduation and acceptance into that little group of scientists upon whom most of our industrial progress rests. Such men should not be in the armed forces as combat troops. Such men are needed in the laboratories and factories of the Nation. Only then can they give to our troops their fullest ability to help.

Today, once again, there is a distinct threat that the production armies and the research teams, already depleted and reduced in rank, will be seriously affected by the latest draft rulings to take all fit men up to 30 years of age. The scientific societies have been pointing out the necessity of conserving trained men ever since the war started. In 1942, shortly after Pearl Harbor, the American Chemical Society, a federally incorporated society comprised of some 40,000 chemists, was warning the Nation that the production arm was essential to the success of our arms and that chemists, chemical engineers, physicists, and other essential technical men are officers of the production army. It cannot function without them. In February 1942 there were only 360 chemists and chemical engineers in the service, and even then the technical organizations were decrying their loss. Back in 1940 Selective Service was warned about impending shortages and classified chemists and chemical engineers as groups in which it is expected that the demand currently exceeds, or in the immediate future will exceed, the supply of qualified workers. Why, we might ask, has this declaration and the warnings been ignored?

In 1944, the American Chemical Society sent to the President of the United States a letter urging that the reservoir of trained chemists and physicists be not reduced further. The President replied, stating that the special need for such men in industry would be kept in mind, and a reproduction of his letter is printed in Chemical and Engineering News, March 25, 1944. At that time it was pointed out that a further reduction in the number of industrial scientists would be disastrous. This was at the time that the Army was advancing the blanket draft to include the men up to 26 years of age, the idea being that almost, regardless of occupation, men would be inducted into the armed forces. Little was done to prevent the indiscriminate drafting of such men, and today there are some 17,000 chemists and chemical engineers in the armed forces. Once again these trained men are facing a depletion of their numbers as Selective Service has moved the deferment age up to 30 and may soon raise this to 33. How can we in the United States expect to meet a challenge to our industrial supremacy if we continue to remove from positions of research and responsibility those very men upon whom we rely for the continued expansion of our positions?

Over a year ago the Saturday Evening Post in an editorial pleaded with the selective service of the Nation to be just that—selective. In it, and I quote, they said:

In its most recent attitude, as expressed in orders to local draft boards, Selective Service

appears to take the view that men needed for war production are never young men. Already men under 22 are being refused occupational deferment for any reason, and it is expected that this limit will soon be raised to 26. Boards still may defer men with engineering degrees, but some industries report that selective-service officials show little disposition to exercise this discretion. The theory behind this attitude must be that nobody in the twenties can actually be indispensable in the war industries. What are the facts?

The failure of so many people to understand the part being played by young men on the industrial front is partially explained by the fact that we still do not understand the full meaning of the truism that this is a war of machines. The battle is the pay-off, and we can understand the necessity for discipline, rigorous training, and careful selection of personnel in preparation for combat. But we do not even now appreciate the need for young keymen in war industries, where pace, imagination, and a certain brash disregard for precedent are needed if we are to keep our fighting men better equipped than those who oppose them.

There are in the Nation, according to the best surveys now available, some 85,000 chemists and chemical engineers, 78,000 mechanical and electrical engineers, 12,000 other engineers, a total of 179,000. Surely this handful can be spared, especially since our security depends upon them.

It was over a year ago that Dr. Charles L. Parsons, secretary of the American Chemical Society, in a meeting called for the express purpose of appealing to Selective Service to be cautious in its drafting of trained men, said, in part:

The following statement has been reported to us. The classification officer addressing a company of basic trainees at Camp Sibert, Ala., said:

"I know that there are many chemists and chemical engineers among you who hope that they will have an opportunity to do research or technical work in the Army. I must assure you that the Army has about 100 times as many chemists and chemical engineers as it can possibly employ in such capacities, since most of the research work requiring chemists or chemical engineers is well taken care of, mostly by civil servants."

While blanket deferment is not advocated, a blanket draft seems imminent. Competent chemists, chemical engineers, or other scientists should not be permitted to serve in a nontechnical capacity, either in or out of uniform. Scientists, certainly those in the draft age not in uniform, should be put in uniform or given some special insignia to remove the slacker stigma. Our young technologists are not slackers; they are anxious to serve America where they can serve her best. Their scientific occupations on the average are as dangerous as if they were inducted into the Army.

The solemn warnings of men in position to survey and evaluate the facts must not be ignored. If the blanket draft of men up to the age of 30 is carried out, it is expected that 50 percent of all our trained men would be affected. Men that have been trained in the sciences are surely more valuable to a mobilized nation in doing the things in which they are expert. Is it not logical to assume that a physicist contributes more to victory when he is perfecting a thing such as radar, or a new fire control apparatus for big guns, than he would be driving an army truck or policing the parade grounds for cigarette butts? The scientists of our Nation, I am sure, agree with Dr. Parsons when he states that they ought—whether in uniform or not—be doing the things that are really a contribution to the strength of the country.

However, the problem is not simply solved by deferring scientific men. The crisis facing us at this time is twofold, for not only is the present backlog of trained men threatened but the rapidly expanding technical industries and research programs of this Nation are in great need of trained men—and our colleges and universities cannot supply them. To many this is a problem of coequal seriousness with that of drafting the men we now have. The reason is one of time. It takes 6 years to train men and we must have these men available. We must continue to expand our frontiers in science, for the nation that is second in science today is second in everything, including the ability to protect those cherished liberties for which we are now fighting. Without a supply of trained men constantly flowing into industry we lose ground that never will be recovered.

In the January 1945 issue of the Review of Scientific Instruments the editor, in commenting on the decline of graduates in universities, said:

In a report of the Parliamentary and Scientific Committee entitled "Scientific Research and the Universities in Post-War Britain," the following statement appeared:

"We have more than doubled the output of engineers and physicists during the war. The implementation of any thoroughgoing post-war reorganization of research and technological development will require an equal or even greater expansion in trained personnel. Our universities will, therefore, need to handle ultimately something like two or three times the 1938-39 number of science and technology students on this account, plus the future increase in developments foreshadowed in connection with science teaching in schools."

"This," comments the editor of the magazine, Dr. Gaylord P. Harnwell, "represents a very different accomplishment and direction of future planning than we can 'point to' in this country."

The trained personnel now in the country are succeeding beyond the realm of imagination in scientific endeavor and accomplishment. Here is what one of the country's outstanding scientists has to say about the crisis. He is Arthur Holly Compton, of the University of Chicago, an outstanding physicist, a Nobel prize winner, and a man held in reverent admiration for his keenness of intellect and his outstanding accomplishments. He stated in a Nation-wide broadcast that:

The international competition for leadership in science, though on a friendly basis, is, nevertheless, intense. I recall in 1927 commenting to the director of Germany's great National Institute of Physics and Chemistry with regard to the high quality of his scientific instruments. Though Germany was complaining then of her poverty, in our country no universities or Government laboratories could afford such equipment. The reason, said Dr. Paschen, was not far to seek. The Reichstag was determined to give all possible support to German science. They no longer had any Kaiser, nor any army. In what could they take pride? "Their men of science," they said; "let's make of them the best in the world."

This was the spirit that has enabled our enemy to match step by step the combined technical developments of ourselves and our allies. It is true that when the Nazis came into power the study of fundamental science was greatly curtailed, and even the technical schools fell to, roughly, 25 percent of their full enrollment, as they were building up their armies just before 1939. Yet this did not go as far toward destroying their scientific strength as we have gone in weakening our own science in this war. Just as the war began the Germans came to realize the danger to their future because of their failure to train enough scientific and technical men. They set aside an increased group of young men best qualified for science and barred them from entering the armed forces.

At least until perhaps very recently these students have been continuing their training for careers in science and technology. The result is that the German war industries and research organizations have an indefinitely continuing supply of fully trained men.

Our national policy with regard to the training of scientific men has been precisely the reverse. We have gambled on a short war. Science professors and students alike have left the universities. All their effort is concentrated on devising and developing new and improved weapons. Because we were caught unprepared for a war in which scientific developments have become so vital, this has seemed to be the only possible procedure. Yet now practically no students over 18, except a few IV-F's, are studying science.

If the war could have been completed within a year or two, this policy would have been a good one. The idea is that everyone puts all that he has into the fight now and gets it over with, and then all return as promptly as conditions permit, to resume their normal tasks. But the war in Europe has already been going for over 6 years, and our 3 years of intense effort have not shown us clear evidence of an early victory. If the war should continue for as long as it has already been fought, our present policy of no advanced scientific and technical training will spell national disaster.

It takes at least 6 years for a capable 18-year-old to train himself for effective scientific research. Even if we should start now to resume such training, it will thus be at least 6 years before a normal supply of young professionals will again be available to our laboratories. Can we afford to wait any longer?

This is a situation of national concern which needs to be carefully watched, lest, when the war is won, we may find that we have gained a pyrrhic victory, having lost so much of our technical strength that we shall be unable to carry on the great task of world leadership which we now see before us.

But men of science are not alone in their pleas for a sensible evaluation of the best means of conserving the Nation's resource of technical men.

The Worcester (Mass.) Telegram stated recently that:

Experts have agreed that the present clamor about a manpower shortage arises less from a shortage of ordinary unskilled labor than from an acute shortage of highly trained personnel that could not be replaced when they were drafted.

And further in the same editorial:

There has been considerable confusion about the drafting of skilled workers ever since the war began, and it has been suggested that a true policy of selective service, operating as its name implies it should, might have avoided much of the skilled labor shortage.

This situation was more or less predicted when in 1942 an official publication of the American Chemical Society printed an observation of C. L. Parsons, its secretary, that "personnel, not material, will be the bottleneck; largely through waste."

Or the Toledo Blade of February 1 of this year in commenting on scientists and the draft:

The view that students of science should not be drafted to serve in the war machine may be regarded as an extreme one right now by many who feel that in the enormous upheaval of war, students of any class must take their chances with everyone else in being assigned to battle duties. However, just as the radical ideas of one era often come to be regarded as stodgy conservatism of the next, it is probable that public opinion of the future will include amazement at the waste of specialists in World War II.

There are reasons for the present indifference concerning this waste. In the past, there has not been sufficient relationship between ability and the opportunity for a scientific training. Many of the graduates and post-graduate students of our scientific schools have been lucky enough to belong to families of sufficient wealth to bear the expense involved. While this fact is no reflection upon their ability, true democracy, it seems to us, should mean that mental qualifications should be considered first in higher education for the ultimate benefit of the Nation, and that the matter of money should not enter the picture at all. Probably some method or methods of financing higher education for apt students handicapped by finances in the future will be accepted as a matter of course in the natural evolution of efficiency.

Science—all science—has made such wonderful strides in spite of these fetters that anyone can visualize what immense progress must be made in that future era when scientific education becomes dependent solely on aptitude. That this progress should be interrupted by the absence of an entire generation of scientists is so contrary to reason that, from the standpoint of national defense alone, a provision will conceivably be incorporated into our regulations whereby our scientific youth will not be drafted in the next war to serve in capacities unrelated to their knowledge and ability. Great Britain learned that lesson from the last war.

America did not learn the lesson, presumably because we were not in the war long enough, and Britain's example was ignored. Soldiers of this war and veterans of the last could give some startling information concerning the lack of consideration of aptitudes in military assignments.

True democracy requires universal service in times of emergency, but it should be service according to ability if for no other reason than that such a selective system could be expected to win the war more quickly and to provide for recovery and future progress more readily. No question of individual partiality should be involved, and we do not believe it too much to expect that this principle will eventually reach universal acceptance.

But it has been the men directly engaged in the study of science that have issued the broadest and most comprehensive warnings. In the Scientific Monthly of January 1945, Mr. M. H. Trytten, Director of the Office of Scientific Personnel, states that—

We have failed to safeguard our supply of men trained to carry on in the technical field, and that we have not guarded our scientific and engineering preeminence.

This is a serious charge to make to those responsible for the future of our country.

Henry A. Barton, in his report as director of the American Institute of Physics, states that, "Rightly or wrongly some of the seed corn of American scientific progress for years has been ground up to make a day's feed for the war machines."

These men of science are warning the country of a folly that will have serious repercussions in the days to come. One of the last things that Thomas Midgley said to his fellow chemists before his death was that the Nation must become aware of the fact that science is power, and the chemists should bring to the attention of the people and the men responsible for the administration of the welfare of the people—

That France fell in 40 days before the German onslaught partially, if not largely, because it failed to appreciate that science is power, because it continued to believe and trust in Napoleon's out-dated and out-moded philosophy that God is on the side of the army with the most guns, because it failed to be technologically strong to meet any emergency.

And how has this Nation tried to keep technologically strong? By the reverse process of cutting off the supply of trained men and of wasting the abilities of those already trained. In pre-war we had about 200 doctor of philosophy graduates a year in physics, the number is now about 50. In mathematics it has decreased from over a hundred, to less than 50. Geology graduates in the doctoral category have dropped roughly to one-third; chemistry in 1944 trained less than 200 doctors, where once the supply was inadequate at about 700, and both chemical and engineering post-graduate study is now down practically to zero.

And for those who think inadequately and hastily trained men will provide the stopgap, they will first have to explain away the clean-cut statement of Dr. James B. Conant, chemist and president of Harvard University, to the effect that "10 second-rate men are no substitute for one first-class man."

America needs trained scientists, and to waste them or to fail to provide them is a slow method of committing national suicide. Even now, the national roster of scientific personnel estimates that if the war ends this year, the country will have a deficit of over 9,000 trained chemists and chemical engineers and—should the war and our present method of wasting our trained men continue until 1947 there will be a deficit of over 20,000 in the same fields. Other estimates state that at present we are short 1,800 trained physicists, and at least 1,100 mathematicians, and this estimate was made on the assumption that all such personnel in the Army and Navy had been returned.

In the magazine Industrial and Engineering Chemistry, there recently appeared an editorial, Only God and a Few Humans Know. This has been placed in the Appendix of the RECORD, page A486, by Hon. WALTER H. JUDD, of Minnesota, and I will only refer to the letter quoted in the editorial which tells of the serious decrease in enrollment of our technical colleges. There a head of a chemistry department states:

Instead of a normal senior class of chemists and chemical engineers of about 100, I met my senior class on Monday consisting of 1 girl, 2 IV-F men, and 2 men in I-A who will almost certainly be called before they can graduate in February. This is the class which ordinarily would graduate in June. In other words, it is our normal class. At the present time, instead of having about 80 graduate students in chemistry and chemical engineering, we have 4 girls, and 4 IV-F men. Of the girls, 1 is married to a staff member, and the other is an alien.

Certainly if our Nation is to be strong, and if we are to prosper as we must in future world's economy, it is imperative that we do something about this serious situation. In the matter of keeping technical students in college, in the matter of guaranteeing a supply of trained men for the post-war, our allies could teach us a few lessons. They have insisted on maintaining students in college, counting on this investment to pay dividends later on. Russia, it has been said, considers education so important that one of the first acts when a town is liberated is to set up schools for supplying trained personnel.

I asked a person closer to this problem than anyone in the United States to comment on the course we are following today, and he supplied me with this closing paragraph:

American technology has given birth to the greatest power of all time. Today we are drying up prosperity at its source. Public opinion of the future will view with amazement the waste of scientists in World War No. 2, will applaud the unequaled accomplishments of the few who were utilized, and will condemn the lack of trained personnel in the economic competition that is to come. Our children and our grandchildren will not forgive the loss of an entire generation of scientists, a disaster that can easily be avoided.

St. Patrick's Day Address by Hon. Robert E. Hannegan

EXTENSION OF REMARKS

OF

HON. FRANK P. BRIGGS

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, March 19 (legislative day of Friday, March 16), 1945

Mr. BRIGGS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. Robert E. Hannegan, chairman of the Democratic National Committee, at a St. Patrick's Day dinner at Rochester, N. Y., on March 17, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I have always liked St. Patrick's Day gatherings. You meet people of so many different nationalities.

In years past our Irish forebears here in America singled out March 17 as their day. Now it's different. St. Patrick's Day in

America has come to be pretty much an all-American day. It is a legitimate opportunity for all Americans to say what they like about the Irish.

Those of us with Irish blood have no objection.

There are a great many of us. I don't think Americans generally realize how many. Three centuries ago half the people in America of trans-Atlantic origin were Irish. During the decade 1650-59 60,000 came over. And in 1789 a historian wrote, "For the past 70 or 80 years no nation has contributed so much to the population of America as Ireland."

I take it he was referring to immigration. But we did our share in contributing to the population in every way possible.

Today America has Ireland in the blood. Just what that ingredient means in the life stream of a nation is brought out in a little story concerning a certain despotic King of England in the past.

The King took ill, and blood transfusions were necessary. But the land was searched, and no one could be found with just the right kind of blood; no one, that is, except one lone Irishman who was traveling in the country. From this Irishman the blood was taken. When the first transfusion was made the King opened his eyes. With the second transfusion he sat up in bed. And with the third transfusion he jumped out of bed and roared, "To hell with the King of England!"

But America today not only has Ireland in the blood—more important, America, fighting the good fight for man's freedom, follows a pattern of ideals that was Irish a thousand years before Christopher Columbus found these shores.

Ireland, the spirit of Ireland, fights on for freedom through a mighty roster, hundreds of thousands of gallant young men wearing the uniform of the American armed forces, and bearing the names of Irish ancestors.

The spirit of Ireland fights for a lasting peace and a saner, more decent world, through millions of American citizens who bear Irish names. They have joined hands with other millions whose names go back to England, France, Russia, Poland, Czechoslovakia, and a score of other countries.

The Nazi Goebbels did his best to convince us that this fighting community of nations was not genuine, could not stick together. His propaganda machine worked overtime to that end. But the lines of steel which he said were imaginary are now drawn tight on Nazi Germany's throat. They are real enough to crush the greatest force that ever threatened the liberty of mankind. And they are also real enough to unite the peoples of the world in a permanent peace.

We have now, on our side of the Atlantic, those who want to convince us that our program for a permanent peace is not real, that it won't work.

Fellow citizens, those of our own people who do not wish to see the makings of peace before their very eyes today are even blinder than the German people who could not see the makings of war across the Atlantic Ocean when they sneered at our democracy's fighting power a few years ago.

With the leadership that we have, the peace that we shall make will be as genuine and solid in the councils of nations as the victory that we are achieving on the field of battle. Deny the possibility of the one and you deny the reality of the other.

I say this is true with the leadership that we have—the leadership of President Franklin D. Roosevelt. It is the leadership that was given a mandate last November by the people of America to carry on.

And I wish to repeat here what I said a few weeks ago in Washington at a gathering of the Presidential electors. It is this:

The victory of Franklin D. Roosevelt at the polls last November, great as its importance was to the Democratic Party, was of yet greater importance to America. That victory was more important to America than it could have been to any one party, interest, group, or individual in America.

Why was this so? It may be pointed out that on the great issues of war and peace—on such broad objectives as speedy and unconditional victory over our enemies, international cooperation, post-war employment, social security—on these basic aims, the stated principles of the Republican Party were closely patterned after the Roosevelt program.

Most Republicans wanted to see this fulfillment of America's destiny. All but a small number of the 48,000,000 voters of 1944, Democratic and Republican, shared alike this resolve to go forward on the road that our country had been traveling.

Why, then, was the reelection of Roosevelt so vital to our Nation and its future?

The fight to preserve freedom is worldwide. The edifice that must be built to protect our freedom and to insure our national safety from future aggressions will be—must be—a world edifice.

And the architect of that edifice must therefore command the confidence, the trust, of all peoples of the world.

President Roosevelt has earned, and today completely commands that trust. No man since the time of Abraham Lincoln has been called upon to prove himself so thoroughly, and has so thoroughly succeeded, as has Franklin D. Roosevelt.

Today as our country stands ready to enter into the greatest undertaking of mankind—the end of wars—we are secure in the knowledge that whatever is done by the leaders in this undertaking will not be hindered by distrust, subverted by the scheming of reactionaries, or hamstrung by the hatreds of isolationists.

Not unless we, as a people, allow a reactionary, isolationist minority among us once more to pull the wool over our eyes, as they did a quarter of a century ago, can this happen. The danger of letting it happen lies not with our leadership, but with ourselves. The responsibility for preventing it lies not with our elected Government, but with our electorate—the millions of citizens who choose that Government—and who will again be faced with a choice in November of 1946.

No nation, certainly no democratic nation, is guaranteed the continued enjoyment of great leadership without returning to that leadership the continued support of the people.

For this reason, as we place our confidence in the President's proven statesmanship, he in turn relies upon us for our continuing support.

In this sense, a vote cast for President Roosevelt in the election of last November was something more than a vote for an individual, more than the endorsement of a personality. Your vote for the President was also your pledge of support for the policies that are inseparable from the man. With the fate of our Nation at stake, that vote was not only a privilege, but the acknowledgment of a duty as well—the duty of backing up the broad program for which this man stands.

If I am correct in this, then I believe it follows that the citizen's responsibility is also the party's responsibility. Just as the ballot of last November was an acknowledgment of a duty by each of us individually—in the same sense, our party's nomination of the President was also a pledge of continuing party support.

And in that sense, we of the Democratic Party, who constitute a political division in America, today acknowledge a stewardship, a responsibility beyond that which a political party is ordinarily called upon to accept.

This responsibility of the party is to back the policies of the President on which he won his election. This stewardship is to muster the maximum of public support for those policies, to unite the American people, whatever their traditional politics may have been in less strenuous, less crucial times—to unite them now behind the administration's efforts to bring our country and the world triumphantly through this crisis.

For us Democrats, then, here in New York and throughout the Nation, I believe the watchword from this time on should be:

"Follow through."

Now, how can the Democratic Party carry out this responsibility? What must we do to "follow through"?

In terms of action, our next goal is victory at the polls in 1946. We hope and believe that the war will be over before the congressional election of 1946. But the task of building the peace will undoubtedly be a continuing one, and the new Congress will share that task with the Executive.

I cannot emphasize too strongly, therefore, the importance of the elections 2 years hence. The choices that our people make then will have a most vital bearing on the preservation of world peace, on everything that we are fighting for now.

We know the people of America will demand a membership in Congress of men and women who understand the President's program for making a permanent peace, and who will back him up in his resolve to see that program work, and we Democrats expect to be the party that will fill this need of the people.

They will be men who have thoroughly informed themselves of the organization for peace as it was roughed out at Dumbarton Oaks and as it will be perfected in the San Francisco and subsequent meetings.

They will be men who understand the rightness and the necessity for workable mechanics of international finance in a peace-preserving world—the mechanics originally proposed in the Bretton Woods Conference.

They will be men and women who know what the people want—these Members of the next Congress—and who have the courage to see that they get it. That means, my friends, they will be Democrats.

If in the coming sessions of Congress we find a Republican minority in Congress who still mouth international cooperation at us while they try to throw sand into the machinery we are building to make cooperation work, we will be ready for them in 1946.

We will have their records We know their game—from the blustering of the isolationists to the treachery of the perfectionists. It was all revealed to us a quarter of a century ago. We will be able in the campaign of 1946 to spot the "yes, but" boys. We remember how their predecessors in Congress used that "yes, but" technique to stab peace in the back after World War No. 1. "Yes" they are for international cooperation, "but" they are against every honest, practical measure to put the principle in operation.

The Republicans are in the minority in Congress, and the "yes, but" boys, we hope, will be in the minority even within the Republican Party. But they have money power behind them and they have lung power within them. They are still acceptable to the powerful little clique that has kept its grip on the leadership of the Republican Party.

This Republican leadership, you may be very sure, will be hard at work from now on to win the congressional elections. And men will run for Congress who are determined to block and barricade this Nation against any real international security, men who still are hoping that they will be able some day to force our country back into the war-breeding ground of isolationism.

And we can lick this group in 1946. And we must lick them. And as for ourselves, let us be able to say to our President that the Democratic Party's slate for the next Congress will be a slate of Americans whose souls have been tried by the times and have not been found wanting. It will be a slate of patriot-statesmen.

I can give you an example of the kind of patriot-statesman to whom I refer. An excellent example. We have him here with us tonight. You have recently reelected him to the United States Senate—Senator BOB WAGNER.

I can give you people of New York another example of the kind of patriot-statesman we shall support with all the resources at our command. We have him, too, with us tonight—Senator JIM MEAD.

Whether it be for the mayoralties of our cities, the governorships of our States, or for our representation in the National Legislature, these are the type of men we shall choose and back in the elections to come.

In building up local support for the caliber of men we want in the Congress of 1946, again we must shape our strategy around the Roosevelt post-war program.

Because that program is broad world wide in its embrace—we of the Democratic Party shall have to broaden our own scope of activities and contacts accordingly.

In the last election we saw the value of doing this. We were assisted and encouraged by the efforts of many individuals and organizations working and fighting for our party's principles. Roosevelt was elected, not by labor alone, not by business alone, not by the farmers or the professional men or the soldiers and sailors alone, but by a joining of hands among all these and many other groups of Americans.

Never before in our party's history have we had extended to us the willing support, the eagerness to help, from so many sources, so many walks of life, from such a broad and varied majority of the American citizenry, that we are offered today.

I do not propose to keep the door of our Democratic house shut to these newcomers simply because they are not or have not been members of the Democratic Party in the past. I do not propose to brush off their offers of assistance, or treat them lightly.

I know why thousands and hundreds of thousands of one-time Republicans have forsaken their party. I know why they are here at our door.

They are Republicans, but in a conflict on principle, they have been driven out of their own political house.

I know why millions who make up what we call the "independent vote" have turned again and again to the Democratic Party over recent years, why they vote for our candidates, why they even go out and work and fight for them.

They are independents, but since 1932 they have been voting Democratic on principle—the general principle of a better "break" for the people of this Nation.

It seems to me most fitting that on this day which is dear to the Irish heart, we Americans should think and speak of a permanent guaranty of liberty for all peoples.

Once, long ago, an Irish lad in his twenties stood before a court in Dublin and heard a judge sentence him to be hanged. His name was Robert Emmet, and the crime that he had committed was to search and fight for that same guaranty of liberty for his people.

When he asked if he had anything to say before the execution of his sentence, Robert Emmet addressed the court in words that are remembered today.

"I wished," he said, "to procure for my country the guaranty which Washington procured for America. These were my objects: Not to receive new taskmasters, but to expel old tyrants. In the dignity of freedom I would have fought upon the threshold of my country, and its enemy should enter only by passing over my lifeless corpse.

"I have but one request to ask at my departure from this world," he went on. "It is the charity of silence; that no man write my epitaph; for, as no man who knows my motives dares now vindicate them, let not prejudice or ignorance asperse them. Let them and me rest in obscurity and peace, and my tomb remain uninscribed, and my memory in oblivion, until other times and other men can do justice to my character."

A century and a half have gone by since young Robert Emmet spoke those words. That last request—the charity of silence—was not granted him. His words have gone ringing down through the years. But today—today we can, in good conscience, honor the memory of Robert Emmet, and to his poor, pitifully youthful shade, we can say:

"The men who can do justice to your character—to yours and that of every other brave spirit that fought for freedom—are here. Not for Ireland, but for the world, is the great guaranty now being made. A free and warless world will be the epitaph which these times and these men will write for you and for those who followed you and fought your fight."

And Robert Emmet, if he hears, may rest in peace. For men who dare to demand an end of oppressions, an end of wars, are speaking and acting. The time has come when they need not be silent.

Overtime Compensation of Federal Employees

REMARKS

OF

HON. CHARLES R. CLASON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. CLASON. Mr. Speaker, for many years, thousands of employees of the Federal Government have not received just overtime compensation. Due to different methods employed in computing the overtime pay of Federal employees, some have fared far better than others. During the war period, hundreds of thousands of American citizens have suffered because of the failure of the Government to remedy this inequitable condition which has been brought repeatedly to the attention of Congress, the various departments involved and the President. In order to remedy this situation, I introduced legislation in the last Congress which would place all Federal employees on an equal basis in the computation of their overtime pay and which would provide for them true time and one-half rates of pay for overtime work. I reintroduced this bill, H. R. 108, in the present Congress.

Chairman ROBERT RAMSPECK of the Committee on the Civil Service has kindly sent to me a copy of the report of the United States Civil Service Commission upon this proposed legislation. In view of this report, it is my hope that the House Committee on the Civil Service will give Congress the opportunity to vote on H. R. 108 and provide by law the means for giving true time and one-half rate of pay for overtime work to the several hundred thousand employees against whom discrimination is now practiced by reason of existing laws and regulations.

I am pleased to call to your attention that the legislation proposed in H. R. 108 would be in accord with the President's program and that the United States Civil Service Commission recommends favorable action upon this provision in this bill:

UNITED STATES CIVIL SERVICE COMMISSION,
Washington, D. C., March 12, 1945.

Hon. ROBERT RAMSPECK,
Chairman, House Committee on the Civil Service, House of Representatives.

DEAR SIR: This is in compliance with your requests of January 4 and January 9, 1945, previously acknowledged, for our comments on H. R. 103 and H. R. 487, which are identical bills to amend the War Overtime Pay Act of 1943, Public Law, No. 49, Seventy-eighth Congress.

The purpose of these bills is to—

1. Repeal the present provision that overtime pay shall be computed on only so much of an employee's annual salary as does not exceed a rate of $2,900 per annum.

2. Repeal the present provision that departments and agencies may elect to grant employees compensatory time off from duty in lieu of overtime pay for work in excess of 48 hours in any administrative workweek.

3. Substitute a divisor of 260 in lieu of the present divisor of 360 for converting annual rates into daily rates for overtime pay computation purposes.

In his Budget message to Congress for the fiscal year 1946, after referring to the need for reexamining the entire subject of hours of work and pay prior to the expiration of the War Overtime Pay Act of 1943, the President recommended that the Congress enact permanent legislation which would authorize overtime compensation at true time and one-half rates.

The Commission recommends favorable action on the provisions of these bills with the exception of the discontinuance of authority to departments and agencies to grant compensatory time off from duty in lieu of overtime pay, for work in excess of 48 hours a week. To eliminate this provision would remove an item of flexibility in the administration of the War Overtime Pay Act of 1943, which we believe should be retained.

We very strongly favor the change proposed by H. R. 108 and H. R. 487, with respect to the divisor to be used in converting annual rates to daily and hourly rates for overtime pay computation purposes.

Government employees generally are paid at basic annual, daily, or hourly rates. There is no statute establishing a uniform rule for converting these basic pay rates into overtime pay rates. In fact, existing law requires inconsistency.

In order to compute overtime earnings, it is first necessary to determine the overtime rate per hour. Under Public Law 49 and under daily and hourly wage schedules, the overtime rate per hour is one and one-half times the straight-time hourly rate. An inconsistency occurs, however, in computing the straight-time hourly rate.

The statutory method for computing straight-time hourly rates from annual rates is first to divide the annual rate by 360 (to give the straight-time daily rate) and then to divide this daily rate by 8 (to give the straight-time hourly rate). This formula is predicated on the theory that annual workers are paid for 360 days' work in the year, or 2,880 hours. At precent, however, the basic workweek for annual-salaried workers is 40 hours a week. Work above that is overtime service. The year's work corresponding to the year's basic salary thus in fact consists of a basic work period of 40 times 52, or 2,080 hours, or 260 days.

Although the same basic work year of 2,080 hours is recognized in computing overtime pay for wage-board employees, it cannot be recognized for employees under Public Law 49 without new legislation.

An illustration will show the effect of the difference in the two methods.

A mechanic whose basic workweek is 40 hours works 48 hours in 1 week. For the 8

hours of overtime service he receives the equivalent of 12 hours (8×1½) pay at his straight hourly rate, or an increase of twelve-fortieths of his basic weekly earnings. This is a 30 percent increase.

A stock clerk in the same plant whose basic workweek is 40 hours works 48 hours in the same week. For the extra 8 hours of overtime he is paid one three-hundred-and-sixtieth of his annual basic rate ($\frac{1}{360} \times \frac{1}{2} \times 8$), times one and one-half. This is equivalent to a weekly increase of one two-hundred-and-fortieth of his basic annual earnings, or a weekly increase of fifty-two two-hundred-and-fortieths of his basic weekly earnings. This is a 21.67 percent increase.

Thus the mechanic and the stock clerk under the same circumstances receive a 30-percent and a 21.67-percent increase, respectively, over basic weekly earnings.

This difference is also clearly illustrated in the case of employees whose annual earnings are substantially the same without overtime, e. g., a mechanical employee, paid at $1.20 an hour and a salaried draftsman paid at $2,500 a year. For working regular 40-hour schedules for 52 weeks the mechanic would be paid $2,496 and the draftsman $2,500. For each hour in excess of 40 hours a week the mechanic is paid one and one-half times $1.20, or $1.80. The draftsman is paid $1.30 ($2,500 divided by 360, divided by 8, multiplied by 1½) for each overtime hour, or 50 cents per hour less than the mechanic, although their straight-time annual earnings are substantially the same rate.

We believe this inconsistency should be corrected.

We have been advised by the Bureau of the Budget that the enactment of overtime-pay legislation, such as is proposed in title II of the proposed bill presented to the Speaker of the House on February 21, 1945, and referred to your committee (now title II of H. R. 2497), would be in accord with the President's program.

By direction of the Commission:

Sincerely yours,

HARRY B. MITCHELL,
President.

Address to the Friendly Sons of St. Patrick by Rev. Edmund A. Walsh, S. J.

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES

Monday, March 19 (legislative day of Friday, March 16), 1945

Mr. O'MAHONEY. Mr. President, Saturday evening last the Friendly Sons of St. Patrick of the District of Columbia held their annual meeting. It was presided over by William Montgomery, the president of the Acacia Mutual Life Insurance Co. of the District of Columbia, one of the distinguished and successful insurance executives of the United States. The address of the evening was delivered by Rev. Edmund A. Walsh, S. J., vice president of Georgetown University in his customary scholarly and eloquent manner. I ask unanimous consent that his address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The immortality which clings to certain great names across the centuries is sure index of something permanent and universal in them which transcends time, space, and locality. These recurring memories and the personality they recall were not always on the side of the angels, but often perpetuate the salutary warning attaching to certain evil influences such as Nero, Ivan the Terrible, Machiavelli, and Hitler. Parallel with these remmberances of disservice to humanity runs the record of heroic and sacrificial devotion to higher purposes, such as St. Francis of Assisi exemplified, or Sir Thomas More, Simon Bolivar, Pasteur, Washington, and Lincoln. This juxtaposition of contending forces in the age-old panorama of evolving social forms carries the germ of a philosophy of history which is the only satisfying explanation of human destiny. Human betterment, it would appear, is inseparably connected with conflict and contradiction.

One historic phase in this unending drama was enacted on Easter morning of the year 432 of the Christian era on a hill called Tara in the province of Meath on a far-off Atlantic island known to Strabo the Greek geographer as Hibernia. The first monarch of the land, surrounded by his great council of fellow kings and judges, attended by his bards, his minstrels, and his pagan priests called Druids, sat in royal ceremony awaiting the arrival of a visitor who had sought conference with the five kingdoms there united under the Celtic constitutions. That assembly had convened there for centuries in governance of a people whose ancestry has been traced back to those ancient Greeks whose civilization dotted the islands and shores both of the Aegean and the Mediterranean long before the legions of Caesar created the far-flung Roman Empire.

Into that convocation of Ireland's governing officials strode a majestic figure whose very aspect struck a responsive chord in the hearts and intellects of men sensitive to the dignity of authoritative bearing and accustomed to pageantry. This imposing messenger from the imperial city on the Tiber, now become the central shrine of Christianity, had voyaged by land and sea to this outpost of Europe, this furthermost island of the then-known world, to confront and evangelize a paganism which was destined to undergo such regeneration of spirit as would merit for that little island throughout succeeding centuries the high privilege of becoming the fruitful motherland and fountainhead of saints and Christian scholars.

This legate, who bore to Ireland the tidings first heard by shepherds on the hills of Bethlehem, came by his impressive bearing and confident demeanor through an inheritance of birth which had been further enriched by association with great souls and great events. His father, Calpurnius, was a Roman of the Romans, a decurio in Gaul or Britain and descended from a family of rank. His mother, Conchessa, was probably a native of north Britain and relative of the renowned patron of Gaul, St. Martin of Tours.

It was an age of Titans and epoch-making figures in the Christian church. Patrick moved through an era made illustrious by names such as the great Augustine of Hippo who next to Saint Paul molded the intellectual content of the nascent Christian faith and composed that immortal masterpiece, "The City of God." Jerome of the soaring vision was alive, translating the Scriptures into the Vulgate version. Ambrose of Milan was still the redoubtable bulwark of the spiritual against the arrogance of the temporal power wielded by the Emperor Theodosius whom the archbishop had halted at the door of his cathedral and bade fall on his royal knees, like any sinner, and ask God's pardon for that heinous crime of mass murder committed against the people of Thessalonica. Saint Leo the Great was in his prime, soon to become the pontiff unafraid who turned Attila, King of the Huns, and later Genseric, King of the Vandals, from their fury of destruction. The gentle Saint Martin of Tours was founding monasticism in the West, while in the Orient, Basil the Great, Gregory of Nyssa, Athanasius and the golden-tongued John Chrysostom had but shortly left the scene of their earthly labors and heroic pioneering for Christianity in the eastern empire. This was the air that Patrick breathed. He shared the contagion of greatness which it carried from Constantinople to the English Channel and was raised by it to peerage in that galaxy of saints, pontiffs, apostles, and missionaries who made the fourth and fifth centuries the golden age of church history.

And now in the maturity of his manhood, somewhere between his forty-fifth and fiftieth year, he stands before his appointed adversaries, a bishop of the Christian church commissioned to a most important apostolate by a great pontiff and a great saint, Celestine I. With Patrick, the cross of Christ entered the proud banquent hall of Tara where the invincible eagles of conquering Rome had never penetrated. In that unarmed figure advancing to the throne of an alien king guarded by alert warriors, we see a superb symbol of the passing of the secular Roman Empire to be succeeded by a new universal faith, the Pax Christiana, which caught the torch from Caesar's faltering hand and set the times ablaze with the dynamic of a new spiritual kingdom not of this world.

The scene which then unfolded in the great hall of Tara marked a definite transitional moment in the chronicles of western Europe. Once again was demonstrated the pregnant truth that history is made by historic men cast to the stature of the times. It was not a Carthagenian Army that crossed the Alps—it was Hannibal. It was not three frail caravels manned by Spanish seamen who dared the unknown perils of unexplored oceans to discover the Americas—it was the obstinate vision of one man named Christopher Columbus. It was not a demoralized army of tattered Continentals who survived Valley Forge to emerge in victory—it was the iron will of one man on his knees in the snows, George Washington. It was not the crozier, nor the mitre, nor the cope, nor yet the choice of an opportune moment when Caesar was in retreat that changed the history of the Irish people and made that island a reservoir of faith and education for the Continent in succeeding generations—it was the indomitable faith coupled with the unflinching courage of Patrick cooperating with the designs of Providence and using every human instrumentality at the right moment. It is not enough to be right in the affairs of men. One must be right at the right moment. It can be as disastrous to be wrong at the right moment as right at the wrong moment.

Unlike the skeptical Greeks in the Aeropagus, these Celts did not say to this other Paul, "We will hear thee again concerning this matter," but made their choice between Christ and Baal then and there as Irishmen have been doing from that day onward. It is related that the chief of the bards, one Dubthach by name, ranking next in authority to the king, finally rose in his place, harp in hand and proclaimed: "Hear me, oh high king and chieftains of the land. I now declare that this man who comes to us speaks from God; that he brings a message from God. I bow before Patrick's God. He is the true God, and as long as I live this harp of mine shall never sound again save to the praises of Christianity and its God."

That pledge has been kept for over 15 centuries of intermittent prosperity and vicissitude. No important heresy, so far as I know, has ever originated in Ireland, though much robust controversy respecting theology

has flourished there. Theological differences have even been known to percolate into civic and social relations. That must have been the mood of the lady of Dublin who had no love for the Jesuits a generation or two ago. She was seated next to a distinguished Irishman, Gen. William Francis Butler, who had served with much honor in the British Army particularly in Egypt and on the Nile. It would appear that Dublin had been shocked and stunned by a crime of rare occurrence in that capital. A young girl had been kidnapped, and as a result both press and private quarters were fairly buzzing with gossip, rumor, and speculation. Leaning over to her dinner partner the dowager whispered: "General, don't you suspect the Jesuits had something to do with that ghastly kidnaping?" The grizzled old warrior comforted her by explaining: "No, madame. You know the Catholic Church has a special order for that." "I knew it," she whispered triumphantly. "Who are they?" "The Trappists," he replied.

The total acceptance of Christianity by the Irish people and their integral loyalty to its credo ranks as the outstanding characteristic of Patrick's achievement. Whereas other pagan lands had brutally martyred the first missionaries or Christianity or submitted slowly and painfully to the yoke of Christ, as the Teutonic tribes did, the Irish nation looked upon the Cross and recognized the face of Him who is the Way, the Truth, and the Light of the World. In that integral acceptance of the supernatural we find the key of her long history and a powerful answer to many of the vicissitudes she has suffered. She was sealed from the beginning to two loyalties—love of the ancient faith and love of the soil which Patrick consecrated by his labors, his mysticism, his miracles, and his vision of the role of pain in the Christian economy of salvation.

When his days were done, at the age of 76, he saw a whole land evangelized and he alone of all his great contemporaries of the Christian West had the unique privilege of finding a people predominantly pagan on his arrival and leaving them wholly Christian at his death. This amazing transformation was accomplished in 30 years. If, as the Emperor Augustine could say of Rome, "I found it a city of brick and left it a city of marble," Patrick could say before the judgment seat of God, "I found them bound to idolatry and superstition; I left them consecrated forever to Thy Divine Son made man of Mary and crucified for our salvation."

These two loves characterizing the Irish people run, like a golden and a silver thread, respectively, through the warp and woof of Irish character wherever found—and that means everywhere. The fabric of the historical pattern woven for them thereafter on the loom of time was frequently crimson-hued. The slender thread of burnished gold was often dyed in the red of persecution, while the gleaming silver thread of legitimate national aspiration often grew tarnished and undistinguishable under political absorption. But true metal resists even fire and is shaped to forms of beauty under the hammer. For 300 years Danish invaders inundated and scourged the land but did not succeed in quenching the sanctuary lamps in Glendalough.

For 700 more years the Anglo-Saxon invaders sought to extinguish both the ancestral faith and the stubborn sense of nationality. At one time it was by direct assault and force of arms, at another period by penal laws and transportation of thousands into slavery, then by seduction of a maneuvered parliamentary union and always by calumny or subtle falsification of history, such as Froude, the visiting English historian, attempted in this country in 1872 until he was routed by the facile pen and eloquent tongue of the celebrated Dominican, Rev. Thomas Burke.

We have considered thus far the genius of the Irish people viewed collectively as a nation. What of them as individuals? Not all are saints but all know what sanctity is and revere it humbly, which is the difference between a contrite sinner and a scoffing skeptic. Even in his cups an Irishman knows the eye of God is upon him. His religious faith at home, on his native soil, is incorruptible, for it has been tried in fire. It is usually under the seduction of complete freedom abroad, by alien enticement or prosperity that he loses his faith—and even that paradox is comparatively rare. That is why Ireland's saints have sometimes prayed to keep her poor—if riches are to lead to that sin of pride by which the angels fell. Irish womanhood has sanctified the purity of maidens and ennobled the chastity of wedlock. Your Irishman is not a stranger to violence but is quick to forgive and forget. In that respect he is a paradoxical reservoir of vehemence and humility.

He does not hate his adversary though he will battle him to that hell of Connaught which Cromwell once decreed for all nonconforming Celts. I verily do not believe that Irishmen in Ireland hate the English as violently as second- or third-generation Irishmen do from the safe distance of America. Or if they do, their attitude is likely to rest on a sort of theological premise similar to that manifested by the young man who recently said to his parish priest:

"I hope that man Hitler ends up in hell." To which the good pastor replied, "Come, come, my boy, don't be as un-Christian and uncharitable as that." "But Father," insisted the impatient Hotspur, "what's the use of having a devil at all, at all, if he doesn't get Hitler. The Church shouldn't have him around."

The Irish immigrant to America has easily adapted himself to her institutions, her laws, her culture, and traditions. He is assimilated into the American democracy without difficulty and has rendered loyal service in its defense. He is rarely found among the radical elements of the left wing, though he will gladly lead a revolt against injustice wherever found, and has been known to engage in a brawl with the policeman on his rounds. His rebellion is against injustice and oppressive government, not against the principle of authority. No figure wields more authority over him than his priest in whom he recognizes a representative, however human, of Him who is the source of all the law and order by which creation moves.

It is sometimes alleged that Irish politicians and prominent Americans of Irish extraction have sinned against the public welfare with much facility and special grossness. Doubtless Irishmen have gone to jail for high crimes and low misdemeanors, and it is entirely possible that some are still at large who should be jailed. But it is wholly unreasonable to indict the vast unpublicized majority for the sins of the notorious few. When an Irishman succumbs to an unholy greed for gold or goes wrong in other ways, I concede you he can become as offensive and criminal as any of those eminent persons with non-Celtic names who have graced the apartments at Sing Sing, or smoothly plundered and wrecked an important railroad in New England, or pauperized innocent widows and orphans by unctuous manipulation of worthless securities. It is an ancient but ever odious device of bigotry to attribute and transfer individual wrongdoing to an entire racial, religious, or political collectivity rather than lay it to the common weaknesses of human nature persisting in all the sons of Adam, be they Catholic, Protestant, Jew, or atheist.

For every unworthy Roland discovered by the scavengers someone will quickly dredge up an Oliver of different faith until dangerous hatreds infect the entire body politic where unity and mutual respect are so desperately needed. The shallows of a river are the points of babbling noises and friction; the deep volume of water flows majestically and silently to meet the sea. So it is with the river of life, and so let it be with our judgments on the currents of our neighbors' conduct as they empty into the ocean of eternity.

The double seal which Patrick imprinted on Irish souls—acceptance of Christianity even to the shedding of lifeblood in its defense and a flaming patriotism—will be challenged more than ever, I suspect, in the uncertain and perilous social upheavals which will undoubtedly afflict all the survivors of the present world tragedy. Eire, it is said, will be excluded from the ultimate peace conference which will attempt to liquidate the curse of war and the hatreds now devastating Europe and Asia. But let her be of good heart. Perhaps she will one day account it a blessing not to have cooperated in the injustice now being contrived against another Catholic nation of central Europe in appeasement of atheistic communism. Ireland's destiny has never been that of a great power as power is measured in the eyes of men. Her strength has been rooted in the power of her will to freedom, in her unshakable loyalty to the supernatural in man and in the election of a Wolfe Tone, a Grattan, a Robert Emmet, a Daniel O'Connell, and a Parnell to die on their feet rather than to live crouched on their knees before any totalitarian aggressor.

May the Lord of Hosts still keep her within the shadow of His outstretched hands even though their juncture forms a cross, and grant her Patrick's shield of sanctity, wisdom, fortitude, and clearness of vision in the darkness of the present hour. She will preserve the integrity of her soul and make a new Tara so long as she builds it of the rock from which she has been hewn.

All-American Flag Line

EXTENSION OF REMARKS

OF

HON. PAT McCARRAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Monday, March 19 (legislative day of Friday, March 16), 1945

Mr. McCARRAN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a statement entitled "All-American Flag Line," made by me this morning before the Committee on Commerce.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

With many others, I share a vision of America's destiny as the outstanding power in world air transportation. I am determined to do what I can to bring about fulfillment of that destiny. I believe adoption by this country of the policy set forth in the bill S. 326 is essential to achieving that objective.

I believe that the proposal for a single American-flag line in international air transportation, with all existing American air carriers participating in its management and direction, and sharing in its profits, will mean unprecedented growth for American aviation and new prosperity for the domestic air lines of this country, as well as giving this Nation the inside track to the commerce

and industry which world-wide air transportation is certain to develop.

Whether we like it or not, we are going to be forced into active competition with foreign nations in a struggle for control of global air transportation. We must either hold our own in that struggle or be forced into a secondary position in world affairs, for world trade will hold the key to international preeminence and national prosperity after the war, and within the span of a few years air transport will be the keystone of world trade.

In the post-war world, far more than in the pre-war world, commercial air lines will provide the key to economic development and exploitation. If this Nation can achieve and maintain the supremacy in world aviation which is her natural destiny, American prominence in world affairs will be assured for the next three generations. If we fail to meet this challenge, and allow any other nation or combination of nations to take over the position of leadership in world aviation which should be ours, we shall soon and long have cause to regret it. We shall see our natural markets weaned away from us. New markets will be developed primarily for the benefit of other nations. Our own consumers will be unable to purchase important articles without paying tribute to the foreign carrier which brought them to our shores.

If this situation were clearly understood by the great mass of the American people, there would be only one possible answer to the question of whether we should enter the field of international aviation in the post-war world with anything less than the maximum potential of our entire air transport industry, unified for the greatest possible efficiency, and backed to the limit by all the resources and facilities of our Government. That answer, the enlightened answer, the prudent answer, is the answer embodies in Senate bill 326.

The bill would create a federally chartered private corporation, with potential working capital in excess of $1,000,000,000, to be known as the All-American Flag Line. This corporation would be composed of air carriers now holding certificates under the Civil Aeronautics Act of 1938, except air carriers whose opcrations are wholly within the Territory of Alaska.

Creation of this corporation would effect a pooling of all the resources, both domestic and foreign, of the air-transport industry, to forge a new agency able to make the commerce of the United States first in the air all over the world. This new agency would have back of it not only the full strength of this unity of all factions of the air-transport industry of the United States concerned with foreign air transportation, but also all available facilities of the Government of the United States, to enable it to carry out the purpose for which it is being created.

This corporation would, therefore, have active partners operating throughout the United States to funnel international business into designated points of entry or departure. Likewise, these interstate air-carrier partners would pick up and disperse throughout the United States the international air traffic which is brought to our shores by the All-American Flag Line, or by any foreign air carriers. I believe this offers an unbeatable combination.

The bill prohibits the All-American Flag Line, or any foreign air carrier, from engaging in interstate air transportation, and specific provisions of the bill prevent any one air carrier from owning a controlling interest in the All-American Flag Line.

Remember, the pace of the world is geared to transportation, and aviation is the instrumentality which will set the pace in the foreign trade and passenger field after the war. We cannot afford to come out second best in the race for air commerce in the markets of the world. That is why this bill proposes to put the entire facilities of the air-transport industry and the full weight of the Government of the United States back of the All-American Flag Line.

In considering the question of our international air policy, even more than in considering the question of our domestic air policy, national security is of primary importance. Our national policy in regard to international civil aviation must be shaped and formed with a view to full recognition of the military requirements for national defense.

One essential prerequisite of adequate national defense is a powerful air force. To have a powerful air force in time of war, we must have, in time of peace, the civilian components which will go to make up wartime air power. We must have a strong air transport system; a system with air bases, airway facilities, and aircraft which shall be readily adaptable to military use.

This transport system must either be subject to some form of governmental control which will insure that proper weight shall be given to military considerations at all times, or else it must be actually operated by the military. I anticipate that we shall be under strong pressure from the War Department, after this war, to provide for continued operation of the Air Transport Command on a world-wide basis, as a direct adjunct of the Army. The Air Transport Command is today the greatest international air carrier of persons and property in the world It has recently begun to carry civilian passengers for pay. If this policy is continued after the war, the Air Transport Command will be a far greater threat to private enterprise in aviation than the All-American Flag Line proposed by this bill could ever be. Remember that the All-American Flag Line, while it will be subject to a large measure of Government control through the Civil Aeronautics Board, will be a private enterprise, in which all existing United States air carriers will share.

I believe the provisions of this bill are adequate to insure the development of international air transportation under the United States flag in such a way that all its facilities—its air bases, its aircraft, its traffic-control installations, even its personnel—will be available and readily adaptable for military purposes in time of war. I do not believe that, from a national security standpoint, the proposal for a number of smaller independent companies, competing one against the other, is nearly so acceptable.

This bill has been called a chosen instrument bill.

If we are going to bandy the phrase "chosen instrument" back and forth, we should have a clear understanding of what we mean by that phrase. The bill does not propose a "chosen instrument" in the sense in which that phrase is most commonly accepted. It does not propose to take some existing air line and make it the favored company. The "chosen instrument" under this bill will not be an instrument picked from stock and given some sort of royal seal of approval; it will be an instrument forged for the specific purpose for which it is to be used, from all the best elements of the aviation industry of this Nation.

In this sense of the phrase, when we send a team of athletes to compete with foreign nations in the Olympic games, that team is a "chosen instrument." We do not send to Europe the outstanding college track team of the Nation. We do not pick two or three or four outstanding college teams and send them across the water to compete in different events. We combine all of the best talent and ability and skill which the country affords, and we weld that talent and ability and skill into one team, and that team goes to the Olympic games to represent the United States of America.

Another word which should have a little preliminary attention in connection with the discussion of this bill is the word "monopoly." This is a word which has been both freely and loosely used by opponents of this bill. "Monopoly" is an unpopular word in this country. It is so unpopular that a great many people will oppose anything that is tagged with the monopoly handle. Of course, calling a thing a monopoly does not make it so. There is nothing inherently wrong in the word "monopoly," anyway. The Post Office Department is a monopoly—a monopoly in the public interest. Does calling it a monopoly make you dissatisfied with the Post Office Department?

Webster's Collegiate Dictionary says that in popular use "monopoly" means "any control (of any commodity or service) in a given market as enables the one having this control to raise the price of a commodity or service materially above the price fixed by free competition." Under this definition, the all-American Flag Line would not be a monopoly, for it would have to meet the competition of foreign air lines in prices and services. At most, the proposed All-American Flag Line would be a monopoly in operation; clearly it would not be a monopoly of control, for every United States air carrier would participate. A much better term than "monopoly" is "cooperative." The All-American Flag Line would be a joint enterprise by all the domestic carriers of this country, providing them an outlet to the commerce of the world for the passengers and goods they transport to our shores, and bringing to this country from all the world air traffic in which our domestic carriers would share.

At the present time, Pan American Airways has a virtual monopoly on international air transportation under the American flag. Only one other company is licensed to engage in such transportation. This bill provides that international air transportation under the American flag, and the profits therefrom, shall be shared by 20 different air lines. Instead of owning 90 or 95 percent of the entire system, Pan American Airways would not be able to own more than 25 percent.

If each licensed air carrier in the United States subscribes for the maximum amount of voting stock in the proposed community company, to which it is entitled under terms of the bill, no one carrier, nor two, nor even three, will have voting control; and every air carrier will subscribe to this stock if S. 326 becomes law; make no mistake about that.

Any claim that small air carriers would be frozen out because they would be unable to subscribe to $5,000,000 worth of stock in the All-American Flag Line can only be made by a man with his tongue in his cheek, or a man with no understanding of finance. Stock in the flag line will be a gilt-edged investment. It will pay a guaranteed minimum interest of 6 percent, and might pay as high as 8 percent. Any person or company entitled to subscribe to any amount of that kind of stock can easily raise the money to do so.

The stock percentages provided for in the bill are based upon the proportionate volume of business done by the different air line companies in a given year. On this basis, I have figured out what the approximate holdings of voting stock in the All-American Flag Line would be.

Pan American Airways would have $50,000,000 worth, or 25 percent of the voting stock. American Airlines would have about $25,000,000, or 12½ percent. United Airlines would have approximately $22,000,000, or about 11 percent. Those three companies together could only control a maximum of 48½ percent. Transcontinental & Western Air would have about $15,500,000, or between 7 and 8 percent of the voting stock. Eastern Airlines would have about $12,500,000 worth of stock, slightly over 6 percent. Each of the remaining 15 air carriers would have $5,000,000 worth of stock, or 2½ percent of the total.

The 15 air lines which would each hold 2½ percent of the total voting stock are All-American, American Export, Braniff, Chicago & Southern, Colonial, Continental, Delta, Essair, Hawaiian, Mid-Continent, National, Northeast Airlines, Northwest Airlines, Pennsylvania Central, and Western Airlines.

I discussed this bill on the American Forum of the Air last week. During that discussion, one of my distinguished colleagues on the panel suggested that the whole proposed financial structure of the All-American Flag Line was bad because the bill provides for subscriptions to capital stock of the company within 30 days after the act becomes effective. I understand that view was borrowed from a report by the three gentlemen who constitute the aviation committee of the New York Chamber of Commerce. Now, in my judgment, 30 days is ample time. We know that every aviation company is going to want all of the stock it can get, and we know there will be no problem of financing. But if it is the judgment of this committee that 30 days is not long enough, then let us amend the bill to provide for a longer period. That is a minor matter. It is absurd to damn the bill because of a single provision. I am not wedded to any single provision in this bill. All I am advocating here is a principle. I think the bill provides a reasonable and workable plan; but I shall not resist any amendment which leaves the principle intact.

I have been in public life for 40 years. My record is fairly well known. I have always fought to maintain the principle of free competition as part of the American way of life. I have been accused of sacrificing that principle in advocating an All-American Flag Line for international air transportation. Gentlemen, the problem with which we are dealing involves our national interest to a vital degree. Would you have me say, "If the national interest conflicts with one of my principles, damn the national interest"?

Competition in international aviation will be between nations. If we have several carriers in the field, the operations of those carriers as between themselves will not be competition, but internal strife.

The job American aviation will have to do in the post-war world is to carry the American flag to the four corners of the earth and maintain this country's prestige and influence throughout the all-encircling ocean of the air. To whatever extent different sections of American aviation squabble between themselves for routes and profits, they will be hampering the performance of this major job.

"Controlled competition" is a catch phrase which is freely used by opponents of this bill; but as they use it, it does not mean competition at all; it simply means regional monopolies.

Does the Southern Pacific Railroad compete with the Baltimore & Ohio? You would have exactly the same degree of competition between a carrier operating across the North Atlantic, and a carrier operating across the Pacific.

Those who advocate dividing our international air commerce into several zones, and then letting one company operate in each zone, are in no position to point their fingers at this bill and cry, "Shame! Monopoly!" They are proposing several monopolies; and the monopolies they propose would be real monopolies, for all aviation interests would not share in fair proportion, as they would under this bill. Far from it. Under the zone plan a few companies would get all the profits; the rest would get nothing.

Now, what are the specific provisions of this bill? I shall run through them briefly.

Subsection 1 (a) creates the Corporation to be known as All-American Flag Line, Inc.

Subsection 1 (b) defines the general purposes of the Corporation.

Subsection 1 (c) provides for establishment by the Corporation of branch offices or agencies.

Subsection 1 (d) sets forth the powers of the Corporation. Included are all of the usual corporate powers necessary to carry out the purposes of this Corporation. Also included is the power to acquire or control subsidiaries in the furtherance of its corporate purposes. If you want a zone system, with several different air carriers, each operating in a separate sphere of influence, you can have it under this bill.

Subsection 1 (e) puts back of the Coporation all of the aid, other than direct financial assistance, available from any department or agency of the United States Government.

Section 2 covers issuance of stock by the Corporation.

Capital stock is divided into two classes: Class A stock, which will be issued in the amount of $200,000,000, and which will be the voting stock of the Corporation, and class B stock, which will be issued only in exchange for assets owned by class A stockholders, used in foreign air transportation, and useful to the Corporation.

Class A stock will pay dividends at the rate of between 6 and 8 percent depending on earnings.

Class B stock will pay reasonable dividends based upon the earnings of the Corporation.

I call the attention of the committee to a typographical error on page 5 of the bill in line 23, where the syllable "tors" has been inserted after the word "approval."

Subsection 2 (e) limits the holder of class A stock to licensed air carriers, not including air carriers operating wholly in Alaska.

Subsection 2 (f) sets up a minimum limitation of $5,000,000, and a maximum of $50,000,000, on the amount of class A stock which any eligible air carrier may purchase.

Subsection 2 (g) provides for reallocation of any stock for which an eligible air carrier fails to apply. It also provides that no stockholder shall at any time hold more than $50,000,000 worth of class A stock. As I have mentioned, the provision in this section for stock subscription within 30 days after the effective date of the act has been assailed; and I shall have no objection to providing for a longer period.

Subsection 2 (h) provides for cash payment of subscriptions to class A stock and prohibits class A stock from being traded on any stock exchange or curb market. It also prohibits sale or transfer of class A stock without approval of the Civil Aeronautics Administration.

Subsection 2 (i) provides that class B stock shall only be issued as payment for assets purchased from class A stockholders.

Subsection 3 (a) requires that a subscriber to class A stock must agree to sell to the Corporation upon demand any of its assets used in foreign air transportation at fair market value in exchange for class B stock.

Subsection 3 (b) provides for appraisal of the fair market value of properties to be sold under the provisions of the previous subsection.

Section 4 provides that the board of directors of the corporation shall consist of 1 member designated by each class A stockholder plus 10 additional members to be elected annually by all class A stockholders. This means 30 directors, of whom the 4 largest air lines could not possibly control more than 14.

Section 5 governs issuance of notes, debentures, bonds, or other obligations by the Corporation and fixes the limit on such obligations at three times the amount of issued capital stock. It provides that any issue of securities by the Corporation shall require approval of the Civil Aeronautics Administration. It requires that all obligations of the Corporation shall be secured by assets of the Corporation. It authorizes the Secretary of the Treasury to purchase securities issued by the Corporation.

Section 6 (a) provides for organization of the Corporation within 60 days after the act becomes effective.

Section 7 directs the C. A. B. to issue the Corporation a certificate as an air carrier in foreign air transportation.

Section 8 provides for extension of service by the Corporation where required in the Nation's interest. The Civil Aeronautics Administration is empowered to require any such extension upon certification by the Secretary of State that such action is necessary either for the maintenance of cooperative relationships between the United States and any foreign country, or in the furtherance of national policy, or for the performance of a treaty obligation. Where an extension of service is so required this section makes provision for direct payments to the Corporation within the limitations of appropriations made by the Congress for such payments, so as to guarantee to the Corporation reasonable compensation for the service it is required to perform.

Section 9 prohibits the All-American Flag Line or any subsidiary from holding a license to engage in interstate air commerce or a certificate to engage in interstate air transportation.

Section 10 makes the All-American Flag Line the only air carrier in international air transportation which shall be authorized to transport United States mail.

Section 11 provides for consultation between the Secretary of State and the Civil Aeronautics Authority with regard to negotiation of agreements with foreign governments affecting or in connection with air navigation or air commerce. It provides that the Secretary of State may negotiate agreements with foreign governments for the benefit of the All-American Flag Line, and provides further that the Secretary of State shall make available all the services and facilities of the State Department in the furtherance of such negotiations. It prohibits the State Department from negotiating agreements with any foreign government for the benefit of any other air carrier engaged in international air transportation. Those provisions are important.

Our international air commerce must have the Government behind it. A foreign nation dealing for landing rights will vastly prefer to deal with a government than to deal directly with private enterprise. If we are competing with the British for some landing right, and our approach is made by a private company while the British Government handles the deal for British overseas airways, we are licked before we start.

Section 12 provides that the All-American Flag Line shall be subject to all the provisions of Federal statutes applicable to other air carriers.

Section 13 is the usual separability clause.

Section 14 provides that the act shall become effective 60 days after the date of its enactment, with a proviso that this effective date may be extended, at the discretion of the Civil Aeronautics Administration up to a maximum of 180 days.

With that summary of the bill in mind, let us consider what has been the experience of other countries in the field of international air commerce.

The first air line in Europe was a small British company started in 1919, to operate to Paris and to Holland. Within a few months there were four separate British air lines operating to different points on the Continent, three French air lines, three German lines, and a Dutch line, known as KLM.

It is significant to note that there was only one Dutch line. Within a very short time it became apparent that the Dutch company was able to play the British and French and German companies one against the other, to the great benefit of the Dutch. The British were the first to take realistic action in self-defense. A Royal commission was set

up to consider the situation. This commission recommended legislation requiring the merger of the several British companies into a single company, privately owned. Such legislation was passed and the new company, known as Imperial Airways, was designated to fly all Empire routes, which at that time were the only service of interest to the British Government.

The principle thus adopted by the British was followed by nearly all the other European governments within the following 5 or 10 years.

At first there were attempts by several governments to institute some sort of zone arrangement, with different airlines operating in different spheres of influence; but finally, in each case, in every important nation of the world, the government policy was set up that a single company should represent the nation in the field of international air commerce.

Each of the governments which took this action did so on the basis of several important considerations. In the first place, it was, as I have pointed out, an action in self-defense to avoid cutthroat competition between the countries and nationals abroad, and to prevent foreign flag companies, such as the Dutch KLM, from playing them off one against the other. The new policy also permitted and facilitated diplomatic support of the air line in other countries, in seeking to secure not only operating rights but also the numerous other important concessions which must be secured in order to operate. Another reason for the action taken was to avoid subsidizing private competitive lines in the international field. Considerations of national prestige were also important.

It may be profitable to look closely at some of the attempts to establish zone systems in international aviation and see why they failed.

As I pointed out earlier, British Imperial Airways was designated as the national company for Great Britain, to operate throughout the world on Empire trade routes. This company had no interest in serving the continent at that time; its chief job was to bind the Empire together. Later, another privately owned company, known as British Airways, was set up to operate to the Continent and to Scandinavia.

Though these two companies were not interested directly in the same field, and though they operated in separate spheres of influence, almost immediately there was conflict of interest between them. That conflict was so sharply criticized in debates in Parliament that in 1939 Great Britain swung over to the single-company policy and created the British Overseas Airways Corporation, commonly known as B. O. A. C., to be the Government national air line for Great Britain.

The French Government made an attempt to operate a zone system for 5 or 6 years. There were five French international air lines. One, known as Aero Postale, operated from France to South America by way of Africa and across the north coast of South America to the French possessions in the Caribbean. Another French line extended through Africa to Madagascar. A third reached out from France through the Orient to French Indochina. A fourth French line served Germany and northern Europe. The fifth line was the important route to London.

Each of these five companies was protected by an agreement with the French Government designed to prevent any other French line from operating in its particular zone. Each French company, in other words, was the representative of France in its own sphere of influence, and these spheres were defined and separated.

Not one of these five companies wanted a unified French air line. Each one wanted to continue as the big frog in its own puddle. Debate in the French Chamber of Deputies extended over a period of many weeks, and after long deliberation the French Government decided that, in spite of the zone system, the five companies were being played off, one against the other, by the national companies of other nations, and the French, after this long and well-considered debate, adopted the policy of a single company, privately owned. Such a company, known as Air France, was promptly organized.

Germany had two air lines for many years operating in separate spheres of influence. But Germany also learned from experience and decided, in the national interest, to merge its lines into a single carrier. The result was the Lufthansa, the line which was responsible, more than any other single factor, for Germany's phenomenal success in international trade, particularly with South America.

Japan originally had three separate companies—one supported by Mitsui, another by Mitsubishi, and the third supported by the South Manchurian Railroad. As in the case of other countries, conflicts of interest arose, and the Japanese Government eventually insisted that the three separate lines be merged into a single company, known as Dai Nippon.

Before the war, 26 nations of the world were interested in international air transportation, and 25 of them had adopted the official policy of concentrating their efforts behind a single airline. The United States, while it did not adopt such a policy officially, actually operated on the same basis, for only one United States flag line, Pan-American Airways, was active in the foreign air transportation filed prior to the war.

In this connection, I should like to comment upon the report filed by the State Department on the bill, S. 326. This report states: "It is often assumed that most of the leading nations have adopted in full measure the single-company principle, and that this was done because of unsatisfactory experience with other alternatives. As a matter of fact, the experience of other countries is so varied that very few definite conclusions can be drawn."

The most charitable comment I can make upon that statement is that it is somewhat misleading.

The State Department report attempts to support that misleading statement by dividing the nations of the world into several different groups according to their policies with regard to international aviation. The distinction between groups, which the Department makes, rests upon factors other than the single question of whether the country does have a single company policy in international air commerce.

The Department's report states that Belgium, Denmark, Finland, Germany, Greece, Hungary, Ireland, Japan, Norway, Poland, Rumania, Russia, South Africa, Spain, and Yugoslavia all adopted the single-company policy; and then puts these nations in a separate category because they also have a single-company policy for domestic air service. This distinction is unimportant because our own policy with regard to domestic aviation is not here under consideration.

The State Department says that Great Britain is to be included among the countries adhering to the single-company policy except—and I quote—"except for the continued existence of certain small unsubsidized British flag lines to the Continent and to Eire." That distinction is unimportant for several reasons. In the first place, the "small unsubsidized lines" have ceased operations. What is more important, the new British policy in international air commerce, announced only last week, provides for unified control of all international air transportation under the British flag. I shall have more to say about the new British policy a little later. In any event, the question of operations by "small unsubsidized lines" is not involved, because there is nothing in the bill (S. 326) which would prevent the operation of such lines under the American flag.

The State Department reports that—and I quote—"France, Italy, and the Netherlands subsidized their international services through more than one company, although in general their routes did not duplicate each other." That statement is in the past tense, and so it may be considered partially correct, but it is certainly not up to date. It is not even recent information. I have already pointed out to the committee what actually occurred in the case of France and how France came to adopt and did adopt the single-company policy. The Netherlands, despite the State Department's report, had a single air line from the beginning.

The State Department reports—and I quote: "The United States, Canada, Australia, India, Brazil, Mexico, Argentina, and Peru have followed the policy of regulated competition with respect to domestic air services, but this principle was not extended by all of these countries to their international operations."

That is a weasel-worded statement if I ever saw one.

That statement is certainly intended to carry the implication that at least some of these countries did extend the policy of regulated competition to their international operations. On the contrary, however, so far as I know, not one of them did. Canada certainly did not.

Nearly 2 years ago Prime Minister Mackenzie King, of Canada, made a very clear statement of Canada's policy with regard to international aviation. That policy, to which Canada adheres today, was stated by Prime Minister King in April 1943 as follows:

"Trans-Canada Airlines has by its charter the right to operate international air transport services and has already been designated as the instrument of the Canadian Government in air transport service across the North Atlantic and in Canadian services to the United States. The fact that international negotiations of great importance must surely take place confirms the wisdom of government policy under which its freedom of action in international negotiations is not limited by the existence of private interests in international air transport services."

So we see that Canada supports a single company, Trans-Canada Airways, as its national instrument in domestic air transportation. Australia did not put several different air lines into the international field. Air Minister Arthur Drakeford, of Australia, outlined Australia's position with regard to international aviation about the end of last September. He said Australia favors operation and ownership of all international air trunk routes by an international air authority, or, in the alternative, a government-owned British Commonwealth system. Only this month Australia has adopted a policy under which she will nationalize her internal air lines. The United States may have adopted a policy of regulated competition for its international air services, but the proof of the pudding is in the eating; and the United States had only one air line flying international routes before the war.

I do not wish to enter into controversy with the State Department. The fact remains, regardless of the Department's report, that the experience of every major nation which has engaged in international air transportation has indicated not merely the desirability, but the necessity, in the national interest, of adopting the single-company principle.

Besides the State Department, several other Government departments have filed reports on the bill S. 326. Each of these reports is worthy of analysis, and they undoubtedly will be analyzed and discussed before consideration of this measure is completed. I shall not attempt such discussion today. I should like to point out in passing that each of these reports must be considered as a whole and must be carefully weighed, and fact separated

from opinion, in determining the extent to which the Congress should be guided by these expressions from the departments. It will not be sufficient to quote a paragraph here and a sentence there to build up a case.

A few minutes ago I spoke of the fact that the British Government last week made public a white paper outlining its proposal for operations in the field of international aviation. There seems to be some difference between what this proposal involves and what the British say it involves.

The British white paper explaining the Empire's new air-transport policy, refers to the policy as an abandonment of the single-company idea. The white paper declares:

"The Government is convinced that the policy of a single chosen instrument, whatever may have been its merits in the past, is unsuited to deal with the great expansion of the future. There must, therefore, be several air-transport undertakings. A single entity, even if it could effectively include and use all the varied experience of aviation and transportation which it is necessary to bring in, would be too large and far-flung.

"Moreover, while it is clearly desirable to eliminate wasteful competition between British operators on the same route, it is none the less desirable both to avoid a sealed pattern of management and to encourage different managements to try out their own ideas. This would in no way prevent the constant pooling of experience."

It is literally true that the British propose to set up three companies, each to operate in a different sphere of influence. However—and this is important—all three companies are to function under Government control, and apparently all three are to be dominated by British Overseas Airways Corporation.

The first sphere of influence set up, which the British classify as "Commonwealth air routes," will include routes to the United States, China, and the Far East. Operations in this sphere of influence are to be conducted directly by B. O. A. C.

The second sphere of influence, which the British call Empire air routes, will include routes internal to the British Isles and between points in the United Kingdom. Operations in this sphere of influence are to be conducted by a company to be formed by representatives of British railroads, short sea-shipping companies, travel agencies, and the B. O. A. C. and other pre-war air operators.

The third sphere of influence designated by the British includes routes to South America. Operations in this sphere are to be conducted by a new company which will include representation from B. O. A. C., ocean-shipping lines, and travel agencies.

Lord Swinton will continue to appoint directors of B. O. A. C., and will also approve representatives named to the boards of the other two companies. That means unified control.

The British announcement specifically states that B. O. A. C. will take part in the capital and management of the two new corporations.

The three corporations will "jointly create and manage a combined organization for overhaul of aircraft and a combined training establishment for flying and technical staff."

Commenting on the British announcement, the chairman of the board of B. O. A. C. said he welcomed the announcement as forming "a reasonable and workable basis for developing British air transport." And he added: "Britain can now get down to the job of making British air transport second to none, and that is just what we are going to do."

Reuter's News Agency reports today that British Government officials expressed the opinion the first British plane opening commercial service to South America would take off for its initial trip within 6 months. This is certainly a far cry from postponing action until the war is over. The British are going ahead full steam, while the United States quibbles and procrastinates.

The British policy seems to have two major points: Participation by all air lines, and completely unified control in international air transportation. Both these points are in line with the philosophy embodied in the bill, S. 326. Because I know there will be those who will attempt to quibble over what the British proposal means, I should like to point out what I know is obvious to those who like the members of this committee, really understand this problem: Namely, that the most important factor of the British plan is unified control in international operations, with the full weight of the Government backing up those operations. This is the principle which the bill, S. 326, stands for. I should like to point out further that under the provisions of S. 326 it would be entirely possible, and might be desirable, for the all-American flag line to set up several subsidiary organizations, under unified control, to operate different routes.

Setting up several separate routes independent of each other would be much less desirable, from many standpoints. Let me point out one or two reasons why. In the first place, the sphere of influence plan differs from the all-American flag line plan about the way a number of separate little sticks differ from a big stick. We need a big stick in international aviation, to protect our national interest. Air line tycoons who state, in effect, that they would rather be the king frog in a small puddle under the sphere of influence plan than share the limelight under the all-American flag line plan are ignoring the national interest and voicing a completely selfish attitude.

Deciding which carrier gets which sphere of influence would be no small job. The North Atlantic route will be highly profitable. There will be "gravy" in it. The Pacific route will require a substantial subsidy. Under the sphere of influence plan, how will we determine who gets the "gravy route"? Furthermore, shall we let the profits from the North Atlantic route go into the coffers of a private company while the taxpayers dig down to provide a subsidy for unprofitable routes? It must be obvious that from the taxpayer's standpoint it would be preferable to let profitable operations help finance those which are less profitable, and provide subsidy only as it is required by the over-all picture. Another consideration here is that a single company could utilize its equipment and personnel much more effectively than a number of small companies, with resulting savings in operating cost, which in turn would reduce the total amount of subsidy required.

Whatever policy we adopt with regard to the United States flag air lines which are to operate on world routes, we are going to find the military leaders in this country insisting that, for reasons of national security, the communications system serving our international airways outside the continental limits of the United States be owned or controlled in its entirety by a single agency, either owned or rigidly controlled by the Government. There will be many good reasons advanced why our airways communications system should be so controlled. It is important to the national security to know that in case of war, our military agencies can assume immediate control over that communcations system. I submit that under the provisions of the bill S. 326, the requirements of the military with regard to airways communications will be satisfactorily met. If we adopt a policy of letting a number of smaller companies operate internationally, then we shall have to deal separately with this problem of communications; and, in order to satisfy the military, we shall have to say to those various companies: "You cannot set up and maintain and operate your own communications systems; we are going to create an agency to do it for you." I do not believe that will be a happy solution to the problem.

What I have just said is a very sketchy mention of a very important subject. Much more remains to be said on this subject; and what I have said has been only for the purpose of calling the attention of the committee to some of the problems involved.

Now let me turn to another phase of this subject.

This country has traditionally followed a policy of freedom of the seas. We have fostered and encouraged the widest freedom of competition in ocean trade. What has been the result? In 1815, 90 percent of all American overseas trade was carried in American-flag ships. By 1860, that share had been reduced to 66 percent. In 1900, only 9 percent of American overseas trade was carried in ships flying the American flag; and between 1900 and 1914, the proportion varied between 9 and 10 percent.

The First World War brought a shipping boom, and the portion of our overseas trade carried in our own ships rose to about 50 percent in 1922. It steadily declined from that level for the next two decades, and in 1939 was less than 15 percent.

In the passenger business, especially, foreign vessels were predominant; and in the boom years of the tourist traffic more than 80 percent of the money paid out as fares, by Americans traveling overseas, went to foreign ship owners. American ships increasingly sought the protection of coastwise trade, from which foreign vessels were excluded; and by 1939 only 23 percent of the United States ocean-going tonnage was engaged in foreign commerce, as against 61 percent which had been so engaged in 1920. Attempts to subsidize and otherwise assist American shipping were made, notably under the Merchant Marine Acts of 1928 and 1936; but the portion of United States trade carried in domestic vessels continued to decrease, and the ratio of receipts to payments continued to decline.

Since the beginning of the present war, we have seen a tremendous resurgence of American shipping; and I point out that this has been brought about by unified control of the American merchant marine under the United States Maritime Commission. I have little doubt that if, after this war, we throw overboard the lessons the war has taught, change our shipping policy from unity to disunity, and face the world once more with a multiplicity of shipping lines flying the American flag, all competing with each other as well as with foreign lines, we shall again see the American Merchant Marine wither and shrivel.

Why is it that foreign competition was able to drive our shipping from the high seas? The answer is that foreign competition was not "free and fair" competition as Americans understand that term. The foreign shipping lines had two great advantages, low wage levels and Government subsidies. Furthermore, those lines were backed 100 percent by their respective governments, and they were not competing with other lines under the same flag.

Those same advantages which foreign competitors of our shipping lines enjoyed will be dominant factors in international air transportation, to an even greater degree than they were in pre-war ocean traffic.

It is easy for me to understand why the foreign interests which profited so largely by the decline of American shipping under freedom of the seas should be so desperately anxious to get the United States committed to a policy of freedom of the air. It is not so easy to understand or explain why Americans should advocate a policy which all experience in the field has clearly indicated to be prejudicial to the best interests of this Nation.

In the formulation of America's policy with regard to international air commerce I advocate both caution and realism. By realism I mean a recognition of the facts we face.

By caution I do not mean delay. We have already delayed too long. It is because of the very urgency for adopting a policy immediately that we must be cautious, in the adoption of that policy, not to make a commitment or take a stand which will be irrevocable or which will tie our hands in dealing with the problem as it may develop in the future. We must adopt a policy. We must do it now. But we do not have to adopt our final policy at this time. We must avoid freezing our policy prematurely. We must avoid reducing our freedom of choice. We must avoid weakening our bargaining position with the other nations of the world.

An especially prudent choice—a cautious choice, if you please—will be the adoption of the principle involved in Senate bill 326. Unifying our international aviation effort in a single American-flag company will give us the maximum competitive strength to enter upon world competition. It will provide the best possible protection for American jobs and wage standards. It will also give us an opportunity to continue our study of the problem, to learn by our own experience, meanwhile preserving our freedom of choice. If we now adopt this policy, we can change it at will if it later proves unsatisfactory. I do not anticipate that it will prove unsatisfactory, but if it did we should be in a position to adopt a different policy. On the other hand, if we now adopt a policy of limited competition, granting franchises and building up equities which we shall be forced to recognize thereafter; if we now commit ourselves to a policy of freedom of the air under which foreign-flag air lines may tap this country's air traffic at its sources, rather than at our shores; if we adopt any other policy which has been advanced, except the policy in this bill, then we shall be restricting our freedom of choice for the future. I hope that point will be given the most serious consideration even by those who disagree with my own sincere conviction that any other policy than the policy embodied in this bill will be inherently detrimental to the best interests of the United States.

The Democratic Party's Legislative Program

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, March 19 (legislative day of Friday, March 16), 1945

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address entitled "The Democratic Party's Legislative Program," delivered by Hon. Paul E. Fitzpatrick, New York Democratic State chairman, on March 11, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This is not an election year and partisan politics has no place in what I have to say to you this evening. Nor should Governor Dewey toss into the political arena an issue which all fair-minded citizens hoped to keep out of politics. The Ives-Quinn anti-discrimination bill was enacted because of the unanimous support of the Democratic legislators as contrasted with the bitter opposition of some Republicans in both houses. Instead of taking personal credit for this result the Governor should acknowledge his debt to those most deserving. The law will attain its objective only if wisely administered and we will watch the character of the Governor's appointees and will be vigilant in following their official acts. On them depends the success or failure of the law.

Here in New York another session of the State legislature is fast drawing to a close. With the approval of the executive budget during the past week the policies which the Dewey administration intends to follow during the year ahead are now clear and the picture is disheartening. Unless forthright and vigorous action is taken by the State legislature during the 2 weeks before adjournment, the year 1945 will long be remembered as the year of the great fumble.

Because the time is so short and so much remains to be done the Democratic Party has decided to go to the people in its appeal for enactment of a constructive legislative program before the time runs out. As chairman of the Democratic State Committee, I earnestly desire to lay before the people of New York a program which will assure a faithful discharge of the obligations now facing the State. Only with your help can anything be achieved before the legislature adjourns.

To conserve your time, I am going to confine myself to the specific points where the Republican administration has been unwilling or unable to supply the leadership essential if these issues are to be met.

In modern government the executive budget has come to be looked upon as the most efficient tool for formulating and carrying out the State's program. The executive budget is the creation of the Democratic Party. It was championed by Alfred E. Smith who, as Governor, for years fought reactionary Republican legislatures to establish it as the law of the State. Governor Dewey's conception of the nature and purpose of the executive budget does not instill confidence in those who have followed either his public pronouncements or his actions.

The State constitution calls for a balanced budget. It was never contemplated that the State through its revenue-raising policies should make a profit on the taxpayer. The Democratic Party believes that the constitution does not permit the deliberate underestimate of revenues and the deliberate overestimate of expenditures in order to create a surplus. Governor Dewey's budget for 1945 is guilty of this distortion.

Let this be clear: We have approved the establishment of a post-war reconstruction fund created from actual savings out of the State's revenues. We have not opposed the freezing of sums of money found on hand at the end of a fiscal year. But this is vastly different from what Governor Dewey is now doing. This year he has deliberately contrived a budget that will admittedly produce a surplus which, in his message to the legislators, he asks to be frozen in advance. At the same time, he deliberately ignores the current needs of local government.

The present policy of hoarding millions of dollars by the State while the municipalities have insufficient revenue to meet war-time needs reflects poor management and limited vision. The welfare of the municipalities is tied up with the welfare of the State. War-time conditions have thrust upon the municipalities additional expenditures. Their physical plants have been overloaded; local governmental personnel have suffered severe hardship through their inability to stretch an inflexible pay check to cover increased living costs. Concurrently, existing constitutional limitations and necessary wartime controls have prevented the municipalities from augmenting their income from their chief source of revenue, the general property tax.

The same wartime conditions which have brought financial embarrassment to the municipalities have brought unprecedented surpluses to the State. Common sense dictates that some equitable readjustment be made. As an immediate stopgap measure we have introduced bills for "unfreezing" $75,000,000 of the existing surplus in order that the municipalities may escape permanent injury. We hope these bills will be approved.

The Democratic Party has also recommended legislation which would give every employee of the State, irrespective of his present salary, a war emergency compensation at the rate of $500 annually. The increased cost of the necessities of life falls more heavily upon the shoulders of employees in the low income brackets and the reason for a flat increase in dollars and cents is to cover this increased cost.

Governor Dewey's proposal for war emergency compensation on the varied percentage basis discriminates against the employees in the lower income brackets. Under his proposal, 95 percent of the State employees would receive less than $500 as annual war emergency compensation, whereas a small percent of the employees who are in the higher income brackets would receive as much as $1,000. For example, under his proposal, employees of mental institutions would receive as little as $240 a year, compared to the $500 they would receive under the Democratic proposal.

In keeping with the times the Democratic Party urges the adoption of the pay-as-you-go plan for payment of the State income tax. No reduction in the State's income is involved in the change-over, but the step will reduce confusion by bringing State and Federal procedures into line. The success and popularity of the Federal pay-as-you-go system has already demonstrated its superiority. I sincerely hope that petty partisan considerations will not stand in the way of its adoption.

I turn to another area where there is great need for action instead of verbal sympathy, namely, agriculture. To the end that the farmer may receive a just return for his labors and that life on the farm be made more desirable, certain existing evils must be eliminated and a constructive program for rural New York put into effect at once.

Milk is the State's No. 1 agricultural business. And no matter how you look at it there is something very wrong with the milk business. We urge an immediate and thorough milk investigation by the legislature to ascertain whether the spread between the price paid by the consumer and the price paid to the farmer is excessive. We also advocate that electricity and rural telephone service be put in reach of every farmer without making him pay excessive rates, pole-setting or other so-called service charges. In line with previous democratic policy we pledge our continued support to better medical service, better health and better education in our rural areas.

The slum clearance and low-rent housing program which was inaugurated and made such splendid progress during the Lehman administration has run into rough weather during the past two and a half years, notwithstanding the intensified needs for housing which wartime conditions have brought. One wonders whether Governor Dewey believes in public housing. His request for only $35,000,000 for low-rent housing and slum clearance projects is merely a political gesture; it would be humorous were it not so tragic. Let us remember in this connection that Mr. Dewey and his Republican legislature "forgot" in 1943 to pass the necessary legislation and in so doing halted the housing program.

To make sure the housing program will be continued, we urge that the legislature vote the balance of $115,000,000 for loans now. We also propose to keep the housing program alive by a referendum to increase the amount of subsidy to $4,000,000 annually. Unless these measures are passed post-war housing will remain an empty phrase.

Since the enactment of the unemployment insurance law, the Democratic Party has consistently sponsored amendments to keep pace with changing conditions. In keeping with this policy, we have this year recommended that the waiting period for unemployment insurance benefits be reduced to 4 days, and that the benefit payments be increased to 26 weeks. These changes anticipate the demands which will be made upon unemployment insurance during the post-war reconversion period. Six months is a minimum within which such reconversion may get under way.

We are opposed to any system of merit rating which discriminates against seasonal occupations or industries. We are opposed to the Young-Demo bill and Wicks-Stephens bill on merit rating because they violate the foregoing principle. We favor the Falk-Gugino bill, which recognizes merit rating on a sound and equitable basis, and will give this proposal our wholehearted support.

Wartime conditions have not left our schools untouched. Due to changing times, the original Friedsam formula which determined the allocation of State financial aid for education has become outmoded. Last year, under constant prodding by the Democratic Party, the Governor reluctantly permitted the allotment of some additional funds. The amount allotted was not adequate and the schools have continued to lose their best teachers. Teachers are today notoriously underpaid.

We have proposed a flat 20-percent increase over the amount which the Friedsam formula would provide. This is a realistic and direct approach; it avoids the delay inherent in the preparation and enactment of any new formula and permits a solution this month of the difficulties besetting the school boards throughout the State.

Another unfortunate byproduct of the war is the increased rate of juvenile delinquency. The absence of working mothers from the home and other unavoidable factors have hit New York State especially hard. By 1944 juvenile delinquency had risen 53 percent over the last peacetime year, but no new institutional facilities have been created to care for these children. The resulting congestion has produced conditions which cannot be ignored any longer.

The Democratic Party has introduced a bill which proposes that the State prepare to meet its responsibility for the adequate care of delinquent, mentally ill, and mentally deficient children to the extent that private institutions or private agencies fail to meet these needs.

Rent control continues a critical and unsolved problem. Democratic demands for rent-control legislation last year were ignored. Under persistent pressure from us, Governor Dewey this year finally recommended legislation freezing rents on loft buildings, but he continued to ignore the equally serious need for similar limits on office and store rents.

The Republican Party recommended that rents on loft buildings be frozen at a rate of 25 percent in excess of the rental prevailing on March 1, 1943. It opposed amendments offered by the Democratic Party to include offices and stores. Under the driving force of our party, the Republicans were forced to make a turn-about-face and to reduce the ceiling on loft rents from 25 percent in excess of those prevailing on March 1, 1943, to 15 percent.

The emergency confronting tenants in stores and office buildings has become increasingly grave. We hope that because of our vigorous fight remedial legislation freezing rents in stores and offices will be enacted at this session.

The needs of the returning veteran are uppermost in the minds of us all. Our gratitude for what they have done cannot be measured in material terms, but no one questions their rights to all the material benefits we can make available to them. The interests of the veteran will be best served if the State and Federal Governments collaborate to that end rather than attempt to compete with one another. The Federal G. I. bill of rights is a big step in the right direction. The Democratic Party decries Governor Dewey's attempt to derive political advantage from the needs of the veterans. We believe the G. I. bill of rights should be liberalized and expanded until it meets completely the needs of the veterans.

I close on an old, yet still unremedied issue—the soldier vote. The Democratic Party recommends that the provisions of the State soldier vote bill be liberalized so as to permit applications for a soldier's ballot by any person on behalf of the serviceman. We recommend that the provisions of this law be made available to members of the merchant marine and those members of the Red Cross and other supplemental services engaged in war work on foreign soil. We also recommend that the soldier-vote law be amended to permit the receipt of ballots up to December 10 if they are postmarked before election day.

At no time in our State's history was it more imperative that the Democratic Party be the driving force for liberal, progressive and humane government. We welcome the support of all who endorse our stand.

The Way to 60,000,000 Jobs

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, March 19 (legislative day of Friday, March 16), 1945

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address delivered by Marshall Field before the Advertisers' Club of Cincinnati on March 7, 1945. This article is a clear and explicit statement of the issues which face the country and the solutions which are necessary to be found to meet them.

I have obtained from the Public Printer an estimate of the cost of printing this address. The estimated cost is $121.40.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE WAY TO 60,000,000 JOBS IS THROUGH GOVERNMENT PARTICIPATION

I am one of those who believe that full employment has to be worked for—worked and planned and sweated for, with all the resources of economic wisdom and political skill this American democracy can mobilize.

It may seem strange that this proposition should even have to be stated. Isn't everybody in favor of full employment? Yes, everybody is, in the same sense that everybody is in favor of good health. But some people want, and others do not want the Nation to take specific steps and adopt specific laws which will make full employment possible. Some people want, and others do not want, to safeguard the Nation in advance against the causes of mass unemployment.

That is how we are dividing today. The fight in Congress over the confirmation of Henry Wallace has clearly set forth the division. On one side are people like * * * Senator TAFT, who say frankly that Government ought not to undertake any guaranty of jobs at fair wages, lest it enter on a novel and dangerous course; who say we must leave the problem of fourteen to nineteen million people, which is the estimated addition to the 1940 employment figures that will have to be taken care of post-war, to the so-called natural forces of private enterprise; who say we must hope, but not act, for full employment.

And on the other side stand the Henry Wallaces, the Beardsley Rumls, the Senator Murrays, and the uncounted millions of plain people who say that the risk of idleness and frustration and disenchantment for 11,000,000 war veterans and 20,000,000 war workers is too great a risk for our democracy and our system of private initiative to incur.

It should not be necessary for advertising men to question their own stake in full employment. Advertising is a function of distribution. It contributes to, and at the same time depends upon, the mass production and low unit prices for which American industry has distinguished itself. The area of advertising's usefulness widens as full employment and full use of our productive resources is approached.

WORK MEANS SPENDING POWER

Obviously, it would be of little benefit to advertise to consumers who had lost their purchasing power. Obviously, then, the primary interest of every person in the advertising business, as, indeed, of everybody else, should be directed toward the maintenance of the maximum possible purchasing power, widely diffused.

Advertising confronts a great future and the opportunity to perform a great service. New products will be coming on the market after the war, and to attain the volume needed for low prices, advertisers must assume the responsibility of informing the community of these new goods. But first of all, the community must have the ability to buy. We shall make a serious mistake if we blindly assume that the mere potentiality of new products will of itself create that ability to buy. As a recent writer in Harper's magazine has pointed out, the development of new products may change the employment picture in particular industries, but we have no assurance that it will create enough net addition to total employment to overcome the great gap between wartime employment and peace.

What are the prerequisites of full employment? The first and greatest of them was suggested by a study made during the long depression by the Brookings Institution, the last volume and summary of which was entitled "Income and Economic Progress." The conclusion of this study pointed a road toward prosperity which I think we might all agree on. It consists of furnishing the maximum amount of goods at the lowest possible price. The role played by consumption on this highway to prosperity is indicated by the effects of maldistribution of income upon economic progress in the past.

As the Brookings Institution study showed, the great purchasing power for consumer goods lies in family incomes of less than $5,000 a year. After you cross that point, in general, your money does not go primarily into the purchase of consumer goods, but is saved and finds its way into the formation of capital. So much of the national income had drifted into the hands of a small proportion of the population with incomes over $5,000 that the power to consume failed to keep pace with our power to produce. I think the study showed that 50 percent of the national increment of wealth went to less than 2 percent of the population.

NO MONEY—THE ROOT OF ALL EVIL

This maddeningly frustrating spectacle of a capacity to produce running out of all proportion to the customers' ability to buy lay at the root of the depression, and it lies at the root of our post-war employment problem. If the large number of families with incomes of less than $1,000 in peacetime could be lifted above that income category; if those who normally earn between $1,000 and $1,500 could be lifted to $2,000; and the $2,000 group to $2,500—the consumption so engendered would not only absorb the existing capacity of our capital plant, but would require considerable new development of it. In short, a vast new market for all varieties of goods lies right here in our own back yard.

I have not seen any study of income groups as of today. But my guess is that, though maldistribution of income still exists in some degree, the desiderata of the Brookings study—the conditions of prosperity which is laid down—must be fairly close to realization, at least temporarily. It is bitterly sad that it has taken the greatest of all wars to accomplish a volume and distribution of income sufficient to provide full employment.

The question is whether we are going back, after the war, to the kind of situation which existed before. If we take the road of wage cutting and deflation then we are surely headed for another depression, just as surely as the sun rises in the morning.

The great industries of this country have demonstrated to the world, over and over again, that low wages are not the way to get low-priced goods. Low prices are made possible by volume output, which cuts overhead costs per unit, encourages the most efficient methods of manufacture and economic purchase of raw materials. Charles Wilson of General Electric recognized this when he recently said that the efforts of his company would be directed toward maintaining prewar sales prices and also maintaining the present scale of take-home pay for workers.

A strange fallacy has crept into the thinking of too many of us. It may have arisen from what is often called the Manchester school of economics. It is the theory that there is just so much in the world to be divided, and that the prosperity of one person or group necessarily takes away wealth from those already in possession of it.

When you examine this theory, you will find no difficulty in recognizing its fallacy. In fact, precisely the opposite is true, as the whole history of America shows. The newly prosperous person becomes a customer and contributes greater wealth to those who have it. The creation of new markets benefits all society together, not just the recipients of the new income.

NO PROSPERITY WITHOUT SECURITY

I believe this is just as true of a nation as of an individual or a business. In the immediate heat and pressure of competition it is very easy to lose sight of this truism; but the prosperity even of this country, with its great internal resources, has always been adversely affected by financial crises and lack of purchasing power abroad.

This is one reason why there is such an overwhelming desire for an international organization that will keep the peace. It is realized that we cannot have material prosperity in a state of fear and threat of war, surrounded by impoverished nations. We must help the war-torn and so-called backward peoples to become customers, who can contribute to the world's wealth and so to our own. We must help them with our technical knowledge. We must give them credit. We must maintain continuous and constantly widening cultural and political relations with them.

Essential as it is to accept the oneness of the world and live on good terms with our neighbors, we must not fall into the error of supposing that all our problems can be solved by the magic formula of foreign trade. We could double or triple our pre-war foreign trade and still not attain full employment. The real creation of volume must always depend upon our home market.

That is why you and I, and every American, must be interested in the maintenance of high wages. That is why the farmer should be just as interested in the maintenance of high wages as any union man—for where else will he sell the products of his farm, if not to the industrial and service workers of the cities and towns? Of course, the farmer is interested in cheap clothing, cheap machinery, and maximum purchasing power for all the goods he has to buy. But if he gets them cheaply at the expense of the worker's wages, he cannot help but get them at the price of losing his real market.

The corollary of high wages for those who are working is an adequate, which means an expanded, social security system for those who for any reason are not working. The social purpose in both cases is the same, not only to give the individual a measure of economic justice, but to give society the benefit of his sustained purchasing power. We must rapidly undertake to provide complete protection against loss of income due to unemployment, ill health, disability or old age.

Our experience with social security since 1935 has amply demonstrated the validity of this approach to the problems of modern industrialism, as has the experience of many other countries more advanced along this road than we. On this foundation we must build securely, so that all groups may be covered and all receive adequate benefits in return for joint contributions by the worker, the employer, and the Government.

A case in point is the provision of unemployment compensation for industrial workers during the reconversion period after war production is cut back. The plain fact is that we have failed, as a Nation, to shoulder our responsibilities fully in this regard.

DEPRESSION MAY BE AROUND THE CORNER

All of us want the reconversion period to be as short as possible; we know that if we permit deflationary tendencies to get a grip on the economy during that period of changeover from war to peace production, we may have great difficulty in starting the machine again at capacity output. The situation calls for adequate unemployment compensation to carry industrial workers through this period without exhausting all their savings, on which we are going to be so dependent for the resumption of peacetime production.

Yet Congress has failed to establish standards of compensation which most experts agree are necessary. Too many of us have turned a blind eye to the needs of the country. We have refused to see that it is to our own advantage to incur the necessary debt and pay the necessary taxes to build this economic bridge across the gulf of reconversion.

Once we have gained the other shore of the transition period, we shall have much to do if we would prevent a short, sharp restocking boom from dissolving swiftly into a major depression. Neither social security nor the abstract principle of high wages will serve our needs. As we learned from the last depression, high wages may be subscribed to by most of our industrialists while the national income is up, but if we once get into that fatal down spiral of depression, the principle collapses under the hard blows of every-day practices.

Two employers may agree perfectly that wages should be high; but when they are desperately competing for business on a declining market each perforce must lay principle aside. Wages fall off and purchasing power falls off not because anybody consciously wills it so, but because the implacable force of circumstance sets in motion events which no single employer or union is able to resist.

The trick, then, is to forestall that first fatal decline, which if left unchecked compounds itself into disaster. For this I see no plausible alternative to bold and dynamic planning, democratically controlled and operating within the framework of our ideals of individual liberty.

GOVERNMENT MUST PLAY ITS ROLE

When we ask who shall do the planning, I see no plausible alternative to Government. With the best will in the world, thousands of corporate and individual employers cannot merge their efforts to maintain capacity operations. Like the blind men and the elephant, each is restricted to his own field, his own sector of the economy. Each sees a part of the picture, but not the whole of it.

The surveys of post-war prospects for private employment, such as those conducted by the Committee for Economic Development, illustrate this point perfectly. When an employer is asked how many jobs he expects to have available after the war, he always predicates his answer upon the existence of a certain volume of business. Add up all the estimates, and you get an impressive total.

But this question remains to be answered: Who shall see to it that the total volume of business remains at the level required to enable all these employers to do the business they want to do? To my mind, there is only one agency that can see the economy whole and take the steps necessary to keep it operating at a high level, and that is government.

What must Government do to discharge this responsibility? Of course, we must have a variety of measures, a multiplicity of approaches. No single panacea can meet the problem. Much has been said of tax reform, and no one can doubt that some fundamental readjustments in the tax structure are overdue, not only reduction of wartime rates, but deeper changes designed to stimulate the growth of new business and provide the maximum incentive for risk taking.

Frankly, I am not nearly so worried as some seem to be on the question of incentive for risk capital. The basic incentive for risk capital will be there, without a doubt, if the purchasing power for goods and services can be maintained. Taxes must be reduced on low incomes first—so that families with such incomes will have the maximum purchasing power and thus overcome the lack of balance revealed by the Brookings Institution studies.

THE LITTLE MAN MUST GET SHARE OF LOANS

In addition to tax readjustment, other measures of stimulating investment will suggest themselves. For example, the policies followed by the great Federal lending agencies will deeply affect the future of our economic structure. With or without Jesse Jones—and the verdict at present appears to be without—I think no man can doubt that the lending agencies are here to stay. We must see to it that they perform their functions throughout the economy and not just in the big-business area of it.

Where adequate financing on reasonable terms is not available to small business from private sources, the lending agencies can fill the gap. They can be of tremendous value, particularly in enabling small business to make use of converted wartime plants. If we can transform only a part of our huge war investment into a source of development for new and competing enterprise, we shall have salvaged some of the heavy cost of war.

Let me give you one more example of ways in which the Government can stimulate private investment and so provide employment. We confront today one of the greatest housing shortages in our history. The demand for good homes, making the most of scientific and industrial advances, is almost beyond calculation. Yet good housing in the past has been beyond reach of the majority of the population, and there is every likelihood that, unless Government acts, it will remain so for many years to come.

A vast new housing market can be opened up by resolute and many-sided public initiative to clear the shameful blighted areas of our cities, to reduce the costs of home financing, to cut construction cost through the elimination of trade barriers and artificial restraints, and to induce private capital, such as that commanded by our great insurance companies, to flow into this field.

Finally, in addition to tax measures and to indirect stimulation of private investment, there remains the field of direct public investment, planned and timed to exert maximum effect in supplementing the activities of private enterprise. Let us recognize frankly that public investment, under our system, is only one form of private enterprise. When the Government builds a post office or a dam, it employs private contractors just like any other employer, and if the project is financed by borrowing, goes to the private-capital market for the money just like any other borrower. Thus, there is nothing antagonistic to our system in the mere fact of public investment.

Furthermore, for many of these investments, if the initiative does not come from the public it will not come from anybody. That is especially true of regional resource developments like the Tennessee Valley Authority, which I hope to see extended to the other major basins of our country in time.

WHAT WE NEED ARE MORE T. V. A.'S

Who shall say that the T. V. A. has not paid for itself many times over not only in its contribution to the war, but in its lifting of the living standards and incomes of people who have thus become better customers for the Nation's goods? Similarly, there are other areas of socially useful public investment which will pay dividends in the long run.

America needs better education, particularly in rural areas and some of the less fortunate States. America needs highways and airports, better nutrition, and medical care, recreation facilities, and the development of all its resources. These needs, I am wholly confident, will be met somehow. The choice lies between meeting them in piecemeal, helter-skelter, immature fashion, on the basis of hasty improvisation in times of emergency, or meeting them boldly and courageously in such a manner as to provide maximum stimulus to private employment.

Always these considerations lead us to the great question, Where is the money coming from? This is supposed to be a stopper. When that question is raised, we are supposed to abandon all our high-flown notions and crawl back into the shell of a balanced budget, even if 15,000,000 restless and politically unstable men without jobs threaten the very foundation of our society.

The plain fact is, of course, as we learned in the thirties, that whatever the cost of full employment may be, we can bear it much better than we can bear the dreadful cost of unemployment. Idle men and idle factories cost us $200,000,000,000, virtually as much as this greatest of all wars during the depression. We could have produced $200,000,000,000 of wealth during those 10 years had we managed to keep at work all those able and willing to work.

I believe in a balanced budget as much as anybody, but it seems to me we have learned one great lesson—that in a modern depression, balancing the Budget simply won't get us out of it. We cannot get full employment merely by balancing the Budget, but we can get a balanced budget by achieving full employment. The costs of our Government's post-war program can be met by increasing the total wealth produced, and when we have full employment we can easily support the Federal Budget taxes alone if we wish to do so.

MURRAY BILL A SAMPLE OF WISE PLANNING

I go back to what I regard as the first essential for full employment—planning. After all, we can argue about what Government might do, or could do, or should do, in all these various fields, but in fact all of these arguments come second to planning. Unless we plan, we shall not know what has to be done. Unless we plan, our Government's inevitable obligation to deal with economic adversity will be discharged in hit-or-miss fashion as it was during the 1930's. Unless we plan, we shall have to devote all our energies to meeting emergencies after they have happened, instead of preventing them from happening.

That is why I strongly support the so-called full employment bill recently introduced by Senators MURRAY, WAGNER, THOMAS of Utah, and O'MAHONEY. This is not a bill to undertake any particular measures for full employment, but a bill establishing the planning machinery by which our Government could intelligently decide what steps should be taken. Under the bill, the President would be required to present each year estimates of the prospective employment in private enterprise and, if this estimate indicated less than reasonably full employment, to propose a program for meeting the deficit. His message would then go to a joint committee of Congress which would hold hearings, pursue its own investigations, and report to both branches what action should or should not be taken.

Thus, all we do in this bill is to say that it is a good idea for the Government to find out in advance whether the people are likely to have jobs, and, if not, to study in advance what might be done to make more jobs available. It seems to me that something like the Murray bill represents the absolute minimum of our social obligations.

I wonder why it is that anybody who talks of full employment is looked upon by so many as a visionary and an impractical idealist. Perhaps it is the working of the Manchesterian fallacy in the back of these critics' minds. The same type of person who would build a wall around this country and let the rest of the world go hang generally also thinks he can prosper no matter what happens to his neighbors.

Industry in this country has proved its magnificent capacity for production. We have all heard of complicated weapons or war machines that are being made for the Government today in great volume at a quarter or a third of the cost of the original models. Production is not and will not be our post-war problem. The maintenance and distribution of purchasing power are the problems that we shall need to solve.

Advertising men have the same stake in this problem as all business. I should like to see them recognize that stake by joining the great crusade to save democracy and save our system of private initiative by protecting it from the dangerous menace of mass unemployment.

Let us not again set our sights too low, as we did for a time in converting to war industry in 1940 and 1941. Let us get the sights for nothing less than full employment and drive to that objective with the same irresistible force which is carrying us to total victory over our Fascist enemies.

Address by Nat Bass at Sergeant Meyer Levin Memorial Hall Association Dinner

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, March 19 (legislative day of Friday, March 16), 1945

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Mr. Nat Bass, president of the Hebrew Educational Society of Brooklyn, at the Sgt. Meyer Levin, Memorial Hall Association dinner, Hotel St. George, Brooklyn, N. Y., March 7, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Toastmaster Nathaniel Kaplan, Mr. and Mrs. Levin, parents of our hero, Judge Livingston, and fellow Americans, when your commander, Nathan Tobin, and his committee, called on me to participate in this occasion, I cheerfully accepted, because I believe the time has come when all of us should be eager to do something about tomorrow today, and not to wait for the "V" day whistles to wake us up.

You may remember the old moral, "a half-baked bird can give you an awful bellyache." Well, victory alone will not release us from bondage, for we're not merely fighting the nations who have warred upon us. We are fighting to establish law and order among men. Graver crises may well lie ahead of us; who knows. When Johnny Veteran comes marching home, will he find peace at home? Or has he returned to an America, in which dangerous and bitter battles are being waged against religious and racial minorities?

If I correctly understand the significant purposes of this occasion, it is to the end that "intolerance and suspicion" be stamped out, and to help make all citizens good neighbors, and to "turn our words into deeds", so as to help prevent the possible resentments and discontents, among our millions of returning veterans, from providing a tempting field of action for demagogs and racketeers.

I feel this problem does not wait on the end of the war; it is most immediate. Selective Service reports already 40,000 servicemen are being discharged each month, and already some leading bigots and rabble rousers have begun to cast their nets.

The Jewish people of this country have contributed their full share to the Army and Navy. They too have paid the price in blood, in tears, in sweat, and in toil. It is but right that the Jewish people shall enjoy the benefits all of us are determined to forge out of victory. The four freedoms are meant for us as well as other peoples, and we must be determined to enjoy equal rights with all other individuals. For these things, we are willing to fight.

Now, my friends, let us be honest with ourselves, and not act individually like ostriches, and face the facts. The roots of anti-Semitism exist in the hearts of too many people, it grows out of man's primitive instincts, his fear of insecurity, his need to blame someone—his longing to feel superior. Just as a child, who bumps his head against an open door, will blame the door for hurting him, so men today seek to find something or someone to blame for their difficulties or failures.

Sure, it is easier to stop looking for the causes of poverty, unemployment and war, which are difficult to understand, and merely find a convenient scapegoat; but are we going to sit back and let those avowed anti-Semitic bigots scheme to attract our returning war veterans? Or are we at least interested in making some attempt at an investment with a human return? To ask the question, I am sure, is but to answer it. For we must not forget that the way to feel safe is never to feel secure, and that the most devastating criticism of any deserving cause is indifference.

Now for the lighter and more concrete end of tonight's purposes. Of course, to much of America, Brooklyn is that queer place where

baseball players originate and eccentric citizens speak a language all their own. But heroes grow in Brooklyn, too.

There was Meyer Levin. He paid Japan the first installment of a vengeance debt. He was one of our typical youngsters, who grew up in a congested neighborhood of Brooklyn—the son of a tailor—and the first American to sink a Japanese battleship, with Capt. Colin Kelly at the controls.

The record shows that Meyer Levin took part in more than 60 combat flights during the following 12 months. For his bravery in action at the Coral Sea and in Manila, where he made many hazardous flights for General MacArthur, he won the Distinguished Flying Cross, the Silver Star, two Oak Leaf Clusters, and the Purple Heart. In January 1943 he died—as he had lived—a hero.

And you may be interested to know that through the efforts of some patriotic individuals here tonight, at the United States Military Academy at West Point a room is named in perpetual honor of Sgt. Meyer Levin, of Brooklyn, the tailor's son, who never got to West Point.

Now, instead of erecting just a picturesque statue of a man on horseback, as they did for heroes in times past, we propose to erect a monument that will live forever. A Sgt. Meyer Levin Memorial Hall Building, with an auditorium, recreation facilities, meeting rooms, something the whole community can use to meet a civic need. And which will stand as a symbol for all, of liberty, of decency, and fair dealing for everyone of every faith. For, by example, we are merely striving to help make a community, one in which people will be united by their purposes, rather than divided by their color or faith.

Yes, and remember by our actions, now, on the home front, we must earn the respect of our boys in the service, and prove to them that we lived in comparative comfort and security not for ourselves but for one another. We must impress our returning soldiers that this war has taught us all that it is not enough to live and let live, but to live and help live. Our answer to the German's "tomorrow the world" must be "one world tomorrow." And as I look into your faces of approval, I feel certain everyone here to a man will become a happy helper to the noble purposes of the Sgt. Meyer Levin Memorial Hall Association—now.

The Road Ahead

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, March 19 (legislative day of Friday, March 16), 1945

Mr. BARKLEY. Mr. President, in the Baltimore Sun of March 14 there was published a very thoughtful and sound article under the name of John W. Owens, who I believe is editor or one of the editors of the Baltimore Sun. The title of the article is "The Road Ahead." It discusses specifically the relation between the United States and Russia. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ROAD AHEAD

(By John W. Owens)

As the dominating positions of the United States and Russia in the handling of international affairs become more clearly evident, attention could wisely be given to two conditions in the relations between the nations.

First, objectively, two nations of immense power could scarcely have less of cause of collision. They are on different sides of the world. Living far apart, each has abundant area within its boundaries to permit full room for its people today and tomorrow. Each has fabulous natural resources with which to employ its people's energies and to enrich their lives. Each has had in the past, and will have after the war, access to such outlying raw materials as may be necessary to supplement its own riches. Each is in possession of technical skills adequate to full utilization of materials. Each, in short, could live within its own borders and enjoy the maximum degree of self-sufficiency possible in this world; each, by adding rational trade with the balance of the world, could lift its standard of living to the highest level now possible. And neither has distant possessions which necessarily impinge upon the other's possessions.

Second, subjectively, these two nations have many differences that could, were negligence, stupidity, or malice in control, result in grave dangers in their relations. In origins, they are as far apart as in distance. They are as far apart in much else. Their languages ar different. Their cultures are different. Their habits are different. Their institutions are different. Their political theories are different. Their economic systems are different. In the whole of ideology they are poles apart. And each brings to its causes vitality probably unequaled in other nations. The United States remains the foremost exemplar of capitalism, with all its political implications, and Russia stands the foremost exemplar of socialism, with all its political implications, though each school is in process of some modification.

On the face of things, the future relations of the United States and Russia, for good or evil, will turn not upon interests; future relations will turn upon thought and emotion. Thought and emotion in the United States and Russia could take such form that ultimately national interests would be involved. But, as of today, relations between the two nations will be for good or for evil according to the nature of thought and emotion.

When we have reached that point in measuring relations between the two vast nations, we are compelled to recognize that on the way people think and feel in the United States and in the Soviet Union depends much of the future of the world, as that future opens before us in the light we now have. For, if the United States and Russia master their thought and emotion, if they direct thought and emotion into cooperative channels in the affairs of the world, they can assure peace and order. They can, though other nations lag, make the proposed world organization a functioning instrument of law. Other nations cannot wreck that organization if the United States and Russia will that it shall function. On the other hand, if the United States and Russia permit their thought and emotion to be governed negligently, or stupidly, or maliciously, they can assure turmoil and danger which could sprout into war and anarchy. Let these two vast nations go wrong in their relations, and all other nations cannot make the proposed world organization a functioning instrument of law. All other nations cannot save that organization if the United States and Russia, by quarrels and hatreds, will that it shall not function.

That ought to determine the course of Americans. We see about us, in the loss of billions of treasure and millions of young lives, the price to be paid in this world when turmoil and danger are allowed to run their course and to invite war and anarchy. With that before our eyes as the alternative to peace and order, Americans ought to know that decency in thought and emotion in both of the two vast, dominating nations is the pearl without price. And a people who have as much of fair play in their composition as have Americans ought to know that if we are to win decency in thought and emotion, the place to begin is at home—whatever the controversies of the past.

One word may be said on what is usually called the practical side. Many conservative people in this country fear the spread of communism. They ought to fix firmly in their heads the obvious political fact that communism will not spread in this country through the evangelism of Mr. Earl Browder or any of the evangelists of reddish hue. Communism will spread among the masses of this country, if it spreads at all, through the effects of economic disaster. And the most practical men ought to know from the lessons of the twenties and thirties that the deepest cause of economic disaster is turmoil in international affairs. Since turmoil is inevitable without Russo-American understanding, the course to be followed by practical men ought not to need labored argument.

Something To Bargain With

EXTENSION OF REMARKS

OF

HON. ALBERT W. HAWKES

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, March 19 (legislative day of Friday, March 16), 1945

Mr. HAWKES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Maurice R. Franks, editor of the official organ published by the Railroad Yardmasters of North America, Inc.

Mr. Franks, who is an intelligent, conscientious labor leader, talks the kind of common sense that is necessary if labor unions are to be successful and serve their membership in the only way that will bring fruits to them because it makes fruit grow on the American individual enterprise system.

We must get back to this type of common sense if we are to rebuild this country after the war, and establish sound, human, and equitable principles governing the relationship between employer and employee on the one hand and between employer and employee and the consuming American public on the other hand.

I believe this editorial is well worth the time it will take for Senators to read it.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOMETHING TO BARGAIN WITH

The big cry of the workingman has been for his right to organize and bargain collectively through representatives of his own choosing. This cry was heard by many political officeholders over a period of several generations, but yet, it has only been in the last decade that it has become recognized by law, and the citizenry as a whole, that workers do have the right to collective bargaining.

Many businessmen, who just a few years ago hated the word "union," have, through contractual relations with them, come to the realization that unionism is not just something out of Hades. They realize the fact that when unions are properly operated, they can be beneficial, not only to their workers, but to themselves as well.

In order for the workers fully to enjoy the fruits of their great victory, the recognition

by law of their right to bargain with their employers, they must encourage every idea lending itself toward this attainment. In line with this suggestion, it may be a good idea for some of our labor leaders to look up the definition of the word "bargain" and they will find it means: "(1) An agreement between parties to a transaction, settling what each shall give and receive; a contract regarding terms of sale and purchase; as, to make a bargain. (2) Such an agreement viewed in its results as: He made a bad bargain, or the agreement is advantageous."

Examination of many contracts on collective bargaining makes one wonder just where the "bargain" comes in. Many of these documents practically tell the employer that, for the consideration of being allowed the use of so many workers, on conditions not always in accord with good business acumen, he will be allowed to operate his business. In other words, through this condition of unionism, a monopoly is created whereby the customer of unionism, the employer, must pay the monopolist any price quoted, and under any condition. This practice certainly cannot be in accord with the intent of the law covering collective bargaining. Until unions come forward with a plan within the meaning of the word "bargain," they will never be accepted or respected as a necessary part of our American way of life.

The only actual difference today between the average union worker and nonunion worker is a membership card, and it costs more to hire a union worker. Little has been done to make the union worker stand out as a better craftsman than the nonunion worker, as, for instance, the bricklayer, who is capable of and willing to lay 1,800 bricks per day, is forced down to the level of the man who can or is willing to lay only 600 bricks. This condition absolutely discourages incentive because why should a bricklayer capable of and willing to lay 1,800 bricks give full performance when he can only receive the same compensation as his fellow craftsman who is not able or willing to do a full day's work?

Many labor leaders are under the impression that holding down production guarantees better union stability because, through this system, more men are required to perform a task, thereby enhancing the union membership. Nothing could be further from the truth. Common economics proves the contrary. Just to give you an illustration of the fallacy of this idea, let us take a railroad switchman, earning in the neighborhood of $7 per day, who to my mind is as important to society as a bricklayer. As a matter of fact, the bricklayer could not lay the bricks unless the switchman plays his part in the hauling of the bricks or the material required to make the bricks. But when the switchman wants to build a home which necessitates the services of the bricklayer he is forced to pay the bricklayer his scale of wages, which is practically twice as much as his own.

You may say, "Well, it is not unreasonable that a bricklayer's compensation is considerably more than that paid a switchman. After all, the bricklayer does not work the entire year in his occupation, as does the switchman. He is fortunate if he works 9 months." On this point I do agree. However, I also say that the switchman is entitled to value received for his money. But he does not get it.

In order for a switchman to hold his job, he must perform a full day's work for a full day's pay. Unless he does, he will not be tolerated, even by his fellow workers, because he would be the means of tying up a railroad yard. But the bricklayer who is capable of laying 1,800 bricks a day, through the present-day system of unionism, is held down to one-third of that amount, thereby causing an immediate imposition on the switchman for double of his wages. In other words, the switchman must pay $14 per day of his wages to receive one-third of a day's work from the bricklayer, or $42 of his earnings, 6 day's work, to get 1 day's production from the bricklayer. If this is not inequitable, I want to know just what it really is.

It is not only unfair to the switchman, but, in the long run, unfair to the bricklayer as well. It places the switchman in a position of not being able to afford a brick home, and the bricklayer in a position of not being able to apply his craftsmanship as he should, with the inevitable result that the building of homes by craftsmen is rapidly going into oblivion, thereby encouraging houses void of the bricklayer's skill.

In case you do not know just what I mean, ask any architect about prefabricated houses, which can be assembled without the help of skilled craftsmen, bricklayers, carpenters, plumbers, and the like. These prefabricated houses can be assembled by most anyone in less time than it takes for a good craftsman to do a poor day's work. This example can be applied right down through industry, where good workers are being penalized because of poor workers. Therefore, it is obvious that a forward step in the direction of promoting incentive and rewarding the capable and conscientious worker, would be to classify them in accordance with their ability to produce; of course, starting with an ample minimum wage, and a reasonable maximum enticement.

As industry is progressing today, it is only a matter of time when the skilled worker will have become a thing of the past. Through our present system of unionism, incentive is definitely being curbed. It is recognized by students of human nature, that all men are not created equal from the standpoint of ability. Some are endowed with abilities far superior to their fellow workers. This being the case, why should unions be the means of retarding progress, which, in the final analysis will boomerang.

No fair person desires to make a slave out of the incompetent worker through starvation wages, and no fair person wishes to stifle the ability of the capable, energetic, and honorable worker. If all labor leaders only received the same compensation, and recognition in their role as leaders as they did in their actual occupation, I venture to say there would be very few labor leaders. So you can well understand that this suggestion of classifying labor is very elastic, because it definitely encourages incentive.

Unions must realize that their longevity is entirely dependent upon the success of capitalistic enterprise. When this is more fully understood, unions will cooperate with management and look upon the industrialist as a partner in industry. No partnership was ever successful, void of a condition of trust and cooperation.

The main reason why many labor unions of today are not being whole-heartedly accepted by the employers, is simply because they lack that "something to bargain with."

Frankly yours,

MAURICE R. FRANKS.

Editor.

Nonferrous Metals: Labor's Victory Program for War and Peace

EXTENSION OF REMARKS

OF

HON. GLEN H. TAYLOR

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, March 19 (legislative day of Friday, March 16), 1945

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Nonferrous Metals: Labor's Victory Program for War and Peace."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NONFERROUS METALS: LABOR'S VICTORY PROGRAM FOR WAR AND PEACE

("In the midst of war surplus materials resulting from the miracle of production have become a menace to post-war prosperity and a genuine peace."—Reid Robinson, president, International Union of Mine, Mill and Smelter Workers (C. I. O.).)

The following outline of labor's victory program for war and peace in the field of nonferrous metals covers three time periods which will demand major shifts in policy and program to meet changing conditions and new problems. The first of these periods is from the present until the military victory over the Axis has been won;[1] the second is the short-run period from the end of the shooting war until the decisions at the peace conference have been made; and the third is the long-run post-war period following the peace conference.

With the industrial war machine now functioning at top speed, the immediate major concern in dealing with the problem of surplus materials before victory is won is to avoid premature and short-sighted actions, stimulated by the fear of a post-war collapse in metal markets, which will slow down the war machine and prevent an early defeat of the Axis. A conservative forecast of the nonferrous metals needed for post-war consumption in the manufacture of peacetime products (see Appendix A) clearly indicate that such fears are groundless provided steps are take to accumulate in Government stock piles inventories of the metals that are in temporary surplus as measured by wartime needs. All that is apparently needed to absorb such temporary surpluses is an expansion of the authority delegated to the War Production Board that will permit increases in the stock pile goals now prevailing to a level more reasonably in line with estimated requirements for post-war consumption.

The major concern in the second period is twofold; first, to be prepared for the transfer of existing controls from the temporary war agencies to more permanent peacetime organizations immediately upon the cessation of hostilities—congressional enactments to provide for this shift should be immediately formulated—and, second, to see that such measures as are taken in this connection provide a basis for post-war controls to conserve resources, to stabilize the domestic metals and minerals industry and to set an example to the rest of the world, in line with the Fulbright and Connally resolutions, that will encourage international collaboration for the establishment of permanent peace by putting this program into effect throughout the Western Hemisphere prior to the eventual submission to the peace conference of a similar program for the rest of the world.

The major concern in the third period is to be prepared with a specific over-all program for metals and minerals that will carry out the provisions of the Atlantic Charter with respect to free access to raw materials and give substance to the commitments made to the common people of all the world at Moscow and Teheran.

---

[1] The first period might be subdivided into two shorter periods, one until the European war is won and the other until the Japs have been beaten. However, neither the timing nor the order of occurrence of these events is clear; moreover, for each of these periods only minor shifts in policy will be necessary to achieve a partial reconversion to civilian production as charges in the requirements for war production permit.

In this connection the concluding section of this outline (see appendix B) presents for consideration a proposed international agreement to develop national programs of conservation and stabilization for the metals and minerals industry in which the structure and major functions of the proposed constituent organizational units involved in the agreement are described. In such programs, "conservation is defined to mean not hoarding but rather orderly and efficient use in the interest of national welfare, both in war and peace, without unnecessary waste either of the physical resources or the human elements involved in their extraction."[2] Stabilization means the same in terms of general objectives but has particular reference to market changes and the waste resulting from unnecessary fluctuations in prices, and in inventories held by producers, fabricators and other consumers of nonferrous metals, as well as fluctuations in employment and wage standards at mines, smelters, refineries, brass mills, and other segments of the metals industry.

BASIC CONSIDERATIONS

Several important factual considerations are basic to a proper evaluation of labor's program.

1. There has been a serious depletion of irreplaceable mineral resources, particularly those of higher grades and a resultant marked tendency toward higher costs of extraction for a substantial proportion of the domestic output of our more important nonferrous metals. This fact has tremendous national significance both from the standpoint of the post-war future of the economy and the nonferrous metals industry in particular as well as for the immediate situation in which irreparable damage may be done by removing special incentives to the mining of low-grade, high-cost ores containing those metals whose supply is now sufficient to meet military requirements. Such action would force a sudden depression upon the underground mines in the industry and lead to the premature abandonment and irrevocable loss of huge tonnages of low-grades ores.

2 There will be an assured post-war expansion in domestic requirements for copper, lead, and zinc, beyond the capacity of our domestic mines to supply even if the post-war level of national income is not sufficiently high to achieve full employment of the manpower that will be available. Unless arrangements can be made to obtain available supplies from other countries, the post-war domestic shortage of nonferrous metals might become a major obstacle to plans for post-war expansion to achieve full employment in the United States.

The prospect of post-war domestic shortages of important nonferrous metals points clearly to the immediate need for congressional action to provide means for the accumulation of stock piles of those metals which are in temporary surplus as measured by war needs. It also suggests the importance of maintaining and developing the good neighbor policy in the field of foreign relations and the advisability in this connection of continuing the present foreign procurement of metals whose supply is no longer in critical shortage for war needs, but which will provide a necessary supplement to the domestic supplies needed for post-war consumption at levels of national income sufficiently high to provide full employment.

3. The cost differentials between different mines producing the same metals are wide and relatively fixed because they depend for the most part upon the character of the particular mineral deposit—grade of ore, width of vein, etc., or upon the kind of mining techniques which can be used to exploit the deposit—stoping, block caving, or open-pit steamshovelling. As a result, competition in the metal mining industry in contrast to competition in manufacturing does not tend to equalize costs as between different producing units. Nature rather than management makes a mine high-cost or low-cost.

These characteristics justify the special price treatment which has been accorded to high-cost producers in the nonferrous metal mining industry during the war under the Government's premium price plan. Labor supported this plan and contributed to its establishment. The same facts plus the post-war need for the metal justify the continuation of such special price treatment after the war, but in a form modified to fit the needs of conservation and stabilization.

At the same time these same characteristics point to the need of Government control over competition that will prevent large monopoly holders of low-cost metals resources from accumulating and unloading speculative inventories, disrupting metal markets, creating ghost towns, and reducing hard-won wage and working standards.

4. Some of the metals and minerals urgently required in large volume for military purposes and now in surplus supply do not have substantial peacetime uses. This difference is fundamental and should indicate the need for a different and special treatment for wartime metals that are not needed for peacetime purposes when supply goals for military requirements for these metals have been reached. The decision on such matters should reside primarily in the hands of those responsible for our military preparedness. Care should be taken, however, to avoid possible interpretations that the accumulation of national stock piles of these wartime metals is in preparation for another war. Such interpretations would endanger the whole policy of international collaboration to establish a basis for permanent peace.

5. Wartime experience in dealing with the problem of supplying our metal mines with sufficient skilled labor to achieve production goals for the munitions program clearly demonstrates the need for general improvement in wage and working standards as well as in housing and other community facilities for the mining camps of the industry if we are going to provide the supplies of nonferrous metals necessary to meet post-war requirements.

6. Wartime experience has also demonstrated that high prices for metals under conditions in which the minerals resources are fixed and limited in supply do not attract substantial increases in production. In copper, for example, notwithstanding premium prices in the neighborhood of 27 cents a pound no new large deposits previously unknown were uncovered. Moreover, high prices in the post-war period for metals to be sold to fabricators and other consumers will be limited by price competition from substitute materials. Such considerations support a policy of selective pricing to procure the needed output from high-cost mines and one substantially lower open market price for the fabricators and other consumers of nonferrous metals.

PRINCIPAL RECOMMENDATIONS

1. Provide for an interim extension and expansion of the powers now delegated to wartime agencies—the W. P. B. and M. R. C. in particular—

(i) to permit Government stock piles and procurement of metals and minerals having substantial peacetime uses, beyond the limits set by war requirements for such metals and minerals and consistent with a national policy of conservation; and

(ii) to permit the continuation of "subsidy" payments when W. P. B. production and stock-pile goals for war requirements are attained and when such payments are justified under the national conservation policy, as a form of conservation payments to prevent the loss of mineral resources through mine shut-downs resulting from the elimination of subsidy payments.

2. Take congressional action now to definitely establish a consistent national policy of conservation for our mineral resources. Such policy to be implemented—

(a) by the establishment as soon as possible of a National Minerals Resources Board consisting of representatives from appropriate Government agencies—

(i) to develop guiding principles and a unified program of conservation for our mineral resources; and

(ii) during the war period to advise the W. P. B. on appropriate conservation principles to be followed for metals eligible for special prices or subsidies; and

(iii) at the close of the war when special powers granted to existing governmental agencies have expired to assume directive control over such policies and functions as are now performed by these agencies with respect to the premium price plan for copper, lead, and zinc as well as in the field of Metals Reserve procurement and stock piling of strategic metals and minerals;

(b) by a post-war system of conservation payments as an alternative to, or substitute for, the present subsidy system for increased production of strategic metals and minerals in order to prevent the loss of mineral resources resulting from the elimination of incentive subsidies remaining at the close of the war;

(c) by the accumulation of buffer stocks of metals and minerals having substantial peacetime uses, for purposes of achieving price stability for such as are included in the conservation program;

(d) by making exploratory representation through appropriate governmental channels to metals-producing countries of the Western Hemisphere with the objective of reaching an international agreement—

(i) to establish uniform national policies of conservation consistent with that established for the United States;

(ii) and make appropriate credit and trading arrangements to permit the accumulation and exchange of Government surplus stocks.

Are Hospitalized Veterans Being Treated Right?

EXTENSION OF REMARKS

OF

HON. EDWARD O. McCOWEN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. McCOWEN. Mr. Speaker, I desire to call the attention of the House today to a news item which appeared in the Times-Herald this morning. The news item states that veterans are leaving hospitals before they should do so partly because their pensions are reduced while in the hospital. Might it not be well for the Committee on Pensions to make a careful and thorough investigation to determine the facts in the case so that appropriate legislation may be introduced and passed, if deemed advisable?

To assist in arriving at a conclusion as to what to do, a sampling of opinions of veterans in a certain number of hospitals

could well be included in such investigation.

The news item reads as follows:

PENSIONS OF VETS IN HOSPITALS CUT

Yanks are leaving Veterans' Administration hospitals against medical advice partly because of reduction of pensions or compensation during hospitalization, Omar B. Ketchum suggested yesterday.

Ketchum, national legislative representative of the Veterans of Foreign Wars, said a service-connected disabled veteran, without dependents, might suffer a pension decrease of $80 a month, merely by staying in a hospital.

Speaking in the first of a series of weekly broadcasts over WOL, he commended Veterans' Administrator Hines for urging veterans' groups to survey agency hospitals.

How About U. N. R. R. A.?

EXTENSION OF REMARKS

OF

HON. JOHN M. VORYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. VORYS of Ohio. Mr. Speaker, in view of the panning U. N. R. R. A. has been receiving, the following article from Business Week for March 3 should be of interest to the House. As one who supported U. N. R. R. A. legislation in Congress, and who feels it has a great humanitarian task to perform, I have been disappointed and impatient at the delays in getting relief started. This article explains some of the delays, shows that a lot has already been accomplished, and that much more will soon be done. This is good news, for you cannot declare a moratorium on starvation, sickness, and homelessness. Starving, sick, and homeless people cannot wait indefinitely.

The article follows:

U. N. R. R. A. GETS READY TO ROLL—FRANCE, BELGIUM, AND THE NETHERLANDS DROP SELF-SUFFICIENCY STAND, AND UNITED NATIONS' RELIEF AGENCY AT LAST GETS GREEN LIGHT FOR EMERGENCY ASSISTANCE IN LIBERATED NATIONS

Considerations of sovereignty, prestige, and protocol have been submerged by the threats of starvation and political turmoil which now haunt the leaders of France, Belgium, and the Netherlands. These countries have finally turned for aid to the United Nations Relief and Rehabilitation Administration.

SELF-SUFFICIENCY FAILS

At Atlantic City, birthplace of U. N. R. R. A., these well-heeled nations—and later Norway—turned a proud and chilly back on the infant international agency created to minister to war-ravished peoples. It was all right for the poor Greeks and Yugoslavs to turn to U. N. R. R. A., but the rich western European states were jealous of intervention, sure of their power, and anxious to sustain authority by holding the reins of relief and rehabilitation.

But each of these governments, as it endeavored to procure and distribute civilian relief, was confronted with forces it could not master—shortages of supply, of authority, and of shipping. This week in Washington the U. N. R. R. A. Council agreed to rush emergency relief goods into western Europe from stock piles in the United Kingdom.

With this decision, U. N. R. R. A. came into its own. Until now it has been one of the most misunderstood and oft-maligned of intergovernmental agencies.

Actually U. N. R. R. A. has suffered no more violently from the birth pangs of organization than most wartime national agencies; it has had fewer internecine rows, pulled fewer boners, and hewn closer to objectives than many another agency.

FOR EMERGENCIES ONLY

U. N. R. R. A.'s job cannot be understood until multiple misconceptions have been dispersed:

1. U. N. R. R. A. is not an American-dominated agency, even though more than two-thirds of its funds come from the United States. It is an instrument of 44 United Nations. Its director general—former Gov. Herbert H. Lehman of New York—has put aside American allegiance to become an international servant, a world citizen.

2. U. N. R. R. A. is not to be blamed for the unhappy destination of Italy, for until last September U. N. R. R. A. had no responsibility for relief in former enemy territory. Now its $50,000,000 minimum aid program in Italy (restricted to helping mothers and children) is rolling smoothly under a mission headed by S. M. Keeny, a veteran of the American Relief Administration of World War fame.

3. U. N. R. R. A. cannot operate until it has been authorized to do so by the military and governmental authority of a liberated area. Thus it was barred from western Europe by the self-sufficient stand of the local governments—except for U. N. R. R. A. missions invited by the military; it entered Greece by military request; it is working with the military in Yugoslavia; it is readying a mission to follow relief goods en route to Czechoslovakia and Poland.

4. By its charter U. N. R. R. A. cannot do more than help people to help themselves. It cannot help those who have not asked for help. It normally has no relief responsibility until after a nominal 6-month military period during which relief is provided by the Army Civil Affairs Branch (G-5). It cannot extend more than emergency short-term aid—no industrial rebuilding, no T. V. A.'s, no tampering with time-worn economic patterns.

OPERATIONS RESTRICTED

But despite all these limitations, U. N. R. R. A. has done an admirable job. It has even entered liberated areas with Allied military forces, although the first experiment at jumping the gun in this way was a tragic mistake.

U. N. R. R. A. sent 113 workers into Greece with the British troops, since the country had been evacuated by the Germans and hostilities had ceased. But the civil warfare in Athens and environs resulted in the wounding of 9 U. N. R. R. A. workers and the death of 1; on the advice of military authorities all but 40 U. N. R. R. A. representatives were withdrawn. The remaining workers continued distribution of food and clothing in noncombat zones. U. N. R. R. A. has delivered hundreds of thousands of tons of food to Greece (while, up to January, civilian supply shipments to France totaled only 175,000 tons).

With the western European nations excluded—until the decision this week to permit emergency aid from U. N. R. R. A.-owned stocks in Britain—the only other areas of operation were Italy (the $50,000,000 minimum-aid project), Yugoslavia, Czechoslovakia, and Poland.

OBSTACLES OVERCOME

U. N. R. R. A. aid to Yugoslavia is on two levels. In advance of the termination of hostilities, Allied military chiefs asked U. N. R. R. A. to assist with relief, and an agreement was signed outlining areas of authority. An U. N. R. R. A. mission is now at work in Yugoslavia in liaison with the military. In preparation for the second phase, negotiations with the de facto government of Yugoslavia to determine U. N. R. R. A.'s role after the end of hostilities are now going on.

Czechoslovakia and Poland invited U. N. R. R. A. aid, but means of delivering the goods were lacking. An initial shipment of a few tons of medical aid was flown to Moscow from Britain and assured transit to eastern Czechoslovakia.

This week, following a Soviet invitation to use the Rumanian ports of Galatia and Constanta, U. N. R. R. A. shipped enough medical units to supply 100,000 people for 1 month with complete hospital set-ups, including X-ray equipment and mobile medical-aid units. These are destined for the use of a Czech medical mission already in the field; U. N. R. R. A. observers will follow to work in both Czechoslovakia and Poland.

FUNDS CAME SLOWLY

Before U. N. R. R. A. was prepared to act in any capacity a lot had to be accomplished. Relief planning had started several years ago in London, and the study of requirements and supply was continued by U. N. R. R. A. for months before the agency swung into action.

U. N. R. R. A.'s operating funds came slowly—even the United States took 9 months to appropriate 60 percent of its quota, and tied strings to 45 percent of that. So far, some 30 noninvaded countries have set aside $1,800,000,000 to U. N. R. R. A.'s account. The goal exceeds $2,000,000,000. Because the bulk of U. N. R. R. A.'s requirements is noncritical (such as cotton and wheat) or semiperishable (such as milk and flour), and can be procured quickly, actual expenditures have been small although large sums have been earmarked for specific purposes.

SUPPLY TASK IS COMPLEX

U. N. R. R. A.'s problems of procurement, stock piling, shipment overseas, and final distribution are all complicated. For one thing, 90 percent of each country's money contribution is, by agreement, to be spent on supplies in that country. This means shopping in thirty-odd nations, each desperately conscious of wartime shortages of civilian goods and equally anxious to move war-accumulated surpluses.

For goods in short supply U. N. R. R. A. must turn to the United States-British-Canadian combined boards, and compete with the needs of the military, civilian, and export claimants at the national level in each country.

NEEDS GEARED TO WAR

As a claimant agency U. N. R. R. A. must schedule its needs far in advance. Its programs are based on estimates of country-by-country requirements calculated in 6-month blocks extending over a period of 18 months following liberation. Its schedules are inevitably keyed to the war's progress.

Consequently, allocations from supplies in the United States, or Canada, or the United Kingdom may be ticketed for U. N. R. R. A. and then returned to the national pool if they are not lifted by U. N. R. R. A. for delivery to a freed area. Some goods of a noncritical nature can be stock-piled. Some others, requiring time to fabricate (such as locomotives, mobile repair units, and farm implements), must be ordered long before they are needed.

WORLD WIDE IN SCOPE

From the start U. N. R. R. A. has surveyed relief needs on a world-wide basis, and its programs are keyed to these over-all requirements to assure equitable distribution among needy countries. Consequently, even the programs of countries paying their own way (such as France and Belgium) are studied

by U. N. R. R. A. The Supply Section of U. N. R. R. A. advises the combined boards on whether these requests are justifiable or likely to infringe upon available supplies for other areas to be liberated later.

In fact, U. N. R. R. A. has helped the paying countries. It has procured for them $75,000,000 of relief goods and transferred to them an additional $30,000,000 of goods from its stock piles.

WAR REFUGEES AIDED

But U. N. R. R. A.'s activities do not end with the planning, procurement, and distribution of relief goods. A multilateral agreement between the United Nations has put in U. N. R. R. A.'s lap the job of returning millions of displaced persons to their homeland, and at the frantic request of Allied military chiefs U. N. R. R. A. missions are already at work in Europe.

Ten days ago U. N. R. R. A., which now employs only about 2,000 persons for all its operations, was asked by Supreme Headquarters, Allied Expeditionary Force, to send 1,200 workers to staff 100 refugee centers in Germany. There are some 9,000,000 foreigners in the Reich today and many are crossing to Allied territory every day. Before U. N. R. R. A. had caught its breath after this premature and unexpected demand (Germany is still quite a combat zone), S. H. A. E. F. boosted its ante to 450 centers, which will require the recruiting of between 4,500 and 6,000 U. N. R. R. A. workers.

SANITATION SUPERVISED

Some 40,000 refugees are already being cared for in U. N. R. R. A. camps in north Africa, and last week another 3,000 were on their way from asylum in Switzerland.

Since the revision of the International Sanitation Convention last year, U. N. R. R. A. has taken over administration of the regulations and last month began publication of the Epidemiological Information Bulletin, a bimonthly report to health officers of all nations on the incidence and control of epidemic diseases. Experts from the Health Research Unit of the League of Nations have joined U. N. R. R. A.'s staff to assist with the work.

TECHNICAL AID GIVEN

Among its many other activities, technical and engineering sections of U. N. R. R. A. have been quietly at work preparing guidebooks and manuals for distribution in liberated areas. These include instructions for remaking clothing, medical guides and instructions for labeling and using drugs, and technical guides for the reconstruction of damaged industrial and utility facilities.

Of special interest to American and allied businessmen, however, are the instruction booklets which will accompany machinery taken into Europe by U. N. R. R. A. Manufacturers and U. N. R. R. A technicians are preparing simple instructions in French and English on the use of farm equipment and other types of machinery to be provided by the United States, Canada, and Britain. The various national governments will be expected to translate the instructions into the local language. Seed guides and farming information are likewise being prepared by a technical staff working in London.

AHEAD OF SCHEDULE

So far U. N. R. R. A. has been asked to begin its work in a half-dozen areas well in advance of the scheduled date. It has not yet fallen down on the job.

But Director General Lehman has admitted now that the planning stage is almost past. So U. N. R. R. A.'s big job lies ahead. It remains to be seen whether an international agency can operate in the face of continuing supply shortages and shipping limitations—on which the military still has first call—and accomplish the task set for it by the United Nations.

Treatment of Disabled Veterans in Texas

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. RANKIN. Mr. Speaker, there has been so much propaganda spread recently concerning the treatment of our disabled veterans in Government hospitals that I think it is well to have the views of men who are familiar with the situation from actual experience.

Under permission granted me to extend my remarks in the RECORD, I am inserting a letter I received this morning from Dr. V. L. Smith, 834 Medical Arts Building, Dallas, Tex., together with the statement to which he makes reference.

The material is as follows:

DALLAS, TEX., *March 16, 1945.*

Hon. JOHN RANKIN,

Member of Congress, Washington, D. C.

DEAR CONGRESSMAN RANKIN: I am enclosing copy of reply to an article appearing in the Cosmopolitan, and as you are chairman of the Committee on Veterans' Affairs of the House, and have always been the friend of veterans, especially of the disabled, I send you this for your information.

As to conditions in our veterans' facility in Texas, they are of the highest order, and we know General Hines is on the job and want him retained. While Texas might be just a little split on regular and some other branch of Democrats, I can assure you the veterans of Texas are almost unanimously for Frank T. Hines. And Mr. RANKIN, you'll get anything you ask out of the D. A. V.'s of Texas. We admire and love you for your unselfish efforts in our behalf.

With all best wishes sir, I am,

Sincerely,

V. L. SMITH, M. D.

Dr. Smith's reply to the article appearing in the Cosmopolitan magazine reads as follows:

In a recent article in a national magazine serious charges were brought against the Veterans' Administration, and especially the medical personnel, in which they are charged with being incompetent, bureaucratic, and callous.

After many years' service with several of the veterans' organizations, assisting them in caring for the sick and disabled of their organizations, both service-connected and nonservice-connected cases, and having to deal with the Veterans' Administration, I am positive the conditions complained of in the article do not obtain in Texas. I am a general practitioner of medicine and know the profession in Texas, especially the medical personnel of the Veterans' Administration, many of whom are nationally, State, and locally known for their medical attainments. I have been brought in direct contact with them through my position for over 2 years as State commander of the Disabled American Veterans in 1942-43 and 1943-44. As senior vice commander in 1941-42, I visited every veterans' facility in the State, made personal inspection and contacted the veterans themselves, and usually without a representative of the Veterans' Administration being present, and only grievances of minor nature were ever offered as to their treatment, food, quarters, recreation, and entertainment. These, when called to the attention of the medical officer in charge, were immediately corrected.

The facility in Waco, which is for psychiatric and nervous veterans, is in charge of Dr. H. Rubin, who knows, and can call the name of almost every veteran in the institution, and they in turn know the doctor. He has a corps of highly trained and competent medical men and women on his staff, specialists in mental and nervous diseases. He is a strict disciplinarian, and requires service of his staff, and no word of complaint has been offered about the treatment received either medical or civil.

The Veterans' Administration facility in Dallas is rather new, and is in charge of Dr. C. L. Magruder, medical officer, and he has a competent staff of physicians, laymen, and women. This is a general medical hospital, and their turn-over in patients is somewhat more than other hospitals. They have a fine corps of specialists and consultants, and the entire personnel is always on the job, considerate and courteous and interested in giving the best service possible to their wards. Because of the varied nature of their diseases and disabilities, it is much more difficult to meet and satisfy the demands and requirements of patients in a general medical hospital, yet only criticism of minor nature has been made here.

The facility at Legion is a tubercular hospital, and until just recently was in charge of Dr. Frank Brewer, medical officer, who has been succeeded by Dr. C. I. Moore, and staffed by as competent medical men as could be found in any hospital—specialists in every phase of tubercular diagnosis, and treatment always abreast of, and many times ahead of, the most modern methods of caring for this type of patient. They are not only prepared, but I know many, many veterans that are alive today because these very men gave them the advantages of modern treatment—heliotherapy, pneumothorax, thoraco-plastic compression, and phrenic evulsion. The very nature of their disease tends to make them cynical and fatalist in their attitudes—these attributes alone requiring unusual tact and judgment and with all no complaints were ever uttered as to the treatment and care given them. If, on occasion their coffee was cold, or food not particularly appetizing, it required only a word to get these attended to.

In the several facilities of Texas the several ex-servicemen's organizations maintain a liaison and service officer, whose duty it is to visit and assist all patients and invite them to make criticism, or offer suggestions as to improvement of service, and I am sure no material abuses could exist without their knowledge, and if such appeared they would be immediately taken up by their local, State, or national departments, and if the medical service rendered our disabled comrades in the Veterans' Administration facilities in Texas could be classed as third rate, then let's have more of it.

I have attended a majority of the national conventions of the Disabled American Veterans, and at each Gen. Frank Hines, Administrator of Veterans' Affairs, has been present with the chiefs of staff of the respective departments and held schools of instructions with the national service officers of Disabled American Veterans keeping them posted on procedure and interpretation of laws passed by the Congress for veterans' benefit, and requesting reports from all service officers as to difficulties or problems met with as a result of their contact. The Veterans' Administration also assisted the legislative program by constructive criticism and suggestions to further the interest of the disabled veteran, the widows, and orphans of deceased veterans.

I quote from General Hines' first order after assuming his duties as director to all medical officers, rating officials, and other employees:

"Fairness and courtesy must at all times be shown to ex-servicemen by the medical

officers and all other employees whose duties bring them in contact, directly or indirectly, with the Administration's claimants."

There has been more criticism over the assignment of Army medical personnel to duty in the facilities for the past 2 years than any other; the ex-servicemen seem to desire to get away from anything pertaining to the Army or Navy in a medical way. They do insist, however, upon ex-service medical officers being placed in charge of facilities.

It would appear also that the author of the criticism overlooked or did not know that a large number of doctors manning the several staffs of the facilities were medical officers of World War No. 1, who know the ex-serviceman and his needs. Also, that the medical staff of the veterans' facilities hold daily staff meetings and preceding Pearl Harbor post-graduate courses were held and the doctors required to keep abreast with the most recent advances in medicine and surgery.

I have purposely avoided any statistical matter, but as criticism was made that only a few cases were cured and a small number improved will make the observation that most patients entering the facilities enter with disabilities of a permanent nature, most of them incurred as a result of their military service and for which they receive compensation; many show an increase of disability as a result of natural progress, others by aggravation and by changes that take place through the several decades of life.

Again, it is to be remembered that the Congress passes the laws under which the veterans' facilities are administered, and the veterans are permitted to elect whether or not they take the treatment recommended.

Dr. V. L. SMITH, M. D.

DALLAS, TEX.

Food Shortage

REMARKS

OF

HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. AUGUST H. ANDRESEN. Mr. Speaker, according to the report issued by the War Food Administration and the O. P. A. we are headed for a very serious food shortage in this country. The farmers of the country have produced an abundance of food for the people of the United States, as well as to take care of our armed forces and to meet other commitments, but if a food shortage is developing for the American people, it is the duty of Congress to investigate and determine the reasons for that shortage. In order to develop this information, I have introduced a resolution today directing the Committee on Agriculture to make a searching investigation of food supplies and to find out what commitments have been made by the Federal Government throughout the world in connection with the food stocks that we now have on hand. I discussed this matter in the Committee on Agriculture this morning, and I hope they can get busy in accordance with the resolution and find out what difficulties exist and try to correct them.

Resolution for investigation of food supplies and commitments

Resolved, That the Committee on Agriculture of the House of Representatives is hereby directed and authorized to immediately investigate the food supply situation in the United States.

The said Committee on Agriculture is empowered to subpena witnesses and to require the production of records from any or all Federal agencies disclosing information on supplies of food and commitments made for the distribution of such food. The committee is also directed to fully investigate the reasons for the development of food shortages.

The said Committee on Agriculture is directed to hold its hearings in the District of Columbia or elsewhere, and any person or official who refuses to testify before said committee and refuses to give true statements as to food supplies and commitments shall be considered in contempt. The said Committee on Agriculture is directed to report its findings to the House of Representatives on or before April 15, 1945.

The said Committee on Agriculture is authorized to use available funds heretofore provided by the House of Representatives for the marketing investigation in its inquiry athorized by this resolution.

United States-Mexico Colorado River Treaty Opposition

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. HOLIFIELD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein a roster of the important organizations who are in opposition to the present form of the Colorado River treaty provisions. The California congressional delegation is in agreement on the urgency of the settlement of points of difference between the United States and all foreign nations, but we feel that a great injury is being dealt the State of California in the terms of the treaty as now written:

FARM, LABOR, VETERANS, AND PROFESSIONAL ORGANIZATIONS ON RECORD AGAINST VARIOUS PROVISIONS OF PROPOSED TREATY

National Grange.

State Farm Bureaus of Arizona, Colorado, Idaho, Nevada, New Mexico, Oregon, Utah, Washington, Wyoming, Montana, and California.

American Federation of Labor.

Brotherhood of Railroad Trainmen.

Railway Labor Executives Association.

Colorado River Water Users Conference (80 percent of American water rights on Colorado River).

American Society of Civil Engineers, Intermountain Section.

Arizona Water Users (representing 85 percent of Arizona's water rights on Colorado River, including Salt River Valley Water Users Association, Yuma Conservation Club, Gila Valley Irrigation District, Arizona Highline Reclamation Association).

Utah Water Users (representing a large part of Utah's water rights on Colorado River, including Metropolitan Water District of Salt Lake City, Provo River Water Users' Association, St. George and Washington Canal Co., Price Bench Canal Co., all 13 irrigation companies on Virgin River).

Wyoming Water Users (representing 100 percent of Wyoming's Colorado River water rights, including Wyoming Wool Growers' Association, Wyoming Stock Growers' Association, Colorado River Water User's Association of Wyoming, Black Fork Irrigation and Power Project, Green River Basin Development Association).

California Water Users (representing 100 percent of California's Colorado River water rights).

Nevada Water Users (representing 100 percent of Nevada's Colorado River water rights).

American Bar Association is opposed to certain administrative provisions.

Veterans of Foreign Wars are against any provisions depriving veterans of legal rights to water.

Nation-wide Airport Program Needed—C. A. A. Advisory Service Vital

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. RANDOLPH. Mr. Speaker, it had been my intention, had I been able to do so on Friday, to offer an amendment to H. R. 2603 to increase the appropriation for the airport advisory service of the Civil Aeronautics Administration.

The reduction in the funds to carry on the airport advisory service for the fiscal year of 1946 from the amount of $425,000, as recommended by the Bureau of the Budget, to $300,000, as approved by the Appropriations Committee of the House, and by the House itself today, will necessitate a cutting of the existing staff of approximately 200 persons needed to perform this work to about 65.

The demands from States, cities, and many civic bodies for expert advice from the C. A. A. on the planning, development and construction of airports, and on airport legislation, including local and State zoning and airport enabling legislation, has grown tremendously in recent years. The interest in planning and development of adequate airport facilities is widespread throughout the Nation and local officials of government naturally turn to the Federal agency, in charge of aeronautics, to obtain proper assistance.

The present work load in this respect is such that it cannot be properly handled with less than 200 employees, including both Washington and field. It is obvious that if only $300,000, sufficient for only 65 employees, is appropriated, it will be impossible to perform this service with any degree of effectiveness. Over 20 percent of the requests for such service emanate from Members of Congress on behalf of their constituents. If the proposed small staff is authorized for this work and backlog of such requests will immediately develop to a point where six to eight months may elapse between the time a Member of Congress requests

such advisory assistance until such assistance could be given by the C. A. A.

Harm and costly mistakes will follow the lack of expert airport advisory direction in the planning and development of airports without necessary advice. It is quite apparent that a sizeable portion of the cost of airport development will be borne by the Federal Government in the post-war expansion of aviation and the $125,000 which would be saved by the reduction is insignificant compared to the cost of the mistakes which undoubtedly will be made without such expert advice, and will have to be paid for proportionately by the Federal Government.

It is therefore unquestionably in the interest of the Federal Government to make available the small amount of Federal funds required to assure the proper direction, guidance, and planning of our national airport system, and I hope the Senate will provide the amount of $966,000 requested for this purpose from the Bureau of the Budget by the Civil Aeronautics Administration.

Mr. Speaker, hearings are now in progress before the Senate Commerce committee on airport legislation. I hope the House will act in the near future that both bodies may act promptly that this Nation may soon begin an adequate airport construction program.

The Washington (D. C.) Post commented today on the need for the Federal Government to lead the way in this field. The editorial follows:

AID FOR AIRPORTS

Postwar employment openings for millions of demobilized servicemen and warworkers are not going to be found by pursuing a do-nothing policy. Nor can we banish unemployment by providing fake jobs at Federal expense. However, there are various ways in which the Federal Government can assist the expansion of private industry and thus help to create permanent jobs without squandering public money or impairing private initiative. One such promising opportunity would be afforded by Federal grants for airport construction, as provided for in bills currently being considered by an aviation subcommittee of the Senate Commerce Committee.

Since the Civil Aeronautics Administration is within the Department of Commerce, Secretary Wallace has had the congenial task of appearing before the subcommittee on behalf of legislation authorizing the Federal Government to make grants to State and local governments on a matching basis for airport construction. He pointed out that "a constructive program of Federal-aid highway development adopted by the Congress at the close of the last World War laid the foundation for the development of our great automobile industry. The expansion of our airport system," he added, "will have a major influence on the rate of growth of our civil aviation industry, particularly insofar as the manufacture and use of personal airplanes are concerned."

Assistant Secretary of Commerce Burden explained that the present system of airports is seriously deficient, since construction has been concentrated during the war on very large airports, chiefly with a view to military requirements. Our present airport system, he says, "could barely accommodate physically the number of civil aircraft which can be expected during the first 2 or 3 post-war years. Moreover, in a large number of cases existing airports are so inadequately planned and so inconveniently located as to prove a serious obstacle to the expansion of civil aviation." Mr. Burden estimates that the more than 3,000 additional airports proposed by the C. A. A. would provide permanent employment for from 80,000 to 100,000 persons. That total is exclusive of the 400,000 new jobs to be created within the next 8 or 10 years through the anticipated expansion of the civil aviation industry.

The construction of airports, furthermore, would provide a large volume of temporary employment. The cost of the developmental program outlined some time ago by the C. A. A. is put at a billion and a quarter dollars, with the Federal Government contributing one-half that sum. The annual Federal outlay over a 10-year period would, therefore, amount to about $62,500,000. That would be a small price to pay for the benefits accruing to workers, to the traveling public, and the Nation, whose national defenses would be strengthened by additional airports serving as potential military bases and as training centers for fliers.

Airport construction is a form of public works greatly needed to develop our system of public transportation. Such outlays would build up, not tear down, private industry. But it takes time to inaugurate an ambitious construction program entailing cooperation with local governments. For that reason enabling legislation should be passed promptly so that there need be no delay in getting to work when the war comes to an end.

Farm Loans for Veterans

EXTENSION OF REMARKS

OF

HON. PAUL CUNNINGHAM

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. CUNNINGHAM. Mr. Speaker, I have today introduced a bill to amend the G. I. bill of rights so that returning veterans can more easily secure farms upon their return to civil life. This bill provides loans at 3-percent annual interest and up to 100 percent of the valuation of a farm. It provides that they may be repaid during a period of not to exceed 40 years.

The bill also provides that the cooperation of county veterans' organizations shall be called upon to help administer it.

Under it the veteran can use his own judgment as to how he will operate his farm.

It has been introduced as the result of a study by a number of my colleagues. They are: Hon. EDITH NOURSE ROGERS of Massachusetts, Hon. JOHN ROBSION of Kentucky, Hon. JOHN JENNINGS of Tennessee, Hon. LAWRENCE SMITH of Wisconsin, Hon. HENRY DWORSHAK of Idaho, Hon. C. W. BISHOP of Illinois, Hon. CARL ANDERSEN of Minnesota, Hon. KARL MUNDT of South Dakota, Hon. EARL LEWIS of Ohio, Hon. GERALD LANDIS of Indiana, Hon. CHARLES ROBERTSON of North Dakota, Hon. MAX SCHWABE of Missouri, Hon. A. L. MILLER of Nebraska, Hon. J. GLENN BEALL of Maryland, Hon. FRED BRADLEY of Michigan, Hon. HARRIS ELLSWORTH of Oregon, Hon. WALT HORAN of Washington, Hon. ROSS RIZLEY of Oklahoma, Hon. WILLIAM S. HILL of Colorado, Hon. FRANK BARRETT of Wyoming, Hon. JOHN BUTLER of New York, Hon. THOMAS D. WINTER of Kansas, and Hon. HUBERT ELLIS, of West Virginia.

In order that the Members may have ready access to the features of the bill, I include a copy in my remarks as follows:

A bill to amend title III of the Servicemen's Readjustment Act of 1944, G. I. bill of rights, pertaining to loans for the purpose of purchase or construction of homes, farms, and business property to provide more adequate and effective farm-loan benefits

Be it enacted, etc., That title III of the Servicemen's Readjustment Act of 1944, Public Law 346, Seventy-eighth Congress, June 22, 1944, is amended by adding after section 505, the following:

"SPECIAL FARM-LOAN PROVISIONS

"SEC. 506. That there is authorized to be appropriated $200,000,000 and thereafter such sums as may be necessary to enable the Administrator of Veterans' Affairs to make loans in the United States and in the Territories of Alaska, Hawaii, and in Puerto Rico, to persons eligible to receive the benefits of sections 506 to 511, inclusive, to enable such persons to acquire farms.

"COUNTY COMMITTEES AND LOANS

"SEC. 507 (a) A county committee shall be appointed to appraise and approve loans by the Administrator of Veterans' Affairs.

"(b) The county appraisal committee shall consist of three members.

"(c) A county appraisal committee shall be appointed by the Administrator of Veterans' Affairs, preferably from lists of names recommended by the duly constituted veterans' organizations of the county, or by the county board of supervisors, or by the county commissioners.

"(d) Applications for loan are to be accepted by the duly organized veterans' groups of the county, by the county agricultural agent, or by the county veterans' service officer of the county.

"(e) The committee shall meet on the call of the county agricultural agent of the county or on the call of such other person as the Administrator of Veterans' Affairs may designate. The Secretary shall prescribe rules governing the procedures of the committee, furnish forms and equipment necessary for the performance of their duties, and authorize and provide for the compensation of such clerical assistance as he deems may be required by the committee. The Administrator of Veterans' Affairs is authorized to appoint the county agricultural agent or any other individual as secretary of the committee.

"(f) If any county does not have a county agricultural agent, a duly constituted veterans' organization, or a county veterans' service officer, the Administrator of Veterans' Affairs is authorized to make use of the personnel of adjacent counties.

"(g) No certification under this section shall be made with respect to any farm in which any member of the committee, or any person related to such member within the third degree of consanguinity or affinity, has any property interest, direct or indirect, or in which they or either of the have had such interest within 1 year prior to the date of certification.

"TERMS OF LOANS

"SEC. 508. (a) Loans made under this act shall be in such amounts as may be necessary to enable the veteran to acquire a farm and for the necessary repairs and improvements thereon and shall be secured by a first mortgage or deed of trust on the farm.

"(b) The instruments under which the loan is made and security given therefor shall—

"(1) Provide for repayment of the loan within an agreed period of not more than 40 years from the making of the loan.

"(2) Provide for the payment of interest on the unpaid balance of the loan at the rate of 3 percent per annum.

"(3) Provide for a loan not to exceed 100 percent of the appraised value of the farm unit.

"(4) Provide for a loan not to exceed $12,000 on any one farm.

"(5) Provide for the repayment of the unpaid balance of the loan together with interest thereon in installments in accordance with amortization schedules prescribed by the Administrator of Veterans' Affairs.

"(6) Be in such form and contain such covenants as the Administrator of Veterans' Affairs shall prescribe to secure payment of the unpaid balance of the loan.

"(7) Provide that the borrower shall pay taxes and assessments on the farm to the proper taxing authorities and insure and pay for insurance on the farm buildings.

"ELIGIBILITY FOR LOANS

"SEC. 509 (a). As to provisions of sections 506 to 511 inclusive, any veteran with a discharge other than dishonorable is eligible for a loan.

"(b) Any veteran with a farm loan at the present time is eligible to make application for loan under the provisions of this act.

"DISTRIBUTION OF LOANS

"SEC. 510. In making loans under section 505 to 511 inclusive of title III the amount which is devoted to such purposes shall be distributed on the basis determined and authorized by the Administrator of Veterans' Affairs.

"ADMINISTRATIVE POWERS OF ADMINISTRATOR OF VETERANS' AFFAIRS

"SEC. 511. For the purposes of sections 506 to 511 of this title III, the Administrator of Veterans' Affairs shall have power to—

"(a) Appoint (without regard to the civil-service laws and regulations) and fix the compensation of such officers and employees as may be necessary.

"(b) Make contract for services and purchases of supplies without regard to the provisions of section 3709 of the Revised Statutes (U. S. C., 1934 ed., title 41, sec. 5) when the aggregate amount involved is less than $300.

"(c) Make payments prior to audit and settlement by the General Accounting Office.

"(d) Acquire land and interests therein without regard to section 355 of the Revised Statutes, as amended.

"(e) Compromise claims and obligations arising under, and adjust and modify the terms of mortgages, leases, contracts, and agreements entered into pursuant to sections 506 to 511 inclusive of title III as circumstances may require.

"(f) Collect all claims and obligations arising under this title III, or under any mortgage, lease, contract, or agreement entered into pursuant to sections 506 to 511 inclusive, and, if in his judgment necessary and advisable, to pursue the same to final collection in any court having jurisdiction: *Provided*, That the prosecution and defense of all litigation under the provisions of sections 506 to 511 inclusive of title III shall be conducted under the supervision of the Attorney General, and the legal representation shall be by the United States attorneys for the district, respectively, in which such litigation may arise, or by such other attorney or attorneys as may, under the law be designated by the Attorney General.

"(g) Make such rules and regulations as he deems necessary to carry out the provisions of section 506–511 inclusive of title III."

Marvin Roth, of Daytona Beach, Fla.

EXTENSION OF REMARKS
OF
HON. JOE HENDRICKS
OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. HENDRICKS. Mr. Speaker and Members of the House, we know how appointments to West Point and Annapolis are coveted by so many fine young men in our districts. It certainly is a rare thing to have one of these appointments turned down after it has been offered.

Recently I offered an appointment to Marvin Roth, of Daytona Beach, Fla., and it caught up with him in the front lines. He declined the appointment, preferring to stay there on the job. I received a letter from his father, for which I am asking permission to include in the RECORD because of the fine letter that he wrote to his father, Mack Roth. This boy is an honor to his country.

The letter follows:

DAYTONA BEACH, FLA., *March 14, 1945.*
Honorable JOE HENDRICKS,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: Your offer of appointment of my son Sgt. Marvin Roth, * * * to the United States Naval Academy, caught up with him at the front lines of the Seventh Army.

Marvin writes me that he turned down your very kind and generous offer. He wants to stay with the boys. Because I think you should be very proud to have selected such a boy for appointment, prompts me to write you and tell you what he said in his letter and point out why it is that our American boys will never be defeated by any country, no matter who the enemy is. Its the spirit of boys such as my son that makes us all proud of being Americans.

Quote from Marvin's letter: "So you can see that the life of a soldier in combat is pretty easy when he is not busy dodging bullets, and with the psychology that I use, even the falling of artillery 50 feet away isn't such a rugged thing. Too many men go into action with a fear of being hit, while if you watch the odds, you've safe as can be. I honestly believe this sitting back safe from the normal battle conditions is more trying on the nerves than actual fighting. Waiting and watching has never been to my liking, and it's making me restless, as I have always been in the past. All the fellows that are with me seem to be perfectly content to remain here for the duration, but war hasn't disillusioned me yet, so I'm still 'raring to go.' I wonder if my attitude will ever change, but when I really think about it, I believe I'll always crave the excitement and adventure of the unknown. I've listened to the fellows talk about going home, and that if they get there, no power will induce them to ever return overseas; but my mind doesn't function that way, and I've been able to make myself perfectly comfortable and content regardless of where I am at. That's why I refused Congressman HENDRICK'S appointment when it caught up with me at the front. I'll be back soon enough, so don't worry." End of quote.

Not one boy in a thousand would have refused your appointment, especially while dodging bullets and living in fox holes. My son has had four years of R. O. T. C. in military colleges, and when the need for paratroopers became great, he wanted to transfer to that branch of service, from the Infantry branch that he was in. He could not at that time transfer in rank, so resigned the R. O. T. C. and his commission as second lieutenant to be a buck private in the paratroops. I dare state that very few men in the Army ever did a thing like that. Since he has transferred however, I understand that one can now transfer in rank. I hated to see him lose his R. O. T. C. standing after completing four years of that work and hope some day the War Department will reinstate those who resigned before the new rules went into effect.

Please pardon my bragging. He may not win medals but if he had accepted your appointment he would have brought you credit, as he will his country.

With kindest regards and best wishes,
Sincerely and cordially yours,
MACK ROTH.

A Primer of "Peace"

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence from the United States News:

A PRIMER OF PEACE—THE ELEMENTS OF TRUE PEACE AND THE FORCES WHICH PREVENT OR PROMOTE ITS ATTAINMENT—FINAL ANSWER LIES IN PRACTICE OF CHRISTIAN DECENCY BY MEN AND NATIONS IN RELATIONS WITH EACH OTHER

(By David Lawrence)

What is the definition of "peace" as the term is used by modern governments?

Peace is envisoned as a state of continued submission by a people defeated in war—an acceptance of complete subjugation for an indefinite period of time.

How long does the defeated nation stay subjugated?

Only as long as just treatment is accorded. Otherwise a defeated people will contrive by one means or another to throw off the yoke of bondage as soon as sufficient economic strength is developed to resume the war, either alone or with new allies.

Why doesn't the defeated nation usually stay subjugated?

Because when an armistice is signed the war really does not end. The peace terms imposed continue the war for the defeated. Punitive measures, usually called a "hard peace," keep the spirit of resistance alive. Even if dormant on the surface, eventually the desire for revenge asserts itself underneath and the defeated people begin to scheme and plot a way to get revenge and recover what they have lost.

But cannot the conquerors keep such a defeated and obviously weak nation from rearming and bringing on another war?

Not unless the defeated people become convinced that they have more to gain by remaining at peace than by resorting to force, and not unless occupying armies are maintained for 20 or 30 years in a conquered country at a heavy cost in lives and money, as the French underground movement can inform us after four years of German occupation.

But would not any people have more to gain by preserving the lives of their youth and staying at peace?

Many persons cherish honor above life itself and many persons believe that death on the battlefield is better than slow starvation or economic strangulation for their families. The imposition of slave labor is not a persuasive way to instill a will to peace.

But do not the conquering nations usually give the defeated peoples a chance to live?

They, of course, express such a desire and many elements among them honestly intend to give the vanquished a chance, but these elements are usually shouted down and accused of wanting a soft peace or of allowing their humane sympathies to influence them unduly.

Should we not punish the war criminals and impose penalties on Germany?

Yes, every single one of them should be tried and the guilty hanged as an example. Definite penalties should be imposed on the German people that are economically bearable and of fixed duration. But even when we have done this, we have not come to the root of the problem. The war criminals of the 1920's on the Allied side who allowed the economic plight of 90,000,000 human beings in central Europe to become so desperate that they were receptive to any leadership or program—even war—as the only way out of economic anarchy were likewise guilty. But those Allied leaders have long since passed from the stage and their acts have escaped review in a welter of alibis and explanations that always focus on Germany's refusal to accept subjugation or on her plots for revenge but rarely weigh the effects of the blunders made by the Allied Governments and their indifferent peoples. We must avoid the emergence of a new set of war criminals of our own who by their blindness to or negligence of the needs of conquered populations can bring on World War No. 3.

Will the next war be begun by Germany?

Not necessarily. Germany may next time play the role of junior partner to a new dictator, who may arise in France or elsewhere and who may attempt to consolidate all the countries with grievances. Italy, France, Poland, Finland, Estonia, Lithuania, Latvia, Rumania, Hungary, Yugoslavia, Bulgaria, Greece, and Turkey will come out of this war feeling they have been made the pawns of the major powers. Discordant elements abound which, together with the peoples of the dismembered areas of Germany and Austria, may furnish the sinews of new and strange alinements. The fight between "left" and "right" will not end with the present war. As long as Russian totalitarianism is not superseded by democracy and individual freedom, there will be a fear of Russia and a tendency to form continental alliances against Russia.

Will not the United Nations organization be able to prevent a third world war?

Not unless it is considerably changed at San Francisco from its proposed charter. For a clique of major powers already has decided that dictatorships and totalitarianism are internal matters and of no external significance, that if powerful nations want to go to war nothing can be done in advance to persuade or compel them to do otherwise, and that a system of collective security or self-discipline for all is too idealistic.

Is there any way to get a real peace—one that will endure at least for several decades?

Yes; there is a way. It means the establishment of a tribunal of justice with all nations committed to enforce its awards. We must first, however, concede that a court inflamed by passion or bitterness is not calculated to influence the loser to accept his loss or to convince him that he had had a fair trial and that he must seek compensation in fields of endeavor other than those which led him astray. A league of victors, on the other hand, which practices self-restraint and does not allow the spirit of revenge to write the peace terms but objectively, earnestly and sincerely seeks to produce an economic equilibrium in the world so that all peoples may have a chance for employment and for a decent standard of living, could become truly a constructive organization. It could bring real peace. America has enough influence in the world today to assume leadership in the attainment of such a peace.

Why then do we not set up such an organization?

Because too often nowadays the press, radio, and the movies arouse our brutish instincts and not our sense of justice. Atrocity stories and scenes of devastation influence people to succumb to short-sighted slogans. The people should be reminded of the true origins of international friction and of the provocations to war. Our leaders of Government and public opinion and most of their followers profess to believe in the tenets of Christian philosophy but, when confronted with the problem of practical application, they prefer to consider these principles as merely desirable goals for perfectionists—something to be striven for and perhaps attained in the future but certainly not now. Nearly 2,000 years have passed since those basic principles of human brotherhood were promulgated and yet we are told we must not strive today to do too much. There is always some far-off time when the world is expected to develop Christian decency—but, of course, not now.

What are the principal barriers between present-day policies and the achievement of the ideal state of peace on earth?

Propaganda of emotion rather than facts, selfishness on the part of governmental leaders here and abroad who are afraid to face perhaps a temporary loss of political power and to tell the people the truth about the essentials of peace, greed on the part of commercial interests that want territory and resources for exploitation, pride on the part of those who have led millions of youth to their deaths and who glorify military achievement as a mark of virility, and, finally, lack of candor on the part of statesmen of today who know better but who refuse to admit the errors of the 1920's or to admit the truth about the world's failure in 1919 to follow the epochal proposals of an American President. In vain did Woodrow Wilson cry out for a "peace without victory" as a means of healing the wounds of mankind. In that much-misunderstood phrase—which really meant peace without the abuse of victory—lay the key to a constructive peace.

Revenge does not restore the lives lost in battle nor, as modern penology teaches us, does excessive punishment rehabilitate a criminal or keep criminal instincts from being engendered for the first time among masses of men, women, and children who feel they should not be made to suffer for the crimes of ruthless rulers. Millions of Germans still in Nazi concentration camps and the countless relatives of those on the Hitler "purge" lists can testify to the efforts at resistance by an unarmed populace in a Gestapo-controlled state.

When leaders among us are willing to become martyrs for truth and to preach and practice the philosophy of human kindness and justice—even as some of our countrymen laugh at them for their pains—there can be the beginnings of a long peace. It is the most inexpensive price the world will ever be asked to pay—simple sacrifice of stubborn pride and perhaps of a few worldly possessions which we cannot take away with us anyway.

In essence, it demands from all of us—leaders and followers—the surrender of the supreme ego to the Supreme Being. Perhaps God has been waiting patiently for men to learn how to live together in peace before bestowing His blessings. We must deserve peace before we are permitted to enjoy it. Wars are man-made—and so are years of genuine peace.

The "Gripsholm"

EXTENSION OF REMARKS

OF

HON. WILLIAM H. STEVENSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wausau (Wis.) Daily Record-Herald of March 3, 1945:

THE DRIFTER

The Drifter notes by the papers that the *Gripsholm* is at sea again, carrying across the ocean to a neutral port a cargo of Axis diplomats and civilians who have been interned in this country. In Portugal she will set them ashore and load up a similar group of American diplomats, consuls, reporters, and other civilians who have until recently been interned by the Vichy government. The return-trip passengers are already awaiting the little Swedish liner at Lisbon, and their dispatches have told how eagerly they are awaiting the opportunity to board her and head for home.

The *Gripsholm* will be full of history and incident when this war is over. More than any civilian vessel sailing the seven seas will she be freighted with historic memories. The plain, factual statements of her log would make a best seller, one would suppose, and if there is a member of her crew with a gift for writing he should find material for half a dozen books in what he has seen and heard aboard her. She's a neutral link between bitter enemies, sailing always on a voyage of humanity and mercy, and for thousands she has been the gateway from despair to new hope.

On the *Gripsholm* anxious married couples have been reunited after months of imprisonment, during which neither knew if the other were still living. On her, children have been born, old friends have met after long separation, and pining prisoners, suffering from worry and despondency, have miraculously been returned to health and hope.

She has seen the arrogant Japs, "interned" in the lap of American luxury at Virginia Hot Springs, parade down her gang-plank with golf clubs and cases of American liquors and other luxuries, while gaunt, half-clothed, pain-wracked Americans waited in painful eagerness to march up the gang-plank and put forever behind them the memories of Japanese prison cruelty and deprivation.

I think the story of the *Gripsholm* that will longest be remembered is that of the bountiful hospitality prepared by her ship's company for those poor, half-starved Americans whom she took aboard at Siego Suarez in Madagascar after they had been unloaded by some Nipponese "kaisha" or other, after a long voyage on which they were fed on rice and pickled fish. Do you recall the elaborate "smorgasbörd" that the Swedish captain and crew prepared for our emaciated compatriots? It had everything, the dispatches reported, that ever was served in a smorgesbord—which means that it must have looked like Heaven's own bounty to men and women who for months and years had been living on the yellow man's meager wartime rations.

I recall that some of them broke down and wept at the sight of the high-piled tables of dainties; that others gorged themselves to the point of illness—and that many of them found themselves unable to eat at all, or at least to do more than nibble, because their stomachs had so shrunken from the insufficient Japanese supplies.

That was a gesture which showed, if proof were needed, where Sweden's sympathies and hopes lie in this war. The Swedes are neutral, but that doesn't prevent them from knowing the difference between Axis perfidy and the half-bewildered, dogged determination of the United Nations.

I think the American Congress during or after this war, ought to cite for decoration, by a special medal, the officers and crew of the *Gripsholm* for this and a hundred other instances of kindness and sympathy for our sorely beset countrymen. We should be first-class ingrates if we did not realize how much their kindness has meant to so many Americans—and those of other United Nations who have come back with them from the dark places of the earth.

The *Gripsholm*, I understand, isn't one of the world's luxury liners. She's a middle-sized ship, built for tourist-cargo service—not exactly a tramp, but certainly not a floating palace. But what a castle of refuge and security she must have seemed to the hundreds who have boarded her in out-of-the-way ports halfway around the world after having been long in the power of unscrupulous enemies. She's well-found, I'm sure, for nobody in this world loves the pleasures of the table more than the Swedes. But her plain staterooms and clean, pleasant saloons must have seemed like the suburban areas of Paradise to most of her passengers.

They say her passengers, from hard-boiled military attachés to missionaries, from old men to children, invariably line her rail to cheer the Goddess of Liberty as she comes up New York harbor, and those who aren't crying too hard raise the national anthem. One can well believe it—for what American with their experiences would not give thanks with all his heart to see the mighty towers of New York City, and to know that mile upon fruitful mile of his own country stretches across the continent behind them?

The Drifter has never seen the *Gripsholm*, but he hopes to do so one day. I'd kind o' like to tell the sturdy little ship how much she's appreciated for what she's done for us and ours.

MARK R. BYERS.

Establishment of Government General Hospital at Fort Huachuca, Ariz.

EXTENSION OF REMARKS
OF
HON. RICHARD F. HARLESS
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. HARLESS of Arizona. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorial of the Legislature of the State of Arizona:

House Memorial 4

Memorial requesting the establishment of a Government hospital at Fort Huachuca

To the SECRETARY OF WAR OF THE UNITED STATES:

Your memorialist respectfully represents:

The experience following World War No. 1 with respect to the care and hospitalization of returned veterans suggests that early steps should be taken for the establishment of adequate hospital facilities for returning soldiers of the present war.

At the military reservation of Fort Huachuca, in southern Arizona, will be found an ideal location for a veterans' hospital of large capacity.

Fort Huachuca, situated on the eastern slope of the Huachuca mountain range in Cochise County, at an elevation of approximately 3,200 feet, possesses one of the mildest year-around climates in the Nation, a condition highly important in the care and treatment of the classes of cases which are the inevitable product of war.

Early in the present war, the facilities at Fort Huachuca were greatly expanded by the War Department, and many permanent installations made at large expense. At the time of such construction it was planned to accommodate approximately 25,000 military personnel. However, fast-moving events have reduced the military requirements of the reservation to a comparatively small force.

Since the present buildings at Fort Huachuca are mostly new, facilities for the care of personnel installed, and the reservation being maintained, the establishment of a general Government hospital would require only a small additional investment for the remodeling and conversion of the facilities for the purposes of a hospital.

Wherefore your memorialist, the House of Representatives of the State of Arizona, urgently requests:

1. That the Secretary of War give careful consideration to the merits of Fort Huachuca as a location for a general Government hospital for sick and disabled returning soldiers.

Adopted by the house of representatives February 21, 1945.

What Seamen's Bill of Rights Means in a Hospital Ward

EXTENSION OF REMARKS
OF
HON. HUGH DE LACY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. DE LACY. Mr. Speaker, under leave to extend my remarks, which has been given me, I am including a letter which comes to me from the United States Marine Hospital in Seattle. The letter is written by one of our merchant seamen, one of those who contracted tuberculosis in carrying the goods across the dangerous Pacific. He is one of the many war casualties among the great men who keep our bridge of ships intact, who defy death, and whose courage and determination is second to none among the heroes of this war.

He writes to me because my office forwarded to him a copy of H. R. 2346, the seamen's bill of rights, introduced by the distinguished gentleman from Florida, Mr. J. HARDIN PETERSON, which would extend benefits to our brave and patriotic merchant seamen.

The letter speaks most eloquently and I take great pleasure in reading it:

MY DEAR SIR: First let me thank you for sending me the seaman's bill and the letter. I am happy to inform you that this legislation would benefit me better than I dreamed anything could.

The present bill fortunately includes those of us who served in the United States Merchant Marine Cadet Corps. I had about 18 months of foreign duty, including 6 months of foreign sea duty in this outfit.

I also have circulated the bill to the other seamen in the TB wards. You see, we had all heard much of the bill in our union papers, etc., but to actually read and hash over the real goods was like lifting a veil from a mystery.

Most of the fellows said it was almost too good to be true, especially the disability benefits. I wish that every legislator in Washington, D. C., who happens to be undecided or opposed to this legislation could take a trip through this TB ward and talk to the men.

Morale has gone decidedly up. Moreover, this bill will not only help our dependents and alleviate our financial troubles while we are here, but it will encourage us to stick with the cure until we get well. Furthermore, it will mean so much toward helping us stay well. We won't have to worry about going back to work too soon after being discharged; to say nothing about those of us who will never be able to work again.

Very truly yours,

L. H. MATHISEN.

Rehabilitation of the Physically Handicapped

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. SPARKMAN. Mr. Speaker, the problems of the 25,000,000 physically handicapped, both military and civilian, are engaging the attention not only of the Congress, primarily through the work of our House Labor Subcommittee to Investigate Aid to the Physically Handicapped, but of outside organizations and the public generally.

In that connection, I am including below the address I made on March 14, 1945, before Washington Lodge No. 2, American Federation of the Physically Handicapped, along with introductory remarks of the national president, Mr. Paul A. Strachan:

ADDRESS OF PAUL A. STRACHAN, PRESIDENT AMERICAN FEDERATION OF THE PHYSICALLY HANDICAPPED, INC.

President Walsh and friends, I am glad to see an interested, large group here tonight. I am reminded that in September 1940, we couldn't get a handful of people together, to discuss the problems of the 25,000,000 physically handicapped, but, now, we seem to be making progress. Yes, we are moving steadily along.

I believe today there is a feeling on the part of the general public, and of governmental and private agencies at interest that is going to be very helpful to our movement, but, there is no question about it, we all have much to learn. Indeed, we have only started learning.

I can well appreciate, perhaps more than some of you, what it has meant to see this rising tide of public interest in the disabled. I assure you, without reflection upon individuals present, some of us wore out an awful lot of shoes 4 years ago, trying to get public and private agencies to take hold of his thing, and we were laughed at, or ignored. We were told, "We don't want to be bothered with the handicapped!"

We have made very definite progress in another direction. Certainly, it goes without

saying that no national program for handicapped can ever be successful unless it is understood and supported by the Congress of the United States. I know that when we first began canvassing the Hill there was little or no interest. There was a feeling, "Well, we'll get around to this, after while."

I have said before, and again emphasize, if this job is not done right, so far as Congress is concerned, it is not Congress' fault, but our fault. If we do not educate Congressmen, if we do not stand at their elbow and give them continuous jogs, they can too easily forget, because they have many other matters to think of. So, again I say, keep punching; keep reminding them, and they need reminding, continual reminding.

Our first step, of course, toward real victory, the beginning of the work, in my view, was the establishment of the House Labor Subcommittee to investigate aid to the physically handicapped. Now, the picture is much clearer, in some respects, because, prior to that committee, while there were separate groups representing blind, deaf, hard of hearing, polios, cardiacs, tuberculosis, and so forth, there were very few people who had any conception of the whole picture, and there was no approach to an over-all basis. But now, we are learning. We are learning, it is true, the hard way. We know we are learning, because we have to learn, and Congress is learning faster, too, because it must learn.

I am proud that this organization was successful in establishing the investigating committee, and I feel still prouder that what it has already accomplished, in the brief 4½ months of its existence, has laid the ground work of the greatest job yet done for the handicapped. Still, I know that, if only 7 out of an estimated 118 groups of handicapped have testified before that committee, the surface has been but barely scratched and we must continue and complete the work of that committee, by all means.

Now I can tell you something that I believe will make you feel good. As you know, we have been working very hard to have the House reconstitute the committee. Yesterday the House Rules Committee unanimously and favorably reported to the House, House Resolution 45, to continue and complete the work. That, I believe, is the forerunner of favorable action by the House. It is now on the Calendar and I hope the resolution will be taken up very soon.

We have, then, continued to go forward. Let us continue to fight, so that we won't stop with half a victory, or even two-thirds of one, but finish the job. We must devise and execute a program to cover all the disabled. Post-war reconversion and reconstruction will bog down unless we find a way to take care of these disabled people so that they will be tax-paying, self-respecting citizens, not moochers, nor those compelled by defect, injury, or disease to live in enforced idleness, but producers.

That is the program of this federation. We have not requested any special favors for the handicapped. We have demanded only equality of opportunity, and abolition of unfair discrimination. We have said that the responsibility of the Nation to the handicapped is to treat, train, and place these people, insofar as possible, in position to earn their own living, wholly, or in part, and that is still the program of A. F. P. H.

In happier years, it was my job to cover 13 Southern States and very, very frequently I visited, and in fact, made headquarters for a time, in the grand old State of Alabama. I found it to be truly a wonderful place. It had in it all of the natural resources that a State could wish. It had forests, water power, coal and iron, and above all, it had fine people. I am very happy to say that I made many friends in that State. In fact, I believe I once knew a politician in every whistle-stop in it and naturally it still occupies a very soft spot in my affections.

I have to keep an eye on a number of my friends from Alabama in Congress, in order to help them live up to the high standards I demand of those from Alabama. In course of watching public men for some 30 years, off and on, I have marked them down into two classifications—the ones who do things, and the ones who say they'll do things. My conception of the highest exemplification of public service is that of a Member of Congress who stays on the job in season and out of season, and who believes there can be no greater accolade than giving his best at all times for the people.

It is a pleasure to know that there are many in Congress like that. I can call a long roll of them myself, and in introducing the next speaker I can say that he is one of those "who does things." He is liberal where he should be liberal, and tough where he should be tough, and I have seen him steadily progress toward the ideal of statesmanship ever since he came to Congress.

Some of you doubtless remember Woodrow Wilson's statement to the effect that "in Washington some men grow, while others just swell." The next speaker, very definitely, is one of those "who grew."

I know he has a deep interest in the welfare of the handicapped. He has manifested that on many occasions. He is not like those whom we sometimes meet in public life who too easily promise, "Yes; count me in," when the battle is imminent, but when the guns begin to shoot, they ain't there. John is one of those who will always be found ready to do his part when needed, and that is my kind of people.

I take real pleasure in introducing to you our friend Representative JOHN J. SPARKMAN, of Alabama.

ADDRESS OF HON. JOHN J. SPARKMAN

Mr. President, in coming before you tonight, I do so as one long interested in the great work you are doing. To rebuild our physically handicapped men and women is an economic necessity and is, also, I believe, carrying out one of God's own mandates, to restore the ill and injured to usefulness. We should plan wisely, thoroughly, and extensively, now, not only for those in need of immediate rehabilitation, but for all those who will become afflicted in the years to come.

My good friend and your faithful and energetic federation president, Paul Strachan, suggested something to me a few days ago that had never occurred to me before. It was the analogy between the rehabilitation of the physically handicapped and the rehabilitation of a great area in my section through Federal establishment of the T. V. A. Other sections of the United States could be used perhaps as well—our rehabilitation work has been widespread. However, I can speak to you as one who has seen the miracle of rehabilitation come to pass under my own eyes in the T. V. A. area. I have witnessed the mightiest transformation ever performed by human hands in all the world's history. I have seen the wastelands, the denuded forests, the dissipated energies of countless streams of our beloved Southland rebuilt, conserved, and put to work for the benefit of the whole Nation, through exemplification of the very principle your federation is advocating, respecting restoration of physically handicapped people.

T. V. A. took a section of this country which was truly physically handicapped and through its systematic rehabilitative processes, brought that section to a pitch of physical perfection never before attained. It transformed, as I have said, waste into productive energy. It made more than two blades of grass grow where only one grew before, or, to illustrate more clearly, as Chairman Lilienthal of T. V. A. has said, "It made two bulbs glow where only one glew before!"

If we will but look at the composite picture of T. V. A. we will see that although its outward manifestations—its tremendous dams, the creation of miles and miles of inland water transport routes, its scientific and practical control of soil erosion and development of soils, cattle, sheep, yes, even chickens and bees—are awe-inspiring in their magnitude, but the real benefit of all this effort has been in the development and uplifting of our people.

We have seen a growing threat of poverty transformed into promising prosperity and comfort; we have seen an increasing betterment of education. We have witnessed, as corollaries, the upsurge of industrial and agricultural production, and, above all, the great improvement of health.

These things, cumulatively, I believe, have added up to providing in T. V. A. the mightiest weapon for war and the strongest stabilizer for peace the United States has ever seen.

If such a rehabilitation project will work in the T. V. A. area, it will work in any other section of the country, and I hope that our first post-war project will be to engirdle our beloved America with a series of T. V. A.'s, so that all parts of the Nation may have the same opportunities and the same benefits from scientific engineering and planned design for better living.

And this same principle of human engineering should and must be applied to the 25,000,000 physically handicapped citizens of our Nation. If, as we have indubitably proven, such benefits may flow from T. V. A. engineering, then we may be sure that a sound, practical program for all physically handicapped people, built to the scale of need and properly administered, will produce even greater benefits.

In that connection your federation is to be commended for having initiated, through passage of House Resolution 230, the work of the House Labor Subcommittee to Investigate Aid to the Physically Handicapped. For the first time in history, it opened the door to knowledge of essential facts about the handicapped, without which the Congress could not design nor enact appropriate remedial legislation. Just yesterday the Rules Committee reported favorably on a resolution to continue this work.

In this connection I should like to pay my compliments to the great interest shown in this work by Congressman KELLEY of Pennsylvania. He and his subcommittee are to be highly commended for the manner in which the hearings have been conducted and for the tireless effort to get at the real facts upon which to recommend legislation to Congress.

As we study the report and hearings of the committee, it is clear that, as yet, no adequate program has been either devised or applied to cover the needs of the handicapped.

I believe the chief reason for this is, and has been, the lack of knowledge on the part of the public, as well as our legislators, about disabled people in general. I confess I was surprised indeed to note the gigantic numbers of handicapped, in the various categories. It had never occurred to me, for example, and I do not believe the average American citizen realizes, that there are some 13,000,000 cardiacs in this country; nearly a million amputees; 230,000 blind; 10,000,000 children with visual defects; 700,000 children who are epileptics; 120,000 totally deaf; and 10,000,000 hard of hearing. Because the committee has only begun its work, it is manifest that there are many other groups, which, for lack of time, have not as yet been surveyed and which will add tremendously to the aggregate.

This, to me, was a staggering blow. As a citizen, I am concerned to note that this appalling situation exists. As a legislator, concerned with the Nation's welfare, I want to do something concrete to remedy this condition.

Chiseled in imperishable granite at the entrance to our Federal Archives Building, are the words: "All That is Past, is Prologue." So it is with the work that has been done thus far in this field, particularly since the passage in 1920, of the first Federal Vocational Training Act. It is plain that the work has just begun. We in Government, both State and Federal, have been derelict in promoting a program, largely, I believe, because of our great ignorance of the true facts.

Since 1920, for illustration, following passage of the act, down to date, only a grand total of some 205,122 persons have been rehabilitated by Federal-State means. Since it appears that in the same period, from 600,000 to 1,000,000 citizens, or an average of 800,000 yearly, have been incapacitated in some degree, exclusive of the mounting military casualty lists, then we know that, as against that figure the number rehabilitated, approximating an average of 8,500 yearly, is truly picayune, and wholly unworthy of the needs of the handicapped, or the Nation.

Referring again to our lack of knowledge of the bigness and seriousness of this problem, I cannot believe that people generally realize that we are having a total casualty list on the home front of 800,000 a year. Only recently the whole country was again reminded of the great cost of this war when we were told that our total casualties since December 7, 1941—more than 3 years—had been about 800,000. And yet rather unconcerned we go about our business with an equal number of casualties here every year.

It is true that under the stern spur of wartime necessity, larger efforts are being made, but it is clear that even now there must be better coordination, more extensive surveys upon which to base rehabilitation programs, and, above all, more individual service to the handicapped in the form of medical treatment, training, and placement.

A nation which relegates approximately 800,000 of its citizens each year to the human scrap pile is making for insecurity, not security, of both itself and its citizens.

That condition is wrong. It must be rectified for the sake of the Nation's safety. I am glad, indeed, that A. F. P. H. is carrying on the fight, as it has already demonstrated, beyond shadow of doubt, that there must be a militant, powerful organization, campaigning ceaselessly, to force public attention and public action, on behalf of the physically handicapped.

The Congress will respond favorably. I am sure of that. But you must not expect us at a time when we are engrossed in wartime effort to pilot our Nation through the numerous reefs and shoals of domestic and foreign problems, to respond to you, unless you see to it that we are apprized of the facts, and are given a sound program to meet your needs. We must, as Members of Congress, be convinced of the need—the imperative need—for action. That is your job, and you must do it.

I am absolutely opposed to unfair discrimination against the handicapped in employment. It seems to me that any intelligent employer must realize that the preponderant number of employables left in the country today are those who have some degree of physical disability, and every effort should be made to utilize the skills and aptitudes of these people, in work for which they are suitable.

I particularly disapprove discrimination against the handicapped in Government service. It is a sad commentary, indeed, upon our great Government when it has denied, in great part up to the beginning of this war, opportunity to the physically handicapped for obtaining civil-service employment. The Civil Service Commission is to be commended for its present efforts in this direction, but it is clear that appointing officers of some of the departments and establishments still need education on this point.

I voted for House Resolution 230, and I am supporting, as a continuing proposition, House Resolution 45, as the work of the House Committee to Investigate Aid to the Physically Handicapped, which has been so well begun, must be completed. I promise to do all possible to that end.

You have, in A. F. P. H., one of the greatest potential forces for good in the Nation. You have a tremendous field—25,000,000 handicapped, and their friends. You properly build your federation upon the theory that the greatest public service you can render is service to your own people.

You teach the physically handicapped to stand upon their own feet, and fight their own battles. You inculcate in them the feeling of pride and independence that comes, inevitably, from transforming a person from enforced idleness to productive work. You show them that their physical handicaps need not deter them from great achievements, and point out to them that some of our greatest men and women who ever lived, and particularly those in our own country, have been physically handicapped—Edison, Steinmetz, Theodore Roosevelt, Andrew Jackson, Helen Keller—those are only a few. We may even reflect upon the fact that our great leader of the United States, Franklin D. Roosevelt, is one of you.

But all of them, as well as countless thousands of leaders who achieve their goals despite physical handicaps, had faith. Faith is the substance of things hoped for, the evidence of things not seen. I urge all of you to keep your faith. Have faith in yourselves, and then live up to that faith by constant effort to improve yourselves.

If you do this, you will not only better yourself, but you will strengthen our Nation, which needs the loyal, unselfish service of every one of its citizens to withstand the severe rigors of war, and to speed the final victory that will restore the happier days of peace.

Wall Street or Main Street?

EXTENSION OF REMARKS

OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. CARNAHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the St. Louis Post-Dispatch for March 15, 1945:

WALL STREET OR MAIN STREET?

While Bretton Woods has been marking time legislatively, it is becoming increasingly clear that the American people aren't yet hypnotized by the Wall Street bankers' barrage of technical criticisms of the proposed international monetary fund, well termed by Assistant Secretary of State Acheson, "a substitute for international monetary warfare."

They now know that the much-heralded Burgess report backing the bank but blasting the fund was not laid before the American Bankers' Association in convention assembled but is the work of a big-banker-dominated commission under the association's auspices, and was issued without prior approval by A. B. A.'s rank and file. Thomas L. Stokes, Scripps-Howard's columnist, says this illustrates the way the big bankers are trying to kill the Bretton Woods plan because it might cut into their profits and power in the postwar world

The bankers of Main Street promptly registered their disagreement with their Wall Street cousins. The Independent Bankers' Association, with national headquarters in Sauk Center, Minn.—whose Main Street was immortalized by Sinclair Lewis—a body recognized as representing the country banker's point of view, has approved the fund as well as the bank. It reported to Congress that the technical details of the fund "are as sound and as workable as it is possible to formulate in advance of an actual trial and tested experience."

This, we believe, represents the mood of the people. The Main Street banker is close enough to them to appreciate their determination that America won't upset the international apple cart this time because of either isolationism or just plain greed.

The little banker knows what Secretary Morgenthau meant last week by his appeal to the House Committee on Banking and Currency for the quick passage of the legislation to implement our participation in both fund and bank. He knows how important it is that the assembling delegates to the San Francisco Conference of the United Nations, beginning April 25, have this exhibit A of our sincerity in the cause of international economic peace.

Payments for Certain Indian Lands in Arizona

EXTENSION OF REMARKS

OF

HON. RICHARD F. HARLESS

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. HARLESS of Arizona. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorial of the Legislature of the State of Arizona:

Senate Concurrent Memorial 3

Concurrent memorial requesting the Congress to pass S. 114, to pay for lands of the San Carlos strip ceded by the Apache Indians

To the Congress of the United States of America:

Your memorialist respectfully represents:

There is pending in the Congress a bill (S. 114) to authorize payment to the San Carlos Apache Indians for the lands ceded by them in the agreement of February 25, 1896, ratified by the act of June 10, 1896 (29 Stat. 353), reopening the lands to mineral entry, and making them a part of the public domain.

The bill in question is designed to rectify errors made by governmental agencies in permitting citizens to homestead lands in the so-called San Carlos strip and in issuing patents to the State of Arizona and leases to other persons for lands therein, whereas, under the agreement above referrd to, the land should have been opened to mineral entry only.

The proposed bill appears to provide the only equitable method of preserving the rights of all parties concerned, and all parties concerned favor passage of the measure. It is unjust that citizens who have expended much time and money in developing lands

in the San Carlos strip should be ousted therefrom, when the fault lies not with the citizens but with governmental agencies. It is likewise unjust that the lands be used without compensating the San Carlos Apache Indians therefor, and it appears that, if other settlement be not soon made, the Indians and the Indian Service will demand complete restoration of the lands involved.

It is fitting, also, to call attention to the fact that the longer action is postponed the more complicated the condition becomes. The situation should not be aggravated by continued delay.

Wherefore your memorialist, the Senate of the State of Arizona, the House of Representatives concurring, prays:

1. That the Congress of the United States speedily enact S. 114, authorizing payment to the San Carlos Apache Indians for lands ceded by them, and reopening those lands to mineral entry, in order to settle for all time the confusing and conflictnig claims to the lands, and to do justice to all parties.

Adopted by the senate, February 24, 1945.

Adopted by the house, February 23, 1945.

American Merchant Marine: What Shall We Do With It After the War?

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1945

Mr. COFFEE. Mr. Speaker, a few weeks ago I addressed the People's Lobby Conference on the subject of merchant marine in the post-war era. Many citizens throughout America are vitally concerned with the role to be played by America's merchant marine, constructed during the war and financed by Uncle Sam.

Recently, an editorial appeared in the St. Louis (Mo.) Post-Dispatch, which refers to my address and to certain of the points adverted to therein. The editorial is as follows:

SHIPS AS AGENTS OF PEACE

A merchant marine is a vital factor for war or for peace, and as Congressman JOHN M. COFFEE told the People's Lobby Conference in Washington recently, we must determine which ours is to be before fighting ends. The United States Maritime Commission has reported that, in spite of past and prospective losses, the Government will own a fleet of about 50,000,000 deadweight tons at the end of the war—as much as the entire world's merchant shipping in 1939. How will we use this great economic weapon?

The shipowners have made it plain that they expect the early restoration of their carrying trade. Almon E. Roth, the president of the National Federation of American Shipping, testified before the House Committee on Merchant Marine and Fisheries last year that "if we do not get into it at an early date, we will see our British cousins and the Scandinavians going in."

But Arthur E. Phillips, for the C. I. O. Maritime Committee, termed shipping an international industry, and said that continued and increased United Nations collaboration is a prerequisite for profitable post-war shipping operations.

If the operators' attitude prevails, we will hold on to all our tonnage and dominate the shipping routes of the seven seas. Britain, Norway, Sweden, Holland, Belgium, and France will have little chance to come back effectively against our immense fleet or against our propensity to use subsidies to meet any differences in operating efficiencies or costs.

Britain will come out of this war with a merchant fleet greatly reduced in tonnage, but with shipping know-how among the few assets not greatly diminished by war losses.

The way United Nations shipping has been pooled in the war has contributed greatly to our extraordinary logistical achievements. Can we work out a plan for some sort of pooling after the war? As Mr. COFFEE says, any other course is likely to prove a challenge, if not a threat, to peace.

Proposed National Institute of Dental Research

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, March 19 (legislative day of Friday, March 16), 1945

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a series of editorials published in magazines devoted to the profession of dentistry, relating to a bill which I have introduced, designed to establish a national institute of dental research.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Journal of Dentistry of March 1945]

A NATIONAL INSTITUTE OF DENTAL RESEARCH

A bill which provides for a dental-research institute in the United States Public Health Service has been introduced in the Senate by Senator JAMES E. MURRAY, of Montana. The enactment of this bill will speed up the progress of scientific knowledge, so that dentists and other health professions will be able to do vastly more than they can do today in preventing dental diseases. The American Dental Association and the dental profession of the United States strongly supports the proposals of this bill. To the public, this dental-research program offers the hope of bringing, in the future, immeasurable relief from suffering, and tremendous improvement of positive health, in return for expenditures that would be relatively trivial.

The bill proposes that there should be established a national institute of dental research, as a division of the National Institute of Health in the United States Public Health Service. The dental research that is already being done by the Public Health Service and other agencies, public or private, would be greatly increased under arrangements that assure coordination of the new and the old activities.

The Surgeon General of the Public Health Service is to direct the new institute and its work. To assist him, there would be created a national advisory dental-research council, to include—in addition to the Surgeon General who will be chairman—six appointed members, at least four of whom shall be dentists, to be selected from leading authorities.

The institute is to conduct and aid research on the cause, prevention, and methods of diagnosis and treatment of dental diseases and conditions; to promote coordination of dental research to provide fellowships in the institute and make grants-in-aid to universities and other institutions; to secure the consultation services of other experts; and to cooperate with State health agencies. The institute is authorized to receive gifts from private sources.

The Surgeon General is required to make a full report to Congress each year. To give effect to this program, the bill proposes that Congress should authorize appropriations, up to a maximum of $1,000,000, to erect and equip a suitable building after the war; and up to a maximum of $730,000 a year to provide a budget to carry out the program.

This is a bill proposing that we should make a good investment in the future health of the people. It should be promptly enacted by Congress. Practicing dentists can make themselves and the voice of their patients heard. This apportunity should be taken advantage of for the greater health of the public. Write your Senators and the Congressman from your district today.

[From the Fortnightly Review of February 1945]

SENATOR MURRAY INTRODUCES A BILL FOR DENTAL RESEARCH—PROPOSES A NATIONAL INSTITUTE TO AID AND ENCOURAGE STUDIES OF DENTAL DISEASES

A bill was introduced in the Senate of the United States on January 10 by Senator JAMES MURRAY of Montana, who recently spoke before a joint meeting of the Illinois State and Chicago Dental Societies, to provide a dental research institute in the United States Public Health Service. It proposes that the Surgeon General of the Public Health Service direct the new institute in its work. To assist him, there would be created a National Advisory Dental Research Council to include six appointed members, at least four of whom shall be dentists, selected from leading authorities.

SCOPE

The institute is to conduct and aid research on the cause, prevention, diagnosis, and treatment of dental diseases and conditions; to promote coordination of dental research; to provide fellowships in the institute and make grants-in-aid to universities and other institutions; to secure the consultation service of other experts and to cooperate with State health agencies. The institute is authorized to receive gifts from private sources and the Surgeon General is required to make annually a full report to Congress.

APPROPRIATION

It seeks authorization for an appropriation up to $1,000,000 to erect and equip a suitable building after the war and a maximum of $730,000 a year for a budget to carry on the program.

Senator MURRAY points out that modern dentistry is 100 years old and that in the course of the century dentistry has made tremendous progress. While American dentistry is second to none in the world, the dental profession and public-health leaders are not satisfied; they are anxious to speed up the progress of scientific knowledge so that much more can be accomplished in preventing dental diseases and in curing what cannot be prevented.

SENATOR COMMENTS

In support of his bill the Senator states: "Dental diseases and conditions, in damage to health and working power, now cost untold amounts every year, amounts which are probably to be measured in billions of dollars, to say nothing of human suffering and unhappiness. In addition, the people of the United States spend several hundred million dollars a year on dental services, even though they are receiving only a minor part of the dental care they really need. It is therefore good economy and good sense that we should

invest an amount equal to a very small fraction of these sums in learning more about the cause of dental diseases, in inventing new and better methods of treatment, and in improving the efficiency and economy of dental care.

"The dental profession of the United States strongly supports the proposals of this bill. I am sure that many other professional groups that are interested in the improvement of health will also support it as a much-needed and useful step. To the public this dental research program offers the hope of bringing, in the future, immeasurable relief from suffering, and tremendous improvement of positive health, in return for expenditures that would be relatively trivial.

"This is a bill proposing that we should make a good investment in the future health of the people. It should be promptly enacted by Congress."

[From the Journal of the American Dental Association of February 1945]

A NATIONAL INSTITUTE FOR DENTAL RESEARCH

A bill has been introduced into the United States Senate authorizing the appropriation of $1,730,000 for the erection of a national institute for dental research and for fostering dental research by public and private agencies. The National Institute for Dental Research would be a part of the National Institute of Health, Bethesda, Md., which is under the direction of the United States Public Health Service, Federal Security Agency. Similar institutes have already been authorized for research on cancer and tuberculosis and one has recently been proposed for mental hygiene. The dental institute will be erected and equipped at a cost of $1,000,000, while the remainder of the funds authorized will be used to aid dental research by public and private agencies under the direction of the Surgeon General.

The bill was introduced by Senator JAMES E. MURRAY, Montana, who, on two previous occasions sponsored bills for dental research. The present bill exceeds both of those efforts in scope and importance. Senator MURRAY has again given evidence of his substantial interest in providing a scientific approach to the problem of improved national dental health.

The new research bill is the translation into legislation of the first part of the program that has been declared repeatedly by the American Dental Association to be the basis of a successful, long-range program for dental health in this country. At the last annual meeting of the house of delegates in Chicago, the committee on legislation was instructed to make all three points of the A. D. A. program effective through legislation. Dental health education and dental care, the remaining two points, will be treated in bills to be introduced at a later date.

The passage of this bill by Congress will insure a constructive beginning on a national program for dental health. Such legislation deserves the interest and constructive support of both the public and the profession.

[From the Illinois State Dental Journal of February 1945]

STATEMENT OF HON. JAMES E. MURRAY, UNITED STATES SENATOR FROM MONTANA, ON THE INTRODUCTION OF A BILL TO ESTABLISH A NATIONAL INSTITUTE OF DENTAL RESEARCH, AND TO AID AND ENCOURAGE DENTAL STUDIES THAT WILL ADVANCE THE PREVENTION AND TREATMENT OF DENTAL DISEASES

I have today introduced in the Senate of the United States a bill to provide for a dental research institute in the United States Public Health Service.

Dental diseases and conditions are the most common ailments of man. They cause untold suffering and harm. Selective-service examinations showed that defects of the teeth and other dental diseases and conditions were a most common cause of rejection even among the younger men.

In spite of the tremendous advances of science, the causes of dental decay are partly or largely unknown. The methods of prevention, diagnosis, and treatment for many dental conditions are still limited or uncertain in value.

Modern dentistry is just about one hundred years old. In the course of that century, dentistry has made tremendous progress. American dentistry is second to none in the world. Still our dental profession and our public health leaders are not satisfied. They are anxious to speed up the progress of scientific knowledge, so that dentists and other health professions will be able to do vastly more than they can do today in preventing dental diseases and curing what cannot be prevented. One of the most important and promising ways to progress is through well equipped research.

The dental profession of the United States strongly supports the proposals of this bill. I am sure that many other professional groups that are interested in the improvement of health will also support it as a much needed and useful step. To the public, this dental research program offers the hope of bringing, in the future, immeasurable relief from suffering, and tremendous improvement of positive health, in return for expenditures that would be relatively trivial.

My bill proposes that there should be established a National Institute of Dental Research, as a division of he National Institute of Health in the United States Public Health Service. The dental research that is already being done by the Public Health Service and other agencies, public or private, would be greatly increased under arrangements that assure coordination of the new and the old activities.

The Surgeon General of the Public Health Service is to direct the new institute and its work. To assist him, there would be created a national advisory dental research council, to include—in addition to the Surgeon General who will be chairman—six appointed members—at least four of whom shall be dentists—to be selected from leading authorities.

The institute is to conduct and aid research on the cause, prevention, and methods of diagnosis and treatment of dental diseases and conditions; to promote coordination of dental research; to provide fellowships in the institute and make grants-in-aid to universities and other institutions; to secure the consultation services of other experts; and to cooperate with State health agencies.

The institute is authorized to receive gifts from private sources.

The Surgeon General is required to make a full report to Congress each year.

To give effect to this program, the bill proposes that Congress should authorize appropriations, up to a maximum of $1,000,000, to erect and equip a suitable building after the war; and up to a maximum of $730,000 a year to provide a budget to carry out the program.

Dental diseases and conditions, in damage to health and working power, now cost untold amounts every year, amounts which are probably to be measured in billions of dollars, to say nothing of human suffering and unhappiness. In addition, the people of the United States spend several hundred million dollars a year on dental services, even though they are receiving only a minor part of the dental care they really need. It is, therefore, good economy and good sense that we should invest an amount equal to a very small fraction of these sums in learning more about the causes of dental diseases, in inventing new and better methods of treatment, and in improving the efficiency and economy of dental care.

This is a bill proposing that we should make a good investment in the future health of the people. It should be promptly enacted by Congress.

[From the Pennsylvania State Dental Journal of February 1945]

A STEP IN THE RIGHT DIRECTION

The Honorable JAMES E. MURRAY, United States Senator from Montana, introduced a bill in the Senate on January 10, 1944, to establish a National Institute of Dental Research, and to aid and encourage dental studies that will advance the prevention and treatment of dental diseases.

The bill proposes that there should be established a National Institute of Dental Research, as a Division of the National Institute of Health in the United States Public Health Service. The dental research that is already being done by the Public Health Service and other agencies, public or private, would be greatly increased under arrangements that assure coordination of the new and the old activities.

The Surgeon General of the Public Health Service is to direct the new institute and its work. To assist him, there would be created a National Advisory Dental Research Council, to include—in addition to the Surgeon General who will be chairman—six appointed members—at least four of whom shall be dentists—to be selected from leading authorities.

The institute is to conduct and aid research on the cause, prevention, and methods of diagnosis and treatment of dental diseases and conditions; to promote coordination of dental research; to provide fellowships in the institute and make grants-in-aid to universities and other institutions; to secure the consultation services of other experts; and to cooperate with State health agencies.

The institute is authorized to receive gifts from private sources.

The Surgeon General is required to make a full report to Congress each year.

To give effect to this program, the bill proposes that Congress should authorize appropriations, up to a maximum of $1,000,000, to erect and equip a suitable building after the war; and up to a maximum of $730,000 a year to provide a budget to carry out the program.

The outline of the bill in essence is in agreement with the first of the revised principles as recommended by the Council on Dental Health of the American Dental Association.

Important points to be noted in the bill are:

1. Of the 6 appointed members of this Advisory Dental Research Council, 4 shall be dentists selected from the leading authorities in the profession.

2. To promote coordination of dental research, it provides for fellowships in the institute and will make grant-in-aid to universities and other institutions and will cooperate with state health agencies.

3. The institute is authorized to receive gifts from private sources.

The passage of this bill is the impetus that dentistry needs. It can be the beginning of a tidal wave of endowments from private sources for dental research. Medicine has been the recipient of many millions of dollars and has been able to encourage research work in that field. Dentistry has lacked the required personnel of research workers because of the insecurity of financial assurance needed for devoting a life time to dental research.

To see this same Senator MURRAY, who was a cosponsor of the Wagner-Murray-Dingle bill, take cognizance that the over-all picture

of social assistance must begin with research is an encouraging sign and proves that through education and by personal contact with the profession the problems of dentistry can even permeate into the Congress of the United States.

Two Letters

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. VOORHIS of California. Mr. Speaker, on February 5 I made a speech in the House in which I discussed in general the problem of dollar-a-year men and specifically spoke about the connections of Mr. T. K. Quinn with the War Production Board.

Without further comment, I am asking consent out of consideration for Mr. Quinn to insert in the RECORD a copy of Mr. Quinn's letter to me commenting on my speech and my reply to him:

T. K. QUINN CO., INC.,
New York, N. Y., February 14, 1945.

Mr. (H)ORACE JERRY VOORHIS,
Congressman, Twelfth California District, House of Representatives, Washington, D. C.

MY DEAR SIR: I have just seen your completely surprising attack on me spread over four pages of the CONGRESSIONAL RECORD, 822, 823, 824, and 825, of the February 5 issue. You could hardly be further from the truth were you in Germany or Japan, where such vilification would be more appropriate.

In this first reply I suppose I should give you the benefit of the doubt and assume that you were simply taken in and used as a mouthpiece by more sinister job holders fighting for a place on the Government pay roll. The material for the misrepresentations you make was gathered in part by a disgruntled employee whom I could not conscientiously promote to a vacancy he coveted. His contemporary heads of sections were unanimously opposed to his promotion and confirmed my judgment of his incompetence now emphasized by the grudge he bears against me which you voice. He appears to seek a continuing Government job at the taxpayers' expense.

I was formerly in the business of advertising, industrial and public relations, as this letterhead indicates, but I lost my contacts and accounts during, and because of, my service in Washington. Months ago I planned the entirely different national merchandising business in which I am now wholly employed. A dozen trade and business papers have carried articles on it during the past 3 months. You could easily have found this out.

I have never, nor do I now, nor have I planned for 1 minute on capitalizing for profit my Washington experience which, of course, makes your whole calumnious attack a tissue of completely false abuse which can only be excused on the ground that you didn't know what you were saying.

You, sir, are now in the unenviable position of attacking, with a reputation-destroying attempt, a citizen who sacrificed his remunerative position of many years' standing to serve his country in wartime without compensation or expectation of reward; and of using your immunity and the Government time and printing press to publish false allegations. At the moment I can think of nothing meaner or more contemptible.

As to the condition of the War Production Drive Division when I assumed charge, or my work there, I shall not comment except to say that after a year and a half there were 1,800 labor-management committees, many of them inactive, when I took office, and over 5,000 live and active ones when I left a year and a half later. Donald Nelson who has the facts or the vice chairmen, William Batt, Clinton Golden, Joseph Keenan, or Highland Batcheller could have set you straight for the price of a telephone call. Instead you chose the counsel of a disgruntled subordinate. You are quite misinformed as to what was accomplished. I have letters from hundreds of war plants commending my work, as well as from many labor leaders and officials in Washington.

The forthcoming Labor and Management Committee Manual is replete with evidence.

There were no funds or approvals for publishing the record or documenting the experience and technique. So I undertook to do it myself fully anticipating a loss and a further contribution to labor and management teamwork, which is almost a religion with me. Here again you wantonly accuse me of trying to make a private profit notwithstanding my own published statement (printed in the book) that any income beyond costs will be donated to the American Red Cross.

My whole and sole interest in the manual is to get it published for the present and future good of the cause and harmonious industrial relations. We solicited orders in the L-M News at the time it was expected that the Government would print the manual, as it may very well have done. Several officials favored that course, as I did. It took me 2 months to get a decision which was finally negative.

Let me make to you this proposal—

If you will assume my costs of over $5,000, under audit, I'll turn over to you ever cent of the income from the book, provided you also will agree to absorb any loss and donate any possible profit to the Red Cross, as I have. You say you favor the labor and management committee program. Here is an opportunity to prove it. I never heard from you while we were developing the program.

You say with respect to my statement that the book would be sold on a nonprofit basis that you have "only my word" for that. You say that your speech was made not in criticism of an individual, but we have only your word for that You say that you have no animus against me, but we have only your word for that. If you believe the charges you have made, then you ought to feel the same animosity you should bear toward any common crook.

It seems inconceivable to you that there are patriots and dollar-a-year men who will contribute, if necessary, everything they have to their country—except their integrity and reputation—which you now seek in my case, so meanly to destroy.

Your whole speech is so full of errors, misstatements, and subtle implications that it would take pages to correct them.

The War Production Drive Division budget was cut in 1944. We had reduced the personnel under Budget orders to one-half by December 1944. There were to be further major cuts by March 1945, all planned. It was certainly intended to discontinue the division, as such, and as it should be, when the extreme production pressure could be lifted. There was a change of face with the German break-through in Belgium and many of those who had been predicting an early end of the war ran for cover and looked for scapegoats. I favored continuation of the Division without reduction until the war in Europe is over but was forced to accept reductions in the fall of 1944.

The L-M Weekly newspaper which you quote was established by me in September 1943. To get it started I had to underwrite the cost of the first two issues myself because of Government red tape. Perhaps only a dollar-a-year man would or could do that. The Government afterward paid the bill when even the unimaginative could see the value of the paper—after it was printed. However, I personally paid the first salary of the editor who helped make it successful and that cost has never been repaid to me nor do I expect it to be. My alternative was to accept an editor, under pressure, a less competent, political henchman, like the one you champion, which I refused to do.

Your statement that I tried to hire the employees and take over the drive is entirely false and senseless. I did employ one man, when we were required to reduce the personnel, to come with me in my new business as an accountant and analyist. Neither of us has ever done any labor-management work since his employment except to produce the book.

I could go on, but perhaps you have read enough. What I expect and hope from you is a full retraction. I am not unused to the methods of publicity or too poor to see that every official, war plant, and newspaper in the country gets all the facts. Still I prefer to believe that after further investigation which you should have made before your attack, you will be man enough to admit your error and withdraw your completely false allegations.

Very truly yours,

T. K. QUINN.

MARCH 12, 1945.

Mr. T. K. QUINN,
New York, N. Y.

DEAR MR. QUINN: I am in receipt of your letter of February 14 commenting upon my speech in the CONGRESSIONAL RECORD of February 5 (in which I discussed the work of the war-production drive of the War Production Board and your connections therewith.

In the first place, I can assure you that the information which I received did not come from any "disgruntled employee," as your letter indicates. Quite the contrary is the truth. Furthermore, when you suggest that I should have checked the matters discussed with officials of the War Production Board, I am able to tell you that I did so before the speech was made and that I should not have made the speech otherwise.

The basic difference between us seems to be your opinion that the War Production Drive should be discontinued as soon as possible, whereas I believe that the work of Government in promoting cooperative relationships between management and labor should be continued as vigorously as possible into the indefinite future. A careful reading of my speech will show, I am confident, that I did not at any point attempt to judge the motives which prompted your action, and I repeat the statement made in the speech that I have no animus toward you or any other individual but that I do believe the dollar-a-year system is a serious mistake of Government policy; that I have believed this for a long time; that I felt that certain circumstances connected with your relationship with the Government in that capacity illustrated its weakness.

I should like to point out that in my speech where I commended the work of the war-production drive I made no exception of the period during which you were in charge of it. I believe that the drive was, generally speaking, a success all the way through, both during the period when you were in charge of it and before and after it.

You will not find in my speech criticism, of the work which was done by yourself while you were head of this drive excepting such criticism as relates first to your announcement on your own personal stationery while you were still an official of the drive to the effect that the drive was going to be discontinued and excepting again the rather close

relationship between your work as head of this drive and the publishing of the booklet which your company is now carrying on.

My feeling about these matters is not limited to the War Production Board or to dollar-a-year men. I enclose copy of the resolution which I have introduced in the House for an investigation of the influences of former employees of the Government upon decisions of another department.

It is true I have been definitely under the impression that your company was continuing with the work of advertising and performing services in the field of industrial relations and the letterhead upon which you wrote your letter to me tended to bear that out.

I did not state in my speech that you were making a profit out of the sale of the book. I did state that your company was a profit-making enterprise and that it was selling the book which contained the material developed by a Government agency with which you were formerly connected. I have no means of knowing whether on this particular book any profit is being made. But you tell me no profit is being made on it, and I am perfectly willing to take your word for it. The War Production Board assures me that all the material contained in that book is available at no cost to anyone in the ranks of industry or labor who may desire it.

Your action in underwriting the cost of the issues of the Labor-Management weekly newspapers is certainly to be commended and I am very glad to do so herewith. I am glad you were reimbursed and did not have to sustain personal loss.

I still believe that it was not right for you while still an official of the War Production Board and in your capacity as a private businessman either to indicate that the War Production drive was going to be terminated or to indicate that the materials made available as the result of that drive would be sold whether at a profit or otherwise by your own company.

In one respect at least I do not blame you for being angry. The reason I say this is because the same sort of thing has happened in a good many other cases. There are unfortunately the cases of lawyers formerly employed by the Government who have subsequently made a very lucrative business out of representing private clients before Government agencies, thus capitalizing upon their governmental experience and the cases of other dollar-a-year men who have acted in similar fashion. In other words, the points wherein I criticized your action are no doubt equally applicable in other instances. But this only reinforces the reasons which I had for trying to point out the weaknesses of the dollar-a-year system.

If you want me to do so I stand ready to insert your letter to me of February 14 together with this reply of mine in the CONGRESSIONAL RECORD. It is certainly not my desire and never has been to put you in any position of not having an opportunity to make reply through the columns of the RECORD in which my original speech appeared.

Sincerely yours,

JERRY VOORHIS.

Human Rights

EXTENSION OF REMARKS

OF

HON. HERMAN P. KOPPLEMANN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. KOPPLEMANN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over Station WDRC Sunday, March 18, 1945:

There is a great deal of speculation in Washington these days about what will come out of the United Nations Conference in San Francisco. Although it is recognized that the delegates have a tremendous task before them, the general feeling is that the prospects are good for setting up the framework of a world security council.

The Conference is being widely discussed not only by statesmen, diplomats, and politicians, but by the peoples of all the United Nations who are wondering whether it will result in a practicable, workable international organization, capable of solving the many complex problems of the peace. Men and women throughout the world are waiting to hear what the plans are with regard to national security and economic cooperation.

But above all, the peoples of war-town Europe and Asia are anxious to learn what measures will be taken to safeguard the personal freedoms of the common man. For there is a mounting conviction that the protection of basic human rights must be the foundation of any system of global law and order; that unless the United Nations jointly undertake to guarantee individual liberty, all our planning will be powerless to prevent another war.

Many people who have been giving serious thought to the post-war period have come to this conclusion: that the future international organization must not only iron out complex problems of relationships between different countries, but must also provide legal guaranties of freedom of worship, speech, and assembly, and equal justice under the law, for all people in every country of the world.

John W. Davis, nominee for President in 1924, on behalf of the Commission to Study the Organization of Peace, called for machinery that would provide for a commission on human rights. President Roosevelt stressed the essential place of human rights when he rallied the world to the Four Freedoms as a common goal.

Commander Stassen in his Nation-wide radio address of March 7 gave a very interesting statement of how progress in this field might be made. He said, "The beginning may be very small, but even if we started with the enactment of one law, a law that no country, in time of peace, shall execute a human being without just trial, it would be a significant step. We sometimes fail to realize that there is no such world law today. The Nazi stormtroopers and Gestapo who dragged civilians from their houses in Germany and summarily shot them were violating every moral code we know of but were not violating any international law because there is none to protect a human being within a nation. We know full well that Nazi aggression actually started, not when Hitler marched across his borders, but rather when he ruthlessly trampled the rights of men within Germany. The rights of freedom of worship, of fair trial, of freedom of speech and press, the right of the worker to organize, and the prevention of discrimination should be developed."

With that purpose in mind, 150 distinguished Americans from all walks of life, have signed a document urging the United Nations to create a permanent Commission on Human Rights and Fundamental Freedoms. Their statement of purposes expresses the belief, shared by all far-sighted Americans, that the struggle for human rights and the struggle for peace are two sides of the same coin.

This document says in part: "At Dumbarton Oaks the United States, Great Britain, the Soviet Union, and China took a momentous step in the age-long struggle for liberty by proposing to give international sanction to human rights. They proclaimed that in order to create 'conditions of stability and well-being which are necessary for peaceful and friendly relations among nations' there must be international action to 'promote respect for human rights and fundamental freedoms.' Thus they recognized that the violation of human rights anywhere may be a threat to world peace everywhere. To safeguard these rights they open the way for a permanent agency within the coming world organization."

Establishment of such an agency would be a tremendous step forward toward the goal of freedom for all, regardless of race, nationality or religious faith. And equally important, it would help up avoid disastrous errors of the past, when we failed to recognize, until too late, that attacks upon the rights of individuals or groups within a country were actually the first steps toward foreign aggression and war.

None of us enjoy recalling our mistakes. Such reminders are often painful, but they can serve as guides to future action. So I want to go back for a moment, to the days when we Americans thought we could isolate ourselves from events beyond our own borders. When fascism came to Italy, we did not see that it was any affair of ours. Besides, Mussolini made the trains run on time, and the beggars were cleaned out of the streets of Rome. Bombs dropping on the defenseless people of Ethiopia didn't leave huge craters in the streets of Hartford or Bridgeport.

And when a wild-eyed fanatic from a beer hall in Munich became Chancelor of Germany, it created very little stir in America. When Hitler's storm troopers attacked innocent Jews, threw priests and ministers into concentration camps, and broke up trade-union meetings, many of us were shocked; but still we said that events in Germany were the business of the German people and no concern of ours. Finally, however, when the Nazis and Fascists, firmly entrenched at home, started marching toward world conquest, we began to realize the reckless folly of our shortsightedness. By that time, Hitler had seized the Rhineland, Austria, and Czechoslovakia; Albania and Greece had fallen, and the invasion of Poland was launched.

The freedom-loving peoples finally shook themselves free of appeasement and hesitation, and joined hands in a world-wide unity which slowly but surely turned the tide. Today, the enemy is being pounded from all sides, with no hope of salvation.

Thus, Hitler gave us an object lesson, and we learned one truth we will never forget—that when the oppression of one group is allowed to go unchallenged, the rights of all are in danger.

Protecting the rights of others, therefore, is no longer a matter of altruism, but of hard-headed, practical self-interest. We dare not return to the old system where every nation is a law unto itself in the treatment of its citizens. Just as nations must be safeguarded against aggressions by other States, so must the people within each country be assured of international defense against arbitrary violation of their basic human rights.

In a sense, this is not a new concept. It is in fact, a logical advance in the march toward freedom which began in a meadow at Runnymede, when King John of England signed the Magna Carta over 700 years ago. Let's face the facts of the changing times. The airplane, the radio, and other marvels of modern science have made our world very small. As a result, nations have become so dependent on each other that the fate of their citizens can no longer be considered a domestic concern.

The job of setting the world in order is a slow and laborious one, but we have a great opportunity to make a start in that direction. The creation of a commission on human rights will not automatically end injustice

and the menace of aggression, but it will provide us with the machinery whereby such evils may eventually be eliminated.

Its success will depend in great measure upon our determination to support such an agency. The United Nations must be prepared to take steps against power-hungry leaders in any country who stir up racial and religious prejudice and make scapegoats of minorities as a device to gain tyrannical control.

We can do it if we will. The plain people of the world, when they get together, are an irresistible force. That has been proven in the desperate crisis of war. But the problems of peace require of us an equal measure of devotion. If only we can go on in the spirit of comradeship, freely discussing and solving any differences which may arise between us, subordinating selfish national and personal interests to the need for unity, we can secure the goals for which at this very moment American boys are fighting and dying on distant battlefields.

The forces of reaction and bigotry will try to undermine our efforts. Reliable reports indicate that the Nazis are making their own post-war plans. In preparation for inevitable military defeat, they have already set up an underground propaganda network on an international scale. Their agents will try to sabotage cooperation between the democracies, and deprive the new world organization of any unified backing.

It is not always easy to spot these enemies, but we have the experience of the past to help us. We must be on guard against those who are contemptuous of human rights. At San Francisco we can lay out blueprints to safeguard these rights. And if the people continue to stand together in defense of liberty for all, we may at last be opening the door to peace and universal justice.

Representation at Peace Table of Members of the Armed Forces

EXTENSION OF REMARKS

OF

HON. HERMAN P. KOPPLEMANN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. KOPPLEMANN: Mr. Speaker, under leave to extend my remarks in the RECORD. I include the following resolution of the General Assembly of the State of Connecticut:

Resolution memorializing Congress concerning representation at the peace table of members of the armed forces.

Whereas the American soldiers have fought with unequaled courage, valor, and bravery, moving always forward from victory to victory, spilling their very lifeblood that our cherished American ideals might not perish: Therefore be it

Resolved, That the Congress is petitioned to take suitable action to provide that the 12,000,000 men of the armed forces be represented at the peace conference, that there be selected one member from the personnel of the enlisted men of the Army, one from the Navy, one from the Air Force, one from the Marine Corps, and one from the merchant marine, to have their part in the deliberations for the peace of the world, and be it further

Resolved, That the clerks of the house and senate are directed to forward a copy of this resolution to each of the Connecticut Members of Congress.

Asking Why

EXTENSION OF REMARKS

OF

HON. CHARLES E. McKENZIE

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. McKENZIE. Mr. Speaker, I have just returned from a short visit to my district. The people there feel, just as I find people everywhere feel, that the war in Europe is fast approaching decisive military action that must bring it to a reasonably early end. Press and radio reports have quoted high authority as placing the end of the European war at varying dates, none of which go beyond July. Whether these estimates be right or wrong, I suppose no layman should say. Nevertheless, the people here at home, the parents and wives and families of the men doing the fighting, the man in the street, the clerk in the store, the farmer behind the plow, the worker in the industrial plant; the average American who is working overtime to help get the job done, who is enduring food shortages, being regulated by bureaucrats and wild-eyed theorists; Mr. John Q. Public who is doing the work, supplying the know-how, and paying the taxes, has a right to wonder. He is willing to make any necessary sacrifice but he is beginning to have some pertinent thoughts that rouse uneasiness in his mind. He has been told that the Pacific war has taken only 40 percent of the Nation's war effort, obviously the other 60 percent is being exerted in the European theater. Can the Japanese war be expected to increase two and one-half times in tempo? Of course not. Distances and shipping facilities alone would preclude that. Military men do not expect it. So why should not the American people be a bit skeptical of the continued pressure and drives for further regulation and regimentation? Why should not he expect a reasonable return of civilian goods to the market?

The truth of the matter is that he does expect it. He feels that he is being badly treated and possibly deceived. He has vivid recollections of the cancelation of ration points by O. P. A. less than 3 months ago and feels that by this action his Government broke faith. He feels that the Government, his Government of which he is supposed to be the master, has reversed the normal procedure of government serving the people and has contemptuously attempted to make the people the servants and slaves of the government and its bureaucrats. He believes in his right to constitutional democratic government. He believes in free speech and will deny it to no one, but he also believes it should be honest speech. He knows he has been the victim of much propaganda that was Government inspired. Naturally he is just a bit doubtful just now and with General Ayres and the Washington Post is asking why. I offer the editorial below. It speaks for itself:

ASKING WHY

Gen. Leonard P. Ayres, well known business analyst for the Cleveland Trust Co., considers it a "curious anomaly that while we are watching one of our wars draw toward its end, we are acting as though we were convinced that both of them were going to continue indefinitely." It is, indeed, hard for the average civilian to understand why production of goods for civilian use should actually be cut down and munitions orders be stepped up, with cut-backs in the offing as the close of the war in Europe approaches. For we cannot possibly need as much for the conduct of one war as for two. And in any case there are limits to the quantity of materials and supplies that can be moved out of the country into the Pacific areas.

No really satisfactory explanations have been given for the increased demands of the armed forces, the clamor for additional manpower when labor is known to be inefficiently utilized, and the virtual abandonment of spot reconversion plans. There is little open complaining but an undercurrent of doubt and dissatisfaction is making itself evident in thinly veiled criticism of the erratic programming of the armed services and the consequent interruption to a steady flow of war materials and essential supplies. A general uneasiness among war workers is also a sign that the public simply does not give credence to vague suggestions that the war in the Pacific will engage our energies and resources so fully as to preclude substantial cut-backs in the war program after the fall of Germany.

Finally, comments such as those voiced by the cautious General Ayres are an indication that the home front is doubtful whether all the sacrifices now being demanded of civilians are really necessary or justify extra deprivations imposed by the ultra caution of those made wary by past mistakes of underestimate.

William Jennings Bryan

EXTENSION OF REMARKS

OF

HON. JOE HENDRICKS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. HENDRICKS. Mr. Speaker, this is the birthday of William Jennings Bryan. Far be it from me to make any attempt to pay proper tribute to this great man. Suffice it to say that because of his interest in the common man he was and is known as the Great Commoner. It was an honor to Florida that Williams Jennings Bryan was a citizen of our State. Our beloved chaplain, the Rev. James Shera Montgomery, known in his newspaper days as "Gummy," and loved by every Member of this House, pays this tribute to William Jennings Bryan:

I believe that America has a Providence. Things do not come to pass in the founding of any country just by chance. So we revert to our political history for a moment and call to mind that outstanding character in our political and religious life, William Jennings Bryan. Disregarding the controversy of that era, it must be concluded that there was an unseeing hand shaping and directing the destiny of our country. I knew Mr. Bryan personally. One Sunday morning

in Calvary Methodist Church in this city, while I was its pastor, Mr. Bryan preached for me and in his introductory words he commended me to the chaplaincy of the House of Representatives. He was assuredly and truly called the Great Commoner. His heart and thought were ever in the interest of the common man. He was the forerunner of a new era which more and more is bearing a fine fruition. He was a prophet and a preacher of righteousness. He lived on a very high political plane but he also lived devotedly on a very high level of Christian life and character. I regard him as one of the outstanding churchmen, not only of his day but of our day. It would be wise indeed for this young generation to know more and more of this great soul who was the teacher and preacher of political and Christian righteousness.

Radio Address of Lothrop Stoddard

EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address by Lothrop Stoddard, delivered March 18, 1945:

On both sides of the world the war grinds bloodily on toward an eventual conclusion which is almost mathematically certain, even though the timing cannot accurately be foretold. Under such circumstances, the interest of far-sighted persons tends increasingly toward the shaping of the post-war future. Such thinking is quickened by the imminence of the San Francisco Conference, now less than 6 weeks away, whose outcome will go far to determine the nature of the post-war period. But that outcome will, in turn, depend to a considerable degree on the state of public opinion, especially here in the United States. Unfortunately this country seems to be heading into a serious domestic crisis which coincides with an equally serious diplomatic crisis involving the very essence of the Yalta agreement between Soviet Russia and its western allies. I shall defer discussion of the foreign scene until the outcome of current events in Romania and elsewhere make clearer the moot question of Moscow's intentions and good faith. This Sunday I propose to survey the domestic situation in its relation to foreign affairs. For it would seem obvious that if our domestic economy continues to deteriorate at its present rapid rate, public opinion will tend to react violently against the monumental commitments and contingent sacrifices which, under the international programs elaborated at Dumbarton Oaks, Bretton Woods, and Mexico City, the United States is supposed to assume. From the purely psychological aspect, the inherent validity or invalidity of those programs is of secondary importance. The primary question is, What will be the national state of mind if a coincidence of domestic and foreign crises this spring raises a wave of popular antagonism and disillusionment, with its immediate reaction upon Congress, and even upon the Executive branch of Government.

The complex difficulties under which we labor are of long standing. They began when our original role under lend-lease as the pseudoneutral "arsenal of the democracies" was expanded into that of a belligerent in a gigantic two-front war compounded with enormously intensified lend-lease efforts, and still later further complicated by prospective post-war commitments on a prodigious scale. Conservative economists have long been warning that only the wisest and most comprehensive planning could enable even so strong and wealthy a country as the United States to keep up so gruelling a pace and carry so heavy a load. But every well-informed person knows that our wartime economy has evolved largely through improvisation, compromise, the pulling and hauling of pressure groups, and partisan politics. The result has been an enormous amount of waste, extravagance, mismanagement, slackness, profiteering, and downright corruption. And the bitterest fruits of those unwholesome growths have been, for the average citizen, the unending shortages and uncertainties which do so much to make life hard and exasperating—the more so as many of them appear to be either partially or mainly avoidable.

To discuss or even to catalog the shortcomings of our wartime economy would be profitless, since they are all too well known to each of my radio listeners. It will suffice to discuss briefly the current meat crisis, which threatens to be not merely a bad shortage but an actual famine. The sad story was succinctly told in a United Press dispatch of last Tuesday from Chicago, the meat-packing center of the country. It reads:

"The worst meat shortage since the start of the war has cleaned out butchers' counters from one end of the United States to the other. A United Press survey tonight revealed that in nearly every area of the country the better grades of meat have disappeared. Producers, wholesalers, and retailers agreed gloomily that months may elapse before these meats again will be on the counter. A familiar spiral of events revealed itself in the meat picture. Customers thwarted in their hunt for fresh meat swamped retailers with demands for fish. As fish became scarce under the impact of the new customer pressure, the scramble switched to poultry. That in turn led to a War Food Administration order establishing priorities for poultry supplies. In places where a housewife could still find some meat, it was mainly cold cuts and canned or luncheon meats. Runs on supplies of these, forecasting their early disappearance, were reported. * * * The Meat Trade Institute reported that less than 5,000,000 pounds of meat a week was available for home use, compared with a normal consumption of 20,000,000 pounds. The institute said the situation had been aggravated by the worst black market in the country. It estimated that 90 percent of meat in New York City was moving into retail channels at above-ceiling prices. Even at Dallas, Tex., in the heart of the cattle country, it was reported that throughout southwest areas the shortage was unprecedented. The shortage has hit civilians dining out just as it has home diners. Quick-lunch stands are closing everywhere, as are barbecue pits and hamburger shops."

The impending meat famine is, of course, merely the most acute of a long series, most of which tend to get worse rather than better. How far can they be explained by the stock alibis of military needs, increased civilian consumption, labor shortages, and lend-lease shipments abroad? Before going too far into that maze of arguments, suppose we take a look across our northern border and see how our good neighbors the Canadians manage their national housekeeping. Let me quote some excerpts from a recent series of articles by an American journalist who is making an investigatory trip through the Dominion. Writes Willard Edwards:

"The cream is thicker, once you cross the border into Canada. That's just one of the scores of little items which appeal to the American visitor who has been fretting under our wartime bans and restrictions. The Dominion has not found it necessary to invoke those limitations on living, even though it has been formally at war 2 years longer than the United States. It looks with mild amusement, tinged with scorn, upon what it views as hysteria which has prompted a midnight curfew, abolition of conventions and horse racing, curbs on sports, limitation of outdoor electric displays, and rationing of a great variety of commodities. * * * There are only three edibles rationed in Canada—butter, sugar, and preserves. Butter rationing is a joke by comparison with the American system, half a pound being allowed per week for each person in the family. Few Canadians use all the butter coupons given them. Restaurants parcel out two lumps of sugar for each cup of coffee. Coupon allowances for preserves and jams are generous.

"There is a nostalgic pleasure in wandering through a Canadian meat market, gazing on a vast arrangement of beef, lamb, pork, chickens, turkeys, ducks, and cheese—all available without a ration book. On grocery store shelves are ration-free cans of peaches and pineapples (80 blue points in the United States) and bottles of catsup, canned milk and other canned goods upon which large ration point values have been set in the United States. Liquor is practically the only commodity now easier to obtain at home. But you can step into a Canadian cigar store and buy a dozen packs of cigarettes if you so desire. You can sit in a shoe store while a deferential salesman displays a wide variety of handsome brogans for your approval at from $6 up, according to your pocketbook. No limitations on purchases. No coupons. Food prices in public restaurants are generally lower and the portions more generous. A thick sirloin steak in a leading hotel costs $1.75. A club sandwich, crammed with bacon and slices of chicken, was 60 cents. In a cheap but clean restaurant, a plate lunch of pork chops, fried potatoes, salad and coffee cost an incredible 30 cents. Rich ice cream is plentiful. There's no rationing of fuel oil. New home construction is widespread—enough to care for the gain in population."

Well, that's the general picture across our northern border. How have the Canadians done it, despite the fact that the Dominion has been in the war 2 years longer than we and has unquestionably done as much, if not more, than we have in every branch of the war effort, in proportion to its percentage of population? The basic answer is quite simple. Early in the war, Canada established a scientifically worked-out system of overhead war controls, playing no class or sectional favorites and holding the balance even between industry, business, labor, and agriculture. The result has been stable price levels, virtually no shortages, and a smoothness of everyday living which should make us green with envy.

Now, with all allowances which may be made for differentials between Canada and the United States, something must be very wrong with the picture here when a new super agency headed by War Mobilization Director James F. Byrnes has had to be hastily set up to investigate and, if possible, end chaotic conditions which threaten our domestic economy and our war effort. The howls which have at once arisen from every department threatened with curtailments testify to the magnitude of our commitments, especially abroad, and I cannot think that the President has clarified the situation by his assertion that the American people will have further to tighten their belts, speaking as he did before any evidence had been adduced as to how much of the trouble is due to inefficiency, waste, or overlapping, uncoordinated demands of governmental agencies. As conditions get harder, the American public is going to demand both factual explanations and remedial action before they are in a mood either to tighten their belts now or promise to keep them tightened after the fighting stops.

The example of Canada today is bound to make a deepening impression on American public opinion, just as the Dominion's far wiser handling of the liquor problem did so much to hasten the abandonment of our ignoble experiment. A people will put up with a great deal up to a certain point. Then, even a relatively slight worsening of a bad situation may act as a sort of detonating incident, precipitating a major change in the public temper out of all seeming relation to its proximate cause. Unless I am much mistaken, the American people are about ripe for such a psychological shift, and drastic remedial action regarding our domestic economy can alone avert it. The effect of a sharply changed attitude of mind would inevitably be reflected in the popular attitude toward foreign as well as domestic problems. In addition, the simultaneous impact of a diplomatic crisis over Rumania and other points of difference between Soviet Russia and the western signatories of the Yalta agreement would both compound and intensify the temper of American public opinion.

All this is one important background factor against the coming San Francisco Conference which many foreign commentators overlook, but which I believe should be closely watched and carefully kept in mind.

Democracy in Action

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I am inserting copy af a questionnaire which on January 23, 1945, I attempted to place in the hands of as many citizens of my district as possible. I fully realize it was humanly impossible to secure the opinions of all of my constituents, but believe the replies received fully cover the majority of the opinions.

I am also including an article that appeared in the Columbus Dispatch on March 11, 1945. The results obtained, as set forth in this article prove to me that the people, which it is my honor to represent, are anxious to express their views on issues before Congress for consideration. As long as I am in Congress, it will be my aim to endeavor to learn the opinions of my constituents and will always welcome their suggestions. I am one, Mr. Speaker, who firmly believes that the people back home are a part, and want to remain a part, of our National Government.

QUESTIONNAIRE

From Hon. J. HARRY McGREGOR, Member of Congress, Seventeenth Ohio District:

(1) Do you favor a national work-service law (giving authority to the Director of War Mobilization to determine where you shall work—refusal of which would be civilian penalty)?
Yes ------- No -------
Remarks:
(2) Do you favor drafting of nurses?
Yes ------- No -------
Remarks:
(3) Do you favor drafting the IV-F's?
Yes ------- No -------
Remarks:
(4) Should IV-F's be given full veteran benefits?
Yes ------- No -------
Remarks:
(5) Do you favor compulsory peacetime military training?
Yes ------- No -------
Remarks:
(6) Should compulsory peacetime military training be devoted solely to military, or should it include courses in educational, social, and religious subjects—the type of training the National Youth Administration previously gave?
Yes ------- No -------
Remarks:
(7) Do you favor United States becoming a member of a world peace organization?
Yes ------- No -------
Remarks:
(8) Would you favor No. 7 if Russia and England refused to apply the principles of the Atlantic Charter to the small nations (not allow them to become active members of a world league)?
Yes ------- No -------
Remarks:
(9) Do you favor Senator VANDENBERG'S plan of beginning a league now before the war is ended?
Yes ------- No -------
Remarks:
Signature ----------
Address ----------
Occupation ----------
Date ----------

Please write on the back of this page your comments on what the peace proposal should contain and how the Axis nations should be governed.

Please return to 1534 House Office Building, Washington, D. C.

[From the Columbus (Ohio) Dispatch of March 11, 1945]

WASHINGTON, March 10.—What 725 citizens in the Seventeenth Ohio District think of a world peace organization, peacetime military training, drafting of nurses, and other momentous questions was reported today by Representative J. HARRY McGREGOR, of West Lafayette, in a tabulation of answers to questionnaires he sent out recently.

The Seventeenth District comprises Ashland, Richland, Coshocton, Delaware, Licking, and Knox Counties.

This is the third year that he has taken this means of sounding out his constituents on public questions, and he received the greatest response of all. The first year there were only 300 replies to 1,200 questionnaires; last year, 500; and this year, 725 out of 1,200.

So successful has this method become, Congressman McGREGOR reports, that some 15 or 20 other Congressmen are thinking of trying it out on their districts. He has had a number call on him this year to request copies of his questions.

Replies were received from Democrats and Republicans, ministers, lawyers, beauty-parlor operators, blacksmiths, mechanics, school teachers, housewives, etc. In addition, the questions were discussed at civic clubs and lodge meetings, and answers tabulated.

One garageman wrote the Congressman:

"This paper was handed to me by a friend of mine, and it being the first time I have known of a Representative of the people at Washington being interested enough in the people back home to go to the trouble to try to find out what they wanted in the way of new laws, I thought I should take time to answer it."

So did the head of a $30,000,000 concern, a noted author, an Army officer now on duty in another State.

"When one gets answers like this," said McGREGOR, "I feel that one is getting the real views of the people, not answers from pressure groups."

He compiled not only answers from the total but replies according to special types or occupations of voters.

Results were as follows:

A total of 559 voters opposed a national work service law which would have the authority to determine where they would work and include a civilian penalty for refusal. There were 159 favoring this. Farmers for the most part were opposed to this, voting 68 to 20. Labor groups opposed it 54 to 11; housewives, 42 to 12; businessmen, 110 to 25; professional people, 67 to 38; and attendants at club meetings, 145 to 95.

The vote opposing the draft of nurses stood 394 to 311. Farmers favored this 45 to 40 but labor opposed the draft of women 45 to 24. Housewives opposed it 31 to 25, businessmen 70 to 66, and professional people 67 to 38. Club members on the other hand favored it 132 to 111.

There was a vote of 419 to 265 in favor of drafting the IV-F's. Farmers favored this by a narrow margin of 49 to 37. Labor voted for this 35 to 25, housewives by a like margin of 33 to 23, businessmen by a somewhat wider margin of 78 to 58, professional people by a vote of 63 to 38 and club members by the wide margin of 152 to 88.

To the question whether IV-F's should be given full veteran benefits, 388 voted for this to 271 opposed. Farmers said "no" by a vote of 44 to 36; labor, by the difference of 3 votes, 30 against and 27 for; housewives said "yes," 28 to 25; while businessmen said "no" by 71 to 57; and professional people "no," 54 to 46. Club members, however, voted for giving the IV-F's full benefits, 204 to 46.

To the question: Do you favor compulsory peacetime military training? 387 said "no" and 327 "yes." Votes by groups on this question were, farmers, 77 opposed, 27 for; labor, opposed, 56 to 27; housewives, opposed, 49 to 26; businessmen, for, 81 to 57; professional, for, 59 to 45; club members for, 185 to 54.

Should compulsory military training include educational, social, and religious subjects, that is, the type of training the National Youth Administration gave? To this 385 said "yes" and 205 "no." Farmers were almost evenly divided on the matter; businessmen favored it 76 to 35; professional men voted for it 56 to 30; and club members endorsed it 151 to 53 votes.

Constituents voted overwhelmingly in favor of the United States becoming a member of a world peace organization. Totals stood 655 for to 48 against. Businessmen registering the most nos on this, 17 no and 120 for. Farmers voted 83 to 2 for it; labor, 52 to 10; housewives, 55 to 2; and professional people, 19 to 9; and club members, 226 to 10.

The vote was opposed, however, when McGREGOR asked if his district would favor United States entry into a world peace organization if Russia and England refused to apply the Atlantic Charter principles to small nations, not allowing them to become active members of a world league.

To this, a total of 406 voters said no and 259, yes. Farmers as a group said they would be opposed to United States membership in such an organization under these circumstances. They voted 51 to 28. Labor taking a similar view voted 39 to 14; housewives, 40 to 11; businessmen, 82 to 48, and club members, 136 to 92. However, professional people voted in favor of United States membership, regardless, by a vote of 59 to 46.

A total of 519 Ohioans in the Seventh district favored Senator VANDENBERG'S plan of beginning a league now before the war is ended, as compared with 160 opposed. Farmers voted 69 to 16 for this; labor, 40 to 20; housewives, 45 to 4; businessmen, 112 to 19; professional people, 76 to 21; and club members, 167 to 51.

In addition to his poll, McGREGOR said he would continue his practice of meeting constituents at various courthouses in his district during the summer at which time dis-

cussions on these questions will continue. He remains at each courthouse 2 days to contact any persons interested in seeing him on any matter.

Wisconsin and Iowa Join Arkansas in Passage of Rescinding Resolution on Former Endorsement of "Twenty-second Amendment"—Other States on Road to Joining Arkansas, Wisconsin, and Iowa

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. PATMAN. Mr. Speaker, the truth will out. The activities of the Gannett - Pettingill - McClure - Rumley syndicate are backfiring in their faces. With pious mein, a proponent of the proposed "twenty-second amendment" had the audacity to state that their ambition was to bring their proposed amendment to the people so that the people could decide whether to accept or reject it. The proponent added that the Committee for Constitutional Government wanted the proposed amendment submitted to the Nation for discussion and cation "on its merits." He further stated that Congress should discontinue "suppressing" the proposal.

Well, the proponents are being taken at their word. The proposed amendment is being submitted to the Nation—not only to that selected segment of the population whom they would prefer to have pass judgment, but the whole Nation, the people as a whole, as a result of all the free publicity which I have been more than glad to contribute to the cause. To this has been added the free publicity that many, many educators, officials of national and local organizations, State legislators, radio commentators, newspapermen, and others, who are also glad to contribute toward the national discussion which the Committee for Constitutional Government declares it wants.

The Committee for Constitutional Government has as its goal the dissemination of over 20,000,000 pieces of literature during the year 1945.

I shall do my bit to see that the real truth, and not just this misleading propaganda, reaches the recipients of their leaflets and other American citizens. With the splendid cooperation of those who have joined in this fight, we will reach as many citizens as we can and we will see what judgment the Nation will pass on the so-called twenty-second amendment.

The Gannett proposal is now being studied on its merits for the first time and appropriate action is already being taken by some of the States—States which in the past several years had put their too hasty stamp of approval on the amendment by passing resolutions memorializing the Congress of the United States to call a Constitutional Convention for the purpose of proposing that the Committee for Constitutional Government's amendment be added to our Constitution and the sixteenth amendment repealed.

Now let us see what actions are already being taken after due consideration and discussion of the proposed amendment. Following are some reports of actions taken since January 1, 1945:

ARKANSAS

I have told you that the State of Arkansas was the first to take its name off the list of States which had endorsed the resolution. The legislators of that State are to be commended for their willingness and courage to admit an error and to do the people of their State the justice of rectifying that error.

In the rescinding resolution adopted by those legislators, we find the following very significant words:

> The purport of this resolution (the former endorsing resolution) was misunderstood by various members of the house and senate.

WISCONSIN

I am happy to inform you that the State of Wisconsin has joined the State of Arkansas in passing a rescinding resolution. I have a letter, dated February 8, 1945, from a member of the Wisconsin Legislature, from which I quote:

> In the 1943 session of the Wisconsin Legislature a joint resolution was passed calling for an amending of the Federal Constitution limiting taxes to 25 percent. A copy of your speech regarding this matter which was made in the House last year very startlingly pointed out my error in supporting this legislation. There is now pending in this session of the legislature a joint resolution rescinding our previous action. I wonder if at this time you could forward me another copy and in brief some other material to support the passage of this new resolution.

And now I am in receipt of information announcing that this rescinding resolution has passed. I quote from this letter:

> You will probably be interested to learn that Wisconsin has rescinded the action of the 1943 legislature, which had previously memorialized Congress to call a convention relative to the limitation on taxes imposed by Congress. I am enclosing herewith a copy of Joint Resolution 11A. This was unanimously adopted by the assembly on February 14 (by a vote of 90 to 0) and was concurred in by the senate on February 20 without a roll-call vote. It is my understanding that the action in the senate was unanimous, although I am not positive of this.

Another State has had the opportunity to discuss the proposed amendment on its merits—and Wisconsin has acted accordingly.

IOWA

I am also very pleased to advise you that Iowa has joined Arkansas and Wisconsin in repealing the former endorsing action it had taken.

The endorsing resolution—House Concurrent Resolution No. 15—was passed in 1941 by the Forty-ninth General Assembly of Iowa.

However, a rescinding resolution—House Concurrent Resolution No. 9—was introduced on January 23 of this year by 12 members of Iowa's House.

On February 14 a letter was written to me by one of the sponsors which informed me "enclosed you will find House Concurrent Resolution No. 9 which passed the house this morning unanimously."

And now I am in receipt of a letter from this same member which was written on March 15, from which I quote:

> This is with reference to recent communication regarding House Concurrent Resolution No. 9, which passed the Senate March 14. Enclosed you will find Senate Journal of March 14; note on pages 635 and 636 the results. It is a victory for Iowa.

SCORE GOING BACKWARD—NOT FORWARD

I wonder if Mr. Gannett will give much space in his papers to that bit of news or whether Mr. Pettengill will mention it in his propaganda leaflets which he so busily turns out for the Committee for Constitutional Government. I wonder if these propaganda leaflets will still continue to proclaim that 17—in some instances proponents claim even 18—States have endorsed its proposal or whether they will come out and admit that their score is going backward instead of forward.

To my knowledge, they can now lay claim to only 14 endorsing resolutions. If I am mistaken, I should very much appreciate being so advised and advised where I am in error.

My records indicate that the following 17 States have passed endorsing resolutions at any time: Alabama, Arkansas, Delaware, Illinois, Indiana, Iowa, Kentucky, Maine, Massachusetts, Michigan, Mississippi, New Hampshire, New Jersey, Pennsylvania, Rhode Island, Wisconsin, and Wyoming. From this list of 17 States we can cross off Arkansas, bringing the score down to 16; next we can cross off Wisconsin, the score going down to 15; and now as a result of Iowa's rescinding resolution, we can cross off another, leaving 14 which the proponents can claim.

Now I would like to pass on to you information which has been sent me about the action of some of these 14 States indicating that they, too, are on the road to refuting their former endorsement. The legislators and citizens of these States are finding out the true motives of the men behind the Committee for Constitutional Government, have analyzed their activities, and have discovered that this is nothing more and nothing less than a vicious plot to lower the taxes of a selfish group of millionaires and to transfer this portion of the tax revenue to those of our citizens in the lower-income brackets. It is being referred to daily as a tax-dodging scheme.

ILLINOIS

The Illinois Legislature passed an endorsing resolution in May of 1943, House Joint Resolution 32. On January 8, 1945, a rescinding resolution was introduced to rescind the 1943 action. I am pleased to announce that Illinois is on the road to joining Arkansas, Wisconsin, and Iowa in repealing the endorsing resolution. A telegram from a member of the Illinois House of Representatives on

March 13 reported: "Illinois House of Representatives repealed committee for constitutional government resolution."

INDIANA

The State of Indiana also has a rescinding resolution before its legislature, House Concurrent Resolution 5. It was introduced on January 17, 1945. As you know, Indiana passed an endorsing resolution back in 1943. According to a letter from a State official, "It was adopted by a voice vote and later concurred in by the Senate by a similar type of vote. It is not necessary for the Governor in this State to sign a resolution of this type to make it valid and Governor Schricker did not sign it." I have not yet heard of any action having been taken on the proposed rescinding resolution in Indiana.

MASSACHUSETTS

A rescinding resolution was introduced in the Massachusetts Legislature on February 20, 1945, House Resolution 1081. I have no record of any action having been taken on this resolution to date.

MICHIGAN

The Michigan Legislature passed endorsing Senate Concurrent Resolution 20 on May 16, 1941. However, I am informed that three rescinding resolutions are now up for consideration. One of these rescinding resolutions also contains the significant phrase that the purport of the endorsing resolution passed in 1941 "was misunderstood by various members of the House and Senate."

NEW JERSEY

The New Jersey Legislature adopted Senate Joint Resolution No. 3 on February 25, 1944, proposing the adoption of the twenty-second amendment. I am now advised that there was introduced on January 22, 1945, a resolution to rescind Senate Joint Resolution 3. The rescinding resolution is at the present time in committee, and there seems to be some fear on the part of the rescinding resolution movement's supporters that there will be difficulty in having the resolution brought out on the floor for consideration.

I have in my files a letter from an official of the State of Maine, the legislature of which passed an endorsing resolution in 1941, and I quote from that letter:

The records of the Eighty-ninth Legislature of Maine indicate that a resolution memorializing Congress to propose an amendment to the Constitution of the United States relative to taxes on incomes, inheritances, and gifts was presented in the Senate by Senator Brown, of Aroostook, and was tabled by that gentleman on April 10 pending adoption. This was taken from the table and read and adopted by the senate on April 15 without debate. The house of representatives read and adopted same on April 17, 1941. I find no record of any debate in the house of representatives, the adoption of the resolution having been unanimous.

Without debate in the House and without debate in the Senate if that information is correct. A resolution of such tremendous and evil portent and one sponsored by an organization whose main spring was a convicted German agent—a man who took money from the Imperial German Government to buy a New York newspaper, the Evening Mail, back during the last war, to use as a German propaganda vehicle. This man, Edward A. Rumely, took money from the German Government to place advertisements in the newspapers of the United States in order to influence American citizens toward a more sympathetic understanding of the "poor Germans" and their sad plight. This shows the members of these legislatures were misinformed about this proposal.

Let us not, however, be lulled into a false sense of complacency as a result of these displays of corrective action by some of our State legislatures and let us not permit ourselves to think that the battle is won. Far be it from me to underestimate the cleverness of the sponsoring group. Its spark plugs were not picked without careful analysis of their qualifications. Rumely, the master mind, was picked by the German Government to do some of its dirty work once, and we should certainly have learned by now that the Germans are masters at subversive activities and propaganda, and should assume that they would expect its agents to be quite clever.

PENNSYLVANIA

We have gone on the assumption that Governor Martin's veto of the 1943 endorsing resolution constituted an annulment. However, some of the legislators of that State are now attempting to remove all doubt as to the present status in Pennsylvania. I have been advised that a rescinding resolution was introduced February 21.

RHODE ISLAND

This State is another that passed an endorsing resolution and is now considering a rescinding action. The rescinding resolution is H. 626, introduced during the present session.

I wish that I could have printed in the RECORD a copy of a Fitzpatrick cartoon which appeared in the St. Louis Post-Dispatch of February 12, 1945. That cartoon is more striking and to the point as to the motives of the proponents than I could explain in thousands of words. It shows a group of big-money men with the dollar sign on their backs pushing the 25-percent tax-limit amendment along, and under this very splendid cartoon is the title "The Doughboys at Home Prepare Their Defenses." Mr. Fitzpatrick has certainly captured the complete story in the product of his drawing board. This is one occasion that I would enjoy the privilege of inserting in the RECORD something besides figures and words.

I would very much appreciate hearing from anyone who has information as to any activity in the various State legislatures either for or against the proposed twenty-second amendment. Some weeks ago I had printed a pamphlet containing some of my speeches on this subject and which contained a chart showing the status of endorsing resolutions in all of the States. I have revised that chart from additional information I have gathered, but all information pertinent to this subject would be appreciated, as the actions of the various legislatures will make constant revisions necessary. The whole sneak attack on our Constitution has been so quietly executed that even information from the State officials is subject to error. For instance, I wrote last year to an official in Florida asking for the status of any such resolution. His reply stated that to his knowledge no such resolution had ever been proposed in his State.

Only recently, however, I received a letter from this same official advising me that another search disclosed that a "twenty-second amendment" memorial was introduced in 1941 in the Florida Senate but was not favorably acted upon. The same is true of South Carolina—a letter from one official states that no resolution has been offered, while another official has sent me a journal of proceedings for 1944 which shows introduction of an endorsing resolution but unfavorable action.

WYOMING

Wyoming, the first State to endorse the "twenty-second amendment" considered a rescinding resolution during the present year but failed to adopt it, permitting its name to remain on the Committee for Constitutional Government's "honor roll" for the present.

For the information of the Members and others, I wish to submit a chart which will show at a glance the status of either an endorsing or rescinding resolution in any of the States.

This chart is compiled from information which has been sent me in the form of letters from officials of the various States, from letters received from individuals who are interested in the proposals, and from press clippings. Being compiled from such a wide range of sources, and because of the constant changes in status, the accuracy cannot be guaranteed, and I would sincerely welcome having called to my attention any discrepancies in the formation thus presented:

	Endorsing resolution introduced	Passed House	Passed Senate	Endorsing resolution adopted	Rescinding resolution introduced	Action on rescinding resolution
Alabama	June 22, 1943 (H. J. R. No. 66).	Yes	Yes	July 8, 1943		
Arizona [1]	None

Wisconsin	Apr. 14, 1943 (J. R. No. 75)	Yes, 44-34	Yes, 17-9	1943 [2]	Jan. 18, 1945 (J. R. No. 11A).	Rescinding resolution adopted.
Wyoming [1]	1939 (H. J. M. No. 6)	Yes	Yes	Feb. 23, 1939	1945	Failed to pass.

[1] 1945 session of legislature adjourned.
[2] Rescinded by House and Senate.
[3] At executive session of committee on Mar. 15, 1945, formal request to withdraw the resolutions was approved.
[4] Rescinded by House.
[5] At conference between proponents and opponents, proponents acknowledged defeat if vote were taken on floor on S. J. R. No. 2. Therefore it was decided to recommit to committee with general understanding that this action would kill the resolution.
[6] Killed at suggestion of author and recommendation of committee.
[7] Vetoed by Governor.

Adjournments (information as of Mar. 12, 1945): Arizona, Mar. 10, 1945; Arkansas, Mar. 8, 1945; Idaho, Mar. 9, 1945; Indiana, Mar. 5, 1945; Montana, Mar. 1, 1945; North Dakota, Mar. 3, 1945. Subject to call of presiding officers: South Dakota, Mar. 2, 1945; Tennessee, Mar. 2, 1945; West Virginia, Mar. 10, 1945; Wyoming, Feb. 17, 1945; Georgia recessed Mar. 3 to reconvene Jan. 7, 1946.

What the People Are Thinking Back Home

EXTENSION OF REMARKS

OF

HON. WILLIAM H. STEVENSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from a substantial taxpayer and employer:

LA CROSSE, WIS., *March 13, 1945.*

HON. WILLIAM H. STEVENSON,
Congressman, Third Wisconsin District,
House Office Building,
Washington, D. C.

DEAR MR. STEVENSON: As one of your constituents in this congressional district, may I express to you my personal viewpoint concerning the proposed increase in salary for Congressman and Senators. Also the proposal to establish a lifetime annuity for the Members of the House and/or Senate who have served their constituencies and country sufficiently well to have been reelected to the House or Senate for a given number of terms.

It is my firm belief that a substantial increase in salary would definitely attract to both Houses the highest type of citizen. I don't mean this as a reflection on the caliber of our present Representatives and Senators, but I do recognize that there are many people of unusual and outstanding ability who cannot afford to sacrifice their private business or profession for the instability of political life, as a Congressman or Senator. These people, in my opinion, could render outstanding service to the United States and their constituencies. And with some reasonable assurance that their future would be provided for in a substantial way, these men might and probably would be attracted to public service in one or the other of the two Houses of Congress.

I believe it is of vital importance to this country, especially in the unsettled years that lie ahead, that we have in both Houses not only men of unquestioned integrity, but of the highest intellect and broadest statesmanship. May I repeat that I firmly believe the proposed set-up for lifetime annuities would attract many men who now dare not jeopardize their personal position and the welfare of their families.

I am writing this to you in the hope that my feeble voice may in some manner influence the attitude of the Congress and Senate on this proposal to the end that it may be promptly enacted into law.

Respectfully yours,

J. N. DRIBBEN.

The Price We Must Pay

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. ROBERTSON of North Dakota. Mr. Speaker, the serious problems that have confronted our Nation because of a global war need not be restated here. I recognize, Mr. Speaker, that the problems of life so far as our Nation is concerned will not end with the end of the war. We must of necessity make tangible definite plans for that post-war period and we must come to recognize that, if we are to sustain the principles of democracy which can only be sustained by an enlightened America.

And it is therefore imperative that we study and that we read and that we come to know the problems that will face us in that post-war period. We cannot, under any circumstances, be too familiar with the many phases of this situation.

Under unanimous consent to extend my remarks in the RECORD, I include herewith an article taken from the Saturday Evening Post, the author of which is Demaree Bess dealing with this important post-war period, and I commend it to all Members of the Congress and to the people of the Nation for a matter of careful study:

THE PRICE WE MUST PAY

(By Demaree Bess)

PARIS.—Traveling around with the American Army in Europe last autumn, I saw that many of our generals shared with most civilians at that time the hope that the war in Europe could be finished in 1944. Those generals pictured that war in military terms, and it seemed to them, just as it did to millions of civilians, that a military victory over Germany was very close. This expectation was entirely reasonable because, from a purely military viewpoint, the Germans were indeed beaten last autumn. The situation was as unfavorable to the German Army in October 1944 as it was in October 1918. But this time there was one great difference compared to 1918, and that difference was political.

We might have ended the war last autumn in Europe by offering the Germans a negotiated peace. We might even have achieved "unconditional surrender" then if the Allies had been solely interested in Germany's military defeat. In other words, our troops might have got to Berlin months earlier if Russia hadn't been concerned with Poland and the Baltic and the Balkans; if Britain hadn't cared a hoot about what happened in the Mediterranean; if the American Government had been satisfied only with forcing the German Army to surrender. But not one of the Allies chose to take this quick way out. Instead, all of them agreed that it was absolutely essential not merely to defeat the German Army, but also to secure definite political objectives. The stakes the Allied Governments were playing for were so high that they were considered worth, if need be, several additional months of warfare.

This is by no means the first time during this war that political events have overshadowed military events. This occurred at the very beginning, in 1939, when Stalin's deal with Hitler was much more sensational than any of the early fighting. It happened again during the Allied invasion of north Africa, when many Americans were more excited by disclosure of our negotiations with Admiral Darlan and General Giraud than they were by the valiant deeds of our untried soldiers. This often has been the case in Poland also, where disputes between Polish and Russian politicians sometimes got more attention than advances of the Red Army. And all over Europe, ever since last October, politics in Greece and Belgium, Italy and France, have repeatedly distracted public interest from some of the most impressive battles in history.

It is not difficult to understand why European peoples are thus concerned about European politics, but it is not so obvious—until we examine the matter carefully—why Americans should be equally concerned with the complex affairs of this troubled continent. In any event, whether we fully realize it or not, we now are deeply involved in this European political situation, so deeply involved that our Government has shown itself willing to prolong the war in order to achieve our international political objectives. Unconditional surrender must be regarded as a political objective because it involves the elimination of Germany as an independent nation, with all the consequent rearrangement of Europe which that implies. It has been supported by those Americans who feel that this is the only way to make sure that Germany doesn't start another war a generation hence.

But even those Americans who are most insistent upon unconditional surrender sometimes have failed to perceive responsibilities which this objective carries with it for us. Germany's absolute defeat leaves a great hole in Europe which must be filled up with something. Our Russian and British allies understand that very well, which explains much of their recent "power politics" so disturbing to many Americans. We merely delude ourselves if we think that we also are not mixed up in this power politics, that we alone are solely interested in knocking out the rowdy who started the brawl in Europe.

WAR OBJECTIVES AND POST-WAR OBJECTIVES

A conspicuous instance of this type of thinking appeared in an article in the Army and Navy Journal, which I happened to see reprinted in our Army newspaper, the Stars and Stripes, while I was visiting an American Infantry division at the front early last December. According to this article: "British and Russian preoccupation with objectives other than the defeat of Germany was responsible for allied failure to achieve expectations in the United States that the war in Europe would be over by now. Since D-day in France, greater preoccupation has been shown by Russia in her Baltic and Balkan campaigns intended to insure her security, and by Great Britain in Italy, Greece, and Albania to protect her life line through the Mediterranean to India than in achievement of the prime objective of our American armies—prompt defeat of Germany."

As I read that dispatch, I wondered what the soldiers around me were thinking about it. The had been fighting for weeks in mud and rain and cold, and they were more disappointed than even the Army and Navy Journal that the Germans still showed no signs of quitting. I was considerably relieved when I talked with some of these men and found they had not even read this dispatch. They were too much preoccupied with the current battle to have thought for anything but the business in hand. I think this was very fortunate, because the brief quotation from the Army and Navy Journal gave the false impression that our Russian and British allies were engaged in selfish politics, and thus prolonging the war, while we Americans were completely absorbed in winning it.

Actually, Americans cannot rightly claim that we are less responsible for the present situation in Europe than any of the other Allies. We have voluntarily assumed a central role in that great power combination which is designed to reorganize Europe, and we are closely cooperating with both Russia and Britain not only in military matters but also in this post-war reorganization program.

All through this war a curious idea has been prevalent that these military and political affairs are entirely separate, having no connection with each other, whereas it is quite apparent that every campaign in Europe has had political as well as military objectives. There is not the slightest doubt that the strategy of the war against Germany has been influenced, time and again, by the particular interests of one or another Allied Power, and in some cases this may have prolonged the fighting.

For instance, there has been persistent discussion and even some conflict about which of us should liberate which country. Russia, for example, has preferred to do the liberating in countries where Russian post-war influence is likely to be predominant, and the same is true of Great Britain. Where disputes have arisen on such matters, it has taken a little time to straighten them out, and military operations have thus had to be subordinated occasionally to political considerations.

One of the most striking instances of such political influence upon the actual conduct of the war occurred in the Balkans, where Russian and British interests do not always coincide. Last summer the Russians had a choice between several campaigns, and if their sole interest had been to get the war finished in a hurry, they might have done better to concentrate at once their offensive power in drives through Poland and east Prussia. But the Russians are constantly looking far ahead, and they chose instead to sweep through the Balkans first, liberating Rumania and Bulgaria, and then pushing on into Hungary.

In like manner some British campaigns have been planned not only to beat Germany but also to consolidate British post-war influence in all those countries where British sea power and economic interests have made Britain traditionally predominant. One of these places is Greece, which explains why British troops shot down Greek factionalists who tried to take advantage of the war to establish the form of government they preferred. When disturbances occurred in Belgium and Italy, British interference followed as inevitably as Russian interference did in eastern Europe.

There can be no denying that in these instances our Russian and British Allies have used their armies for political as well as military purposes. We know in detail what the British have done in their areas because American correspondents have been freely admitted there. But in most cases we have only indirect reports of what the Russians did in most places, since American reporters were not generally permitted to see these happenings for themselves.

Nevertheless, the Russians certainly did not attempt to conceal their political objec-

tives. It is quite evident that Russia has more clear-cut aims than any other Allied country, and that she has been more tenacious in getting what she wants. The Soviet Government has been entirely frank in its intentions to reabsorb the three Baltic states as well as portions of Poland, Finland, and Rumania. It has not disguised its plans to create pro-Russian governments in Bulgaria, Hungary, Jugoslavia, and Finland. It has concluded a military alliance with France, and it has pressed for the overthrow of Franco in Spain.

Similarly, the British also have contrived their own post-war settlements while the war itself was still in progress. They have offset Russian moves with their own countermoves, yielding to Russia on one point in order to gain another. British statesmen are working from a permanent set of blueprints, upon principles devised long ago to safeguard the interests of the British Empire.

All this jockeying has been abhorrent to many Americans who would like to believe that it makes no difference what European countries are liberated by which Allied power. But we are in a coalition war, and our allies believe that it makes a great deal of difference. Wherever Russian armies penetrated, they set up governments approved by the Soviet regime, and wherever British armies penetrated, they backed governments friendly to themselves. Perhaps some international organization will arise sometime to make such matters inconsequential, but no such organization has yet taken definite shape.

It is obvious, then, what are the high stakes for which Russia and Britain have fought in Europe, stakes which have justified them in prolonging their war against Germany beyond a mere military defeat. Our allies have been determined to safeguard their own war aims promptly, even though they have had to fight extra battles to accomplish their purposes.

What many Americans overlook is that we, too, have had a share in prolonging the war in Europe because we, too, were aiming at political objectives. Our Government has taken the lead in demanding a hard peace for Germany, a peace so hard that it could be achieved only by the hardest kind of war. It was our President who devised the formula of unconditional surrender at the Casablanca Conference in January 1943. It is upon that formula that the entire subsequent program for Germany and Europe has been constructed.

When President Roosevelt first used "unconditional surrender" to express the Allied war aims, the phrase did not appeal either to Prime Minister Churchill or to Marshal Stalin. Churchill at the time was careful to disclaim his own responsibility for it, and Stalin was still using his group of captured German generals to assure the German people that he had no intention of destroying Germany or even the German Army.

It seemed then that the Russians and the British might be more disposed to favor a soft peace for Germany than we Americans were, and protests against any possible compromise with the enemy were more vigorous in the United States than anywhere else. But our allies undertook no peace negotiations with Germany—and thereby they joined with us in prolonging the war—because they agreed that it was better to fight it out for higher stakes.

When Allied victories last autumn were not followed up with peace proposals to the German people, our statesmen were severely criticized by many groups who condemned this unconditional-surrender formula. One such critic, the British Maj. Gen. J. F. C. Fuller, retired, described Allied statesmanship as idiotic, and he blamed Allied propagandists for dragging out the war unnecessarily. According to General Fuller's analysis, the war was kept going last September only because Allied politicians "pumped new life into the expiring Reich."

The farther our soldiers advanced, he said, the more Allied leaders threatened. They spoke of reducing Germany to an agricultural country, of giving the Rhineland to France, of handing over East Prussia to Russia, of delivering Brandenburg and Silesia to Poland. There was open talk of deporting millions of Germans into Russia for slave labor, of killing thousands of German leaders as war criminals, of cramming 80,000,000 Germans into about half of their pre-war territory. In other words, Fuller asserted, they did their best to convince the Germans that they had nothing to gain by surrender.

General Fuller contended that the Allied leaders should have backed up our military victories with a peace offensive, and thus hastened the end of the war. But this retired British general, like some other observers in Allied countries, completely failed to distinguish between so-called threats and genuine war aims. Most of the threats which he mentioned had become details of the Allied program for eliminating Germany as an independent nation. One or another of the great powers intended to carry out every one of these steps.

We Americans cannot properly claim that we have not been informed of these political objectives. Well in advance of last November's elections, President Roosevelt made it transparently clear that he supported a program for Germany which no German group could be expected to accept voluntarily. During the second Quebec conference, the President even expressed qualified approval of the extreme Morgenthau plan. Those who wanted the European war to end last autumn with a negotiated peace apparently did not perceive that matters had already gone too far, that we were committed to fight not only for a military victory but also for a fundamental revolution in Europe. Because the defeat of Germany involves infinitely more now than the end of a mere military contest, Hitler has turned Europe upside down, and Americans have committed themselves to assist not only in putting the continent together again but also in molding it in entirely new forms, political, economic, and social.

This expansion of the European war into the broader aspects of a fundamental revolution can be primarily traced back to Adolf Hitler and his associates. When the blitzkrieg was launched in May 1940, I wrote, in Paris, an article for the Post entitled, "Winner Takes All," in which I pointed out that the Germans had possessed a choice between two types of war, a limited military contest and a totalitarian struggle. Some of Hitler's advisers were strongly in favor of limited objectives, but the more extreme members of the Nazi Party urged an all-out effort. These two groups argued all through the winter of 1939–40—that period which we called the phony war—until the policy of the second group was accepted.

The extent of Hitler's ambition was clearly revealed when he announced, at the outset of the blitzkrieg that he proposed to set up a system in Europe which would endure for a thousand years. He was not seeking only a military victory; he intended to make over the whole of established Europe according to Nazi ideology. And as quickly as the Germans occupied any country, they immediately began to apply their blueprints for this "new order." The stakes in Europe thereupon became not only war but also revolution. If Germany won, then Germany would direct this revolution. But if Germany lost, then her conquerors would also find a revolution on their hands.

Not one of the Allies was eager to accept this challenge from Hitler. The Russians, who know all about revolutions and who had not yet finished with the one they themselves started in 1917, were so reluctant to take on another that Stalin struck a bargain with Hitler, to keep out of the Nazis affair altogether. Britain and France were so reluctant to assume the burden of directing Europe that they deliberately looked the other way when Germany reoccupied the Rhineland; they signored the annexation of Austria and they sold Czechoslovakia down the river. And the United States was so reluctant to meddle in European politics that—for all our loud outcries against Hitler's treatment of the Jews, for all our tears over the fall of France, for all our alarm about German influence in South America—we refrained from completely getting into the conflict until Germany formally declared war against us.

Because all the Allies were dragged unwillingly into this war, it not unnaturally followed that at first they were able to agree only on beating Germany. If we reread the Atlantic Charter carefully, we can see that when it was published in August 1941 it seemed possible to us then that the war in Europe need not become a continental revolution. Its comparatively mild provisions, drawn up by President Roosevelt and Prime Minister Churchill, still pictured the war in limited terms. All during the ensuing year our discussion about post-war Europe generally foresaw some kind of acceptable place for Germany, with no sweeping territorial changes in Europe, once Hitler and his Nazi system were overthrown.

It was not until the Teheran Conference, nearly two years and a half later, that these soft provisions of the Atlantic Charter were rendered finally inoperable by the unanimous adoption of President Roosevelt's newer policy of unconditional surrender. Those critics who have recently been complaining that Stalin and Churchill killed the Atlantic Charter by their action in Poland and Greece had failed to observe that the Atlantic Charter was killed from the day that the three greatest powers accepted unconditional surrender in its place.

The Teheran decisions thus marked a great turning point in European history, because the decision to break up post-war Germany created an immense vacuum in the heart of Europe—a vacuum which spread out beyond the borders of Germany east and south and west. Almost every political move made in Europe since Tehran can be explained as an attempt to fill that vacuum.

It is futile to insist now, as some Americans still do, that this process of filling the vacuum is "power politics," and should not have been permitted to interfere with the conduct of the war against Germany. Our Russian and British allies consider the filling of this vacuum as important as the military victory, and the very realistic post-war European system now arising from the ruins of Hitler's "new order" is as much an American creation as it is a Russian or British creation, because this system is a consequence of the Tehran agreements, to which we were a party.

The new Allied war aims were adopted so gradually that even now most of us probably do not comprehend how revolutionary our objectives really are. It is a curious fact that although the Allies expected Germany to collapse when our troops invaded that country, our armies actually reached the German frontiers before our statesmen were able to come to any agreement among themselves concerning the exact details of our plans.

The explanation for this is that, whereas the Nazi "new order" had been carefully drawn up before the outbreak of the war, the administrative plans of the Allies had to be developed while the war was in progress. The German armies, as they occupied one conquered country after another, were always accompanied by trained Nazi officials who were equipped with charts and statistics and schemes to enforce the "new order." Allied arrangements for liberated countries had to be compounded of the desires and

ambitions and ideals of several nations, until they became a patchwork of compromises.

The bare outlines of this Allied program were first revealed after the Moscow and Tehran Conferences in 1943. Since then—sometimes in secret and sometimes openly—Allied post-war plans for Europe have been slowly worked out. With a few comparatively unimportant exceptions the Crimea Conference of the Big Three merely put the final seal of its approval upon decisions which were the result of bargaining over months and even years. Yalta marked the culmination of processes set in motion at Casablanca in January 1948, and crystallized at Teheran 11 months later.

The new organization of the Continent is a great-power coalition, providing for the more or less permanent domination of Europe by Russia, Great Britain, the United States, and France. There is no place for Germany in this combination. The complete subjection of the Reich is to be accomplished first of all by absolute military defeat, after which Germany will be reduced to an inferior status, partly by territorial partition, partly by military occupation, and partly by destruction of its industrial power—the war-making power recently mentioned by President Roosevelt.

This post-war rule of Germany requires elaborate plans, and these have been worked out by the European Advisory Commission, a body originally confined to the United States, Great Britain, and Soviet Russia, but to which France has been admitted since. These plans are so interesting and so important that I intend to write another article on this subject in the near future, but now it may suffice to say that the plans for Germany are in many respects the simplest part of the projected new European system. At least, the German people will have to do as they are ordered.

It is in other parts of Europe that the varying interests of the Four Power coalition are more apparent and more vexatious. Lately, however, the roles to be played by our allies have become quite clearly defined, not only in such published treaties as the Anglo-Soviet Alliance and the Franco-Soviet Alliance, but also through unpublished informal understandings. It is evident, for instance, that in countries occupied by the Red Army, the Russians are disposed to encourage drastic reforms, such as the breaking up of all large landholdings, the public ownership of much industry and the liquidation of all those elements which have been hostile to the Soviet Union in the past. The reforms already begun by the Russians are far reaching.

Great Britain on the contrary, has discouraged violent and sudden reforms in the countries she has liberated. In accordance with her traditional methods, she has tried to strengthen the position of constitutional monarchies and moderate elements. Yet the British concede that great changes are inevitable in Europe, including even transposition of vast populations from one district to another. On the whole, in spite of differences in outlook and some conflicts of interest, the British are cooperating closely with the Russians, both in conduct of the war and in reorganization of the Continent.

And what of America's role in the New Europe? Just what responsibilities does the Allied plan impose upon the people of the United States, and how long will these responsibilities last? How much will our European commitments cost, in terms of money and in terms of manpower? Is this new European organization a practicable program, a scheme which will accomplish its purposes well enough so that we can expect to support it indefinitely? In short, just what is our American stake in Europe?

Our chief stake, of course, is future peace. Peace is worth a great deal to Americans as well as to Europeans, and we can afford to pay a big price for it. But Europeans may be pardoned for being skeptical of such glittering generalities as that Americans propose to prevent future wars in Europe. Everyone, including Hitler himself, has professed that aim at every stage of this war. When Americans repeat that generality now, Europeans say, "Yes, to be sure, but just how do you propose to do it?"

In times past, the American people were more often inspired by temporary sentiments and emotions than by world interest or even self-interest, when some questions arose concerning Poland or Finland, France or Spain. American purposes in Europe have not been consistent, because we have not previously participated consistently in European affairs. But the last few months have shown us, if we did not realize it before, that when we got into the European war this time, we got into European politics for a long time to come.

Up to this moment, the traditional American attitude in Europe has been that of detachment, a word broader than isolationism and more fittingly expressive of the feelings of our people. This policy of detachment was our tradition, and now that we have abandoned it, an unprecedented situation confronts us. We have no age-old traditions to guide us or our statesmen in every European problem, such as the Russians and the British and the French have inherited from their forefathers.

The wholesale participation of the American people in European politics has now introduced a brand-new factor into the troubled affairs of this continent, a factor which, by its very newness, is more uncertain than anything being contributed by any of our allies. It is we Americans, at least as much as the Russians or the British, who have insisted upon making this a different kind of war from the First World War.

Throughout most of 1944, I have watched thousands of civilian employees of the American Government swarming into Europe, busily engaged in every kind of "experting," finance and trade, agriculture and industry, diplomacy and propaganda. Most Americans are novices at this kind of business and some of them have made some silly mistakes. Nevertheless, these untrained Americans have been assigned to help Europeans set up a substitute for Hitler's "new order," and they are valiantly doing the best they can.

While this American intervention annoys some Europeans, it very much impresses most of the people over here, because it seems to offer a hopeful prospect for their own future. Europeans realize that they are caught up in a revolution whose shape will be determined to some extent by whether Americans help to shape it or get disgusted and pull out. As for us, if we want the European revolution to take a shape which will be satisfactory to us, we then should make up our minds to stay in European politics for a long time to come. The chances are that we shall do so, because the only alternative would be to acknowledge that we have fought this war in vain.

Uncle Sam's Debt Creeping Toward $300,000,000,000—How Can We Handle It?

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 16, 1945

Mr. VOORHIS of California. Mr. Speaker, under unanimous consent, I include herewith with my remarks the column of Raymond Lonergan, appearing in the March 17 issue of Labor, the official publication of railroad-labor organizations:

UNCLE SAM'S DEBT CREEPING TOWARD $300,000,000,000—HOW CAN WE HANDLE IT?—VOORHIS SAYS PRESENT SET-UP PERMITS BANKS TO PROFIT WITHOUT RISK

(By Raymond Lonergan)

When "BOB" DOUGHTON came to Congress 34 years ago, the national debt was about $1,000,000,000. A few days ago DOUGHTON, as chairman of the Ways and Means Committee, persuaded the House, with only four dissenting votes, to boost the debt limit to $300,000,000,000. Of course, no nation in all history ever had a debt like that. Interest alone will soon call for $6,000,000,000 a year.

Probably before Uncle Sam finishes Hitler and Hirohito and cleans up the aftermath of this global conflict, the debt total will be $400,000,000,000 and maybe $500,000,000,000, and interest will be running around $10,000,000,000 a year, with no provision for payment on principal.

Naturally, the best minds in the House gravely debated how Congress should go about handling this staggering debt problem.

During a tilting match with GIFFORD (Rep., Mass.), VOORHIS of California explained how he would take care of at least a third of the debt—that is, the portion held by the banks.

HOW BANKS PROFIT

These financial institutions have purchased approximately $100,000,000,000 of Government bonds, but VOORHIS claims they have not invested a dollar of their own money.

Instead, they have given Uncle Sam a "credit" on their books. When he needs some extra cash, they supply it, but in the meantime they continue to draw interest on the face value of their bonds.

That's one reason why the banks are very prosperous just now. They are pocketing from one and one-half to two billion dollars in interest on Government securities and taking no risk.

Thus the banks are permitted, in a very real sense, to "make money," a function the Constitution confers exclusively on the Federal Congress.

His colleagues have a lot of respect for VOORHIS, and they listened intently as he declared we cannot achieve prosperity without revamping our banking system.

WAREHOUSES FOR MONEY

"The demand-deposit part of banking should be handled purely as a warehousing of money," VOORHIS said. "Every time a depositor puts a dollar in a bank that dollar should remain there until the depositor calls for it.

"Thus the deposits would be backed by a 100 percent reserve, instead of 20 percent as at present, and it would be impossible for the banks, on their own motion, to expand or contract credit."

The savings department and the loan and investment department of a bank would be separated from the demand-deposit department.

REAL MONEY VERSUS DEBT

At present, VOORHIS insisted, our productive power is "harnessed to our debts." Unless our debts increase, and, of course, this includes Government obligations, production either stops or begins to recede.

Instead of this arrangement there should be ample real money to carry on the business of the Nation and keep production at a maximum, the Californian argued.

"I believe that in the future, when money must be created, it should be the Government that does it. I believe that if we do that and maintain a balance between the supply of purchasing power, on the one hand, and the volume of production on the other, we can keep the Government out of the banking business—that is, the business of lending money—and leave that real banking

business to the banking system, where it belongs."

A QUEER PROCEDURE

"But as a matter of actual fact, the Federal Government today gets its money by selling its securities to banks. They create the money to buy the securities, and in many instances, Government agencies—the R. F. C., for example—turn around in a bank's local community and make a loan that the bank should have made itself."

VOORHIS has made many converts in the House and his doctrine has attracted attention out through the country. He is one of the few men in public life who face the debt problem in a realistic way. Certainly it is difficult to answer his proposition:

If a Government bond, drawing interest, is good for its face value, why isn't Government currency, which doesn't pay any interest, equally good?

Both are based on the stability of the National Government, which up to date has never repudiated an obligation.

STORY OF THE GREENBACKS

VOORHIS' opponents are fond of recalling the greenbacks issued during the Civil War. "They fell to 30 cents on the dollar," they say.

VOORHIS replies that Lincoln issued two kinds of greenbacks. One was receivable for "all debts, both public and private." That greenback always sold at par.

The greenback, which dropped in value, had what was known as the exception clause—that is, it was good for all debts both public and private, except "interest on public debt and payment of import duties."

Thus Uncle Sam repudiated his own paper money. The merchant who imported goods from a foreign country had to go into the market to buy gold to pay his tariff charges. When the Government paid interest on its debt, it too had to buy gold in the market.

The result was just what might have been expected. The price of gold soared while the greenbacks which contained the exception clause went down.

T. V. A.

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. SPARKMAN. Mr. Speaker, recently an insertion was made in the CONGRESSIONAL RECORD quoting Mr. William Mitch in criticism of the T. V. A. An answer was made by Mr. Sam E. Roper, former president of the Alabama State Federation of Labor. Mr. Roper's statement appeared in the Birmingham News-Age-Herald of March 4, 1945. It follows:

LABOR

(By Robert W. Kincey)

Sam E. Roper, former president of the Alabama State Federation of Labor, and now president of the Tennessee Valley Trades and Labor Council (A. F. of L.), herein sets out another side of the T. V. A. economic question in answer to a communication in this column by William Mitch, president of District 20, United Mine Workers of America. Mr. Roper's statement, in part and substantially, follows:

"In an article from the Birmingham News-Age-Herald, December 31, 1944, inserted in the CONGRESSIONAL RECORD of January 25, 1945, page A296, William Mitch, president of District 20, United Mine Workers of America, is quoted in several statements critical of Federal water-power developments and of the Tennessee Valley Authority in particular.

"According to the article, Mr. Mitch asserted the T. V. A. does not pay sufficient interest on the money invested, that it does not pay Federal taxes, and that the development of water power facilities for generation of electric power endangers the jobs of coal miners suppiying steam-electric generating plants.

"All three of these contentions have a familiar ring to the people of the Tennessee Valley.

"One of the tricks of such propaganda is to include all of the investment in T. V. A. projects, navigation, flood control, fertilizer and munitions manufacture, agricultural tests and demonstrations, industrial and minerals research, and so on, as part of 'a Government-owned water-power project.' This Mr. Mitch has done, although these phases of Government activity are expected to yield no monetary return but are intended to pay for themselves in terms of public security and well-being.

"In discussing taxes and interests, Mr. Mitch, like the utility propagandists, has simply omitted to mention that the T. V. A. power operations each year return a substantial surplus over all costs of operation, including straight-line depreciation. In the fiscal year 1944, this surplus or net income amounted to $14,116,000 or about 40 percent of gross power revenue, which is, of course, the property of the people of the United States who own the T. V. A. With the $2,169,000 paid in lieu of taxes to States and counties under section 13 of the T. V. A. Act, the total provided by the T. V. A. power operations for public purposes amounted to about 46 percent of gross revenues, as Mr. Mitch could have learned by reading the T. V. A. annual report for 1944.

"Or, to look at it another way, the power net income before interest for the fiscal year 1944 represented a return of about 4 percent on the net average power investment for the year, a return which is well above the cost of money to the Government. The return was about 5 percent in the fiscal year 1943.

"The essential fact is that the T. V. A. power operations are returning gross revenues greatly in excess of power costs, and nothing would be gained by taking these net proceeds of public operation and shunting them into arbitrary public pockets labeled variously interest, taxes, and so on.

"These figures represent only the financial picture, without considering the public benefits which have resulted from the establishment of a tremendous new supply of power in the Tennessee Valley area. The T. V. A. power system supplied some 10,000,000,000 kilowatt hours of power annually, of which three-quarters is now going into war industry to produce aluminum, airplanes, ships' boilers, shells, munitions, Army clothing, and a host of the other materials for war. The vast industrial expansion made possible by T. V. A. power has benefited labor as well as other segments of the community by providing jobs and income, besides contributing immeasurably to the common defense. In the same way, the low-rate policy introduced in the southeast by the T. V. A. area has resulted in the lowering of electric bills of consumers; in the T. V. A. area, the savings in electric bills amount to $10,000,000 annually. It should not be lost on Mr. Mitch that since the advent of T. V. A. in 1933, the great power companies of Alabama and Georgia have forged to the front among privately owned public utilities in the country in providing domestic consumers with abundant electricity at low cost.

"On the basis of past record, Mr. Mitch's concern about coal likewise seems ill-founded. Statistics show that there has been a vast increase in the amount of coal used for generating electricity in the Tennessee Valley area, even prior to the war. In 1929, a peak year for power production in the Nation as well as the Southwest, the amount of coal used for generating electricity in Tennessee, Alabama, Georgia, and Mississippi was 334,000 tons. By 1940 the total used in the same States was 1,346,000 tons, an increase of 303 percent, as compared with a national increase of 19 percent. In 1943, 2,369,000 tons were used, 609 percent above the 1929 level, as compared with the national increase of 61 percent.

"It is obviously unfair and grossly misleading to claim, as Mr. Mitch does, that if it were not for the T. V. A. the present power now being produced would all be generated from coal-burning steam-electric plants. Mr. Mitch and the miners can thank those who helped the Tennessee Valley get a T. V. A. on the job. It has helped the coal miners and operators, and many thousands of other members of organized labor who have had relations with T. V. A. in the construction and maintenance as well as the operating of this great program. I am sure Mr. Mitch and others recognize the relationship of the A. F. of L. through its building trades and other organizations with the T. V. A. The Tennessee Valley Trades and Labor Council has had a signed agreement with the Authority covering all employees coming within the jurisdiction of that group for a number of years, and it is conceded by labor in most of its various branches that the joint labor-relation program between T. V. A. and its labor organizations has done more toward building a real standard of living for the people of the valley."

Kansas City Office of Farm Credit Administration

EXTENSION OF REMARKS

OF

HON. ERRETT P. SCRIVNER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. SCRIVNER. Mr. Speaker, in the Kansas City office of the Farm Credit Administration one employee, A. C. Utterback, for at least 6 months has been paid $700 per month for doing nothing.

In these days of manpower shortage this is astounding. Such waste of public funds when 50,000,000 taxpayers are making sacrificial contributions to our national Treasury is hard to understand.

The following news item from the Kansas City Star of March 14, tells the story:

SITS FOR $700 A MONTH—F. C. A. PAYS A. C. UTTERBACK FOR DOING NOTHING—THE SUPERVISING EXAMINER, AT ODDS WITH OTHER OFFICIALS, SPENDS HIS TIME IN A BARE OFFICE READING

Down on the lower level of the Municipal Auditorium, in space occupied by the Farm Credit Administration, a forgotten man sat as usual yesterday at an empty desk in a bare and unmarked office doing nothing and drawing $700 a month for it.

This forgotten man is A. C. Utterback, one of three supervising examiners for the F. C. A. His enforced idleness has continued for 6 months and no end to it is in sight. Utterback's troubles began in July, when he and his assistant, Roland W. Bush, filed a report on their examination of a Texas bank for cooperatives. The report made sensational charges.

HE IS PAID OVERTIME, TOO

October 18, 1944, Bush resigned so he could make public a charge that the F. C. A. was suppressing the report. A month before that Utterback had been called into the F. C. A. headquarters and assigned to his little cubbyhole office. He has reported for work daily, putting in a full workweek, sitting out also the regulation 8 hours overtime, and has continued to draw his pay. He is given $6 a day additional allowance because he is away from his home office at St. Paul.

An attempt to locate Utterback yesterday nearly failed. The young woman at the F. C. A. information desk couldn't find Utterback listed in the F. C. A. directory. She consulted a card-index system and shook her head. Supplied with a number believed to be that of Utterback's office, she still had no luck, but finally called the office next to it. The visitors were directed to that office. Utterback has no phone.

The heavy black numerals that designate the other offices on the long corridor do not mark Utterback's room. The numbers, however, had been applied lightly with a lead pencil. Utterback laid aside a book on accounting to greet his visitors, but he had little to say. The F. C. A. has advised him that any information he gives will be on his own responsibility.

REFUSED TO CHANGE REPORT

But Bush, acting in behalf of Utterback and himself, talked freely at the time of his resignation, charging that for political reasons Utterback was ordered to alter his report on the bank and that he had refused. It is for this refusal, Bush says, that Utterback is being kept inactive.

I. W. Duggan, Governor of the F. C. A., yesterday denied that Utterback had been asked to change his report on the bank. He said he had been asked only to include in the report evidence substantiating the charges. A second examination was made of the bank following Utterback's report, but Duggan declined to reveal the contents of the two reports or to discuss their differences, if any. The Governor said he felt such a discussion might improperly prejudice a final determination of Utterback's standing with the F. C. A.

Utterback originally tried to get a hearing on the entire matter by filing a grievance appeal under Department of Agriculture regulations. Later he dropped that approach to the termination of the stalemate and elected to sit tight.

HIS DISMISSAL ASKED

Duggan said that shortly after Christmas the F. C. A. personnel department preferred charges against Utterback with the office of personnel of the Department of Agriculture, asking his dismissal. These charges now are pending and Utterback has been asked to show cause why he should not be suspended pending settlement of the case. He has replied by letter to the suspension threat.

Utterback denied yesterday that he had been given notice of any charges filed against him. Duggan was not specific about the charges, saying only that they grew out of the report and circumstances surrounding the situation.

Duggan defended the wasting of $700 a month of tax money for Utterback's salary while he does nothing, by saying that the F. C. A. merely was following regulations set up to protect employees. He mentioned two attempts to bring the matter to a head, the grievance appeal that Utterback started and the more recent filing of dismissal charges against Utterback.

"I am doing all that I can to protect Utterback," Duggan said.

LOTS OF TIME REQUIRED

He mentioned also that it took a lot of time to prepare the charges and handle correspondence between the F. C. A. office in Kansas City and the Department of Agriculture in Washington.

Asked if there weren't other duties that could be assigned Utterback, Duggan said he was trained for accounting work and that under the circumstances he didn't feel justified in assigning Utterback to other types of work.

The F. C. A. governor said he had no idea how much longer the case would be under consideration. He pointed out that should the department decide to discharge Utterback he still had the right to appeal the decision to the Civil Service Commission.

Utterback, who has worked for the F. C. A. 10 years, said he would exhaust every appeal route left open to him. He declined to comment on Duggan's statement that he had refused to supply evidence to back up the charges made in the bank report, and went back to his reading, his only occupation the last 6 months. Yesterday the volume he was reading was entitled "Higher Accounting," but he reads newspapers, detective mystery stories, magazines, and gets a chuckle out of the comics, too.

Employees of the F. C. A. say he is one of the best-informed men in the building on current events.

Mr. Speaker, I have today asked the Department of Agriculture, under which the Farm Credit Administration functions, for a complete explanation. If a satisfactory explanation is not received I propose to offer a resolution seeking a full investigation of this whole matter.

Pohick Church

EXTENSION OF REMARKS

OF

HON. PETE JARMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. JARMAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following sermon preached in Pohick Church, November 7, 1943, by the rector, C. E. Buxton, before three posts of the American Legion and Auxiliaries, Mount Vernon Chapter 22, Baltimore Chapter 122, Military Order of the Purple Heart, and other visiting members with ladies of the M. C. P. H. Auxiliaries, and visiting officers and men of the United States forces from Quantico and Fort Belvoir, and the regular congregation of the church:

St. Luke xxiii: 47: "Now when the centurion saw what was done, he glorified God saying, 'Certainly this was a righteous man.' "—a text which has always engaged my attention for here was a captain in charge of a disagreeable duty, whose only deity was probably Caesar, who stood at the cross so close that he could see and hear everything, and when all was finished, he could as an honest soldier and man come to only one conclusion, to wit, without doubt this Jesus was one I call truly righteous—a remarkable witness from one who was surely not prejudiced for Him. We can better understand how Peter could and did make his answer "Thou art the Son of the living God,"—how the men of the assembly came back and reported, "never a man spake like this man." A soldier can indeed well appreciate this text of St. Luke xxiii: 47.

A double honor is ours today. One, enjoying the full measure of freedom of worship, we can honor our God in divine service, here in this historic church wherein have worshipped the good and great of many generations, and wherein have come as visitors and guests, like ourselves, men and women from far and near, whose names are writ on history's pages.

We who make this our church home consider it an honor, a democratic one for all pews are free, yet a privilege (as we are sure you do) to sit in the places of these splendid men and women who once occupied these boxes. You who sit in Washington's pew—Washington whom many hold as the greatest soldier and citizen of all ages; the pew of Col. Alexander Henderson who was on liberty's side, who with Washington and Mason were the Virginia commissioners who met with Maryland's Chase, Stone, and Jenifer to determine the navigation and jurisdiction of the waters of the Chesapeake who, thinking of the Marine Corps anniversary today, gave them a great general, Gen. Archibald Henderson and another son was Thomas, a famous surgeon of the Army and one of the founders of the theological seminary but a few miles away; one daughter married Gen. Francis Smith, superintendent of the Virginia Military Institute; the Fairfax pew, the Fairfaxes, intimately associated with Washington, Belvoir, Virginia, Pohick, Church neighbors they were, life-long friends, fellow vestrymen; the Mason, builders of this shrine, great men, their pews are side by side touching each other, just like you men sit at this time.

It is appropriate that the members of the Military Order of the Purple Heart sit in the pews of the one who founded your order of merit in 1782; you who wear the first American decoration for valor and the second oldest medal in all the world given to the military, or under special citation given by the Commander in Chief himself. You have made pilgrimages to Washington's headquarters, battlefields, and his home—now you have come to his home church, and perchance find it not hard to almost see or feel him sitting by your side. To the welcome already given you, we add the hope that along with Temple Hill and Mount Vernon you will include Pohick Church in your future itineraries—this is a standing invitation to you as it is to the American Legion, to come—I think a lovely, right, and most helpful thing for organizations to attend in a body divine service at least once a year.

It is quite as apropos that the members of the American Legion are here. Around you the pews of those who wrote and battled for liberty, the Washingtons and Custis, the Lees were not strangers here, Colonel Mason of '76, the Blackburns—how generously they gave of their fortunes; Peter Wagener, gallant major of the French and Indian Wars, and those to whom Baddock's men owed much that they were not all massacred—hardly a pew, if one, where did not sit those who took their muskets and swords when the call to arms came; 1812 and 1861-65, those who followed the Stars and Stripes and the Stars and Bars, and followed them well; the War with Spain, the World War No. 1—the names of those who made the supreme sacrifice from Mount Vernon and Lee districts are in bronze below the pulpit, a bronze dedicated by a President of the United States. A slab outside marks the resting place of those interred around this church. It commemorates the unknown dead parishioners of whom undoubtedly there are the soldiers of the early wars. Across from me is the pew of Parson Weems, once minister here, whose stories of Washington you learned when a child and every boy and girl knows. Rev. Lee Massey, his ashes are under this pulpit, his marker in the enclosure—lawyer, doctor, minister—while rector here he advised in law for the soldiers, and when the veterans grew aged and infirm he ministered to them as a physician. Pews of the ladies, whose fortitude and faith gave steel to the men they gave to their country, like women

of this time, and as the ladies of the auxiliaries present today gave. Brethren, you sit in the midst of memories of the immortals.

The second honor is that we are honored in having you with us, in your coming here humbly as men of God to worship with us, men not ashamed to pray, men who have sworn by all that is high and holy to ever stand for those principles our forefathers deemed worth their all, and you have proven this by your conduct and service for the United States of America. An honor to be here; an honor to have you here.

We gather this Sunday before the armistice in the midst of a global war, for unless something unforeseen happens, there is much bloody fighting to be done, and we at home have yet our high morale to keep, our determination to win, our sacrifices to be willingly made, our unlimited support to pay in many ways, as our snare in all that a treacherous and evil enemy has forced upon us.

When the men of 1917–18 came home, they never dreamed their sons and daughters would be summoned to a conflict such as now engulfs the world—all because we as a nation, and others, failed to organize an enduring peace in the last post-war years. I am quite sure that all of us feel we have much to be repented of in what we did not do to insure a safe and secure world; we hesitate to cast the first stone very far.

But we do not want the mistake of "winning the war to lose the peace" to happen again, to recur; we have in our hearts and minds the overpowering desire for a just and durable peace. We know this must be based on righteousness; any other basis is a mockery; this does not leave out other factors, e. g., economic and social factors, but it does say you cannot make it a mere political peace and have any durable peace, for then the "four freedoms" and decency, honor, truth, respect for treaty and regard for pledged word will go into the discard as soon as some disgruntled loser of this war can rearm. We pray constantly for peace, that it come with such integrity that we can ask God's blessing on it.

The Legion in its last convention distinguished itself by an outstanding expression of foreign policy, reiterating its declaration of a year ago: "No peace, however welcome, however promising, can long endure, unless it be made secure by the nations which have won it; nations which must ever be prepared in every sense to fight for the right of free men and freedom-loving peoples. We cannot escape, we will not evade, our own responsibility for the maintenance of that peace. We must not forget our stake in it." It goes on to speak of the principles that must actuate such.

There is a piece—author unknown to me—written evidently by one who knew, as some of you know by experience the same scene, of a place in France—I read this and will explain shortly: "A wood, a blackened, blasted tree, here a piece of artillery, a rusty helmet left in the forest. The natives of the province called it the wood of fair waters, but that was many years ago. Then, cool, green-bordered paths stole their way between the trees, and frail little vines dipped and rose in the ripples of the silent pools. Belleau Wood is known for other, lesser things now; for a battle that raged and rumbled through the naked heat of a long summer day, for a shattering violence that destroyed all tall and perfect things. The wood where beauty lay slumbers now in the midst of inexpressible weariness. There are waters still, but they are merely sad little trenches where men crouched to hide from death. Or shallow pools where shells burst and the rain gathers in stagnant eddies. This is sacred ground—nothing has changed since that day of conflict—and yet all has changed. For out of the bruised and twisted trunks, new leaves of succeeding springtime are lifted to the sky where the larks, still bravely singing, fly. Under the rusting shells and broken guns, new life creeps furtively. Slowly, relentlessly, nature is coveting to herself all the little perishable things of hate man has made.

And from them great trees will grow, flowers will flourish and dip their plumes in silent waters, and content will walk again with love; the habitants will again call it the wood of fair waters, for as an ugly cross became the world's most radiant living tree, so our shattered dreams shall lead to a newer, higher life, if, if, we only will do what we know, what we know, what all of us of every nation knows—to love mercy, to do justly, and to walk humbly with our God—and not until then."[1]

I have read this, not only for memory's sake, not just because it is an exceptionally beautiful description, but to remind you of younger years how the soldier felt when he came back from the last war—hoping he had made the world safe for democracy. How his dreams have been shattered; why reverently he says, "Fear God," and not irreverently adds, "and keep your powder dry," until a better peace than the last one is with us.

Having in mind the text of the centurion, the experiences of the war we knew, and those our boys tell us of this one—"no one is an atheist in a foxhole" or in oil-slick waters or with one plane wing cracked and but one engine running—I want to commend One who knows all about you and is ever your friend "I call you friend," He says, and He proved his love for each one of us—"Greater love hath no man than he lay down his life for his friend." The man on the raft with Rickenbacker was practically an agnostic—he was; he is not now. Two men—one of the two last surviving officers of the original Black Watch, hung on a barbed wire at the edge of "no man's land—he was wounded seriously; the other of an equally famous regiment, the Princess Pats of Canada, who was covered with earth and mud, half buried in the nearby burst of a big shell, was bleeding profusely. Each said practically the same words, "Lord, if You help me get out of this, my life is yours afterward." They got out by almost a miracle—both are clergymen in the Episcopal Church today. Christ does not fail.

It is reported that there are 600 men in the Eighth Army who have already signified their intention of going into the ministry if they get through this war. People's minds are turned to the enduring values when dark days come—when it gets dark enough they see the stars and think. Christianity has never failed—the living, or rather lack of living, of it has failed and plunged the world into suffering and sorrow many a time. I commend the Lord of Righteousness to you as a daily comrade, true as steel.

To you of the Purple Heart who wear it for wounds received, the verses by Edward Shillito may appeal to you:

"If, when the doors are shut, thou drawest near,
Only reveal those hands, that side of thine,
We know today what wounds are, have no fear,
Show us the scars; we know the countersign.

"The other gods were strong, but thou wast weak;
They rode, but thou didst stumble to a throne;
But to our wounds, God's wounds alone canst speak,
And not a god hast wounds, but thou alone."

To each of you of the Purple Heart, those in service there is a very high standard which gives meaning to your uniform and enriches every bar, chevron, lace, badge, and medal worn thereon—when you face the front as one who counted not his life dear in perilous hour—the four-square standard of soldier, comrade, gentleman, man of God.

A quarter of a century has passed since 1918, when the November bugles blew "Cease firing," and a world went wild with joy of the armistice. With our thoughts oft far away with those who serve today on and under the sea, on land, and in the air, we keep our day of remembrance for those who from falling hands threw the torch, that they may know their torch is caught and we have not broken faith with those who "went west"— we shall not fail them. Within this circle of remembrance we place those of this war who have fallen and are falling, giving their last full measure of devotion.

May they enter more and more into the service and joy of the Lord, and with His servants everywhere win the eternal victory.

May God bless the right—and help us always to stand for and do the right—His will be done. Amen.

[1] Slightly altered (Wood of Fair Waters),

Relief of Certain Property Owners of Santa Cruz County, Ariz.

EXTENSION OF REMARKS
OF
HON. RICHARD F. HARLESS
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. HARLESS of Arizona. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorial of the Legislature of the State of Arizona:

Senate Memorial 2

Memorial praying for the relief of certain property owners of Santa Cruz County

To the President and the Congress of the United States:

Your memorialist respectfully represents:

Through the establishment by the United States in 1898 of a 60-foot neutral strip of territory along the boundary between the United States and Mexico, the rights of persons owning property within said area were involved. Particularly were the rights of property owners within that portion of said neutral strip where the same passed through the territory now known as Santa Cruz County, Ariz., affected, inasmuch as the said strip at such location constituted a part of the city of Nogales, and later became what is now known as International Street in the said city of Nogales.

In the course of a determination of the rights of parties owning property within the said area, the Court of Claims of the United States on April 15, 1912, found that the following named persons were entitled to compensation in the amounts set forth respectively for the taking of their property within said neutral strip as it passed through Santa Cruz County: John T. Brickwood, $3,750; Edward Gaynor, $4,250; Theodore Gebler, $1,200; Lee W. Mix, $1,450; Arthur S. Peck, $2,350; Thomas S. Casanega, $500; Joseph D. Lusignan, $3,250; Joseph P. Berger, $1,800.

Despite the fact that said court found said persons entitled to compensation in the amounts above set forth, they have never been compensated for the loss of their property in accordance with the findings of the court, or at all, a failure which appears to constitute a clear violation of the provision of the Constitution of the United States that private property may not be taken for public use without compensating the owner therefor. Wherefore your memorialist, the

Senate of the State of Arizona, urgently requests—

1. That the Congress of the United States enact the necessary legislation to pay the persons above named the amounts awarded to them by the United States Court of Claims as compensation for the land taken by the United States in the establishment of said neutral strip along the boundary between the United States and Mexico.

Adopted by the senate by the following vote: February 22, 1945, unanimous.

Approved by the Governor, February 23, 1945.

Filed in the office of secretary of state, February 28, 1945.

Central Valley Recapture

EXTENSION OF REMARKS

OF

HON. FRANCK R. HAVENNER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. HAVENNER. Mr. Speaker, there recently came to my attention information of the organization of a group in California whose purpose it is to place the great Central Valley reclamation project under the jurisdiction of the State by removing it from the jurisdiction of the United States Bureau of Reclamation. This interested me because of the enormous sums of money involved. I wanted to know how the State was going to finance the deal, so I wrote to Secretary of the Interior Ickes, presuming that he had been approached by the California group, which I understand is composed of very substantial citizens.

Apparently Secretary Ickes knew no more than I of what financial plans had been proposed under which California would assume the responsibility for this project, which, before it is completed, may run into more than $1,000,000,000 of expenditures. He did send me information regarding the organization of the California group, and a letter he had directed to Governor Warren, in which the Secretary also was seeking information. He has promised to let me know when he hears from the Governor.

There was one particularly interesting fact revealed in the material Secretary Ickes sent me—the fact that the California group apparently is not satisfied with the representation it is receiving from its present delegation in Congress, and intends to supplement it with an unofficial and more highly paid representative, who would receive $12,000 a year for his persuasive efforts. A $10,000 Sacramento representative and a $10,000 publicity man also are proposed.

For the information of the House I am inserting in the RECORD my correspondence on this subject with Secretary Ickes, and a copy of the letter he addressed to Governor Warren, which, I believe, violates no confidences. Since this situation involves the possible payment by the State of California to the Federal Government of more than $150,000,000, an unprecedented procedure, in exchange for tremendous productive properties, I feel sure it will interest all of you.

The correspondence follows:

MARCH 10, 1945.

Hon. HAROLD L. ICKES,
Secretary of the Interior,
Washington, D. C.

MY DEAR MR. ICKES: I have read recently of the organization of a California Water Council which apparently is endeavoring to build up sentiment for the transfer of the Central Valley Federal reclamation project to the State of California.

The gentlemen who are proposing this, I presume, have been in touch with you and have discussed financial arrangements under which the State might take over the enterprise which will be of concern to all Californians. It is my understanding that more than $150,000,000 already has been expended by the Bureau of Reclamation on this project, and that plans call for expenditure of hundreds of millions more.

My chief interest in writing you is to learn what proposals have been made regarding the financial obligations which the State would have to assume in taking over the project.

Some years ago, the voters of California approved a bond issue for the purpose of constructing the Central Valley project under State ownership. I took active part in the campaign for this bond issue, and the people of San Francisco voted strongly in favor of it. Indeed, the vote of the people of my city was a decisive factor in the passage of the bond issue. However, it was subsequently determined that the bonds as voted could not be marketed.

Then the State of California, largely through the efforts of its Representatives in Congress, prevailed upon the Federal Government to undertake the financing and construction of this great reclamation project. This has been done under your supervision. Naturally, as a Representative of California, I am very much interested in the proposals which are apparently being made now for the State to take over the project and assume financial responsibility for its completion.

I have heard that the group making these proposals intends to maintain a lobby in Washington to support their program, but I have no authentic information concerning this.

Any light you can throw upon proposed methods of financing the transfer of the project to State ownership and control, especially the manner in which the State would obtain the many hundreds of millions of dollars required at reasonable rates of interest, will be appreciated. That also raises the question whether irrigation water and electric current could be provided at low rates, and if repayment for the project includes payment of interest charges.

Sincerely yours,

FRANCK R. HAVENNER,
Member of Congress.

THE SECRETARY OF THE INTERIOR,
Washington, D. C., March 13, 1945.

Hon. FRANCK R. HAVENNER,
House of Representatives.

MY DEAR MR. CONGRESSMAN: Your request of March 10 for a report on the organization of the California Water Council and what proposals have been made regarding the financial obligation that the State of California might assume in taking over the Central Valley project from the Bureau of Reclamation is at hand.

I regret that I cannot provide this information that you seek because no such proposal is before this Department. I also have been informed that some organization has been created under the name of the California Water Council that proposes to maintain at least one expensive lobbyist in Washington, as you report. It further proposes to maintain an additional lobbyist in Sacramento and, also, to engage in a publicity campaign to further the as yet not fully disclosed objectives of the California Water Council.

I have made an inquiry on this same subject of the Governor of California and transmitted to him certain reports covering the plans and expectations of this California Water Council, which I understand is a private organization. I enclose, in response to your congressional request for information, my inquiry. That embraces all of the information which has been made available to me.

I recall well your service to the State of California at the time its citizens strongly and successfully urged that the Federal Government, through the Public Works Administration, of which I was then Administrator, take over and proceed with the great Central Valley project. They did so on the basis that California was unable to carry forward the financing and construction of this tremendous development which will be of such widespread benefit to the people of the State. I was happy to be able to make the arrangements that California sought whereby irrigation water and electrical energy could be provided the people of California at low rates under the favorable Federal regulations providing for specified repayments from the beneficiaries. I am glad to be able to report that the construction has been driven forward by the Bureau of Reclamation with expenditures already approaching $150,000,000 from which California has already derived tremendous benefits, with further low-rate water and power still to come.

Any revision of these arrangements must naturally provide for repayment of Federal funds already expended, as well as assurance that the State, by some method as yet undisclosed, is prepared to take over responsibility for the investment already made and also the ultimate completion of the Central Valley project so that all of the benefits might be attained.

In the event that I receive further information which might more specifically answer your inquiry, I will be glad to make it available to the Congress.

Sincerely yours,

HAROLD L. ICKES,
Secretary of the Interior.

THE SECRETARY OF THE INTERIOR,
Washington, March 7, 1945.

The Honorable EARL WARREN,
Governor of California,
Sacramento, Calif.

MY DEAR GOVERNOR WARREN: The question of whether the State of California is to assume the responsibilities of financing and constructing the Central Valley project has been placed before you by a recently organized State group. A committee headed by Milton L. Kidd, which included Edward Hyatt, State engineer, met with you to discuss this matter last January 18 and reported to the group they represented that your attitude was receptive.

A subsequent meeting was held in Fresno on January 26 at which Ronald B. Harris, of the Irrigation Districts Association, and Burnham Emerson, of the North Kern Water Storage District, submitted a draft of proposed legislation. On the following day pertinent legislation was introduced in the State Senate by Senators Crittenden, Deuel, Mixter, Fletcher, and Cunningham.

The committee which brought about this movement has proposed that it raise a yearly budget of $38,000 to forward its activities through a Washington representative, who would be paid $12,000 a year, a Sacramento representative at $10,000, and a publicity agent at $12,000.

Naturally, the activities in relation to the Central Valley of such a group of well-known California citizens interest me, since the Bureau of Reclamation of the Department of the Interior has an investment of $157,180,000 in the Central Valley project, and has plans for its completion which would involve additional expenditure of more than $200,000,000 during the post-war period, in order that all of the farmers of present and potentially irrigated lands might be assured of adequate water permanently.

In addition, the Bureau has tentative plans that might result in the construction in the Central Valley after the war of works requiring hundreds of millions more. The reclamation law, of course, has provisions that have proved very useful in the development of the West, including the clause which enables advancement of Federal funds without collection of interest charges on the capital outlay. I assume, of course, that the State would wish to protect the project in the manner of these provisions in its legislation and with its credit and funds.

You will recall the circumstances under which the project became the responsibility of the Bureau of Reclamation in 1935, when the State of California was unable to negotiate satisfactory terms for the sale of an issue of $170,000,000 of revenue bonds, authorized by the legislation of 1933. At that time the State was glad to have the Federal Government assume the burden of financing this project under the favorable provision of the reclamation law. Ability of the State to assume such a burden now, it seems to me, should depend partly upon whether it could buy out the investment of the Federal Government and finance the remainder of the project and related works itself. In the intervening years, the reclamation engineers, working with your State water project authority, have elaborated the plans originally put forword.

If the State has arrived at a financial position where it is ready to reimburse the United States Treasury for expenditures already made in behalf of the people of California, and is further prepared to guarantee the additional financing necessary to complete the project within a reasonable number of years, the Department of the Interior is prepared to withdraw from the project. Before we hand back these responsibilities to the State, however, we feel that sufficient evidence should be presented to prove the willingness and ability of Californians to shoulder the burdens of this great enterprise.

Attached hereto are data regarding the organization of the group of prominent individuals which may help to throw some light on the situation.

I would very much like to have your views on this, because the Bureau of Reclamation has made many commitments in regard to further development, and because the doubts which have been raised by the proposal to have the State again assume the responsibilities of constructing the Central Valley project necessarily make us think twice before making further commitments, at least until the present uncertainty is resolved. Do you think the State is now prepared to resume full responsibility for the project? Any information you can give me on the financial problems involved will be appreciated.

Sincerely yours.

HAROLD L. ICKES,
Secretary of the Interior.

Jefferson $100 Plate Dinner

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statements:

JEFFERSON $100 PLATE

Chairman Hannegan, in his press notice of the dinners in honor of the author of the Declaration of Independence, names a sliding scale of prices per dinner plate. The prices vary from $25 per plate to $100.

There are $25 plates, $50 plates, and $100 plates. If the contents of the plate determine the price, the menu of Jefferson principles and policies might run something like this:

1. $25 plate: Author of the Declaration of Independence of British rule, as the soup course, plus the debt-extinguishment program of Jefferson as the main course without trimmings.

2. $50 plate: Above courses plus the following—(a) Jefferson's life record as a "Republican" plus (b) Jefferson's support of the American tradition that 2 terms in the White House are enough.

3. $100 plate: In addition to menu 1 and menu 2 above, the $100 plate gets the following list of hors-d'ouvres, side dishes, and desserts:

(a) Neutrality and avoidance of foreign entanglements.

(b) Government efficiency and economy.

(c) Eight annual Treasury surpluses in a row.

(d) Jefferson's Republican slogan—Equal rights to all—Special privileges to none. (P. S.—The New Deal version thereof as interpreted by the late Will Rogers—"Equal rights to none, special privileges to all.")

Thus for $100 per plate, the Hannegan-Hillman dinner serves 8 principles and policies of Thomas Jefferson in reverse.

If Jefferson's bill of rights—including freedom of speech, freedom of the press, rights of States, and protection of private property from seizure without due process to law—were also included in the Hannegan-Hillman dinner, the price thereof might be prohibitive to the rank and file of even the C. I. O.-P. A. C.

One of the most interesting Jeffersonian precedents for the fourth-termers to celebrate is Jefferson's continuous policy of a yearly Treasury surplus (see U. S. Treasury reports):

Fiscal year:	*Surplus, including debt retirements*
1801	$3,510,749
1802	7,133,676
1803	3,212,445
1804	3,106,865
1805	3,054,459
1806	5,756,314
1807	8,043,868
1808	7,128,170

In sharp contrast, the first 8 fiscal years of the New Deal prior to the present war showed eight consecutive annual Treasury deficits aggregating $30,000,000,000.

Jefferson cut down the public debt 8 years in a row, while the present fourth-termers increased the debt as well as the taxes 8 years in a row, before the war began.

Jefferson accomplished this financial achievement in efficiency and economy by resisting the ambition to build up his executive power by multiplication of bureaus and offices, at the expense of the States.

Were Jefferson alive today he might well cite the following paragraph from the Declaration of Independence, as an example of what the present incumbent has brought about in defiance of Jeffersonian principles:

"He has erected a multitude of new offices, and sent hither swarms of officers to harass our people and eat out their substance."

This Jeffersonian doctrine might also be a good theme for the orator of the Jefferson Day dinner in Washington April 13, 1945.

Proof that Democrats were nonexistent in Jefferson's day is the official classification of the Ninth Congress in the second term of Jefferson:

United States Senate, 27 Republicans and 7 Federalists; Democrats 0.

House of Representatives, 119 Republicans and 25 Federalists; Democrats 0.

Both Houses, 146 Republicans and 32 Federalists; Democrats 0.

So the Jefferson birthday dinner presided over by Chairman Hannegan at the Mayflower on April 13, 1945, will celebrate the principles of the first Republican President and the measures of a Congress which stood—146 Republicans, 32 Federalists, and no Democrats—while paying $100 per plate for the privilege of commemorating the following achievements of Thomas Jefferson, the Republican:

The program for extinguishing the public debt.

An 8-year surplus in the United States Treasury without a deficit.

The American tradition that two terms in the White House are enough.

Neutrality and avoidance of foreign entanglements.

Government efficiency and economy without autocratic bureaus.

The American slogan: "Equal rights to all, special privileges to none."

Freedom of speech and freedom of the press without an O. W. I.

Protection of private property against seizure without due process of law.

And the Declaration of Independence against foreign rule and tribute in a Republic where Congress consists of 146 Republicans, 32 Federalists, and no Democrats.

That certainly is worth $100 per plate.

JEFFERSON WAS A "REPUBLICAN"

Under the new party management by Sidney Hillman and the C. I. O.-P. A. C., as recently announced through the press, there will be no more annual celebration of Jackson Day, and, in lieu thereof, the party will celebrate Jefferson's birthday.

The two outstanding political crimes for which Andrew Jacksoan has been indicted are:

1. On January 8, 1935, which for over a century has been known as "Jackson Day," Andrew Jackson paid off the last dollar of the public debt. How, indeed, could a party which has recently boosted the public debt limit to $300,000,000,000, take as godfather Andrew Jackson who, not only extinguished the debt, but claimed that debt-extinguishment was the greatest civic achievement of his administration?

2. Andrew Jackson perpetrated the further political crime of publishing in The Globe, on the morning of January 8, 1835, in the call for the first Jackson Day dinner, that this was a "Republican celebration":

[From The Globe, city of Washington, Thursday morning, January 8, 1835]

REPUBLICAN CELEBRATION

"The subscribers for the public dinner in this city, to be had this day, in honor of the Extinguishment of the National Debt, and Commemoration of the Battle of New Orleans, are requested to call for their tickets

at Brown's Hotel, prior to 5 o'clock p. m., this day.

"The dinner will be served at precisely 6 o'clock, at Brown's Hotel, at which time and place invited guests and subscribers are requested to attend.

"By order of the Committee of Arrangements.

"Thursday, January 8, 1935."

So after 109 years of celebrating Andrew Jackson as the godfather of the Democratic Party Jackson is to be thrown into the discard and the party will now celebrate Thomas Jefferson.

It is plain that the C. I. O.-P. A. C. managers of New Deal democracy have never yet read American history—not even the first inaugural message of Thomas Jefferson delivered to Congress March 4, 1801. Said Jefferson in classifying American citizens of that day:

"We are Republicans—we are Federalists."

There was no Democratic Party until the first Democratic National Convention held at Baltimore in 1836—10 years after Jefferson was in his grave.

Thomas Jefferson, in the scores of letters he wrote in building up his political following, invariably called himself and his followers Republicans. The word "democratic" was a smear word used by the Federalists to imply that Jeffersonians favored mob rule.

The first use of the term "Democratic" by the Republicans was after the Jefferson administration, when New York followers held what were termed "Democratic-Republican" caucuses. But in the South and West Jefferson followers continued to call themselves Republicans even for 30 years after the Jefferson inaugural message of March 4, 1801.

In the Rare Book Section of the Library of Congress there is preserved a small booklet giving the proceedings of the Republican Convention of the First Congressional District of Virginia in 1836. Virginia is Jefferson's own State. Yet what are now known as the Democrats of Virginia still in 1936 called their party Republican, following the example of Jefferson in 1801-10.

Of even greater significance than the party name is the economic fact that the debt-extinguishment program which Andrew Jackson completed on January 8, 1835, was Jefferson's own program.

Yearly debt extinguishment by gradual reduction installments was one of the first steps inaugurated by Jefferson and his Secretary of the Treasury, Albert Gallatin. Gallatin set up a sinking fund for debt extinguishment. Five Presidents and 16 Congresses—from 1801 to 1835—year after year, except during the War of 1812, joined in reducing the Revolutionary debt, until, on January 8, 1835, Andrew Jackson paid off the last debt installment completing the Jefferson-Gallatin debt-extinguishment program of 1801.

In switching from Jackson to Jefferson in their search for a godfather, the C. I. O.-P. A. C. edition of New Deal democracy has jumped from the frying pan into the fire. In Thomas Jefferson as godfather, the New Dealers are celebrating the birthday of the first Republican in American history, as well as the author of the Jefferson-Gallatin plan of abolishing the public debt.

But the New Deal democracy of today departs from Jeffersonian principles on more points than the two above named, as witness:

1. Thomas Jefferson favored what for 145 years was known as the American tradition of two terms in the White House enough. The New Dealers are pondering the question whether four terms are enough.

2. Thomas Jefferson deplored foreign entanglements. The party today, after cementing a three-power foreign alliance with $36,000,000,000 of lend-lease, now wants that alliance and lend-lease continued indefinitely into the post-war period.

3. Any Member of Congress now supporting Jeffersonian principles both in spirit and in letter is in danger of being smeared by the C. I. O.-P. A. C. as an isolationist, because Thomas Jefferson, like Washington, favored neutrality in our foreign relations.

The progress of debt extinguishment during Jefferson's two terms in the White House, was as marked as the yearly increase of the public debt during the first three terms of the present incumbent.

Jefferson's second annual message, December 3, 1802, tells Congress that "upward of $8,000,000, principal and interest, of the public debt" is paid, and that a further sum of $4,500,000 is in course of payment.

Jefferson's third, fourth, and fifth annual messages made like reports of debt reduction, aggregating $18,000,000 of the principal and a like amount of interest on the debt.

Jefferson's sixth annual message reported $23,000,000 of the principal paid in addition to the interest paid, while his eighth and last message reported extinguishment of $33,580,000 of the principal in addition to the payment of a like amount of 6 and even 8 percent interest.

Except during the War of 1812, under the Madison administration, the Jefferson-Gallatin debt-extinguishing program was annually approved by Congress as a continuing institution. The Monroe administration reduced the debt annually, following the plan of Jefferson, as did the John Quincy Adams administration—all calling themselves Republican.

In 1825, John Quincy Adams reported to Congress that the principal of the public debt—including both the Revolutionary debt and that of the War of 1812—was now reduced to $81,000,000. Said Adams to the Nineteenth Congress:

"It is exceedingly desirable that it (the public debt) should be extinguished altogether. * * * And, when the pledge * * * to the public creditor shall have been redeemed by the entire discharge of the national debt, the swelling tide of wealth with which they replenish the common Treasury may be made to reflow in unfailing streams of improvement from the Atlantic to the Pacific Ocean."

Finally, ten years later, on January 8, 1835, a full generation after Jefferson made the first debt reduction, Andrew Jackson completed the job, and called for the "Republican Celebration"—which was officially announced in The Globe.

Five Presidents and 16 Congresses—most of whom, following Jefferson, calling themselves Republican—finally consummated the debt extinguishment begun by Thomas Jefferson on March 4, 1801. Andrew Jackson had the honor of finishing the job of which Jefferson was the architect and foundation builder.

Jefferson laid the first foundation stones as a Republican, and Jackson celebrated the completion of the job by holding a Republican celebration.

These are the two patriotic Americans—Andrew Jackson and Thomas Jefferson—between whom today the C. I. O.-P. A. C. are trying to find a godfather. They have abjured Andrew Jackson because he was a debt extinguisher who called a Republican Celebration. They turn to Jefferson, who proclaimed himself a Republican and was the author of the debt-extinguishment job which Jackson completed. Were either Jackson or Jefferson alive today, would they admit paternity of a New Deal group which in 12 years has boosted the debt 12 years in a row and now climbs the Mount Ararat limit of $300,000,000,000?

The Food Shortage

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. SHAFER. Mr. Speaker, this House, as the Government body immediately responsible to the people of the United States, cannot longer evade its responsibility in the acute food problem with which the Nation is now confronted.

The problem grows worse daily. Shortages increase daily. Announcements of future shortages pour forth daily from the press agents of the several executive agencies which are supposed to be providing a steady and adequate supply of food for our armies, our allies, and ourselves.

President Roosevelt has declared that no decent man will question the allotments of food to relief organizations and to foreign governments. But let me say that decency, like charity, begins at home. And when we hear that sufferers are running away from tuberculosis hospitals because those hospitals can provide only one-half of the minimum meat ration necessary to persons in their condition, then it becomes the duty of decent men to ask what is the matter and to insist upon righting the conditions.

Last week announcement was made of the formation of an interagency committee to study future allotments of food to the various agencies and enterprises engaged in relief work in liberated lands and conquered lands, and Saturday, a few days later, it was announced that civilian supplies of meat in the United States are to be reduced by 12 percent for the next 3 months.

This announcement comes on the heels of months of scarcity during which the American housewife has been unable to obtain a decent cut of meat for her family. It comes on the heels of the cancellation of red points that housewives had been saving to obtain decent cuts of meat for Christmas. Yet we are told that decent men should not say or do anything about it.

I believe that the most elementary decency requires that the proper committees of this House, without delay, determine the whys and wherefores of these shortages and find a way to eliminate them.

The American workingman and workingwoman cannot long continue the miraculous production of weapons and equipment of war which has made possible all of the Allied successes, if they are to be put on and kept upon an inadequate diet.

This House could make no greater contribution to the healthy prosecution of the war than by diligently inquiring into all aspects of the food situation—the amount of food available here, the amount piled up in foreign countries, the amount of American-produced food be-

ing distributed in foreign countries under various auspices, the degree to which these amounts are necessary as a part of the war effort, and, most importantly, the means and steps to be taken to increase domestic production of food to alleviate the existing acute shortage.

Without going into the matter of how much food has been shipped abroad—not for the use of our armies—I should like to point out the conviction I have had, and have stated on numerous occasions, that the production of food has been unnecessarily and unwisely discouraged. Government interference with the farmer and his markets has made it impossible for the producer of food to do the increased job which he must do to meet our own needs and the needs of others who have some claim upon us.

We have dozens of bureaus and agencies interfering with, harassing, and hopping on our farmers. The officers of most of these bureaus and agencies know little about the farmer, the farm, or its products, except that food is something you eat. That is about the outside limit of their knowledge.

This is not a new condition. It has been going on for years. It began when we followed Henry Wallace's orders to slaughter millions of little pigs. And through these years we have built up around the food producer an impassable fence of Government bungling and interference. We are now paying the price in the food shortage which many of us predicted was bound to come.

By governmental interference, schemes, projects, dreams, and contradictions of all the natural laws of food production and food distribution, we have reduced the American diet to a dangerous and unhealthy point.

Even the farmer, though he loves his soil and the products of his soil, cannot and will not work forever without some hope of profit.

But the Government has interfered with and disrupted his market. It has set prices for his produce at such ridiculously low retail levels that the farmer cannot sell even at the cost of production. The inevitable result is abandoned farms and decreased production.

The Government has interfered with farm manpower to a ridiculous extent, with the result that the farmer cannot get and cannot hold the help which is essential even to normal production, let alone the added production which is essential in wartime.

Beyond that, the President issued a directive to draft officials to ignore the Tydings amendment, with the result that the farms have been depleted of essential farm labor.

The Government has interfered with and made it impossible for the food producer to obtain machinery and equipment which are essential to the production of normal food supplies.

In short, it seems that the Government has done everything possible to discourage the food producer, to drive him out of business, and to create the food shortage which the American people—whether the President believes them decent or not—demand now to be alleviated.

On their record it is too much to expect that the very Federal agencies which are in a great measure responsible for the condition which now exists could be expected to do anything intelligent toward its alleviation.

The sole hope of the American people for a decent availability of an adequate food supply lies in this House of Representatives. It can determine what is wrong. It can insist that the wrong be righted. The time is now.

Rehabilitation in the Navy

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. SPARKMAN. Mr. Speaker, I am sure that the Members of Congress, as well as the public, would be much interested in the address made by Capt. Howard H. Montgomery, United States Navy, officer in charge of rehabilitation, United States Navy, before Washington (D. C.) Lodge, No. 2, American Federation of the Physically Handicapped, along with the introductory remarks of President James E. Walsh, of Lodge No. 2, which are as follows:

President WALSH. As we know, the problems of disabled people are inextricably interwoven. In this instance we refer to those disabled, both in the service of our country and the civilian handicapped. Since we have in the American Federation of the Physically Handicapped both those in the armed forces and civilians as members, we are naturally anxious to know what has been done and what is planned on behalf of all groups.

We have learned that with its usual commendable foresight and energy the Navy has developed a splendid program for rehabilitation of the disabled. I am sure that each of you will feel highly edified by learning, at first-hand, the details and methods being developed by the Navy Department.

We are honored in having the officer in charge of rehabilitation, Navy Department, as a speaker this evening, and I take pleasure in introducing to you one of the foremost specialists in this field in the United States today, Capt. Howard H. Montgomery.

Captain MONTGOMERY. As it became apparent that the present war would be a long, hard, and costly undertaking, the thoughts of men and women in civilian life, as well as in the armed services, turned toward the inevitable casualties. It was the consensus of opinion that adequate treatment meant more than the best of medical and surgical attention. Military necessity demanded that every man possible be returned to active service as expeditiously as possible and ready to vigorously resume his regular duties. The country's debt of gratitude to those whose disabilities necessitated their return to civil life must be partly discharged by giving them every reasonable assistance in making a satisfactory readjustment. These considerations loomed large in the thoughts of the Medical Department of the Navy in planning for its care of the men and women of the Navy, the Marine Corps, and Coast Guard.

Trends of naval activity and experience with early casualties were carefully watched, reports of procedures in effect in Allied countries with longer war experience were reviewed, until about a year ago the Surgeon General announced the establishment of an office in the Bureau of Medicine and Surgery to develop, place in operation, and direct a rehabilitation program for the Medical Department of the Navy.

This program provides activities and services which may be required to supplement the ordinary or usual therapeutic procedures in order to achieve maximum adjustment of the patient, either for further military service or for return to civil life, with the least possible handicap from his disability. It includes physical and occupational therapy, education and training, education and vocational counseling, physical training, recreation, social service in its broad meaning, and for those returning to civil life assistance in their problems of readjustment.

This appeared to be a new departure in the Medical Department, but it was new only as a formally organized undertaking necessitated by wartime conditions. The ends it was intended to achieve have always been the basic aims of the Medical Department.

Rehabilitation is not considered a separate undertaking, started at some ill-defined stage in recovery, nor is it a procedure applicable only to a particular type of case. Rather, it is a process that starts as soon as a man comes under medical care—a process that includes all patients—and continues until the maximum benefit from the treatment has been attained and the man is ready to leave the hospital. It consists of the usual complete medical and surgical care supplemented by the services of the rehabilitation program which are designed to hasten recovery and return to duty in an optimum state of physical fitness with a minimum loss of adeptness in usual duties, or prepare the way for a satisfactory readjustment to civil life.

All naval hospitals in the United States have rehabilitation programs in operation which vary in details according to local peculiarities of construction, climatic conditions, and the type of patients that predominate. All hospitals, however, are general hospitals, in the sense that they are not limited to treatment of any particular type of case. Their patients consist of men and women admitted from nearby Navy, Marine Corps, and Coast Guard activities, as well as casualties evacuated from combat areas. As a general rule, the patients received from nearby stations are admitted for acute conditions with complete recovery expected within a relatively short time. The patients received from the combat areas, however, as well as a certain percentage of local admissions, require prolonged periods of treatment before they are ready to leave the hospital, whether to return to duty or to civil life. Consequently, the rehabilitation effort in any one hospital, both in its treatment and in its supplementary activities, must be adapted to the needs of its particular patient population.

With the fact in mind that naval patients remain hospitalized until convalescence is complete, and thus have a considerable amount of time during which the need for active medical or surgical attention is decreasing and they feel increasingly fit, it becomes apparent that there is an opportunity for the rehabilitation program to come into full play.

The program operates in each hospital through a medical officer who is designated as rehabilitation officer, assisted by a rehabilitation board composed of medical officers and technical specialists who represent the various contributory activities. Inasmuch as the program supplements the usual procedures of medical and surgical

treatment, it is guided at all times by the ward medical officer responsible for the care of the individual patient. His recommendations as to types of activity and limitations on the extent of activity govern in all cases. He determines when these auxiliary activities should be introduced, and which ones will contribute most to recovery.

Physical medicine, which is interpreted to include both physical therapy and occupational therapy, is a phase of the program that is actually an integral part of the professional treatment. When indicated, physical therapy is prescribed and included in the patient's daily schedule, so that it may properly supplement the other rehabilitation procedures, especially when activity and exercise are concerned. Occupational therapy is used to promote recovery from physical conditions such as are encountered in orthopedic and surgical wards, and to aid in bringing about a healthy outlook. In certain neuropsychiatric and psychosomatic conditions, directed activity in pursuits that interest the patient will relieve tension, afford an outlet for energy, and build up confidence. The procedures employed are limited only by the ingenuity of the therapist in putting to use the facilities available in the hospital. Many naval procedures and many of the processes of industry require the use of muscles and joints which can be adapted to the aims of therapeusis. By judicious selection of the procedure to be used, the therapist materially decreases the need for teaching patients skills that are new to them, and can concentrate on obtaining the desired therapeutic result.

Physical training is another important feature of the rehabilitation program. A program of graduated physical activities is conducted as one means of preventing, as far as possible, the loss of physical efficiency that accompanies illness and its enforced inactivity and promoting an optimum state of general fitness. This program is designed to improve the strength, endurance, and coordination of the body and, by the use of selected games and sports, to incorporate psychological and sociological benefits as well.

Training, education, and counseling are other important features of the rehabilitation program, training and education particularly for men who are eventually returned to active duty, education and counseling more especially for those who will be discharged from the service. Many patients enter the hospitals from nearby duty stations because of acute conditions of short duration, but a considerable number, among them most of those evacuated from overseas, require prolonged periods of treatment. The type of training or educational project suitable for an individual patient must, therefore, be appropriate to his probable length of hospital residence. Many patients elect subjects related to their usual naval duties; others undertake courses in general education to add credits to their previous academic records. Courses of study which are prerequisite for promotion in enlisted ratings may be undertaken and the patients given credit for successful completion.

Educational and vocational counseling for patients who are to be discharged from the service for medical reasons is another important function—a part of the work that has assumed greater significance as the number of discharges has increased. Once it is determined that a patient will not return to active service, the educational officer reviews with him his total training and experience and learns his preference for his post-service career. Physical and psychological handicaps are evaluated by professional members of the staff.

On the basis of this general survey the patient is assisted in arriving at a decision which will be satisfying to him and, at the same time, be compatible with his handicaps. During the remainder of his hospital residence, he is encouraged to engage in studies or in practical work that will serve as groundwork on which he can build after he leaves the service. All that is done to prepare these men for civil life is coordinated with such civilian agencies as the Veterans' Administration. The objective is to assist each man to plan for his future, and to start him on a course of action in the hospital that may be continued in civilian life with a minimum loss of time.

Accurate and complete information as to what his rights and benefits may be is essential for every prospective dischargee as part of his preparation for return to civil life, and he needs advice and assistance in making claims for those which meet his particular situation. A civil readjustment program to do these things is in operation for all naval dischargees. In the hospitals this important function is performed by officers especially trained for this duty. These officers assist the dischargee with arrangements for effecting his plans for civil life, coordinate the efforts of the representatives assigned to work in the hospitals by the agencies and organizations interested in the welfare of veterans, and make sure that claims for benefits are properly completed and promptly forwarded.

During the entire period of hospitalization, careful attention is paid to the intangible but vital matter of personal morale. The duties of the chaplains are intimately related to this aspect of the program. Sympathetic man-to-man talks with the chaplain assist patients of sincere religious convictions, particularly those seriously ill or suffering from major injuries, to attain the peace of mind and spiritual well-being so essential to recovery. In addition, the chaplains, particularly those who have had overseas duty, have a knowledge of the problems of the men in the naval service and experience in their solution. Regular contacts between the chaplains and the patients are facilitated in every way.

Recreation, which is an essential part of any well-ordered life, assumes increased importance during hospitalization. This has been provided for in well-stock libraries of both books and musical recordings, radio sets, movies, and a wide variety of entertainments, parties, dances, and athletic facilities.

The workers of the American Red Cross perform innumerable personal services. Their trained workers in the hospitals and in the home communities assist in solving unsatisfactory family or home situations. They provide a varied program of diversional handicrafts, entertainments, and various kinds of recreational activities for convalescent patients, and they assist men undergoing discharge from the service in preparing claims for benefits under existing laws.

The blind, the deaf, and the amputee require a particular type of care and are, therefore, brought together in certain centers.

The United States Naval Hospital, Philadelphia, Pa., is the center for care of both blind and deaf patients. The blind are immediately started on a course of social adjustment even while they are receiving whatever medical or surgical treatment that may be required. Their initial training includes steps to bring about a healthy psychological adjustment to the blindness, which, in most cases, has had a sudden onset rather than gradual development. They are taught to care for their personal needs, how to eat properly, how to move about freely and unescorted—in short, how to live as normally as possible despite their disability. They are instructed in typing and started on Braille. During their period of hospitalization, careful counseling on their future is conducted and they are given every opportunity and encouragement to prepare themselves for a satisfactory, economically useful life. These men are not discharged from the service until they are fully ready to start on their careers, whether in employment or in further education. There is the closest possible cooperation between the Navy and the Veterans' Administration in arrangements for the future of these men.

All cases of bilateral deafness of more than a stated degree are also concentrated at the naval hospital in Philadelphia. Personnel to instruct the deaf in lip reading and correct habits of speech, to assist them in their psychological adjustment to their loss of hearing, and to conduct the scientific fitting of hearing aids, have been assigned to duty there. These specialists have been furnished the special equipment required for a complete scientific program for the care of these patients.

Patients who have undergone amputation of an extremity are treated in either the naval hospital at Mare Island, Calif., or the naval hospital at Philadelphia. Surgery necessary to prepare the stump for prosthesis is carried out in these centers. Both hospitals have complete shops for the manufacture of artificial limbs. A temporary appliance is furnished the patient as soon as his stump is in condition to receive it. This is later replaced by a permanent type of prosthesis which the patient is taught to use satisfactorily before he is discharged from the hospital. As part of the training in using the appliance, patients are given opportunities for actual trial in activities in which they may wish to engage after discharge. Some of the amputees, particularly men who have made the service a career, return to active duty of a limited nature as soon as their prosthesis is comfortable and they are able to use it; others go directly from the hospital into suitable employment.

In practice, the program has two objectives: For patients who can be returned to active duty, its services are directed toward expediting their restoration to condition to carry on fully whatever arduous duties may be assigned to them and, at the same time, maintain or improve their adeptness for their usual assignments. For patient who must be returned to civil life for medical reasons its services are directed toward making efficient use of the time required for treatment of their disabilities to prepare them for a satisfactory readjustment to civil life.

It is realized that, although rehabilitation from a physical standpoint can be completed before they are discharged, only the groundwork for their social and economic rehabilitation can be laid. This can be carried through to completion only by the cooperative efforts of the men themselves and the communities to which they return.

It is important for those who are giving thought to the problems of the handicapped to keep in mind that a considerable proportion of men discharged for medical reasons are not handicapped in the sense that they use the word. Service in the Navy in time of war requires a degree of physical and mental stamina beyond that necessary for a very productive, successful, and satisfying life under civilian conditions. Discharge from the service for medical reasons in many cases means only inability to meet the requirements of a very special job—that of being a fighting man in a Navy at war—and not disability for the normal activities of life in a civilian status. There are, however, many others whose disabilities bring them into the realm of the handicapped. The crying need for manpower for production of materials of war has led to the employment of individuals with handicaps which, in other days, would have been a deterrent to even consideration of an application for a job. The excellent manner in which these handicapped people have acquitted themselves when given an opportunity, has been the best demonstration possible of the fallacies of previous thinking, and has opened up wide fields of opportunity for the handicapped casualties of war.

Issuance of War Bonds to Members of the Armed Services

EXTENSION OF REMARKS
OF
HON. EARL R. LEWIS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. LEWIS. Mr. Speaker, I take this time to call to the attention of the House a situation which seems to be prevalent, which is the undue delay in the issuance of War bonds which are being purchased by boys in the service and payment for which is deducted from their monthly pay.

In order that the House may understand what this situation is, I hereto attach a copy of a letter which I received from Mr. Sam Walker, service officer of Post No. 77, American Legion, Neffs, Ohio, in my district. I believe that those in charge of the issuance and delivery of War bonds purchased by our boys in the service should revise their procedure in such manner as to permit quick delivery of bonds. This seems to be a matter which, like most others of which the public complains, is a partial break-down of the executive branch of Government. The letter to which I refer is as follows:

NEFFS, OHIO, POST, NO. 77,
AMERICAN LEGION,
March 10, 1945.

Hon. EARL LEWIS,
Member of Congress, Washington, D. C.

DEAR MR. LEWIS: As service officer of Neffs Post, No. 77, American Legion, have had quite a number of parents of soldiers come to me in recent months complaining of a rather questionable situation involving delay in issuance of war bonds being purchased by their sons in service and payment for which is deducted from their monthly pay.

This particular problem never seems to arise until the boys have gone overseas and then it seems the bonds stop coming although the money continues to be deducted from the soldier's pay.

Recently saw a letter issued from the war bond office in connection with this same matter in which it was stated that no bonds would be issued until the office had received confirmation from the commanding officer that payment for the bonds had been deducted from the soldier's pay and further that parents should wait at least three months before writing in about them.

Am fully appreciative of the fact that with so many men and women in the services and scattered everywhere over the globe as our forces are, it is bound to be a difficult matter to handle, yet would like to know if it is possible that the finance department of the Army in Washington doesn't know or have some record of every pay roll regardless of where the troops are stationed, and if so it surely should be no difficult matter to check if war bond payments were deducted or not.

Am also aware that many of the boys cancel their bond purchases upon going overseas but in the cases that have come to my attention I find that the parents have confirmation of the fact that the deductions are still being made from the soldier's pay yet the bonds are not being issued.

A goodly number of the folks have written in about the bonds but none so far have ever received replies from the war bond office and can personally state that isn't merely hearsay either for I have had the same situation to contend with as I have a son overseas who is buying a $25 bond each month and after some correspondence with him find that he is having the money deducted out of his pay each month and further that he never canceled his purchases.

My own case is typical of most of the cases coming to my attention. Our son went overseas in October 1944 and since that time we have received but one $25 bond, and doubt if we would have received that had I not written a rather nasty letter to the War bond office asking for some explanation of the matter and in about a week or so we received one bond for the month of October 1944 and none since, nor did I ever receive a letter in reply to mine. At present we have five bonds due and upon making inquiry find that most of the folks are in about the same situation.

Had an instance reported to me last night in which a solider purchased about $500 worth of bonds but only received half of them, and although the parents have written time and time again they have never been extended the courtesy of a reply, and after considerable discussion of this matter at our regular legion post meeting last night I was instructed to write you asking that you check into this matter and see what can be done to remedy the trouble.

You can readily see how much trouble this delay in the issuance of the bonds might cause in cases where the soldier is killed in action and the parents have to prove that the money was deducted from the soldier's pay or in a case such as that mentioned in the foregoing paragraph.

Will appreciate your office investigating this matter and advising me so that I may be in position to assist some of these folks as they come to me.

Thanking you for this favor, I am
Sincerely yours,

SAM WALKER,
Service Officer.

Iowa for Economy

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. HOEVEN. Mr. Speaker, the people of Iowa have contributed liberally to the winning of the war. Their sons and daughters are on all of the battlefronts of the world. They have also contributed large amounts of money to every worthy cause connected with the war effort.

The people of Iowa, however, are a thrifty people. They believe in economy and are greatly disturbed over the fact that the Federal Government over a long period has appropriated more money than it has collected. The Iowa General Assembly, now in session, well expressed the sentiment of the people of Iowa when it adopted Senate Concurrent Resolution 13, which I herewith set out as a part of these remarks, as follows:

Iowa Senate Concurrent Resolution 13

Whereas Congress annually for a long period has appropriated substantially more money than taxes levied; and

Whereas the Federal Government debt and need for operating funds in the post-war period will strain the fiscal foundations of our Government; and

Whereas fiscal stability under these conditions demands a constitutional directive which within definite limitations would compel the levying of taxes in at least an amount sufficient to equal expenditures: Now, therefore, be it

Resolved by the Senate of the State of Iowa (the House of Representatives concurring):

1. That the Congress of the United States be memoralized and urged to take immediate favorable action on Senate Joint Resolution 8 establishing a procedure by which Federal spending and Federal income would be balanced except in specified emergencies.

2. That a copy of this resolution be forwarded to the Vice President of the United States, the Speaker of the House of Representatives, and to each Iowa Senator and Member of the House of Representatives in the Congress of the United States.

Judge Fred M. Vinson

EXTENSION OF REMARKS
OF
HON. JOE B. BATES
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. BATES of Kentucky. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials:

[From the Cynthiana (Ky.) Democrat of March 15, 1945]

OUR FRED

Comment on the appointment of Fred Vinson to head the great Reconstruction Finance Corporation may be a trifle late at this time, but it is never too late to rejoice at this additional honor which has come to one whom the people of Harrison County long ago adopted as a favorite son.

His handling of the office of Director of Economic Stabilization was hailed on all sides as an accomplishment of the first order. It called for rare gifts both as a business and political executive. In many ways it was similar to the requirements of the Presidency itself.

His new duties are of the same kind. It is significant that leaders of both parties heartily approved of his appointment. They realize that he has the understanding, the courage and the character that are necessary to reconcile conflicting interests and opinions in the best interest of the country as a whole.

When the time comes to select a successor to President Roosevelt (and our Republican friends fervently hope this will be during their lifetime), we know of no one who will deserve more earnest and favorable consideration at the hands of the Democratic Party and the country than Fred Vinson.

We believe we are expressing the opinion and the sentiment of the people of this county when we say that there is no job too big, and no fortune too good, for our FRED.

[From the Louisville (Ky.) Courier-Journal of March 3, 1945]

AN EXCELLENT CHOICE FOR THE LOAN OFFICE

When it became apparent that the offices of Federal Loan Administrator and Secretary of Commerce would be separated, Henry A. Wallace said that he would accept the Secretaryship, but not "if there were serious danger

of a too-little and too-late man being appointed" to the lending job. Mr. Wallace and his opponents in the late controversy will all agree that Judge Vinson is no too-little and too-late man and is capable of vigilant as well as strong administration of the office.

And if, incidentally, Judge Vinson were a man of different concepts, Kentuckians might be bemoaning the fact that this change did not come a lot sooner so that Kentucky, instead of Texas, could have been showered with blessings, as Texas was by Jesse Jones. But the truth is that Judge Vinson's selection could not have meant, and will not mean, special favors for any State, including his own. And this is just one improvement that has been effected in the change of administrators.

Judge Vinson steps out of the hottest spot in the Government at Washington—the Directorship of Economic Stabilization. This office is the focal point at which the increasing inflationary pressures direct themselves, and its incumbent must be a man of granite and steel, as Judge Vinson is. If his successor is a weaker man, to any extent a complaisant man or a man who courts momentary popularity, then the transfer could be disastrous to the national economy. But unquestionably President Roosevelt knows all this as well as anybody else and has a suitably adamant successor to Judge Vinson in mind.

We Must Puncture Bubble That Calls for Federal Funds in Every Community

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. SHAFER. Mr. Speaker, when the people of America sat down last week to figure out their income taxes—and with more difficulty to figure out how to pay them—many thought, no doubt, that this was just another tribulation caused by the war and that it would cease when victory is won.

While it is true that most of the money now being raised by the income tax is going into the war effort, those who look for an immediate and drastic reduction of this tax when the war is over are not facing the facts of practical life.

Actually, unless there is a radical revision of the course of our Government the income tax in its present heavy form or even heavier is going to be with us for many a long day. It is the price which the people must pay for big government. At least, it is one of the prices. The others are not so tangible but nonetheless real.

The lesson of income-tax day is that we cannot extend and extend and extend the functions of the Federal Government without somebody paying the cost. And the cost must be paid by all of us individual citizens. Soaking the rich, though popular, won't do it. It is now, and will be in the future, a matter of soaking everybody.

If the people would learn this lesson there would be an abrupt curtailment of Federal extension. There would be an abrupt end to the countless dreams of what the Federal Government can and should do. There would be an abrupt end to the pressure by this group and that group to get the Federal Government into this or that activity.

These dreams require financing, whether they envision the Federal Government participating in building more schools, providing hot lunches for school children, building nonpaying model communities, or harnessing the tides.

Somebody has to pay for these things and that somebody is the humble citizen who tries to solve the mysteries of the income tax.

Under the presently pending grandiose schemes for further socialization of our country during the post-war period the incubus of the Federal Government will become weightier and weightier upon the taxpayer. Millions and millions of dollars are called for to advance pet projects and selfishly demanded enterprises for the benefit of particular groups.

We have got to do one of two things. Either we must puncture the bubble that calls the Federal Government into every community to finance and control every enterprise and every citizen or we must reconcile ourselves to a steadily advancing income-tax bill.

The money to finance schemes is not going to come out of the same brains that cook up the schemes. It is going to come out of the pockets of the individual taxpayer whether he likes the schemes or not.

The octopuslike Federal Government which we now have and which is going to grow many more arms after the war feeds on a mighty diet of dollars, and every man and woman in America are going to be called upon to keep shoveling in money unless they—individually and collectively—join in cutting off these arms before it has to be fed.

It must be confessed that a lot of communities in our country think they are getting something for nothing when the Federal Government moves in to finance the latest program or project. They will learn that they are not.

Their citizens are going to pay and pay and pay. And they are going to pay in two ways. They are going to pay in money. But more important, they are going to pay by having the stifling hand of a Federal and necessarily distant Government always around their necks.

We ought to propound and insist upon a freedom to be added to the international list which is so blithely proclaimed and then so blandly ignored. That would be freedom from excessive government. And we ought to propound it on income-tax day.

It is worthy of note that on March 15, income-tax day, the Senate Finance Committee approved the bill already passed by the House which will raise the national debt limit to $300,000,000,000. And the Treasury on the same day announced that before the year was over that limit will again have to be raised.

Figure that out on your income-tax blank.

Treatment of Poland

EXTENSION OF REMARKS

OF

HON. PHILIP A. TRAYNOR

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. TRAYNOR. Mr. Speaker, among the sins that cry to heaven for vengeance must be the treatment that has been afforded to Poland. In the days when the war was young, Hilaire Belloc wrote that of all the political truths connected with our struggle the most obvious and important is that its test is Poland. Almost every Catholic writer with a sense of history and tradition has caught up the phrase "the test of Poland." They know with Chesterton that—

> Poland is the Catholic culture thrust like a sort of long sword blade between the Byzantine tradition of Muscovy and the materialism of Prussia.

They feel—contrary to the hypocritical modernism that religious motives in international politics must not be calculated nor even mentioned—the heinousness of Catholic Poland, steeped in western freedom and culture, to the bloody maws and manacled regimentation of atheistic Asiatics, for they well understand that American Catholics and Polish Catholics all are members of the mystical body of Christ the church. They remember the words of His Holiness, Pius XII, in this respect:

> But a body calls for a multiplicity of members, which are linked together in such a way as to help one another. And as in our mortal composite being, when one member suffers all other members share in its pain, and the healthy members come to the assistance of those ailing, so in the church the individual members do not live for themselves alone, but also help their fellows, and all work in mutual collaboration for their common effort and for the more perfect building up of the whole body.

On the shores of the Black Sea at Yalta, willy-nilly, whether we like it or not, as Americans we were represented by President Roosevelt in the fifth partition of Poland. If we remain silent and the decisions made on the Crimean Peninsula are confirmed at the conference to be convened shortly at San Francisco, we are as culpable as Pilate. No more than he can we wash our hands of the consequences. Does the Yalta decision in respect to Poland truly represent the will of the American people and measure up to their sense of justice and fair play? Let us—to resort to a favorite phrase of that able and fearless American, Al Smith—have a look at the record.

First. When the eastern boundary of pre-war Poland was set by the Treaty of Riga in 1921 the Poles surrendered their claim to 120,000 square miles of old Poland and left outside their boundaries 1,500,000 Poles. Inside the new Poland there were but 150,000 Russians. The Great Soviet Encyclopedia painstakingly points out that this was a Soviet victory, and that the terms of the treaty were

far less advantageous to Poland than those proposed by the Soviets themselves in April 1920. By nonaggression pacts signed in July 1932 and May 1934 the Soviets recognized these boundaries, and as late as July 28, 1941, after her nefarious deal with Hitler and his Nazis backfired, Soviet Russia again pledged her word to hold the same boundaries sacrosanct.

Second. In 1939 the war began because Poland bravely stood up against Nazi demands for 4,000,000 of her citizens and 19,000 square miles of her territory. The world acclaimed her gallantry, and France and England entered the war in her defense. The Soviet Union then delivered the coup de grace to Poland by knifing her in the back and straddled her prostrate body to join bloody hands with the Nazis. Those Poles who escaped the infamous partnership's clutch of death fought on in other lands. In the dark days when Britain stood alone against the spoilers Winston Churchill gave a stirring tribute to those few to whom, as never before in history, so many owed so much. It is a matter of record that one out of every eight planes destroyed over London and the channel in those grim, grave days was shot down by a Pole. When the thieves fell out, as they always do, the skies brightened for Poland and her warriors. The July 1941 treaty mentioned above in which Russia once more agreed to accept the pre-war Poland boundary was underscored by notes delivered to both Governments by British Foreign Secretary Anthony Eden in which it was categorically stated that no territorial changes occurring since the war began would be recognized. Polish legions continued to fight in north Africa, Italy, Holland, Normandy, in Germany itself. Despite Polish service and the iron-clad British guaranty, on February 27, 1945, scarcely 3 years after Eden's notes, Winston Churchill had the effrontery to defend in Parliament the Soviet claims made at Yalta as "just and right." These claims, if the 1939 division of spoils is the indicator, when accepted, would transfer to Soviet Russia 13,000,000 Poles and 77,000 square miles. Over 50 percent of this territory was never part of Russia at any time prior to 1939, and in the whole territory less than 200,000 Russians reside. For what purpose other than aggrandizement is it necessary for a nation as large as the Soviet Union—180,000,000 people scattered over 8,000,000 square miles—to demand half the territory of a neighbor less than one-fiftieth of its size?

Third. The legitimate Polish Government is constantly berated as obstinate for refusing to journey to Moscow to play a minor role in the formation of a new government headed up by a Lublin group spawned in the Kremlin. This latter group, in a membership of 17, numbers 10 Communists and is led by President Boleslaw Berut, O. G. P. U. chieftain—as late as 1938—and Soviet citizen who was dismissed from a Polish federal job in 1935 for Communist activity. Its defense minister and army chief is the notorious Michal Zymierski, who was dismissed from the Polish Army after the last World War for accepting bribes from French munition makers. His record includes service in Red Spain under the alias of General Rola, and as colonel in the N. K. V. D., the Soviet secret police. The legitimate government may remember the words of the Soviet Commissar for Foreign Affairs, V. Molotov, addressed to the Supreme Soviet on October 31, 1939:

> One swift blow to Poland, first by the German Army and then by the Red Army, and nothing was left of this ugly offspring of the Versailles Treaty.

Perhaps, too, they remember that even diplomats do not possess immunity in the land of the Soviets. After Russia attacked Poland nothing was ever heard again of Polish Consular General Matusinski at Kiev. Such proceedings are a far cry from the Atlantic Charter promulgated by President Roosevelt and Mr. Churchill in August 1941 and endorsed by Stalin in January 1942. Its second article provides:

> They desire to see no territorial changes that do not accord with the freely expressed wishes of the people concerned.

And the third:

> They respect the rights of all peoples to choose the form of government under which they will live; and they wish to see sovereign rights and self-government restored to those who have been forcibly deprived of them.

Fourth. It is also impossible to reconcile President Roosevelt's "four freedoms" of January 1941 with the present course in Poland. The second, "freedom of every person to worship God in his own way—everywhere in the world," are words that must choke in the throat of every Pole. What religious freedom can millions of Poles find under a government which has admitted but one Catholic priest—other than in concentration camps—since 1917; has no Catholic seminaries, nor will permit any; allows no religious instructions to children, even in churches, but officially promotes militant atheism; whose President, Kalinin, in 1944, said:

> We believe that religion is a misguiding institution and we struggle against it by education.

Of that Government, in 1941, President Roosevelt said:

> The Nazis are as ruthless as the Communists in the denial of God.

It was left for Acting Secretary of State Sumner Welles to say in June of that same year:

> This Government has often stated, and in many of his public statements President Roosevelt has declared, that freedom to worship as their own conscience dictates is the great and fundamental right of all people. This right has been denied to their peoples by both the Nazi and Soviet Governments. To the people of the United States this and other doctrines of the communistic dictatorship are as intolerable and alien as are the principles and beliefs of the Nazi dictatorship.

A $2,000,000,000 Parity Fraud

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. REED of New York. The Rural New-Yorker, an outstanding farm paper, reveals in its editorial how the farmers are being made the victims of a New Deal fake parity price. The editorial charges that the "fake is deliberate, intentional, and fraudulent"; that "while it is permitted to continue, it is a reproach to our Government." The editorial further points out that "the effect is, of course, to reduce the farm income by $2,000,000,000 every year this parity fake is in effect."

This annual loss of $2,000,000,000 to the farmer as a result of New Deal tampering with the figures by which the parity price of farm products is determined is typical of the program of deceit practiced upon the farmers of the Nation. These political and bureaucratic frauds are concealed by such devices as a handout of subsidies in lieu of fair and honest prices for the products of the farmers.

Under leave to extend, I am including the editorial entitled "A $2,000,000,000 Parity Fraud" published in the Rural New-Yorker:

A $2,000,000,000 PARITY FRAUD

When the United States of America hung out its democratic shingle in 1789, it had a population of 4,000,000 people, mostly farmers, and a war debt of $83,762,172. Their Government was based on the moral law of God, which included the Ten Commandments, the Golden Rule and a sense of justice. They pledged themselves to these ideals and implored Divine direction and help.

They had been dominated and oppressed. Now they were free and happy. They cleared the land, built homes and schools, colleges and churches. In 48 years they had paid their way, and paid every cent of the national debt.

These principles laid down by our forefathers were the controlling influence in our Nation until the close of the Civil War in 1865. After that, the bankers, the industrialists and the speculators dominated. Great enterprises were developed, corporations were created for banking, insurance, and various enterprises, and enormous fortunes were accumulated. Labor suffered great hardships in these times. Farmers suffered even more because of accumulated debts. Industries settled in large centers, and middlemen controlled the distribution of food and other materials.

The purpose of this story is to correct an abuse of this system of marketing farm products, and to encourage a larger farm production for the benefit of everyone who produces and eats food.

For three decades, political platforms, and candidates have promised farmers parity prices for their products. In good faith, this would simply mean cost of production (including economic distribution), taxes, and profit for farmers, just as industry rightly gets for itself. Instead, a monopoly of distribution alleged that from 1910 to 1914, farm and

industry prices were on a par. They therefore proposed to accept farm income for this period as a base and adjust farm prices for all future years as industry prices varied.

In 1920, when this scheme was proposed, the United States Department of Agriculture published the following table in its 1920 Year Book, page 806, table 297, as follows:

Estimated value of farm products 1910–14 based on prices at the farm

Year:	*Total value of crops and livestock*
1910	$9,037,000,000
1911	8,819,000,000
1912	9,343,000,000
1913	9,850,000,000
1914	9,895,000,000

The United States Department of Agriculture in volume 20, No. 3, July 1943, table 1, published the following table:

Gross farm income

Year:	*Total value of crops and livestock*
1910	$7,352,000,000
1911	7,081,000,000
1912	7,561,000,000
1913	7,821,000,000
1914	7,638,000,000

The figures in this report are for the same crops and the same years. The only difference is that they were published 23 years later. Note that the total annual value of the crops, including livestock, is substantially $2,000,000,000 less each year than the figures given for the same period as published by the same Department 23 years before.

The effect is, of course, to reduce the farm income by $2,000,000,000 every year this "parity" fake is in effect.

The Honorable Tom Linder, commissioner of agriculture for the State of Georgia, was the first to discover this trick. He says: "The evidence seems to point that the release published in the year 1943 and now used to determine parity, has been tampered with in an intent to beat down farm prices at the 'fake parity' which is now in effect."

This fake is deliberate, intentional, and fraudulent. While it is permitted to continue, it is a reproach to our Government. It must be stopped and replaced by an honest cost-of-production base for the products of our farms.

Letter From Mr. Morgenthau

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks, I include the following self-explanatory letter from the Honorable Henry Morgenthau, Secretary of the Treasury:

SECRETARY OF THE TREASURY,
Washington, March 15, 1945.

Hon. PAUL W. SHAFER,
House of Representatives.

MY DEAR MR. SHAFER: I have read with great interest the article by Junius B. Wood which you inserted in the CONGRESSIONAL RECORD for February 27. It seems to me that Mr. Wood has presented the British problem very well and that the article should be of real value to all those who are concerned with the economic problems which will confront us after the war.

I am deeply troubled by Mr. Wood's conclusion that the future policy of the United States should not be formulated until Great Britain has determined whether it will adopt a policy of bilateralism, import and export controls, and other devices which restrict the growth of world trade. I believe that Mr. Wood has overlooked two extremely important factors.

The first of these is that the responsibility for establishing proper trade policies is a joint one of all United Nations. We should do everything we can to influence the adoption by Great Britain of trade policies that will not have adverse effects on our trade. The pattern which will be set in the immediate future is likely to govern international economic relations for a long time to come, and I am convinced that we must do all we can to see that this pattern is shaped to meet the needs of our own economy.

The second point which Mr. Wood has overlooked is very closely related to the first. It is the effect which the adoption by Britain of a policy of bilateralism and trade restriction would have on our own exports. During the 1930's, when bilateralism was coming into its own, it was the United States that suffered most from the resulting decline in world trade. This loss of trade was caused not by United States policies of restriction but, on the contrary, by policies adopted by other countries, including Great Britain.

What both Britain and the United States need after the war is an expansion and balanced growth of world trade. This can only be obtained by multilateral agreement to abandon restrictive policies. The Bretton Woods proposals do exactly that in the monetary and investment fields and, in view of this fact, I thought you would want to give further consideration to the conclusion Mr. Wood reaches in his article.

If you wish, I will be glad to arrange for a member of my staff to make an appointment with you to discuss these problems at greater length.

Sincerely yours,

H. MORGENTHAU, Jr.,
Secretary of the Treasury.

Extending Lend-Lease

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Manchester Union, Manchester, N. H., of March 16, 1945.

EXTENDING LEND-LEASE

American public sentiment generally will approve the action of the House in Washington in adopting an amendment to the bill extending the Lend-Lease Act for another year, limiting the lend-lease program to war uses only. This amendment specifies that "nothing shall be construed to authorize the President to enter into or carry out any contract or agreement with a foreign government for post-war relief, post-war rehabilitation, or post-war reconstruction."

The value of lend-lease in the effort to defeat the Axis will be generally recognized. By this means weapons made in American factories were put into the hands of the nations that became our allies, thereby enabling them to keep up the fight against Germany and Japan. Thus two things were accomplished: The war was kept on foreign soil, and American soldiers were spared the job of bearing the whole brunt of the war.

There is a strong probability that without this program Britain and perhaps Russia would have gone down before the German onslaught. What that would have meant for us requires little imagination. Not only Britain and Russia were strengthened to survive, but the armies of many lesser nations were kept in the field against the Axis. In the final reckoning, lend-lease will be rated one of the potent factors leading to the defeat of both Germany and Japan.

But there is plainly a limit beyond which this program should not go. There is general agreement that lend-lease should continue until the fighting is done. But when that time comes, the purpose of lend-lease will have been fulfilled, and our own post-war economy will require that if further financial assistance is to be given our allies for relief or rehabilitation, special provision should be made by Congress for that purpose.

That is the intent of the amendment just passed by the House. This amendment does not say that further financial assistance shall not be given by the United States to help war-devastated countries to get back on their feet, but only that such assistance shall not be provided under the lend-lease program. Lend-lease is a war measure; post-war assistance should be put on another basis.

A. F. P. H. Accomplishments

EXTENSION OF REMARKS

OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. KELLEY of Pennsylvania. Mr. Speaker, the House Committee on Labor, Subcommittee to Investigate Aid to the Physically Handicapped, made a report to the House at the close of the last session of Congress and recently distributed printed copies of its hearings. These documents have been referred to in an article in the Sign Post, the official organ of the Detroit Association of the Deaf. The article was written by Mr. Jay Cooke Howard, probably the foremost expert in the country upon the rehabilitation and placement of the deaf, and director of the division of the deaf and deafened of the Department of Labor and Industry of the State of Michigan.

Mr. Howard's article is as follows:

A. F. P. H. ACCOMPLISHMENTS

The report of the hearings before the House Labor Subcommittee to Investigate Aid to the Physically Handicapped, of which Hon. AUGUSTINE B. KELLEY was chairman, has been released. It is divided into 8 parts: (1) The Blind; (2) Poliomyelitis; (3) the Deaf and Hard of Hearing; (4) the hearing in New York City; (5) the hearing in Pittsburgh; (6) the hearing in Detroit; (7) Federal Aid to the Physically Handicapped; (8) Orthopedic Impairments, Disabled Seamen, etc.—in all, comprising 1,138 printed pages.

An imposing array of specialists appeared before the committee, including professors of Columbia, Harvard, Johns Hopkins, University of Michigan, University of Illinois, and many other leading universities and

colleges, high Federal, State and city officials, personnel directors of large corporations, hotel managers, labor leaders, United States Employment Service Consultants, vocational rehabilitation officials, directors of various foundations, caualty and security insurance executives, Directors of the War Manpower Commission, and many others too numerous to mention.

In this report there is more information on the handicapped and from a greater number of authorities, speaking for themselves, than was ever gathered together before. This is a monumental accomplishment and unstinted credit must be given to the American Federation of the Physically Handicapped for bringing about this investigation.

One cannot write a résumé of this report and do it justice. The men and women who appeared before this committee were enthusiasts, devoted to the great humanitarian task and everything they said pulsed with life. The members of the committee were keenly alive and brought every statement down to a practical application. It is such reading as one seldom finds, whether one is interested in a particular handicap, or the question as a whole.

Youth Guidance Community Program of Fraternal Order of Eagles

EXTENSION OF REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. KEEFE. Mr. Speaker, the Fraternal Order of Eagles is a powerful instrumentality in America that has taken a definite and conspicuous part in promoting the social and economic welfare of our people. This great organization has thrown its resources and its influence into the fight for workman's compensation, old-age pensions, mother's and child-welfare aids, employment stabilization program, and enlargement of the scope of social-security benefits. It is presently engaged throughout the country in an effort to develop ways and means to curb and cure juvenile delinquency and to establish a national program for youth guidance.

As evidence of the intensive character of this work being conducted by the Fraternal Order of Eagles, I am pleased to incorporate herein a letter from Judge Albert H. Schmidt, of Manitowoc, Wis., chairman of the Wisconsin Youth Guidance Committee of the Fraternal Order of Eagles, together with a report made by this committee under date of February 3, 1945. I trust that this report may receive the attention of the Members of Congress and the people of America who are vitally interested in this great problem:

MANITOWOC, WIS., *March 10, 1945.*

Congressman FRANK B. KEEFE,
Washington, D.C.

DEAR BROTHER KEEFE: As chairman of the Wisconsin State youth guidance committee of the Fraternal Order of Eagles, I beg to enclose a copy of the Eagles' State model youth guidance community program recently promulgated and which has already received national recognition. The curb and cure of crime and juvenile delinquency and the proper guidance of youth are of vital importance and concern to every American citizen, for they affect directly the security, the welfare, and the happiness of the American home and family, the cornerstone of our Republic. What subject could be of greater importance to the people of America? What subject is more important to the well-being of future generations?

I know you fully appreciate the immensity and the importance of the problem. No program however good and great and laudable or commendable can get very far, not even to first base, unless it has the support, the active support, of the rank and and file collectively and individually. The Eagles' youth-guidance program, a movement both State and National, is a big, a mighty big and hard job. We'll need a lot of help—the help of many willing hands and hearts and minds. This is not work for a day, a month, or a year, but for years to come, and will establish for all time a worth-while character-building program in behalf of the Fraternal Order of Eagles and America, locally and nationally. It will take time, courage, and persistent effort. It will be no easy task, but one worth while, rich in results and rewards, furnishing inspiring and fascinating work for all who participate, for it is work in behalf of all humanity. Thus a great, humanitarian, patriotic, producing, fighting fraternity, the Fraternal Order of Eagles will again pioneer and lend its powerful organized efforts in behalf of the security of that great American institution, the American family, that constitutes the American home, so vital to the welfare and the perpetuity of our Republic, as it did so successfully in the past in behalf of workmen's compensation, mother's pension, Mother's Day, old-age pension, stabilization of employment and social-security proposals, bringing sunshine and happiness into the homes and hearts of millions of Americans.

Wisconsin has never taken a back seat; Wisconsin has always led the way. May the Wisconsin State youth-guidance model community program become a pattern for the Nation.

We need especially wide and effective publicity. You are at liberty, therefore, to insert this letter and the enclosed model program in the CONGRESSIONAL RECORD and in every other way publicize the same. Please keep me informed as to your efforts in this behalf.

Sincerely and fraternally yours,
Judge ALBERT H. SCHMIDT,
Chairman.

WISCONSIN STATE AERIE,
FRATERNAL ORDER OF EAGLES,
STATE YOUTH GUIDANCE COMMITTEE,
Manitowoc, Wis., February 3, 1945.

Worthy president, secretary, and brother Eagles, the Wisconsin State Youth Guidance Committee of the Fraternal Order of Eagles, with a view toward developing a State-wide model program for every community in the State, under Fraternal Order of Eagles auspices, leadership, and direction, respectfully suggests the following:

1. The establishment of a school for adults, to direct parents in proper methods of child training, with classes for parents in general, delinquent parents, problem parents, and adults generally who contribute to the delinquency of minors, thus helping to eradicate the seeds of delinquency in the home and, generally, recognizing that parenthood is the most important job a human being ever undertakes. Juvenile judges, prosecuting and enforcement officers, and welfare and other agencies should be asked to cooperate by inviting or ordering parents of children who have been in trouble to attend such classes.

2. A police school for children, conducted by the police department, teaching respect for and obedience to constituted authority, respect for private property, respect for the rights of others, obedience to law, especially to bicycle, pedestrain, and other traffic rules, and generally to behave as good junior citizens.

3. The formation of youth and adult guidance committees in industry, agriculture, labor unions, fraternal and civic organizations, the churches, and the schools, such committees to visit and counsel parents whose children have been brought to the attention of the courts or social agencies and outline an individual program for each home; to help young people make necessary readjustments and assist those in family difficulties, such as poverty, death, or a broken home.

4. Have some local attorney, a member of the aerie, appear in court as a friend of the court in all cases relating to minors or in which adults contribute to the delinquency of minors.

5. The full-time use of all public and quasi-public buildings and facilities, including schools, churches, city, county, Federal, and fraternal buildings, all the year round, every day of the year, both night and day—most of which stand uselessly idle day after day and night after night, even for weeks and months at a time. The buildings and facilities are here, the belong to the people, why not use them every hour of every day? A survey and inventory of the total time of idleness would disclose a startling story of waste. The use of church rooms and halls for children in the neighborhood of all denominations would be commendable.

6. A stricter enforcement and more frequent and effective use of section 351.20 of the Wisconsin Statutes, providing that any persons, parents or others, encouraging, causing, or contributing to the delinquency are guilty of a crime and subject to imprisonment in the county jail for 1 year or to a fine of $500 or both.

7. A stricter and more uniform enforcement of all laws, rules, and regulations, with greater and more effective and intelligent attention given to prevention, not overlooking the improvement and modernizing of our laws.

8. Effective and impressive teaching of the Ten Commandments and a more general study and observance of the same.

9. Proper and effective discipline in the schools and other public places.

10. The protection of youth in public places and the prevention of the exploitation of youth.

11. Make every effort to determine and remove the causes of delinquency with predelinquency constantly in mind.

12. Ample recreation and social facilities and services, properly coordinated and supervised programs, with opportunities for young people to take part in community activities, such as health programs, self-policing, and other projects designed to awaken a sense of civic responsibility at an early age.

13. Proper employment of boys and girls under proper conditions.

14. Proper living, housing, and health conditions and services for children of every kind and condition, with health protection to stave off preventable physical and mental handicaps.

15. Proper schooling and spiritual guidance for all types of children, including instruction to develop self-discipline, self-reliance, self-restraint, and self-respect, including education that provides a basis for living in an integrated, constructive manner within society, that includes sufficient knowledge of the principles of conduct to prevent undesirable activities, as well as providing a first step toward useful employment and as to marriage and family life, as well as education for democracy.

16. Effective and intelligent handling of delinquent, neglected, and dependent children by the courts and other officials and agencies with suitable detention quarters, apart from the jail.

17. Bringing into unison, with but a single goal, the three great molding forces of American life—the home, the school, and the church.

18. Obtain the active help and support of all agencies, public and private, that deal with the welfare of youth. Cooperate with them.

19. Call a public meeting of all organizations and interested persons, so as to enlist the entire community in your program.

20. Invite the support of the press from time to time.

21. Have speakers, young and old, familiar with the subject address various groups, including the schools, churches, theaters, and radio.

22. Ask all clergymen to preach a series of sermons on the subject.

23. The suppression of the distribution, sale, or exhibition of obscene, salacious, or demoralizing literature and pictures.

24. Adequate crime-prevention service by the police and sheriff departments and all other agencies, both public and private.

25. A coordinated and cooperative relationship between police, sheriff, prosecutor, court, prison, parole, probation, and public health and welfare officials.

26. Higher qualifications and rigid requirements for public officials in this and allied work.

27. Establishment of mental hygiene, child guidance, and other types of clinics with a psychopathic laboratory for every community, whose advantages and facilities for study and research, with a competent psychiatrist, should be available to every court.

28. Special, concentrated, intelligent attention to social diseases, their prevention and eradication both as to adults and children. Syphilis is decidedly a youth problem, and is the one disease that most seriously affects the family life. In 1944 a total of 15,000 cases of syphilis among children under 15 was reported to health departments throughout the Nation. These reported cases, however, do not reflect an accurate picture of the entire number of infections among the 15-year-old group, because hundreds of cases are never reported. Gonorrhea has also increased alarmingly. America has completed only half the job conquering venereal diseases. Syphilis of the innocent is taking thousands of children's lives in America every year and condemning tens of thousands of others to misery. As the cure for syphilis is to prevent it, so also is that the cure for crime and juvenile delinquency.

Selective service medical examinations indicated that in 1941 more than 3,200,000 Americans had syphilis, 1 in every 42. Gonorrhea occurs 3 to 5 times more frequently than syphilis. In 1943, 600,000 new cases of syphilis were reported in the United States. Every year syphilis kills more than 30,000 of our babies before birth and afflicts 34,000 who are born with the disease. Seventy-five percent of the new gonorrhea cases occur in the age group 15 to 30 years. The cost of public care of the syphilis blind and insane is estimated at $41,000,000 a year. Crime costs the people of the United States $15,000,000 every year, or $120 for every man, woman, and child. For the first 6 months of 1943 arrests of under-age girls for "crimes against common decency" increased 69.5 percent over the same period in 1942. Sodomists and other moral perverts in ever-increasing numbers prey upon and despoil our youth in their devilish and devious ways. Wisconsin showed a progressive increase of 66.3 percent in juvenile delinquency from 1935–36 to 1939–40. In 1943 there were 3,785 serious crimes committed every day in the Nation, 1 for every 21 homes, 1 every 23 seconds, and arrests of boys under 17 increased 30 percent. A robbery occurred every 12 minutes, a burglary every 2 minutes, a larceny every 39 seconds, an automobile stolen every 3 minutes; 13 percent of all murderers arrested were under 21, as were 39 percent of all thieves, 32 percent of all rapists, 30 percent of all arsonists, and 65 percent of all thieves—all under 21. Nearly 23 percent of all persons arrested in 1943 were under 21. More boys of 17 and more girls of 18 were arrested than in any other age group and the arrests of girls in 1943 over 1941, the last peacetime year, increased 130 percent. Nearly a million and a half major crimes are committed in the United States every year, plus countless millions of lesser offenses. The problem is enormous—the necessity, the urgency to do something about it is immediate—now, today—not tomorrow.

29. Establishment of a coordinating central executive citizens' council representative of all interests, public and private, to plan and promulgate a comprehensive, long-range child-welfare program, eradicating duplication and community disorganization.

30. A Nation-wide, frank, fearless program of education by means of press, magazine, platform, pulpit, theater, and radio. A general public aroused to a full realization of the vital importance of the problems to such an extent and degree that the people will rise up as one man and demand and insist upon constructive, intelligent, and immediate action. Public opinion is a mighty force in every community. Without favorable public opinion, progress becomes difficult and actual accomplishment little. Public opinion should therefore be educated, molded, and aroused to demand the zealous protection and advancement of the children of the community, both privileged and underprivileged, at all times. These are not mere idle words—there is more significance in them than appears at first blush; for listen to what the delinquency committee of the White House Conference says: "All children, privileged and underprivileged, take what the community has to offer. Adults make the community what it is. When it does not satisfy the needs of its children or when it thwarts and exploits them, the adults are responsible, and no clinics, juvenile courts, or reformatory institutions can ever fully adjust the child. The community has not yet realized that it is responsible for building to satisfy the fundamental needs of the child, and that it must not only offer opportunity for creative play, companionship, and adventure, but must also protect children and young people from negative demoralizing recreation."

All Federal, State, and local agencies and organizations, governmental and otherwise, from the largest to the smallest, necessary to the successful, impartial, and courageous carrying forward of this great work so important to the welfare of all our people, can, we confidently believe, be intelligently and readily organized, unified, and mobilized into a powerful, patriotic, alive, and alert force and influence for righteousness and good, for law and order, for health and happiness, for the improvement of the human race—a relentless, fearless, fighting phalanx enlisted patriotically and permanently in the great war against crime, criminality, disease, and human delinquency—a mighty force and influence, becoming more powerful and effective year by year, that will be heard and heeded in the Halls of Congress at Washington and in every State capitol throughout the entire country. Only such a great, mighty, local, State, National, nonpolitical, nonsectarian, nonracial organization so constituted and functioning can sufficiently muster and openly exercise that independence of thought and action that courage, fearlessness, and confidence in its plans and purposes, its ideas and its ideals, necessary to successfully meet the challenge with the power, prestige, and influence necessary to carry forward to a successful and effective conclusion this great and important work so vital to the general welfare and well-being of all of our people and the perpetuity of the American Republic.

To help you to carry out the above program, or any program of your own suitable to your particular community, we enclose as a part hereof and for your use as a general guide or handbook the comprehensive and instructive 31-page pamphlet Controlling Juvenile Delinquency—A Community Program, by Katherine F. Lenroot, Chief of the United States Children's Bureau. Preserve it for frequent reference. Use it. "All Americans want this country to be a place where children can live in safety and grow in understanding of the part they must play in the Nation's future. If anywhere in the country any child lacks opportunity for home life, for health protection, for education, for moral or spiritual development, the strength of the Nation and its ability to cherish and advance the principles of democracy are thereby weakened." Our aims cannot be too high, our work too thorough, our endeavors begin too soon. Let no Eagle fail in his duty.

Please acknwledge receipt and report progress from time to time.

Fraternally yours in liberty, truth, justice, and equality.

St. Patrick's Day Address by the Vice President

EXTENSION OF REMARKS
OF
HON. SCOTT W. LUCAS
OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, March 20 (legislative day of Friday, March 16), 1945

Mr. LUCAS. Mr. President, Hon. HARRY S. TRUMAN, the distinguished Vice President of the United States, made an interesting and unusual address on St. Patrick's Day before the Irish Fellowship Club at the Stevens Hotel, in the city of Chicago. I ask unanimous consent that the address be incorporated in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, Mr. Mayor, members of the Irish Fellowship Club, and distinguished guests, it is always refreshing to be with the Irish, especially on St. Patrick's Day. You members of the Irish Fellowship Club, here in Chicago, are following a good old Irish custom. You are keeping alive your native pride.

Today the Irish people throughout the world pay homage to the good St. Patrick. Millions of other people, even those who do not follow his faith, have acquired a deep and abiding affection for the kindly saint from Ireland. St. Patrick has become an inspiration to all who know and admire his deeds and devotion. As you probably know,

marauders carried Patrick, at the tender age of 16, from his English home near the Severn to bondage in that part of Ireland now called Ulster.

During his 6 years of captivity, while tending the herds of Irish rulers, Patrick experienced a deep religious emotion, reflecting his early Christian training.

After a daring escape to the Continent, Patrick finally returned to Britain with a fervent desire to bring Christianity to the Irish. Despite opposition at home, Patrick went back to Gaul with a firm determination to prepare himself for his difficult mission to Ireland.

Consecrated in the year 432, Patrick finally became Bishop of Ireland, and began his missionary work where he once suffered the disgrace of slavery. In spreading the faith of his fathers, the good saint condemned slavery, fought racial discrimination, and sought to end the tragic isolation of Ireland from the civilization and culture of the outside world.

So many legends have grown up around the Patron Saint of Ireland, that it is rather difficult to distinguish fact from fiction.

Although it cannot be proven that St. Patrick actually drove the snakes from the Emerald Isle, we do know that he labored long and hard to expel all evil. In addition to his spiritual teaching, St. Patrick also introduced the learning of the age to Ireland, and brought the Irish to the rest of the world.

Today, America needs the benevolent aid of another St. Patrick.

Evil doctrines of discrimination frequently imported from gangster nations plague certain areas in America. Racial and religious intolerance is being preached and practiced here by agents of our enemies, as well as by innocent victims of their propaganda. With relentless determination, our deadly opponents still seek to apply the ancient doctrine of "divide and rule" in their drive for world domination.

Unfortunately, propaganda poison is exceedingly difficult to remove from our national bloodstream.

The after-effects of this poison may be felt for years to come, especially if we do not recognize its danger and actively combat its spread. No nation on earth is more vulnerable to intolerance and bigotry from America, for no nation is composed of more diverse races and differing creeds than this land of the free.

America became great by being a secure haven for freedom of thought and action.

Despite all our shortcomings, we in this country truly present an inspiring example to struggling humanity. We prove conclusively that people of every race and of every creed can dwell together in harmony.

Into the plain word—American—is fused all the ideals, hopes, inspiration, and faith of our people.

In fact, America has become the hope and inspiration of all oppressed people throughout the civilized world.

Here in Chicago you sense the ever-increasing, Nation-wide, heartfelt yearning for lasting peace.

Common sense requires that all Americans should take a good look at modern air maps. By air no place on the globe is more than 60 hours from your own municipal airport and this time is steadily decreasing.

However, I feel confident that just as the end of isolation in Ireland in St. Patrick's time was beneficial, so will the new era of international cooperation be a blessing for America and for the world.

No nation on this globe should be more internationally minded than America.

Whatever happens in any part of the world personally affects some of us.

When Ireland starved, we sympathized and contributed food; when the Germans murdered the Poles and persecuted the Jews, Americans wept for them. When the British bled at Dunkerque, Americans suffered with them; when Russia was overrun by the Nazis and China by the Japs, American hearts were with these unfortunate people.

In the light of history, it is not surprising that America has finally assumed world leadership.

What other nation has such an intimate understanding of the problems and aspirations of every race?

America was built and developed by members of every racial group.

Our powerful Nation has been welded into one mighty force for freedom by the united efforts of all our people. Our national motto, "E pluribus unum," indicates—one out of many.

To me this refers not merely to the many sovereign States, but also to the members of the many races and creeds, who retain their individual integrity, but become Americans all.

Today our heroic fighting men are again making it possible for America to preserve the ideals for which we stand. This war is a crusade.

When the cause is just the Irish simply cannot resist the call to duty.

There is something in the make-up of an Irishman which causes him to fight when a dictator attempts to push little people around.

The bigger the bully, the better the battle!

The more ruthless the opponent, the sweeter the victory!

Today America is engaged in the most ruthless conflict against the biggest bullies in the history of the world. It is victory or defeat. We win all—or nothing. This means survival or slavery.

St. Patrick in Ireland and Abraham Lincoln in America took a forthright position on the question of slavery.

They fought for the basic dignity of every human being.

They stressed the essential importance of the individual, regardless of race or creed.

The world today needs the spiritual guidance of inspired leaders, who can rise above creed or class, who can help humanity gain security.

If civilization intends to avoid destruction, nations must learn to live together in harmony with each other.

International organization can be successful only if all members of the family of nations actually abide by reasonable rules agreed to for the benefit of all. This requires self-restraint and tolerance. If each nation insists upon absolute freedom of action according to the legal concept of sovereignty, international anarchy become inevitable.

The recent meeting at Yalta, and the coming conference in San Francisco, indicate progress along the road to world order.

Such an international organization must be created as soon as possible.

We dare not postpone building storm shelters until storm clouds gather.

We must not wait for a perfect international plan.

Modern wars do not wait while statesmen plan future Utopias.

We must act and act promptly to check wars before they can get started.

As we united for victory, we must unite for peace.

In winning the peace, the moral strength of the Irish can be a most potent factor.

While the Government of Eire has remained neutral during the war, her sons have distinguished themselves in the armies of the United Nations.

In peace, as in war, the influence of the Irish in the cause of justice far exceeds the strength of their numbers.

It is hard to realize that the population of Chicago far exceeds that if Ireland, or that 100 years ago, the Emerald Isle had twice its present population.

Most of the sons of Ireland emigrated to America, where they made substantial contributions to our civilization. Irish scholars for centuries have been among the leaders in the academic world.

The founding of Trinity College at Dublin in 1591, and that of the University of Notre Dame at South Bend in 1842, are outstanding examples of how Irishmen have actively promoted higher learning throughout the world.

At schools supported by the Irish, mental and physical training are combined.

Football teams of Notre Dame for instance have become an American institution and represent the best in our tradition for fair play and clean sport.

Although individuals of many races and from distant lands became members of these great teams, the people usually refer to them as "the fighting Irish."

The spirit of teamwork and cooperation taught on the gridirons of America should extend to our national life.

Only by working together can we reach our national goal—victory. The United Nations also must work together, if we are to gain a just and lasting peace. That will require vision and hard work—tolerance—and practical idealism, by every race and every creed.

Peace, Realism, and the Balance of Power

EXTENSION OF REMARKS

OF

HON. GEORGE L. RADCLIFFE

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, March 13 (legislative day of Monday, March 12), 1945

Mr. RADCLIFFE. Mr. President, I ask unanimous consent that there be inserted in the Appendix of the RECORD an address entitled "Peace, Realism, and the Balance of Power," delivered by Hon. John Dickinson, general counsel of the Pennsylvania Railroad, and formerly Assistant Secretary of Commerce, and also at one time Assistant Attorney General of the United States.

The address was delivered at the midwinter meeting of the Maryland State Bar Association on January 20, 1945. It is an unusually scholarly and suggestive address, and one which I think should certainly be inserted in the RECORD.

I am informed by the Public Printer that it will cost $208 to print the address.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is appropriate that at a time like this members of the bar should feel concern about the largest and most important public questions confronting us, which are those of our international and world relationships—the great issues of peace and war, and the possibility of contributing somewhat, however little, to diminish the likelihood, or at least postpone the date of, another world cataclysm.

Ordinarily when lawyers interest themselves in international affairs, they are naturally tempted to direct their attention to matters which can be treated juridically in terms of law and courts. There is of course a place, and an important place, for courts and law in the international field, but it is clear, in the light of history and of the experience of our own generation, that the great international conflicts which menace civilization do not arise out of the kind of

disputes that can be decided in law courts. Rather they grow out of general considerations of national security and power, which, in the last analysis, are the same thing—out of the desire of a nation to acquire, or its fear to lose, the power which it feels essential to its security. Such questions are not amenable to judicial process.

These ultimate springs of international conflict are today of deep concern to everyone who by thought or action has a share in the formation of public opinion and who feels any sense of responsibility to do something toward safeguarding civilization. I take it that lawyers would include themselves in this group, and we are therefore under an obligation not merely to concern ourselves in our professional capacity about international law and the juridical aspects of international affairs, but also as citizens to participate in the worldwide discussion now being carried on in an effort to devise a basis for a more durable peace.

It is about some of the fundamental issues raised in that discussion, that I wish to speak to you; and I have chosen as my title, "Peace, Realism, and the Balance of Power," for the purpose of suggesting that, if the world is to find a way of escape from impending doom, it must be through the recognition of hard facts and not through appealing to the slogans of an abstract idealism.

I

Certainly there is no field of human thought or action where the need for idealism of the right kind, for idealism which can translate itself into beneficial results, is more urgent than in international relations; but a great tragedy may be preparing under our eyes through lack of adequate hardheadedness and respect for facts on the part of the American people where their thinking about international affairs is concerned.

We are justly entitled to pride ourselves as a nation on our idealism, but in those fields where it has been most conspicuous and successful it has rested on a basis of common sense and respect for the practical. It has been the idealism of Franklin and Jefferson and Edison, rather than of Rousseau and Fourier and Marx—the idealism of the inventor rather than of the visionary. No doubt all progress requires an element of hope and faith, of confidence in things unseen, a willingness to go beyond what has been done before, and to this extent implies that it is possible to sublimate human nature, and even political human nature, by infusing an element of the ideal. We can never afford, however, to advance so far in this direction as to ignore the known elements of a problem without courting failure and disaster.

It is important to understand this, because the time is at hand when we must make up our minds as to the kind of settlement we will try to bring about at the close of the war, or even sooner, for the purpose of minimizing the likelihood of future wars. At the close of the war we will have to deal with our enemies, but that will be the easier part of the task. Before the close of the war, and in fact here and now, we are having to deal with our friends—with our major allies and the smaller countries which are friendly to us—in such a way as to promote the outcome we desire.

This is not proving easy. We are learning the obvious—learning that all nations do not necessarily think alike, not even when they are allies; that not all have the same ideals and objectives, and that still we have to live with them, and may have to work with them. If we are to have international cooperation in war or peace, it must be with peoples and nations as they are, and not as we would like them to be.

We cannot solve this difficulty by withdrawing into isolation. Today isolation is a physical, no less than a moral, impossibility. We cannot accomplish anything by denying the facts of life which we do not happen to like. We cannot hope to shape the world according to our heart's desire by saying that if other nations do not conform to our ideals, we are not going to have a foreign policy. We must have a foreign policy, and it must be one which takes account of the known facts with respect to the purposes of other nations, including our allies.

The importance of these considerations lies in the fact that today the Allies are in such obvious disagreement with respect to many terms of the post-war settlement, that they are finding themselves unable to set up the kind of conference or council of political consultation which many friends of Allied unity regard as necessary, for fear of bringing their disagreements into the open and thereby impairing the effectiveness of their military cooperation. Everyone admits the desirability of reaching agreements, but agreement of many essential points seems so impossible that in important instances both of our allies have resorted to unilateral action to obtain objectives which they regard as essential to their security.

On one question after another, and in one country after another, Russia and England are pursuing independent policies which at the close of the war will present the world with accomplished facts about which nothing can then be done. Russia in particular is seeking to safeguard her security by building up a vast sphere of influence beyond her borders, and by bringing the smaller nations of eastern and southeastern Europe into the dependent relation of client states. England, to preserve the balance of power, is pursuing a similar course on a smaller scale elsewhere.

It would not be difficult in the light of history to understand this recourse to spheres of influence and the balance of power, were it not that our American idealism has in recent years taught us that these familiar traditional devices constitute sins against international righteousness and are inconsistent with the peace of the world. One Member of the United States Senate tells us that "wars are inevitable under the balance of power policy"; another contends that until Russia reverses its policy toward Lithuania, Estonia, Finland, and Poland, and until Britain abandons her colonial empire, we should refrain from cooperating in any world organization; and a prominent publicist warns us "not to tread the blood-stained path of power politics."

This idealistic revulsion against traditional devices has received official blessing from our own government. Less than a year ago, Secretary Hull, in an important statement, promised that under the new dispensation which will follow the present war, "there will no longer be need for spheres of influence, for alliances, for balance of power, or for any other of the special arrangements through which in the unhappy past the nations strove to safeguard their security or promote their interests." [1]

In the light of such views, does our idealism require us to insist that there must no longer be spheres of influence or an effort to preserve the balance of power? If so, does this mean that at the close of the war we should demand that our allies reverse their actions which we are now criticizing? Does it mean that if they fail to do so, we should refrain from cooperating with them in an international security organization? Are we to attach this degree of importance to spheres of influence and balance of power? The initial problem is one of understanding. What do these terms mean, and what is their significance for good or for ill?

II

Let us take a simple example which goes to the root of the matter. Suppose Germany or Spain, or even one of our allies, France or Russia, were to undertake to intervene in the affairs of Argentina or Bolivia or Venezuela? Would we tolerate it? The answer is given immediately by a reference to the Monroe Doctrine.

The Monroe Doctrine is the frankest and clearest declaration of an exclusive sphere of influence in the world. We say it is necessary to our security. We insist on it as a guarantee against aggression. At the close of the war we should, and probably will, insist on something similar in the Pacific. Can we blame other countries for doing the same thing? Can we say that in their case spheres of influence promote wars, while in our case the same principle is only a necessary safeguard of security?

Doubtless the answer will be made that this country has not abused, and does not intend to abuse, the Monroe Doctrine. Of course, that is so, but it does not answer the contention that the Monroe Doctrine establishes an exclusive sphere of influence. All that it signifies is that a sphere of influence may be either good or bad, depending on whether it is abused or not.

The problem of the sphere of influence always presents itself, and has always presented itself throughout human history, wherever there are small nations in proximity to relatively larger ones. The problem has been perennial. As long as the force of suggestion and imitation operates in human affairs, intrigues and confusion in one country are likely to spread across a boundary. Some small nations, notably Switzerland and in recent centuries the Scandinavian countries, have achieved a remarkable record for stable and orderly government, and have caused no problem to their neighbors, large or small. But unhappily, and with all due regard to the valuable contributions which small nations have made to human culture and progress, the record of many of them is of a different kind in the field of international politics. It has usually been found that disorderly conditions in a small country which is the neighbor of a large one are turned to the disadvantage of the latter. An indispensable condition of peace is to prevent this kind of internal confusion within one nation which is likely to spread to others. Unless the larger nation is willing to see such confusion in its smaller neighbors turned to its disadvantage, it cannot permit any power but itself to intervene in the picture. This is the basic principle of the sphere of influence; it is the basic principle of the Monroe Doctrine.

Of course a sphere of influence may be abused. It may be employed to enable the larger power to dominate, exploit, and oppress the smaller one, meddle in its internal affairs, and in effect deprive it of self-government. We do not believe we have done that under the Monroe Doctrine, and impartial history will no doubt acquit us, but voices will not be wanting to challenge our innocence. As a matter of fact, whenever a sphere of influence is asserted, it will always be charged that the independence of the smaller power is impaired. It need not be, except in the one particular of preventing the smaller nation from making trouble, or letting itself be used to make trouble, for the larger one. Such an impairment of independence is essential in the interest of peace. If not imposed by the larger power itself under the sphere-of-influence principle, some other and possibly more uncertain method of imposing it will have to be found.

The source of hostility to the sphere-of-influence principle is a sentimental insistence on the right of small nations to do as they choose and make as much trouble as they please, a right which is of course denied to larger countries. This sentimental claim of weak nations is one which throughout history, from the time of ancient Greece, has always been abused, and has in fact been

[1] Statement of Hon. Cordell Hull, March 22, 1944.

one of the most prolific causes of war. It is hardly necessary to remind ourselves that it was the intrigues and disorders among the small nations of the Balkans which set the stage and provided the conditions for the World War of 1914.

Not unlike the problem of small nations in certain respects is that of backward peoples and colonial dependencies. Here again public opinion in this country is largely under the influence of a sentimental idealization of the primitive. Because it is no doubt difficult to draw the exact line where primitivism ends and civilization begins, it is the fashion today in more departments of life than one to deny that any line exists, to exalt the primitive, and to insist that it has a right to be protected against civilizing influences.

This is another kind of sentimentalism which is not advantageous to peace. One of the things that primitive peoples most strongly insist on is the right to kill and enslave each other. Irrespective of whether the civilized peoples are entitled to interfere with these primitive practices for the good of the primitive peoples themselves, they certainly have such a right for the advancement of civilization and the maintenance of world peace. It is only by forgetting this elementary truth in the interest of an emotional sympathy for primitive peoples that the vast value of such an organization as the British Empire can be ignored. I can do no better than quote the following estimate of its achievement by a recent American writer. This is what he says:

"Considering its scope the British Commonwealth of Nations is the most remarkable political achievement in history. It has overcome more tyranny, supplied more safety, removed more fear, taught more justice, and given more freedom to more people than any other institution on earth. It is not only worth preserving in the interest of all free men, but unless Britain preserves her so-called empire, there will be no freedom for millions upon millions who are now as free as they can safely be * * *. Without the British Empire we are fighting for an unworkable world as far as free men are concerned, and for a world spotted with Fascists in one place and Communists in another. That is not going to be a peaceful world, which is the first thing we must fight for. That is a world in which there is no end of war. Talking about colonial freedom is one thing. Supplying it is quite another. Furthermore 80 percent of the colonials of the world could not, or would not, use their freedom to maintain freedom."[2]

Those who would cavil at this frank recognition of unpleasant truth need to be reminded that the worst enemy of liberty and justice is the unrealistic type of idealism which demands the kind of freedom that destroys freedom, and the kind of justice that treats unequal things as equal. War is certain to be promoted rather than prevented by subjecting backward peoples and small nations to temptations stronger than they can bear, and by imposing on them responsibilities which they are unable to discharge. A world in which all backward peoples and all little nations were free to indulge in all the political combinations and succumb to all the political temptations that they desired, would be the precise opposite of one where peace was reasonably secure and where the chances of war were minimized.

III

So much for spheres of influence and colonial empires; what of the balance of power? The balance of power is simply the oldest and most elementary device to accomplish the object we are today pursuing in our war against Hitler—to keep one nation from ruling the earth. The principle of the balance of power is that no single power shall be allowed to dominate the international scene—that power should be so subdivided and balanced between nations that no nation shall be strong enough and dominant enough to threaten and overawe the freedom of the rest.

Thus the principle of the balance of power is the necessary corrective and counterpoise to spheres of influence and colonial empires. One of the strongest and most valid objections against these is that they encourage a tendency toward expansion, aggression, and excessive power. The principle of the balance of power sets itself in opposition to that tendency. It aims to insure that no sphere of influence shall be extended so far that no empire shall grow so great as to make a single nation the unrivaled arbiter of the destiny of the world or the dictator of civilization. It does this by strengthening new centers of power and promoting alliances between relatively weak states to counterbalance those nations which show signs of aggressive growth. Most of us doubtless remember the historic words of Canning with respect to America, words which did not reveal their full meaning until almost a century after they were uttered in 1823:

"I have called a new world into existence to redress the balance of the old."

Throughout history, the balance of power has been the most usual and effective form of insurance against aggression. For two centuries and a half it has been the agency through which western civilization has again and again saved itself from successive attempts on the part of ambitious rulers and nations to achieve world supremacy. It was the device by which Louis XIV of France, the great monarch, was kept from crushing Europe. It was the device whereby Napoleon was prevented from establishing universal empire. It was the device which, during the happy days of the nineteenth century, preserved the peace of Europe with only minor interruptions for a hundred years. It was the device which checkmated the ambitions of Germany in the First World War. And in the present World War it was the fact that during the first 2 years of the war there was no balance of power, because of the alliance of Hitler with Stalin, which made Hitler's rape of western Europe possible, and indeed, inevitable.

Why, then, has the balance of power become anathema to international idealists and the chief bugbear of liberal thought? Simply, I believe, because of a basic misapprehension, a confusion of effect with cause. International idealists charge that the policy of striving for a balance of power is a cause of wars. It is not; rather it is the effect of the underlying rivalries and fears which may lead to wars, and it is their effect only in the sense that it is an attempt to counteract them in the interest of peace. Balance-of-power policy is a kind of automatic natural reaction which springs up whenever a state threatens to extend its ambitions too far. Those who would destroy it would destroy the surest and simplest check on aggression. I think it may be said with assurance that there would have been no Munich if in the nineteen thirties the western nations had not been too sophisticated and ashamed to play balance-of-power politics; and a succession of Munichs may be expected wherever the balance-of-power principle is abandoned or ignored.

However, the orthodox doctrine of international idealism today is that the principle of the balance of power must be given up; that it must be supplanted by some form of world association to keep the peace; that the only just and effective way to repress aggression is through the action of a central international agency supposedly representing the common interest and general good of all nations. A great deal of honest, sincere, and constructive thought in this country and throughout the world is being devoted to working out the structure of such an organization. These efforts are well spent and worth while. The time is overdue for the nations to have available an effective agency and clearing house for their problems. The point I wish to emphasize is that if such an organization is to realize its intended aim it must not rest on illusions and false hopes but on a frank recognition of inevitable forces and tendencies. This means that it must incorporate and make use of the balance-of-power principle and not seek to deny or ignore it; it must make room for spheres of influence and colonial dependencies; it must operate through and upon the international facts and forces which actually exist and adapt itself to them, rather than set its sights to the supposed conditions of a brave new world which never was on land or sea.

I submit that if one has even a slight knowledge of history or any acquaintance at all with the world about us today and with the way that men and groups behave it is clear that within any international organization or association that may be set up the principle of the balance of power and of spheres of influence will still continue to operate, possibly in a different form and doubtless by somewhat different methods, but with the same inevitability as in the unorganized world of past and present-day international politics. The mere setting up of an organization is not a panacea which will at once do away with the forces or effect a magical transformation of the tendencies which are at work in the world conditions from which we are seeking to escape. It will only alter their incidence and the environment within which they operate.

This does not mean, as hasty thinkers have a way of concluding, that it is therefore futile and useless to set up an international organization, or to seek to bring about a degree of closer international cooperation, and that attempts to do so should be abandoned. On the contrary the change in the environment which would be effected by the establishment of such an organization, and the resulting change in the methods through which international rivalry and competition would have to proceed in the future, may well produce highly beneficial consequences. They are certain to do so if, in shaping the new organization, due regard is paid to the continued operation of the forces with which it will have to deal, and if no false hopes are entertained which will leave it defenseless in the face of those forces. We can no more hope to build an international organization successfully without allowing for the continued operation of spheres of influence and the balance of power, than we could undertake to improve the health of human beings without taking into account the circulation of the blood and the processes of metabolism.

Let me illustrate from our own history. The formation of the Union in 1787 did not put an end to internal rivalries, expansionist ambitions or efforts to establish and maintain a sectional balance of power. It only altered the procedures and restricted the methods which those tendencies followed. After 1787 they necessarily had to proceed within the framework of the Union, and through the channels which the institutions of the Union provided. That was a great and beneficial advance, even though in the end the balance broke down and a civil war had to be fought before a new balance could establish itself.

If this has been the history of even such a close-knit organization as our own American Federal Union, there is no reason to suppose that the same kind of internal rivalries and the same kind of struggle for a balance of power will not continue even more definitely and decisively at work within the much looser framework of any international union that can be set up. This being so, it is imperative in shaping the plan and outline of the new organization to keep two points

[2] Henry J. Taylor, Men in Motion, pp. 95–96.

in the foreground: first, that the structure of the new agency shall be adapted to the recognition of spheres of influence and the continuance of efforts to maintain the balance of power; secondly, that it shall be built along such lines as to aid these policies and tendencies to promote peace rather than endanger it. On these two points it is of interest to inquire into the probable effect of the provisions contained in the so-called Dumbarton Oaks proposals, which are the official blueprint of international organization sponsored by the Allies.

IV

There are two respects in which the Dumbarton Oaks plan has significance for the matters here under discussion. The first is in connection with the important hiatus, or missing link, in the plan, about which so much has been said in the press.

This missing link in the Dumbarton Oaks plan relates to whether or not one of the four great powers shall be able to veto the application to it of sanctions by the proposed league for acts of aggression. It has been reported that certain of the Allies, including this country, were willing to forego this veto, and grant such a power to the league, but that Russia refused. Of course the effect of the veto, if retained, would be to prevent the league from serving as an instrumentality against aggression by the major powers. No decision was reached at Dumbarton Oaks on this point. The question was left open, and the plan as published simply states that, "the question of voting procedure in the security council is still under consideration." [3]

If it should ultimately be decided in the plan of the new league that the great powers can prevent action by the league with respect to their own aggressions, this would mean that as between them the league would be only a medium for conference and consultation, and not an enforcement agency, or agency of protection or security at all. In such event neither a great power nor a small nation would be able to rely on the league for protection against another great power. For protection against great powers the nations would have to make other arrangements.

It is not hard to foresee what these other arrangements would have to be. Of course they would have to be alliances, counteralliances and efforts to maintain the balance of power along precisely the lines which have always been familiar in the international politics of the past. In other words, on those terms the establishment of the new international security organization would not alter the conditions or methods through which so-called balance-of-power politics has always proceeded in the absence of an international organization. There would, however, be the assurance of meetings, discussions, and conferences between the powers at frequent intervals, which should prove highly valuable, and in addition the league would also have a power of enforcement against smaller nations in cases where the four great powers were able to agree.

However, it is highly questionable whether an international league should have a power of enforcement against smaller nations if its function with respect to the great powers themselves is limited to consultation and voluntary adjustment. There can hardly be much doubt that if ultimately the missing link in the Dumbarton Oaks plan is supplied by acceptance of the Russian view, the new organization should be divested of enforcement functions altogether, so that it may not enjoy these as against the smaller nations, while deprived of them with respect to the great powers. The league would then be merely an agency of consultation and wholly without so-called security functions. It is this kind of a purely consultative league which is apparently desired by so-called realistic thinkers, including Mr. Walter Lippmann, who has written that we should "base the new league not on the principle of enforcing peace, but on the principle of continual consultation." [4]

Our official governmental plan calls, of course, for much more than this. Cordell Hull and others have promised an organization which "must provide for the maintenance of adequate forces to preserve peace, and must provide the institutions and procedures for calling these forces into action to preserve peace." [5] In such an organization with actual powers of enforcement the relationship between the great powers and the smaller nations becomes obviously of the utmost importance, and has therefore quite naturally been the subject of the sharpest differences of opinion with respect to the Dumbarton Oaks proposals. The features of the proposals which bear on this problem of large powers and small powers constitute a second point at which to test the degree to which the proposed plan takes account of international realities.

The plan in this respect has been criticized for being too realistic. Prof. Reinhold Niebuhr, in a speech delivered in Baltimore last November, characterized it as after all nothing but an old-fashioned power alliance. [6] Certainly the Dumbarton Oaks plan is realistic in accepting the view that in international affairs the lead will inevitably be taken, and must be taken, by the great powers, and that it would be futile to construct an organization in which all nations, large and small, are supposed to have an equal voice. However, it recognizes that there would be grave disadvantages in not at least attempting to subject the great powers to some check through what may be called international public opinion as represented by the voices of the smaller nations. This the plan seeks to accomplish by its provisions prescribing membership in the council, which is intended to be the principal organ of the new league for decision and action. These provisions are that the council shall consist of 11 members, five of which are to be permanent members, representing the United States, Great Britain, Russia, China, and France, respectively, as great powers, while the remaining six, constituting a majority, shall be chosen for terms of 2 years each by the general assembly of the league in which all member States are to have an equal vote. It is apparently not contemplated that the votes of these smaller countries on the council would have to be unanimous.

Fair and reasonable as this solution might at first sight seem to be attention may be called to an important difficulty which it presents. That is that at the close of the present war, perhaps to a greater degree than ever before, most of the smaller countries of the world will tend to be mere dependencies and satellities of one or another of the great powers, or at least definitely within the sphere of influence of a great power. This is not a healthy condition, but it is one which will have to be reckoned with. Certainly it tends to make impossible that body of disinterested world opinion which is important in promoting an atmosphere favorable to peace, and which can only be supplied by a group of independent nations standing more or less on the sidelines in contests between the great powers.

If, as seems to be a fact, the number of such nations is diminishing, and more and more countries are coming to occupy the position of clients or dependents of a great power, the presence of such countries on the council of the new league would not add to the disinterestedness or impartiality of its decisions, but might even lead to unfairness in such decisions. Thus under the Dumbarton Oaks plan, the smaller nations who are to form a majority of the council might all be chosen from the sphere of influence of one or two of the great powers, and to that degree unduly enhance the voice and weight of those powers, while correspondingly decreasing the influence of the others. Under such circumstances, if the league were to have the enforcement functions contemplated by most of its advocates and were to undertake to order military sanctions against a power whose client states were only weakly represented, or not represented at all, in the council, there would inevitably be a feeling of injustice and resentment aroused by the league's action which would impair its moral effectiveness.

Some critics who are awake to this difficulty have proposed a solution which was not adopted in the Dumbarton Oaks plan. This is to organize the smaller countries on a regional basis and provide that each regional group shall be represented in the council. Such regional representation of the smaller countries would present difficulties of its own. On the one hand, the smaller countries in a given region, like the Americas or eastern Europe, might very well be all within the sphere of influence of a great power, such as the United States or Russia. In this event the regional representation of these powers in the council would simply have the effect of doubling the representation of the great power within whose sphere of influence they lie.

On the other hand, regional representation of small nations in the council might have a quite different result. It might lend strength to the group of small countries located in the area of a major power to encourage them to take a position of antagonism to that power. While the argument might be advanced that this would be advantageous as a way of curbing the ambitions of the great powers, it is by no means certain that this would be the case. On the contrary, it would certainly provide added incentive for the great powers to bring the smaller countries, lying within their sphere of influence, more effectively and completely under their domination, and to that extent promote a condition of affairs precisely the opposite of that which the advocates of international peace and cooperation desire to accomplish.

These considerations by no means require the conclusion that the effort to establish an international organization should be abandoned. They simply point out some of the difficulties inherent in the effort, and which need to be faced frankly. No good will come from closing our eyes. We can only hope to solve difficulties by recognizing them.

The source of the dilemma lies in two features of the plan of the proposed security organization—first, in the proposal to give the smaller countries a voice in the application of sanctions to the great powers, and, secondly, in the fact that so many of the smaller countries today are, and must necessarily be, within the sphere of influence of a great power. The effect of this combination is that anything approaching impartiality in the application of sanctions by the proposed league will be difficult to attain, and the claim of a decision to be impartial will almost certainly be challenged.

It is of course easy to say that sanctions should be applied, and will only be applied, to check actual aggression. Plausible as this may sound, it is a result easier to state in the abstract, than to achieve in reality. Aggression is not something which can be satisfactorily defined in advance, or upon which there can be reasonable asurance of disinterested agreement in an actual case. In the last analysis, a determination of what constitutes aggression will turn largely on the

[3] Proposals for the establishment of a general international organization (Dumbarton Oaks proposals), ch. VI, sec. C, New York Times, October 10, 1944, p. 12.

views, interests, ambitions, and fears of those who are called upon to make the determination. Any decision which a body like the security council proposed in the Dumbarton Oaks plan might reach as to whether an act of aggression has occurred would in many instances not carry with it that assurance of impartiality which it would have to have if it is to serve as the basis for a command by the league to its constituent member-states to use force against another state. It might well be regarded as no more than a command by a combination of states to other states, including this country, to go to war.

V.

In the light of these considerations it would seem not inappropriate to reexamine the provisions of the Covenant of the League of Nations relating to the same matters. There is doubtless ground for valid criticism of certain provisions of the Covenant, as well as of the fatal caution and timidity which characterized the policy of the League. However, it may be stated with assurance that the failure of the League was certainly not due to the weakness of the Covenant. As a matter of fact, the League never used the full powers conferred by the Covenant. Its timidity and failure were due to the attitude of the public mind within the great powers and to the temper of the times during the decade of the 1920's. It is hardly likely that, given that attitude and temper, the result would have been different, no matter how much stronger the provisions of the Covenant had been. There is, therefore, no reason why the Covenant may not afford suggestions from which we can learn in attempting to deal with our present problems.

The pertinent provisions of the Covenant, as contained in the fifteenth and sixteenth articles, were that in the event of a controversy likely to result in war, the Council was called upon to investigate and report. If the report was unanimous, aside from the votes of the actual parties to the dispute, but only if it was unanimous, the members agreed that they would not go to war in violation of the recommendations of the report. If a member disregarded this obligation, it became the duty of the Council to recommend action to the other members. It is to be noted that this duty was limited to recommendation, and that no obligation to make war was imposed on the members.

These provisions, assuming that the will existed to carry them into effect—and of course in the absence of such willingness no provisions, however strong, would have any value—would seem to provide a solution for the dilemma presented under the Dumbarton Oaks plan. They provide definitely for something more than mere consultation. They stop short, however, of imposing an obligation which, because of the circumstances under which it may come into operation in particular cases, would run the risk of being disregarded and repudiated. It is well to remember that if we give to the new security organization a power to order us to make war under circumstances which, when they arise, are of such a character that we will be unwilling to make war, we should have done the greatest disservice to the cause when we seek to promote. If the sanctity of treaties is ever again to become an axiom of international law, there is nothing more important than to make sure that the obligations which are assumed by a treaty are of such a character that there will be no reasonable excuse for evading them. This is why the provision of the League covenant, which limits the function of the council to the making of a recommendation, seems preferable to vesting the council with authority to order the members to make war.

This does not imply that in the international arrangements to be established at the close of the war, the nations should be under no binding obligations. What has been said merely goes to the character of the obligation, and suggests that it should not take the form of an obligation to use military force when and as some other group or combination of powers may command. Binding obligations of a more definite and specific kind are, however, inevitably indicated as not only desirable but necessary on a far wider scale than ever before. These would naturally take the form of treaties of mutual aid and security between powers, large and small, which have interests in the same regions and areas. Undoubtedly this country will be called on to underwrite the settlement in western Europe and the Pacific, and of course we should do so. Probably our most serious blunder and omission at the close of the last war was not our failure to join the League of Nations, but our refusal to make the security pact with France to which President Wilson attempted to commit us. There should be no such failure again. However, it would certainly be unwise for us to guarantee settlements in areas where our interests are only slight and remote, as for example in the Balkans or the Near East. The mistake of article X of the League covenant was that it attempted to give universal extension and application to a principle which is sound within territorial limitations.

There is another kind of limitation which should be observed in the international commitments that we may expect to assume at the end of the war. This is a limitation with respect to time. It would be disastrous and fatal for the Allies to undertake to frame a settlement on the assumption, or with the intention, that it was to be permanent and unchangeable. On the contrary, all the treaties and obligations entering into the settlement should expressly and definitely provide for their reconsideration and possible amendment. This is essential in the interest of what Mr. John Foster Dulles has called peaceful change. The provision of adequate and workable institutional machinery for carrying through these revisions would be about the most valuable contribution that could be made to the cause of durable peace. It is, however, such an unspectacular matter that not much attention appears to be given to it.

With this parting suggestion, may I sum up what seem to me appropriate conclusions in the matter of bringing an international organization into conformity with the facts and realities of the international situation:

First, no international organization should have a power of enforcement against small countries which it does not possess against the great powers.

Secondly, because so many small countries are now within the sphere of influence of great powers, the presence of small countries on an international security council would not assure the impartiality of the decisions of the council, but might operate to enhance the influence of one great power against another.

Thirdly, and for the foregoing reasons, it would seem preferable to limit the power of an international security council, as under the covenant of the League of Nations, to the making of recommendations, rather than authorize it to command the application of military sanctions.

Fourthly, treaties of security and mutual assistance of a regional character should be entered into with a view to maintaining and preserving the balance of power.

Fifthly, all treaties should include a clause providing for their revision at reasonable intervals and by appropriate machinery.

Certainly these conclusions are neither exciting nor stimulating; they afford no occasion for a display of rhetoric; they do not touch the heart; and they are not calculated to evoke a surge of noble emotion. Nevertheless, in the end, the success or failure of the world's great experiment in durable peace will depend in large measure on such dry and unemotional details, and it is therefore appropriate, and especially for lawyers, who are by profession men of dry details, to give adequate consideration to them while the tumult and shouting engage the attention of the rest of the world.

Leave It to Texas

REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. MANSFIELD of Montana. Mr. Speaker, we all remember the furore created last year when a survey was undertaken among college students covering their knowledge of American history. The results tended to show that our teaching methods were lax when it came to impressing the fundamentals of our history in the minds of our young men and women. This problem has worried me considerably and I find, after extensive research, that this survey did not include Texas and, furthermore, that while we Americans did not have the answers the people of Texas did. Personally, I think Texans, like Californians, are too modest, and I would like at this time, Mr. Speaker, to give credit to a State which too often hides its glorious past from the rest of us.

I am now quoting from the Montana Standard of March 16, 1945, published at Butte, the richest hill on earth, and as follows:

IS TEXAS LOOKING FOR TROUBLE?

As the word got around that Montana was to make Lewis and Clark honorary citizens of the State this summer in ceremonies from border to border, other States in the Union have been picking up their historical ears. Among these is Texas, the Lone Star State, whose claim to half ownership in the only dusty river in the world, the Rio Grande, never has been disputed.

The following includes some historical data as compiled by Fort Worth high school students:

"1492. Columbus discovers America. Contrary to rumor, he was not an Italian, but a Texan, who was recognized as royalty in Queen Isabella's court.

"1620: First Texans set foot on Plymouth Rock.

"1774: Texans organize Continental Congress.

"1775: Texans, always enemies of tyranny, begin the American War of Independence.

"1775: Paul Revere's ride. Paul was not from Texas, but his horse was.

"1776: Texans help Yankees draw up Declaration of Independence.

"1777: Washington crosses Delaware piloted by a Texan.

"1778: Valley Forge—one of the darkest moments in history, ranking next to the Alamo.

"1812: British discover naval supremacy of Texans.

"1845: The Union joins Texas.

"1898: Texans win Spanish-American War.

"1914: Texans complete Panama Canal.

"1918: Texans drive through Argonne and win World War.

"1920: Texas tries to warn the world that Wall Street crash is imminent.

"1941: United States caught napping at Pearl Harbor, calls on Texas to declare war on Japan.

"1943: Texans fight Nazi tanks barehanded.

"1944: Texans 'sparkplug' invasion of France and free Paris.

"1945: Texans get Hitler's goat at Berchtesgarden—Germany collapses."

Now we believe that the average Montanan can write more history in a minute than the average Texan can write in a day, even using a long-handled, asbestos covered pencil. Some of our best historical writers could start out with the Bibical reference to Montana and go on from there, up through the building of the Pyramids to what is commonly known as the Chinese wall. (The fact is one of our engineers, who had the contract for the building of Glacier National Park, did that little job out in China as a sideline.)

Montanans are disposed to deny credit to Columbus for discovering America because a few of them were on the beach to greet him when he landed.

These are just a few minor incidents in history in which Montanans played a leading role. Does Texas want a contest?

Recommendation for Amendments to M-388

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. HOLIFIELD. Mr. Speaker, many of the Members have been deluged with protests against the pending W. P. B. regulations M-388 A, B, C. This order of W. P. B. seeks to bring back to the customers certain low- or medium-priced articles of clothing. I am in complete sympathy with the purpose of this directive. Every housewife in America knows that low- and medium-priced dresses, shirts, underwear, children's garments, and so forth, are scarce or nonexistent in their local retail stores. Many people whose incomes have not been increased should be able to purchase these articles.

Two factors have brought this condition about. The textile mills' output in utility yardage has been almost completely absorbed by military, lend-lease and U. N. R. R. A. needs. This automatically forced the manufacturers of clothing to use higher-priced yardage in their civilian clothing output. Of course the low-priced lines vanished and higher-priced lines took their place on the merchants' shelves. The mill owner, the manufacturer, and the retailer followed the line of least resistance; that is, it was more profitable to sell high-priced units than low-priced units and due to increased purchasing power of the average consumer, there was little sales resistance. The market could easily absorb all production although it was in higher prices per unit.

The second important factor has been the loopholes in the Price Control Act which made inevitable the disappearance of low-price lines. I will mention a few of the most important deficiencies in the price-control program.

First. The Congress prohibited the O. P. A. from prescribing quality standards which would be applicable to certain specific articles and price ranges.

Second. The Congress denied the O. P. A. adequate enforcement funds for the policing of price-control regulations.

Third. W. P. B. and O. P. A. regulations were too often drawn without proper consultation with the representatives of all parts of the specific industry affected.

Fourth. W. P. B. regulations in the field of material channeling, frequently had a discriminatory effect on small businesses and did not prevent the disappearance of basic low cost materials at the mill level.

Fifth. Geographical area customs, and distances from sources of raw or basic materials have not been given equitable consideration in compiling essential lists and enforcing time limits for inventory and conversion.

During the past 3 weeks the Select Committee to Investigate Acts of Executive Agencies Which Exceed Their Authority has been holding hearings on the inequities of M-388. I have attended these hearings and presented a statement before this committee pointing out the mistakes of W. P. B. Directive M-388. In my opinion, this committee which I have supported since its inception, is making an earnest effort to hear all sides of this controversy.

The California congressional delegation has also considered this problem at some length and have addressed certain letters and recommendations to the W. P. B. and Office of Civilian Requirements. I have obtained unanimous consent to append these items to my remarks:

MARCH 20, 1945.

Hon. J. A. KRUG,
Chairman, War Production Board,
Washington, D. C.
(Attention Mr. Joseph Gleitsman.)

MY DEAR CHAIRMAN: The California delegation is deeply concerned over the effects of the M-388 regulations on the textile manufacturing industry, particularly the sections which were considered to be discriminatory against west coast manufacturers. We realize the urgent necessity behind the issuance of these regulations. We believe certain amendments and provisions are imperative, and after careful study of the testimony given before the Smith committee and the problems facing our clothing manufacturers on the west coast, we respectfully urge your consideration of the enclosed recommendations.

Sincerely yours,

CALIFORNIA CONGRESSIONAL DELEGATION,
JERRY VOORHIS,
Chairman of the Special Committee Considering M-388.
CHET HOLIFIELD.
HELEN GAHAGAN DOUGLAS.
ELLIS E. PATTERSON.
CARL HINSHAW.
RICHARD J. WELCH.

MARCH 20, 1945.

DR. WILLIAM Y. ELLIOTT,
Director, Civilian Requirements Branch, War Production Board, Washington, D. C.

DEAR DR. ELLIOTT: The California delegation is deeply concerned over the effects of the M-388 regulations on the textile manufacturing industry, particularly the sections which were considered to be discriminatory against west coast manufacturers. We realize the urgent necessity behind the issuance of these regulations. We believe certain amendments and provisions are imperative, and after careful study of the testimony given before the Smith committee and the problems facing our clothing manufacturers on the west coast, we respectfully urge your consideration of the enclosed recommendations.

Sincerely yours,

CALIFORNIA CONGRESSIONAL DELEGATION,
JERRY VOORHIS,
Chairman of the Special Committee Considering M-388.
CHET HOLIFIELD.
HELEN GAHAGAN DOUGLAS.
ELLIS E. PATTERSON.
CARL HINSHAW.
RICHARD J. WELCH.

RECOMMENDATIONS FOR AMENDMENTS TO M-388

It is recommended that the inventory provisions of M-388 in paragraph 3290.351 (6) "Restrictions of manufacturers' inventories of textiles" be changed from "wherever located if title has passed to the manufacturer" to "after receipt at destination."

M-388 B. SYNTHETIC FIBER TEXTILES

It is recommended that there be added—

(1) Slacks (women's), all sizes, $3.75 each.

(2) Slack suits (women's), short sleeves, all sizes, $6.75 each.

(3) Slack suits (women's), long sleeves, all sizes, $7.75 each.

(4) Shirts (men's), all sizes, $36 per dozen.

(5) Jackets (women's), unlined, all sizes, $5.75 each.

M-388 C. WOOL AND WOOL TEXTILES

It is recommended that there be added—

(1) Coats (men's), separate, all sizes, $12.75 each

(2) Trousers (men's), separate, all sizes, $8.50 each.

As this order, even if these recommendations are included in the amendments, will work a tremendous hardship on the needle industry of California, which has been built around active sportswear, it is recommended that just as soon as the serious fabric shortage created by the requirements of the armed forces is relieved that all restrictions created by this order be canceled.

It is also recommended that W. P. B. make available at the mill level the kind of piece goods and at prices which will permit the manufacturer to produce the low-end merchandise provided for in the order.

SUPPLEMENTING RECOMMENDATIONS FOR CHANGES IN M-388

The request for the change in inventory restrictions is made due to the fact that goods in transit to the west coast take an average of approximately 30 days or more. Therefore, the manufacturer located closer to his sources of supply, all of which are located on the east coast, would have quite an advantage over the manufacturer located at greater distances from his sources of supply, and in many instances it would be impossible for the manufacturer on the west coast to comply with the provisions of the order due to having lost approximately half of the authorized period for the goods to reach his place of business.

It has been customary for many years for the manufacturers located on the west coast to carry considerably larger inventories of piece goods than this order now authorizes and which have been customarily carried by the manufacturers located close to their sources of supply. Therefore, this order as written today penalizes the manufacturers located at great distances from their sources of supply.

RE RECOMMENDATIONS FOR INCLUDING WOMEN'S SLACKS AND SLACK SUITS AND UNLINED JACKETS UNDER M-388 B, THE RAYON SCHEDULE

Statistics are available and have been furnished to the W. P. B. that the above-mentioned items are a part of the clothing worn by women while engaged in their customary occupations. In many instances the plants in which women are employed demand for safety reasons that slacks or slack suits be worn. A survey recently conducted in Los Angeles and San Francisco defense plants, which employ many, many thousands of women, indicated that approximately sixty-some-odd percent of all women checked during this survey wore either slacks or slack suits. In view of the fact that the order sets aside a considerable quantity of merchandise for women's dresses, women's suits, women's skirts, and women's blouses, it is believed that the provisions to include slacks and slack suits and jackets is a very fair request because of the large quantities used on the west coast, and the use of these garments will in fact help to conserve rayon piece goods, because when a woman wears slacks or a slack suit she usually does not wear a slip, a girdle, or stockings.

THE REQUESTED INCLUSION OF SHIRTS FOR MEN

Nowhere in the order are any men's rayon shirts of the type that are so prevalently used by men while engaged in their customary occupations—the open-neck or V-neck type shirt—authorized to be taken care of. There are only two classifications: (1) a sport shirt, short sleeve of cotton, and realistically speaking, there will be no cotton materials available for sometime to come; and (2) the wool work shirt, which has been interpreted to mean a shirt with a neckband. The survey above referred to indicates that the majority of men working in the defense plants wear the type of shirt that we have requested to be included in this order, and with the climatic conditions as they exist on the west coast and with the shortage of cotton materials for work shirts it becomes more important that the item referred to in our recommendations be included in this order.

RE M-388 C, WOOL AND WOOL SCHEDULE

This order provides for a man's suit at $22.25. Much material can be conserved and the consumer will receive the same utility value by the inclusion of the two items requested when the wool materials become available. At the price of $21.50 the separate coat and trousers will be produced, and as the survey again indicates, this is a very popular daily use item for a man while customarily engaged in his regular occupation.

In order for the manufacturer to be able to supply garments at the lower levels prescribed in this order it becomes absolutely necessary that the manufacturer be able to secure merchandise suitable for such production and at prices which will allow him to produce the garments at the prices set forth in the order. The prices suggested in the above amendments are much below the average or normal prices at which these garments have been sold by the manufacturers located on the west coast during the past years, are real values and will only produce plain garments having utilitarian value and cannot be classed in the customary sportswear category.

Curfew Regulations

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Tuesday, March 20 (legislative day of Friday, March 16), 1945

Mr. HATCH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a statement issued by former Justice Byrnes, of the Supreme Court, now Director of War Mobilization and Reconversion; also an editorial from the New York Times of March 20, 1945, and an article by Arthur Krock from the same issue of that newspaper, all on the subject of curfew regulations.

There being no objection, the statement, article, and editorial were ordered to be printed in the RECORD, as follows:

TEXT OF BYRNES STATEMENT ON CURFEW

Director of War Mobilization and Reconversion James F. Byrnes said today that he was surprised by Mayor LaGuardia's announcement that places of entertainment in New York City could remain open until 1 o'clock.

He stated further that he had been pleased greatly with the Nation-wide cooperation which the Government had received in obtaining compliance with this war-conservation measure. The Chairman of the War Manpower Commission has reported that there has been almost universal compliance throughout the country. Not only have local officials, particularly in the larger cities, given wholehearted support to the measure but the voluntary compliance by management of places of entertainment has been almost unanimous.

Justice Byrnes said he was gratified at the estimates of savings effected, the effect upon the manpower situation, absenteeism, transportation, and other problems affecting the war effort. He said:

"I recognize that the indirect sanctions which are available to the Federal Government do not lend themselves to the enforcement of such a request except in isolated instances of noncompliance. The available indirect sanctions cannot be effectively applied without the full cooperation of local authorities.

"The Government has no police force of its own available to discover local violations. It has no intention of building up such a force. It is obvious that this effort would in itself be a diversion from the war effort.

"I believe that a controversial enforcement of the measure in New York City without the support of local officials would be impossible. Any effort to this end would divert from the war effort.

"But the Government does not intend to withdraw its requests for places of entertainment to close at midnight.

"There have been no changes in the conditions which led to its issuance. It was one of a series of conservation measures designed to save coal, manpower, and transportation at a crucial period in the war. We cannot expect to obtain voluntary savings in the home unless we take other measures to convince the public that such savings are necessary. We must convince our fighting forces that the home front is prepared to sacrifice for their support.

"Our armies have gained a foothold on the far shores of the Rhine. American soldiers are fighting with determination against strong resistance to extend this bridgehead sufficiently for a final drive against Germany. We have gained Iwo Jima, but at a price which has warned us of the terrific fight ahead in the Pacific.

"Our casualties during the past 2 weeks are estimated at approximately 2,000 per day. At home we are still confronted with shortages in fuel, manpower, transportation, and other essential services. Now is not the time to relax in any way our effort at home.

"I am confident that after the defeat of Germany many of the existing shortages will disappear. I fully anticipate that then the conservation measures which have been imposed by the Government may be suspended or modified. Now we at home must give full support to our soldiers at the front. They are entitled to know that we are willing to make some small sacrifice while we call upon them to make the supreme sacrifice.

"Measures of this type adopted by the Federal Government must apply uniformly throughout the country. We cannot set one standard for New York City and another standard for the rest of the country.

"Therefore, I still ask the full cooperation of all local officials and of the public in support of this request. In those instances in which local officials report violations, the Government will apply those sanctions which are available for the purpose.

"The managers of places of entertainment have patriotically complied with the request. I am sure that the Government may count on their continued support of the established closing hour. I am equally confident that the large majority of the patrons of places of entertainment will support their Government in this conservation request.

"I am authorized to say that this appeal to the Nation has the full approval of the President of the United States."

[From the New York Times of March 20, 1945]

THE PSYCHOLOGICAL SIEGE OF NEW YORK CITY

(By Arthur Krock)

WASHINGTON, March 19.—They are saying harsh things today about Mayor LaGuardia, saying them in Washington, where he has long been considered the President's roving ally and the New Deal's general of irregulars. The remarks range from suggestions that the mayor has "taken New York City out of the Union" or "out of the war" to charges that, in adding an hour to the night life of the metropolis, he has threatened a break-down of that voluntary system of wartime compliances in which the President has taken such pride. Most of this, of course, is uttered in private; the issue raised is still too delicate for official blasts that may be forthcoming.

Although the stated and implied war powers of the Presidency, carried over from the past, have been added to since this war began by statute and by court and administrative interpretation, it has been high policy to get many things done by "request." The censorship code of the press and radio, except for direct powers of the military to suppress or proceed against certain publications informatory of the enemy, is voluntary. The ban on horse racing is in the same category. And when Administrator Byrnes of O. W. M. R. imposed the midnight curfew he put it in the form of a request.

But now Mayor La Guardia has withdrawn his acceptance of that request, and today the administration pondered for hours what to do about it. The immediate decision was to meet it with psychological warfare. That was the method employed by Mr. Byrnes in his statement today. And it was implicit also in the comment of some mayors of other large cities whose political alliance with the administration is close and of long standing. Their comment critical of New York City's

official position was being repeated here today with what suggested pride of authorship.

It may be the administration will find that it must defend voluntary compliance by stronger measures, should noncompliance spread by example and the European war continue to confound the prophets of an early finish. It may be the administration will continue passively to sit out the situation. For New York's problem is in a sense unique among all the cities of the United States: it is the largest port of embarkation and debarkation, its workers are more numerous and more dependent on all-night transport; and the immediate impression here is that the bulk of its citizenry supports the mayor.

But developments might force on the administration an ultimate choice between two alternatives: relax the curfew to the same degree Mr. LaGuardia has relaxed it; or proceed variously under the President's war powers to abolish or nullify the relaxation.

The decision of the United States district court in Chicago in the Montgomery Ward case indicates that an attempt to substitute Federal for local powers over the curfew would have to be carried to the Supreme Court, through the two inferior tribunals, before the administration could hope to have sustained such an exercise of Federal powers. By that time observance of the curfew might have broken down in many cities and a legal victory do more harm than good to the stated objective. Doubtless, however, United States district attorneys could quote a lot of law in favor of enforced compliance with the curfew: the President is empowered, for example, to place restrictions on trade and industry (which could be the denial of supplies, heat, light, power, and manpower).

But, as Administrator Byrnes conceded today, these are indirect sanctions which cannot be successfully invoked without the full cooperation of local authorities or unless the Government forms its own enforcement division, which, he said, the Government is unwilling to do. Therefore, if his statement remains policy, neither of the alternatives listed above will be chosen. The Administration will rely on the effects of psychological warfare, hoping that—in such instances as that of New York City—local public opinion will force the authorities to recomply, or the end of the war in Europe will come in time to prevent a protracted period of noncompliance anywhere.

This is probably the wisest course the President and Mr. Byrnes could take, and certainly it is the most prudent. Also it is typical of the O. W. M. R. Administrator's methods in Government until very recently, when complaints began to arise that he is an autocrat. He has always preferred persuasion to force, conciliation to attack, and example to precept. And he has never believed that the American people can be driven very successfully. The statement Mr. Byrnes issued today, in which the President's approval was explicitly stated, was reminiscent of others he has made in difficult situations.

The statement of policy was prudent for another reason, and this arises from the growing disturbance in Congress and among the public over food shortages and prophecies of worse to come. If responsible opinion were unanimous that these shortages are part of the cost of a war fought under as good domestic as military management, the threat the administration fears they may represent to international cooperation would not be troubling it so much. But many informed and responsible authorities are charging mismanagement and waste, and Congress is moving toward a vigorous investigation.

With such a prospect, an attempt to force curfew compliance on the largest city in the Nation might be harmful far beyond the local orbit.

[From the New York Times of March 20, 1945]

THE MAYOR ON A HIGH HORSE

When he told his radio audience on Sunday that he had changed the city's curfew hour from midnight to 1 a. m. Mayor LaGuardia said: "I have done something unusual this time." All he has done has been to treat, with contempt a wartime request of the Government of the United States, give the city a black eye, and declare null and void an act of the board of estimate and the city council.

The request for national observance of a midnight curfew made by Judge Byrnes, as Director of War Mobilization, was based purely on the special considerations of a wartime situation. It was not prompted by the "dry" organizations which once sponsored the experiment with Prohibition. It was prompted by a stated desire to save coal, transportation, and manpower in the fourth year of American participation in the greatest war in history. It was accepted as such by city governments in all parts of the country. Mayor LaGuardia himself issued a joint statement with the regional director of the War Manpower Commission "appealing to the public for its cooperation." The board of estimate and the city council, holding special meetings for the purpose, adopted legislation fixing the wartime curfew at midnight and giving the city legal authority to enforce it. Now Mr. LaGuardia decides that 1 a. m. is better than midnight, and tells the night clubs to go ahead with that arrangement on his own say-so.

The problems of enforcing a 12-o'clock curfew in a city like New York are many and difficult—so many and so difficult that Mr. LaGuardia could present a good case for a modification of the Government's proposal. But in the mayor's actual handling of the case the discourtesy to Judge Byrnes is obvious. The flouting of the Government's request is deliberate. The invitation to the rest of the country to believe the old libel that New York City puts pleasure above patriotism is unmistakable. As for the law passed by the board of estimate and the city council, fixing the curfew at midnight, Mr. LaGuardia announces airily: "We won't worry about that. We just won't report any violations until 1 o'clock."

If the mayor can do this with one law he can do it with any other law, and we shall have reached a point at which we won't need a legislative assembly in this city. Mr. LaGuardia can make his own laws in city hall. He is riding a very high horse indeed.

Poland and the Big Three

EXTENSION OF REMARKS

OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Tuesday, March 20 (legislative day of Friday, March 16), 1945

Mr. McMAHON. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a letter signed by Thomas W. Lamont and appearing in the Sunday New York Times of March 18 on the subject Poland and the Big Three.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

POLAND AND BIG THREE—ATTACKS HERE UPON YALTA ACTION VIEWED AS UNJUSTIFIED

(The writer of the following letter is chairman of J. P. Morgan & Co., Inc. In 1919 at Paris he was a representative of the Treasury on the American Commission to Negotiate Peace and was present at discussions having to do with the reconstitution of a Polish state.)

To the EDITOR OF THE NEW YORK TIMES:

Of all the momentous decisions made at the Crimean Conference, that concerning Poland seems to have aroused the most question. In fact, for weeks before the conference there was bitter American criticism of Russia's attitude. It still continues from some quarters. If, however, our American comment is to be informed and helpful, we must understand certain of the very important factors that the Big Three may well have had in mind in this matter.

Poland, lying at the crossroads between western and eastern Europe, has for centuries been a bone of contention. Thrice partitioned by its three powerful neighbors, it had no separate national existence from 1795 until 1919. Then at the Paris Peace Conference the Allies set up the new Polish state, taking care, in accord with both the American and British ethnological experts, to leave indefinite any boundaries east of the Curzon line.

POLES MOVED EAST

In 1918 Soviet Russia had, under unrelenting German duress, signed the humiliating peace of Brest-Litovsk, thereby losing great slices of Russian territory. Then she suffered grievously from the support her late allies gave to counter-revolutionary forces.

The Poles, noting this weakness, were able by force of arms in 1920, although against the urgent counsel of the Allies, to move into the region east of the Curzon Line, and in the Treaty of Riga in 1921 the Soviets finally conceded this territory.

Poland's terrible and ever-present misfortune as the border state has been that she could not maintain the position of neutrality that she sought as between Germany and Russia. Between World War No. 1 and World War No. 2 Polish leaders attempted to avoid the dilemma and to walk a tightrope. Not a democracy, Poland's great landlords, who dominated the country, feared the east rather than the west. The Polish Pact of 1934 with Germany was far more significant than a similar one with Russia, for the arrangement assured Hitler that on his all-important eastern front he would not have an unfriendly neighbor, and that his task of isolating Russia from France and England would be accomplished.

RUSSIA NEEDED TIME

But Poland's hope of neutrality was rudely shattered when Germany launched World War No. 2 and swiftly crushed the country. In the light of later events it seems likely that Russia's primary motive in dividing Poland with Germany was to gain time and additional room for defense; for Marshal Stalin knew his real enemy to be Germany. After the fall of France in 1940 Stalin is quoted by Walter Duranty as saying:

"The Nazis have not beaten England. Unless Hitler can cross the English Channel his war in the west is not won and when he understands that, he will be forced to reverse his direction and strike at us."

Thus it all becomes clearer why Russia has come back to her old principle of frontier defense dating back to the time of Peter the Great. Having twice within 30 years suffered from Germany the most sweeping devastation and appalling loss of life, the people of Russia do not intend to be caught again in the same way.

It is well, too, for us who are far from sympathetic to the Russian economic ideas to remember that the Russians have fought World Wars No. 1 and No. 2 at fearful sacrifice, and like Britain and America, have made a stupendous contribution to the saving of western civilization. For our own interests we must not let the "Russophobes" in our midst lead us up dangerous bypaths of distrust of our Russian ally.

COURAGE DEMONSTRATED

It is quite impossible for anyone to say that either Russia or Poland has been all right or all wrong. Naturally, the sufferings that Poland has endured make strong appeal to Americans who for years have had fear, reasonable or otherwise, of a Bolshevist menace. Poland has in the past had a history and culture that were brilliant and stimulating. The Poles are a gallant people. Nature did not design them to become the satellites of any other nation. In their desperate struggle against Germany the Poles have been fighting the battle of all free peoples and of civilization itself. Thus we could have wished that, if only in tribute to the heroic qualities of a fighting ally, the Russians had been able months ago to show a less intransigent attitude toward their weaker neighbor.

President Roosevelt, in his report to Congress, stated his opinion "that this agreement on Poland, under the circumstances, is the most hopeful agreement possible for a free, independent, and prosperous Polish state."

The new plan for Poland with its provisions for democratic procedure has the advantage that two of the three members of the Commission to set it up are our own capable Ambassador, Averell Harriman, and the experienced British Ambassador, Sir Archibald Clark Kerr. Perhaps our American critics will give them a chance to work things out, realizing meantime that in all these matters Russia's and Britain's activities come down to the same point—the necessity that our allies have been under of being forehanded against a third attempt at world domination by a fresh Germany. In Germany over the generations they may have changed the faces, or have taken on fresh names, but their technique of conquest has remained the same. In 1914 it was Belgium that was the first victim; in 1939 Poland; back in 1864 Denmark; in 1866 Austria; in 1870 France.

Just as in the case of Russia and Poland, many Americans have been highly critical of Britain's attitude as to Italy and Greece and have been demanding the immediate functioning of democratic processes. Of course, Mr. Churchill has more than once proclaimed the necessity of establishing governments of the people. But from the outlook of our own untouched countryside we can have little conception of the devastation, distress, and confusion of these liberated states, of the break-down in the fabric of society. The fact is that until available cargo space for food and other supplies materially increases, the hungry people will take limited interest in democratic legislative procedures. They ask for bread, and all there is available is a stone.

TRADE ROUTES IMPORTANT

American interests in the Mediterranean are certainly secondary to British. Yet it is of serious consequence to us that the Mediterranean littoral should be controlled by states friendly to our freedom of commerce through the Mediterranean and Suez Canal. We want to see an Italy and a Greece that cannot be used by a warlike Germany for its own purposes. We have only to recall the narrow margin by which the Suez Canal and its approaches were saved less than 3 years ago. Had Britain finally failed to throw back the Axis legions, their life line, the Suez Canal and the route to the East might have been gone. Our own operation in north Africa would have been far more difficult, our entire attack upon Japan in the Pacific indefinitely postponed and the war might have been lost.

If America had been plunged into any such imminent peril as these two of our allies were, our attitude of seeking safety first would have been equally insistent. Thus Russia may have been far too peremptory in her decision about the Polish boundary. Yet if we thought, the approaches to the Panama Canal were threatened we should take whatever prompt action we thought essential. We are, and not unnaturally, most intolerant of anybody butting into what we feel are our affairs.

CASE IN POINT

Suppose we remind ourselves again that America has her Monroe Doctrine and her good-neighbor policy toward the score of nations from the Rio Grande south to the tip of Tierra del Fuego. We can hardly complain if Russia and Britain desire to be surrounded by friendly neighbors so as to prevent a possible new Germany from having readier means of access and attack.

I sometimes wonder whether in the field of international politics we American are not still living largely in an age of innocence. We declaim upon the virtues of democracy, and are inclined to thank God that we are not as other men are. But do we fully understand that as yet our strength has been largely economic? Feeling the oats of our powerful economic situation, we assume that we have the right to lay down the law generally in idealistic but not always workable terms. We demand that the European states, that have endured frightful sufferings and are still in the midst of the mess, promptly live up to our American ideals.

STEADINESS NECESSARY

The difficulty, however, is that our allies, the United Nations, and we ourselves are at present embarked upon a sea of troubles and are pursuing our perilous enterprises of winning the war and the peace in a craft that is not too steady and has many leaks. That is the reason why it is dangerous for us, with all our immense economic strength, to throw our weight about the boat and with our offhand orders create near panic among our fellow passengers, thus giving them perhaps the impression that, as 25 years ago, we shall be content to stand aside and fulfill our part in international cooperation simply by word of mouth, by precept rather than by example.

In this imperfect world there can be no complete solution of these post-war problems, no way to satisfy all the needs and aspirations of the widely disparate nations that inhabit this globe. The best that we can hope to do is to arrive at solutions that over the years are as nearly workable as possible. For us over here who, with all our priceless contribution to the winning of the war, with our grievous sacrifice in the lives of our gallant young men, have yet been far removed from bloody invasion and the imminent threat of a hideous foe—for us there is nothing so important as to awake and realize that the world is in an appalling state, that unity of effort is the only thing that can save it. We must be tolerant of the desperate attempts being made by our allies to meet their most pressing difficulties that chance not to be so immediate to America.

We, like Solomon, should ask from the Lord neither riches, power, nor long life, but for an understanding heart that we may deal wisely with the vast problems of our generation today.

THOMAS W. LAMONT.

NEW YORK, *March 15, 1945.*

Should Voting Age Be Lowered to 18? Wonderful Appeal by an Army Officer Who Has Made a Wonderful War Record

---

REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. PATMAN. Mr. Speaker, much has been said about lowering the voting age from 21 years of age to 18 years of age. The State of Georgia has already made the initial step in one of the 48 States. Recently I was privileged to read one of the most comprehensive and appealing letters on this subject I have ever read. It is really thought provoking. It was from Lt. Ben H. Carpenter, Troop B, One Hundred and Twenty-fourth Cavalry, in the India-Burma theater, who enlisted when he became 18 years of age as a private in the Army. He is now past 20.

The question involved is whether or not one who is old enough to fight is old enough to vote. Of course, this is a matter under our form of government entirely up to the States, but I am convinced in my own mind, considering all facts and circumstances, that the voting age should be lowered to 18. I do not propose to try to find an excuse to justify my being against a proposal that would permit boys who are old enough to fight to cast a vote for the officials who represent them and concerning the problems involving their social and economic welfare. They are entitled to have a voice in the affairs of our Government.

Lieutenant Carpenter is the son of the No. 1 business and industrial leader in the southwestern part of the United States, Mr. John W. Carpenter, of Dallas, Tex. John W. Carpenter is president of the Texas Power & Light Co., one of Texas' greatest industries. He is president of the Gulf Southwest Agricultural and Industrial Conference and is president of many other industrial, business, and civic organizations in the Southwest. He is one of our finest and greatest leaders.

In a letter from Lieutenant Carpenter—written on election day, 1944—to his father and mother concerning the privilege of those arriving at the age of 18 years to vote, he said:

Well, here it is November 7. However, you won't vote till tomorrow in the States, since it's still November 6 there. I wonder how it will turn out. I guess we'll hear by radio soon.

Ever since I've been in the Army I've waited and wondered. I can't understand yet why the people of the individual States back home have not exercised their rights as they should. I am ashamed of the people of the State of Texas, and only those people of the State of Georgia can look thousands of their citizens in arms in the face when they return home. Here has been a chance of generations for the exponents of States' rights to exercise their beliefs. Here has

been a chance for the statesmen and citizens alike to hold onto that one central pillar of democracy which was the framework upon which our country and all democracies have been founded. That pillar, stated simply with the words "taxation without representation," was one of the main factors which drove our peoples to the American Continent and was the central pillar our Government was built around as the people pulled the English colonies away from the mother country into their own Government. After all these generations, here has risen a chance for the people at time of seriousness to once again restate their confidence in our form of government by doing something, by restrengthening that pillar, by not allowing taxation without representation.

But that is what is happening—taxation without representation. Not a taxation of property, nor of money, nor of worldly goods, but of life itself. Do the people in the States realize that a large percentage of the soldiers fighting this war ovefseas are not able to vote? They are by the will and votes of the people old enough, adult enough, experienced enough, developed encugh to fight a war for their country and their beliefs, to give their lives, their time. Yet why are they not by the will of the people and their votes old enough, adult enough, experienced encugh, developed enough to have a voice in the affairs of the country and principles they are defending? Why are they being taxed but not being given representation? The Federal system settled the two great suffrage problems, Negro suffrage and woman suffrage, but the Constitution left this greater suffrage problem up to the people of the individual States where it belonged according to that document. The people of Georgia did something about it; the people of Texas and other States did not—possibly they were too busy. The 18-21-year-old citizens of Georgia are fighting a war, being taxed, and also being represented by their right to vote. The 18-21-year-old citizens of Texas and other States, if they can be called "citizens," are fighting a war, being taxed, but are not being represented. True, they are old enough to have the responsibilities of giving their time and life for their country. They are physically and mentally capable. They are doing a good job. Many of them as officers and subordinate leaders are leading into successful battle their older fellow citizens. They have the responsibility of other lives in their hands, the direction of other operations. Many of those who are directed can vote while their leaders and those directing them cannot. Why are these people not old enough to have the responsibilities of giving their votes, old enough to have the privilege of representation in their country? Why? That's the unanswered question.

Why haven't the people spoken up and done something? That, too, is unanswered. By silence and failure to look at the issue even.

I am glad the people of Georgia aren't asleep.

All of this discussion has been in speculation and in serious but amused thought. I just wanted to state a case. Nothing will ever be done about it, I'm almost sure. But I've that much privilege, anyway—so I'll exercise it.

Enclosed you will find a clipping which might be of interest to you.

I am feeling fine tonight, even though it's hot enough for a stove oven in the day, it is getting extremely cold at night. Thanks to the fact that the monsoons are over, however.

TEXAS FLAG CARRIED INTO BATTLE BY LIEUTENANT CARPENTER'S ORGANIZATION

On February 2, 1945, after this letter was written, Lieutenant Carpenter's organization engaged the Japs in combat, which resulted in 520 Japanese being killed in this particular battle. On this occasion Lieutenant Carpenter's conduct was such that he was given the Silver Star for gallantry in action. In a letter to Mr. John W. Carpenter, dated February 15, 1945, Maj. Delbert M. Tanner, adjutant of the One Hundred and Twenty-fourth Cavalry, stated:

SILVER STAR FOR GALLANTRY IN ACTION ON THE FIELD OF BATTLE

The regiment far exceeded any expectations in combat. We had casualties, of course, but nothing in comparison to the enemy. I know of one Texas flag carried in the hottest fight by one of our corporals, who accounted for three enemy pill boxes himself, although wounded at the beginning of the engagement.

Ben was awarded the Silver Star for gallantry in action and also recommended for promotion on the field of battle as, I believe, Colonel Osborne told you in his letter the other day. Ben, during a heavy counterattack by the Japanese, found his troop C. O. had deserted his troop. It was well after dark and the situation was critical. Fire was intense and the troop was about to crack, when Ben came back to see what was the matter. He reorganized the troop, arranged for aid and ammunition, and later at midnight beat off a stronger and more determined attack. General Sultan personally pinned on his Silver Star. The whole regiment is proud of his achievement. Incidentally, the One Hundred and Twenty-fourth had six Silver Stars awarded and four of them were Texans. Ben came through the scrap without a scratch.

Can't tell much about the future, but the confidence and morale of the outfit, and its performance in battle, is a credit to Texas. Our colors are at the forward command post and add just a bit more to the pride and spirit of the regiment.

I may be doing Ben an injustice, but have an idea that he would not tell his part in this battle. I will forward you a copy of the citation in the near future.

In the Round-Up of March 1, 1945, which is published in the India-Burma Theater as an Army publication, it was stated:

Combat decorations were presented this week to members of the One Hundred and Twenty-fourth Cavalry and Four Hundred and Seventy-fifth Infantry Regiments of the Mars Task Force of Brig. Gen. John P. Willy by Lt. Gen. Dan L. Sultan, India-Burma Theater Commander.

The theater commander presented the Silver Star to two officers and five enlisted men of the Cavalry unit and awarded Silver Stars to two officers and four enlisted men of the Infantry Regiment, in addition to presenting decorations to four members of Merrill's Marauders now attached to the Four Hundred and Seventy-fifth.

The Cavalry decorations were for outstanding actions during the engagements that culminated February 2, with a lightning attack on the Japs concentrated at Hpa-Pen and Mong Noi, 30 miles south of the Ledo-Burma Road.

The Silver Star, third highest award for combat, was presented to the following: Lts. Leo T. Tynan, Jr., San Antonio and Benjamin H. Carpenter, Dallas; Staff Sgt. Joe W. Cantrell, Waco, Tex.; Sgt. James L. Speck, McKinney, Tex.; Pvts. (1st cl.) Bert W. Beacom, Jr., Taylorsport, Ky., and Maurice H. Hylton, Bluefield, W. Va.; Pvt. Solomon D. Cureton, Cove, Ark.

Carpenter led a charge to its objective, and then when the unit was counterattacked secured ammunition and reinforcements for it. Without regard for his own safety, he moved about the perimeter during successive counterattacks, aiding the men in repulsing each onslaught.

Statesmen may well ponder the wise suggestions and friendly advice of Lt. Ben Carpenter.

Exports of Farm Machinery

EXTENSION OF REMARKS

OF

HON. MALCOLM C. TARVER

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. TARVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I included the following letter and tables:

FOREIGN ECONOMIC ADMINISTRATION,
Washington, D. C., March 10, 1945.

Hon. MALCOLM C. TARVER,
Chairman, Subcommittee of
Committee on Appropriations,
House of Representatives,
Washington, D. C.

DEAR JUDGE TARVER: As you will recall, my colleagues and I appeared before the subcommittee on February 26, 1945, for the purpose of discussing with members of that subcommittee the exports of farm machinery.

In revising my remarks, I have found it possible to supply the committee most of the information which it requested. However, some of the detailed information necessary to an understanding of the current situation respecting farm machinery and, in particular, the more recent figures of exports could not be made part of the public record because of the security regulations. Accordingly, I have followed the practice of placing in the record detailed figures attributable to the calendar year 1943. Incidentally, these figures are later than any which we have previously been permitted to make public.

So that the committee may have a more up-to-date picture of the situation, I am enclosing with this letter similar figures to those included in the public record but extending through the calendar year 1944. I am certain that the members of the committee will regard these figures as confidential and to be used only for their own information.

On page 2112 of the typewritten record, I was asked for detailed information as to exports of farm machinery by principal types of machinery. In the public record I supplied detailed information with respect to four principal types of farm machinery and a summary table with respect to seven principal types, including the four types for which the detailed information was furnished. I am now enclosing similar information for the years 1943 and 1944, which are marked tables 1-A to 1-E, inclusive.

On page 2117 of the typewritten record, I was asked for information comparing the number of units of farm machinery exported to Canada per Canadian farm with the number of units made available in the United States per United States farm. Included in the public record will be comparative figures of that nature for wheel tractors and combines for the year 1943. I am now enclosing, marked "table 2," similar information for the year 1944.

On page 2125, I was asked for information respecting the export of farm machinery to

Latin America. Figures with respect to the year 1943 have been furnished for the record. I now enclose similar information with respect to the years 1943 and 1944, which I have marked "table 3."

On page 2133 of the typewritten record, information was requested as to any exports that might not have been included in the other figures submitted to the committee. This was in connection with my mention of 30,000 tons of carbon steel which had been allocated to the Foreign Economic Administration for farm machinery for use in liberated areas in order to assist the people of those liberated countries to achieve maximum agricultural production as rapidly as possible and thus prevent their making long-time claims upon the food resources of this country. As I then mentioned, very little of that machinery has been shipped at the present time. The detailed information with respect to the machinery scheduled both for the Army during the period in which it has responsibility for relief purposes and for the United Nations Relief and Rehabilitation Administration cannot be made public for reasons of military security. However, for the confidential use of the committee, I am able to furnish a table, which I have marked "table 4," which I believe gives the required information.

As you probably know, some types of machinery which are considered to fall within the definition of farm machinery have been allocated to the armed forces for direct military purposes. None of the export figures submitted by me, either in the record or enclosed in this letter, take account of such of that machinery as may have been exported by the Army for military purposes abroad. Information respecting that type of export is not available to us.

I hope that this includes all the information which the committee desires. However, if additional information is required, please do not hesitate to call upon us again.

Sincerely yours,

H. W. PARISIUS,
Director, Office of Food Programs.

TABLE 1-A.—*Exports of wheel tractors to specified Foreign Economic Administration countries, 1943–44*

Fair Employment Practices Commission

REMARKS

OF

HON. A. LEONARD ALLEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. ALLEN of Louisiana. Mr. Speaker, today's Washington Post carries an article by Merlo Pusey entitled "Should F. E. P. C. Dictate Hiring Policies?" While I do not agree with all the writer said in his article, I would urge that every Member of this House read the article because it seems to me that it flashes a red light of warning in the face of this Congress in dealing with this very dangerous and explosive subject. I can think of no legislation introduced in Congress in my time that is so fraught with danger to the future peace and happiness of the American people as this legislation is. I think it is high time that the businessmen of the Nation wake up and get into this fight to try to prevent the enactment of this legislation. The article referred to is as follows:

JOB EQUALITY BILLS

(By Merlo Pusey)

SHOULD F. E. P. C. DICTATE HIRING POLICIES?

It is time for plain speaking about the fair-employment-practice bills. Straight-from-the-shoulder discussion has been meager to date because many officials, legislators, and commentators fear that candor will be mistaken for prejudice. If that timorous attitude prevails, we shall likely find on the statute books an unworkable law capable of plaguing the Nation more grievously than did prohibition.

Racial discrimination in the hiring and firing of men is unquestionably an evil. Any democratic government and any right-thinking individual must work toward its elimination. The Department of Labor might well have a unit devoted to the equalization of job opportunities. Congress has a clear-cut responsibility, moreover, to insist that labor unions claiming the right to bargain collectively for all employees in any given industry or craft open their membership to all workers in such industry or craft.

The labor movement has grown to its present strength under the protection of the National Labor Relations Act. It is grossly unfair to permit unions taking advantage of this machinery to exclude minority groups from the monopolistic bargaining agencies which they set up. Certainly any bargaining unit certified by the N. L. R. B. should be required to open its membership to Negroes and all other minority groups as a condition to the exercise of exclusive bargaining rights. Passage of a bill for that purpose would probably be the most effective action Congress could take to minimize discrimination on grounds of race or creed.

But sponsors of the bills now most actively before Congress go far beyond education in this field and assurance of bargaining representation for minority groups. They insist that a Fair Employment Practice Commission be assigned the impossible task of uprooting discriminatory practices by force. The proposed F. E. P. C. would be authorized to summon employers before it on charges of refusing to hire, of discharging, or otherwise discriminating against a person because of his race, creed, color, national origin, or ancestry. Employers found guilty of such unfair employment practices could be ordered to desist and those orders could be enforced in the courts. Back pay to persons so discharged could be ordered and employers could be forced to hire individuals against whom such discrimination had been practiced.

One difficulty with this procedure is, of course, the impossibility of determining whether racial or religious discrimination exists. If a Catholic applies for a job and a Protestant is hired, the former is likely to feel that he has been discriminated against. On what basis could a Federal agency decide such a dispute? The issue would be more clear-cut if a minority group were wholly excluded by an employer. But after that initial barrier had been broken down, where would the proposed F. E. P. C. draw the line? Would the employment of 5 Negroes and 500 whites in unskilled work in Washington be evidence of racial discrimination? There is no reasonable criterion that can be applied short of an invidious quota system.

It seems probable, moreover, that legislation of this sort would narrow the door of opportunity to minority groups instead of widening it. Every Negro fired could be expected to go to the F. E. P. C. with a complaint that he had been discriminated against because of his race. Complaints of this sort would probably involve employers in costly and time-consuming controversies even though they might have had other reasons for their discharges. As a result, employers would doubtless be more eager to keep to a minimum the number of Negroes hired in the first place.

Another real danger should be apparent to those who wish to see the maximum number of jobs created in the post-war era. To enforce such intangible rules as these bills lay down, the proposed F. E. P. C. would have to take a large measure of control over hiring. An arm of the Government would be telling employers whom they could hire, promote, and discharge. Many employers would be likely to conclude that business could not be successfully operated under such an additional handicap and give up the ghost.

Sponsors of this bill make the grave error of assuming that private business firms, large and small, are the equivalent of public institutions. Of course, they are not. Many employers have set up small plants, stores, or service establishments chiefly to give jobs to their sons, their relatives, their neighbors, or members of their church. That is their right in a democratic country. We cannot continue to destroy the motives that lead to the creation of new private enterprises without undermining the whole basis of our capitalistic system.

Maybe the authors of this bill are aiming at unloading a larger share of responsibility

for the creation of jobs upon the Government. Maybe we are entering an era in which the Government will exercise full control over our economy. But at least we ought to move forward with our eyes open and not progressively destroy the conditions under which business can function successfully while giving lip service to the idea of private initiative and free enterprise.

National Federation of Small Business

REMARKS
OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. VOORHIS of California. Mr. Speaker, the National Federation of Small Business, with headquarters at San Mateo, Calif., has been furnishing to small-business men in many communities throughout our country an opportunity to express to Members of Congress their opinion on various current public questions. The Federation selects a list of bills or proposals of interest to small-business men and furnishes ballots to each local group to be filled out and mailed to Members of Congress.

I am greatly encouraged to note that in a recent ballot, namely ballot No. 120, the small-business men of the country were asked to express their opinion on my bill, H. R. 52, and that 85 percent of them expressed their support of this measure and only 9 percent expressed opposition.

The bill in question is designed to assist smaller businesses in reconversion to peacetime production and to equalize the credit opportunities of small business as against those of big business by a system of insured loans through the Smaller War Plants Corporation, similar to the F. H. A. system.

I appreciate very deeply the support shown for this measure by the small-business men of the country and earnestly hope for favorable congressional action with regard to it.

I ask unanimous consent that the text of that bill may be included with my remarks. In accordance with the rule laid down by the Chair I therefore also ask consent that my remarks may appear in the Appendix.

H. R. 52

A bill to facilitate smaller war plants in reconversion to peacetime production; to assure the effective participation of Smaller War Plants Corporation in the reconversion period; to stimulate the development of new enterprises; to amend Public Law 603 (78th Cong.); and for other purposes

Be it enacted, etc., That the Congress hereby declares that the objectives of this act are—

(a) To promote the war effort.

(b) To facilitate the conversion of smaller plants from war to peacetime production.

(c) To stimulate the expansion of peacetime production of small plants and the increased employment resulting therefrom.

(d) To encourage the development of new industries and enterprises.

(e) To furnish aid to war veterans.

SEC. 2. In order that Smaller War Plants Corporation may adequately function under Public Law 395 (78th Cong.), known as the Contract Settlement Act, under Public Law 457, known as the Surplus Property Act, under Public Law 458, known as the War Mobilization and Reconversion Act, and under Public Law 603 (78th Cong.), as well as any other statutes relating to small business and looking to reconversion from war to peace, the life of the Smaller War Plants Corporation is hereby extended until and including the 1st day of July 1948, and section 4 (d) of Public Law 603 is so amended. The Corporation shall hereafter be known as the Federal Small Business Corporation.

SEC. 3. The Corporation is hereby authorized to make or guarantee loans to small business enterprises upon such terms and conditions as may be approved by the board of directors of the Corporation for the purposes of—

(a) facilitating the conversion of small plants from war to peacetime production;

(b) reestablishing any small business concern which has been either partially or wholly curtailed in its operations or injured or destroyed by reason of the pressures of war;

(c) promoting the expansion of peacetime production;

(d) developing new industries or enterprises, engaged or about to be engaged in production;

(e) aiding any business, agricultural, or professional enterprises undertaken or pursued by war veterans.

SEC. 4. The Corporation is hereby specifically empowered to establish a system of credit insurance, which shall be available to qualified financial institutions making loans to small business concerns of the type which the Corporation has been authorized to make either under section 3 hereof or under any other statute. To that end it may issue either blanket or single policies insuring such financial institutions against the amount of the first loss in a sum not exceeding 20 percent of such loans, and may charge a reasonable fee for such credit insurance not exceeding 1½ percent of the total amount of the loans insured, which shall be added to the reserve fund which is hereby authorized to be established for that purpose.

SEC. 5. In addition to the duties and powers imposed on the Corporation by Public Law 603 and Public Law 395, or any other statute, it is hereby provided that the Corporation is authorized and empowered to furnish to small-business concerns, or new enterprises, and veterans, such technical and management service and assistance as they may from time to time require; to secure wherever feasible and place at their disposal, upon such terms and conditions as will conform with the purposes and objectives of this act, such patents, processes, facilities, or other technology as may be owned by any agency of the Government of the United States, or purchased or otherwise acquired by the Corporation from any private source.

SEC. 6. The Corporation is hereby authorized to rediscount notes, obligations, and other paper which it receives with Federal Reserve banks, subject to such terms and conditions as may be prescribed by its board of directors.

SEC. 7. All of the facilities, services, and assistance furnished by the Federal Small Business Corporation shall be available to war veterans who shall be accorded a preference.

SEC. 8. The Chairman of Smaller War Plants Corporation is hereby directed to make a survey and study in order to determine—

(a) what form or measure of tax relief is required in order to facilitate conversion of small business enterprises from war to peace;

(b) what additional legislation, if any, is required in order to facilitate small business concerns engaged in service, distribution, manufacturing, and other types of trade, commerce, and industry in the conduct of their post-war enterprises;

and to report thereon to the Small Business Committees of the House and Senate at the earliest practicable date.

DEFINITIONS

SEC. 9. (a) "Financial institution": Any Federal Reserve bank or other public or private financing institution.

(b) The term "production" shall include any establishment engaged in manufacture, assembly, construction, mining, repair, and maintenance of any durable or consumers goods, or any facilities connected therewith.

(c) "Small-business concern" shall include any business establishment having 500 or less employees, as well as any institution which, by reason of its relative size and relative position in the industry, is determined by the Corporation to be a small-business concern: *Provided*, That is is not a subsidiary or affiliate of any concern dominant in its industry or business.

Iowa Poll Favors Peace Table Seat for the Armed Forces

EXTENSION OF REMARKS
OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. JENSEN. Mr. Speaker, you will note by this poll that the people of Iowa want those who have done all the physical suffering and all the fighting in this war to have their say as to the kind of a world we will have to live in after they have quieted the enemy guns all over the world.

That is as it should be. I have so expressed myself before gatherings of people in my district and here on many occasions, pointing out that unless our returning veterans approve of a peace treaty drawn and signed before they have a voice its force and effect will surely come to naught. We must keep in mind that our armed forces are composed of millions of men and women of mature age who had taken an active part in civic, economic, and political affairs before entering the service, and the minute they lay away their role of a soldier they will immediately enter the role of a citizen actively.

So, Mr. Speaker and my colleagues, I say again that we best make certain they be well pleased with what we do before we make too many pledges to the rest of the world which they now know so well by bitter experiences.

I am very sure the Iowa people have in this poll voiced the conviction of an overwhelming majority of the American people.

[From the Des Moines Sunday Register of March 18, 1945]

FAVOR PEACE TABLE SEAT FOR THE ARMED FORCES

A substantial majority of Iowans is in favor of the armed forces having a representative at the peace table, the Iowa poll shows.

Eighty-three percent of the Iowans interviewed expressed approval of such a move, and 46 percent of them believed a great deal of good would be accomplished if a veteran had a voice in making the peace.

Iowans also were in favor of having servicemen and women select their own representative to sit in at the peace conference.

THE IOWA POLL

The first question asked in the poll was: "Do you think it would be a good idea to have at least one veteran of this war sitting in on peace conferences after the war?"

The vote:

	Total	Men	Women
	Percent	*Percent*	*Percent*
Yes	83	84	82
No	4	4	5
Don't know	13	12	13

This question then was asked: "If a veteran of this war sits in on peace conferences how much do you think he will be able to accomplish toward a better peace—a great deal, very little, or nothing."

The answers:

	Total	Men	Women
	Percent	*Percent*	*Percent*
A great deal	46	46	47
Very little	29	29	29
Nothing	8	11	6
No opinion	16	14	18

The next question was: "Would you be in favor of the men and women in uniform expressing a choice as to a veteran to sit in on the peace conferences?"

The replies:

	Total	Men	Women
	Percent	*Percent*	*Percent*
Yes	79	81	77
No	10	11	9
No opinion	11	8	14

To determine what influence past war experiences might have on the proposal to have a veteran sit in on peace conferences, the answers were separated on a basis of whether those interviewed were veterans of World War No. 1, or had members of their families who were. Their opinions:

	Yes, I am	Yes, member of family	No
	Percent	*Percent*	*Percent*
Yes	82	86	81
No	7	2	5
Don't know	11	12	14

The last question was: "Some people have said that the last war was won by the younger men in uniform and lost by older men at the peace conference. Do you agree or disagree with this statement?"

Navy Commander Harold E. Stassen, a serviceman, is a delegate to the United Nations Conference April 25 in San Francisco, Calif.

Address Delivered by Vice Admiral B. Moreell on the Occasion of the Laying of the Cornerstone for the United States Naval Hospital, Houston, Tex.

EXTENSION OF REMARKS

OF

HON. ALBERT THOMAS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. THOMAS of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Vice Admiral Ben Moreell, Civil Engineer Corps, United States Navy, Chief of Bureau of Yards and Docks, United States Navy Department, Washington, D. C., delivered on the occasion of the laying of the cornerstone for the United States Naval Hospital at Houston, Tex., March 10, 1945:

On this memorable occasion I bring to you greetings from the Secretary of the Navy, from the Commander in Chief of the United States Fleet and from Vice Admiral Ross T McIntire, Surgeon General of the Navy, who was unfortunately prevented, at the last moment, from making the trip. The Secretary had particularly desired to be with us today, but he has recently returned to Washington from a long absence during which he visited the Pacific Ocean combat areas and participated in the assault on the now famous Iwo Jima, where our marines are covering themselves with glory. His heavy official duties prevented his leaving Washington so soon after his return.

The taking of Iwo Jima for use as a base for our fighter planes to escort our bombers for the assault on Japan proper and for our bombers themselves has been pronounced by our high command to be absolutely essential for the successful conduct of our war in the Pacific. The fact that the action has been a costly one in the lives and limbs of our men is indicative of the value which the Japanese have placed on the retention of this base and on the denial of its use to our forces. The inordinately strong defenses which the Japanese have put forth to retain this island is evidence of the wisdom of the decision that this base must be taken, cost what it may. In effect, Iwo Jima will not only permit us to intensify our offensive operations against the Japanese homeland but, of equal importance, it will deny to the Japanese the use of this base for air attacks against our own installations in the Marianas Islands.

I have cited the action on Iwo Jima because it constitutes an outstanding example of our need for the finest of hospital facilities and for the type of structure and organization which we are commemorating here today. The large number of our casualties on Iwo Jima is indicative of the difficulties of things to come as we approach closer and closer to the heart of the Japanese Empire. Our progress toward ultimate victory will be marked by an increasing awareness of the value of the facilities which we are providing to take care of our sick and wounded as we go forward.

The American people may well take pride in the hospital and rehabilitation facilities which they have, through the medium of their Representatives in Congress, so generously provided for these purposes. I know, from talking with medical experts and from my own observations at home and in foreign countries, that no effort and no expense have been spared in providing for the care of our battle wounded and for those who have taken sick in the service of their country. The facilities made available and the personnel provided for these purposes constitute proof conclusive of the realization by the public and by those in responsible authority of the great debt which we owe to the men who go under fire in order that our liberties may be preserved.

Since the beginning of the emergency, generally taken for statistical purposes to be July 1, 1940, your Navy has expended for hospitals and dispensaries throughout the continental United States and in our outlying possessions of Hawaii, the Panama Canal Zone, and Puerto Rico, approximately $275,000,000, which has increased the bed capacity from a total of 6,000 to approximately 98,000 at the present time. In addition, the Navy has provided at advance bases in active theaters of war some 20,000 beds in mobile hospitals which can be taken up and moved forward as the fleet and land forces advance.

As the physical plant expanded, the personnel—doctors, nurses, administrative officers, hospital corpsmen, and WAVES assigned to hospital duties, have kept pace. The Navy has been fortunate in obtaining the enthusiastic support and the services of many of the outstanding medical men of this country so that it can be authoritatively stated that today the Navy has as fine a medical organization as the world has ever seen.

I am pleased to have this opportunity to pay tribute to the great medical organization of the United States Navy which is directed by the officers of the Medical Corps under the inspired leadership of Vice Admiral Ross T McIntire. I have seen their handiwork on the battlefield and in the rear areas, and I can personally testify that the American people can feel secure in the knowledge that their boys are receiving the finest medical attention that money can buy and science can devise. In conversation with the Secretary of the Navy day before yesterday, he made special mention of the speed with which our wounded were evacuated from Iwo Jima. He stated that he had seen in the Naval Hospital at Pearl Harbor boys who had been seriously wounded just 1 week before at Iwo Jima but who were now quite evidently on the road to recovery and who already wanted to return to the battle. All honor to the gallant and efficient officers and men of the Navy Medical Corps.

It is particularly appropriate that the State of Texas and the city of Houston should be the site of a great naval hospital. I recently had occasion to make a computation of the contribution which the State of Texas has made to my own organization, the Navy's construction battalions—known as the Seabees—and I found that Texas had contributed some 50 percent in excess of its quota, based on relative populations. I do not know whether this figure holds good for the other branches of the service but it is reasonable to assume that a comparable condition exists with respect to those branches. Texas has contributed both in quantity and in quality and in the number of those in high positions. The Navy itself is particularly fortunate in having as its commander in the war in the Pacific against the Japanese a distinguished son of Texas, Fleet Admiral Chester W. Nimitz, who has brought honor and glory to the Navy and to his native State.

Not only has Texas contributed to our military forces, but it has sent to Congress some of the most vigorous and effective supporters of the national defense and advocates of a bold and vigorous policy in the conduct of the war. Texas may well take pride in its great war record.

This great hospital, the cornerstone of which is being laid today, will have an ini-

tial capacity of 1,000 beds, calculated on the normal peacetime basis. It is recognized that in time of emergency we are justified in increasing this normal peacetime-rated capacity and that, if the exigencies of war demand, we will have to expand our wards. We have, therefore, designed the clinical, administrative and commissary facilities for 1,500 patients, but under emergency conditions they could accommodate some 2,000.

The present estimated cost of the work now programmed is $7,400,000.

We have tried to make this project, insofar as practicable, a product of Texas and the South. The plans and specifications have been prepared by Finn, Cummings, and Taylor local architects and engineers. The contractor for the first three buildings is the W. S. Bellows Construction Co. of Houston. The contractor for the foundations of the principal buildings is R. P. Farnsworth & Co., of New Orleans and Houston, and the successful bidder for the superstructure of the permanent buildings is James Stewart & Co., of New York and Dallas, Tex. It is expected that the contract for the remaining structures at this hospital, estimated to cost $2,600,000, will be awarded about the middle of April.

According to our present schedules, the construction will be sufficiently advanced to receive patients by January 1, 1946, with total completion of the facilities now planned by March 1, 1946.

Contrary to sometimes popular conception, there is a great deal of sentiment in war. The two-way pipe line of love and affection, kindness and compassion which runs from the folks back home clear out to the front-line trenches and back again is a most powerful sustaining force for the men who do the fighting. The great institution which will rise on this site is symbolic of this force and it constitutes substantial evidence to the men at the front of the sentiment of those they have left behind. This community, through its Representatives in Congress, has been vigorous in its support of this development. Not only has the Navy had moral support but it has also received a suostantial material support in the contribution by the citizens of the community of the site for this hospital, a contribution which made possible this particular development.

In closing, I want to bespeak for our fighting men and women the continued and unstinting support which you have demonstrated to date. There seems to have developed, in the recent past, a feeling of unwarranted optimism with respect to our future operations in the Pacific Ocean. It was my privilege to discuss this matter with Fleet Admiral Nimitz in the very recent past and I can assure you that any optimism such as we felt toward the European war about 1 year ago, and which resulted in a.. unconscious relaxing of our efforts in support of that war, is entirely unwarranted. Our recent landings in the Philippines and on Iwo Jima mark a notable advance but they still leave us far from our ultimate goal. The fierce and costly resistance of the Japanese in the face of annihilating fire from our forces is indicative of the intensity of the campaign which lies ahead. A recent calculation indicates that the Japanese Empire now has under its domination approximately 2,950,000 square miles of territory and approximately 456,000,000 people. In the continental United States we have an area of 3,000,000 square miles with 132,000,000 people. Certainly no one would attempt to equate the productivity of the people and manufactories in the areas under Japanese control with our own. But it must be borne in mind that we are faced with the obligation of carrying the attack across vast oceans to distances varying from 7,000 to 9,000 miles, and that we must have great preponderance in quality and quantity of men and matériel if we are to achieve victory within a reasonable time and at minimum cost.

The game is not over until the final whistle blows, and I know that you share with me the feeling that we must not and will not let our fighting men and women down. This great city of Houston has made one of the outstanding production records of the war. I congratulate Houston and the State of Texas on their records, and I bespeak for the Navy your continued enthusiastic and high-spirited support of our operations.

Shall Grandfather Mountain Be Saved?

EXTENSION OF REMARKS

OF

HON. JOE W. ERVIN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. ERVIN. Mr. Speaker, I believe it is my duty to call to the attention of our Nation, and, particularly, to the people of North Carolina, the fact that Grandfather Mountain, the most rugged peak in the Blue Ridge Range, which is said to be geologically the most ancient of any mountain on the American Continent, is about to be subjected to commercial exploitation.

There are no Federal funds available at this time with which to purchase this property, and, in view of the size of the public debt after the war, we cannot rely upon any expectation that Federal funds will be available for this purpose after the war.

Therefore, it is my hope that the people of North Carolina, by private subscription, may see fit, without delay, to acquire this property and preserve it in its natural beauty.

It occurs to me that it would be appropriate for the people of the State to acquire and save it as a memorial to the patriots who will have sacrificed their lives in this war. A private subscription for such purposes could be deducted, in large measure, for income-tax purposes.

I hope that those North Carolinians who are interested in this matter will communicate with me by letter.

Under leave to extend my remarks in the Appendix of the RECORD, I include therein two articles by Mr. Harlan P. Kelsey, who is one of our foremost advocates of preserving the beauties of our mountains for future generations:

GRANDFATHER MOUNTAIN—SHALL IT BE SAVED?

(By Harlan P. Kelsey, East Boxford, Mass.)

"In the morning of the world a mighty convuision heaved heavenward the Appalachian System—first-born of earth's mountain ranges." Some geologists say 140,000,000 years ago, while others claim not less than 200,000,000 years' antiquity; and so Grandfather Mountain, most rugged, picturesque, and highest peak in the entire Blue Ridge Range was born.

Today this venerable landmark is clothed with an exquisite virgin mantle of rare forest trees and flowers; cold, tumbling brooks cascade down its steep slopes under dense canopies of white and purple rhododendrons and mountain laurel of almost unbelievable size and luxuriance; in May and June on more open ridges the flame azalea, most gorgeous of American shrubs, flashes fire, while charming alpine-like plants in a hundred varieties fill every nook and crevice on its craggy summits.

From the sides of Grandfather Mountain burst forth ice-cold springs, the headwaters of many streams flowing westward by way of the Great Appalachian Valley to water the broad Tennessee and Mississippi basins, and eastward through the Piedmont plains to the Atlantic Ocean. It is surely the "Grandfather of Waters." To the southwest, Grandfather Mountain's jagged cliffs plunge precipitously 2,000 feet into the forest-clad valleys where the Linville and Watauga Rivers, paradises of the trout angler, begin their long journeys to the sea; while to the north and east, long buttressed ridges slope away for miles, giving birth to a hundred tumbling streams that in the upper foothills of the Piedmont, join together to form the fruitful Catawba River, whose controlled waters are incessantly turning the powerful turbines that supply the electric energy for a new and amazing industrial Southland.

Just off the Blue Ridge Parkway and but a scant 10 miles to the southeast of Grandfather Mountain, the Linville River suddenly becomes the wildest and most picturesque stream of the Southern Appalachians, the valley culminating in a deep gorge with a descent of 2,000 feet in 20 miles from the beautiful Linville Falls to the foothills.

Grandfather Mountain towers above the surrounding mountains, and from its several summits a glorious panorama unfolds, with peaks and ridges rising one above and beyond another for 50 or a 100 miles to the south, the west and the north, impressing upon the observer in a manner not to be forgotten, the vastness of this region of mountains. "The varying degrees of haziness of the atmosphere, which has found expression in the name Blue Ridge, at times limits the distance of distinct vision, but it combines with the forest cover to soften the details and to render this Southern Appalachian landscape attractive beyond comparison".

This is the Land of the Sky, where the snowbird nests, and where on the heights in summer cool breezes are born, which forever sweeping downward temper the hot valleys and plains far below to the east, south, and west. The projection far into the Southland of these lofty ancient Appalachians, greatest masses of mountains east of the Rockies and the highest mountains covered with hardwood forest in America, profoundly affected the civilization that so soon after the discovery of America was to be imposed upon the Atlantic side of the continent.

To the steep mountainsides and into the fertile coves and valleys, came the hardiest and most virile of the invading tides of white men, to battle with nature and carve new homes out of the wilderness, inspired with the fierce desire for new freedoms, and security to work out their own destiny. And thereafter out of these same mountains have come brilliant statesmen and leaders in every line of endeavor to do their part in the building of a great America.

From the beginning these same energizing mountains have ever been the near and blessed Mecca for countless thousands of heat-weary dwellers of the lowlands of cotton, tobacco, and corn, a vast plain spread fan-like from a mountain base to the distant Atlantic and Gulf coastlines; for here in pure untainted air they found in overflowing abundance rest, health, and recreation, in a setting of grand and inspiring landscapes.

However with the insistent economic demands of a fast-growing population, the virgin resources of soil and forest have been far too ruthlessly exploited, with little thought of the future, and today the few remaining primeval wilderness areas are in imminent danger of despoliation. Already many of the choicest gems have been desecrated—some beyond regeneration, by cheap commercial exploitation for the temporary benefit of the few, the inevitable result of fatal complaisance and lack of intelligent

forethought and future planning for the good of all.

"The Blue Ridge Parkway is an elongated park with a scenic motorway designed expressly for the tourist, threading the picturesque mountains between the Shenandoah National Park, Virginia, and Great Smoky Mountains National Park, North Carolina and Tennessee. The parkway, first of its type and scale, will be 485 miles in length when completed. It averages 3,000 feet above sea level. It affords an unusual opportunity to view the natural beauty of a country heretofore virtually inaccessible—a country of bold panoramas, wild forest and exceptionally beautiful flora."[1]

At convenient intervals along this now famous parkway, recreation areas of outstanding scenic interest and varying from 500 to 10,000 acres in extent have been reserved, and provided with suitable camping facilities. The land for this unique scenic travelway, together with its protective park-owned right-of-way averaging 1,000 feet in width, was purchased by the States of Virginia and North Carolina, and transferred to the National Park Service in perpetuity, a most unusual and munificent gift to the people of our Nation. The war has halted construction, yet already more than 360 miles of the project have been brought to various stages of completion.

The amazing record of visitors to the Shenandoah and Great Smoky Mountains National Parks, far outnumbering those to our older and larger parks in the West, is convincing evidence of the vital need for setting aside and preserving inviolate before it is too late, every remaining suitable area still available. Thus may be assured, the highest value-use for the health and recreational needs of a congested and increasing Atlantic seaboard and Mississippi Basin population. State parks answer the problem only in part.

Beyond all question, the most outstanding and superb feature along the entire Blue Ridge Parkway is Grandfather Mountain in North Carolina, about two-thirds of the way from Shenandoah to the Great Smoky Mountains. The National Park Service considers it to be a vitally needed addition to the parkway, it is yet to be acquired and today is threatened with immediate calamitous destruction of its virgin glories by lumbering operations and other commercial exploitation.

The case for Grandfather Mountain is clear cut and crystal clear. At the present time a 12,000-acre tract, including the dominant massif of Grandfather Mountain and its beautiful mate Grandmother Mountain, is offered for sale at a reasonable price. Together with contiguous lands partly now available it would constitute a superlative park of over 20,000 acres, with the highest naturalistic park standards, and be under the perpetual administration of the National Park Service.

If and when public ownership is consummated, the National Park Service plans the establishment of a major wayside rest and recreational camp on Grandmother Mountain in a suitable sheltered location adjoining the Blue Ridge Parkway, where it will in no way detract from or mar the naturalistic features of the park.

This is an urgent challenge not only to Grandfather Mountain's homeland State of North Carolina, but to the entire Nation. Is it not an inescapable duty our citizens of today owe to succeeding generations, to save this masterpiece of Nature intact and unsullied? It is certainly a service which when accomplished, will for all time greatly redound to the honor of those who have had a part in preventing its destruction.

[1] National Park Service statement.

SHALL GRANDFATHER MOUNTAIN BE SAVED?

(By Harlan P. Kelsey)

With the establisment of the Shenandoah and Great Smoky Mountains National Parks, a hopeful and encouraging beginning was made to preserve unspoiled for all time the finest natural features of the southern Appalachians.

The Blue Ridge Parkway with its 447 miles of superb scenery linking these two parks, furthered the movement. At intervals along this parkway and its protected strips of wooded land that were donated by the States of Virginia and North Carolina notable sites have been chosen for minor parks wherein to provide rest and recreation camps for the traveler. Others are yet to be selected as the parkway nears completion.

By far the most superlative feature along the Blue Ridge Parkway is the famous Grandfather Mountain area, located about two-thirds of the distance from the Shenandoah to the Great Smoky Mountains National Park entrance. This is yet to be acquired, and now stands in imminent danger of irreparable despoilment by lumbering.

Grandfather Mountain and its contiguous, though more modest mate, Grandmother Mountain comprise an almost virgin area of forests, flowers, and cascades. For many miles the parkway hugs the northern and eastern slopes and ridges of Grandfather Mountain, affording spectacular views of hazy mountains and valleys and eastward lies the peaceful Piedmont region several thousand feet below. But a few feet short of 6,000 feet elevation, Grandfather Mountain is the highest and most rugged peak in the Blue Ridge Range and is said to be geologically the most ancient of any mountain on the American Continent.

With the projection of the Blue Ridge Parkway through this area, the National Park Service became interested in preserving it as a mountain park and in establishing a camp on Grandmother Mountain.

For several years the North Carolina Conservation and Development Commission has realized the importance of conserving the area and Mr. R. Bruce Etheridge, its director, has recently stated that his commission is in accord with efforts to accomplish this.

In a letter to the author dated February 7, 1944, Gov. J. Melville Broughton, of North Carolina, says, in part: "I have several times been over this area and have long felt that with its scenic grandeur, great variety of trees, and other resoures it ought to be set apart for public service. It would be a loss to the State and the Nation if this mountain and its immediate surroundings should be subjected to commercial exploitation."

Only recently were the owners of the Grandfather Mountain property able to name a price that seemed fairly reasonable to the National Park Service and others who might be interested in raising funds for its purchase.

The tract contains approximately 12,000 acres which, together with additional adjoining Government forest lands that eventually might be included, would comprise a park of over 22,000 acres.

Is the natural beauty of Grandfather Mountain to be lost forever by becoming the victim of commercialism, as have other gems in the Carolina mountains? That is a question that must be answered without delay by those who would save in its natural beauty the remnants of a glorious mountain region. Outstanding, unimpaired scenic and wildlife areas remaining in the eastern United States that may yet be saved to serve the spiritual and recreational needs of present and future generations are few. Postwar demands for jobs and the development of resources soon may put in jeopardy those areas that have escaped destruction.

Grandfather Mountain must be saved.

Federal Aid for Airports

EXTENSION OF REMARKS

OF

HON. PAT McCARRAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 20 (legislative day of Friday, March 16), 1945

Mr. McCARRAN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a statement made by me before the Commerce Committee on March 16 with reference to Senate bill 2, which is now pending in the Senate.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

This bill provides for a national airport program upon which $1,000,000,000 would be expended by the Federal, State, and local governments. Half of this expenditure would be Federal, the other half would be matching funds provided at the State or local level.

This program would allow construction or improvement of some 6,000 airports, during the period of 5 years after the war, to meet the needs of post-war aviation, and to foster the growth of air transportation in this country.

Such an airport program would give civil aviation a real chance to expand rapidly after the war. It would also provide an outstandingly useful public works program of Nation-wide proportions, which should be undertaken immediately after the end of the war, so as to provide thousands of jobs for war workers during the period of reconversion from war work to civilian industry.

This bill seeks to effect a compromise between those who advocate an airport program on a Federal-State basis and those who support the Federal-city basis which has been used so successfully in developing in this country the greatest system of civil airports in the world. It is my thought that we should not be too hasty in wholly discarding the successful Federal-city basis of the past, and that it will take some time for the States which have done relatively little airport work up to the present time to secure the necessary legislation and financing for such a substantial program. I have accordingly divided the program between the States and the cities and counties. This is accomplished by assigning to States the construction of small airports, with the larger airports to be handled on a Federal-city basis.

I think it is pertinent to point out to the committe that this bill is no haphazard compilation of accumulated suggestions. It is not a first draft. It is not a bill introduced by request. It is an honest and painstaking effort to draft adequate legislation on an important subject. The author of this bill has attempted to familiarize himself with the subject of the legislation. For everything that is in the bill there is a reason. For many things which have been left out of this bill there is a reason why they have been left out. Those reasons have in each instance appeared sound to the author of the bill. If anyone will bring forward a reason why any provision of this bill should be changed, I shall be glad to assent to the change. If any good reason is advanced why matter which does not now appear in the bill should be included, I shall be glad to vote to include it. But I would warn the members of the committee of a fact with which I know they are all familiar; namely,

that even a small change in one section of a bill may necessitate other and more numerous and more extensive changes in other sections. A good bill is a well-rounded whole. Wherever there is reason for making a change, let us make it, but let us not lose sight of the fact that there must be a reason for the change.

In the drafting of this bill every effort was made to use, and to preserve by using, all of the best of previous legislation drafted on this subject, and to incorporate in this bill as well the best features of suggested legislation drafted by Government agencies. Accordingly, you will find in this bill many provisions which are similar to the provisions of other bills on this subject. In fact, it can be said and it will be said, that there is very little difference between some sections of this bill and the corresponding sections of certain other bills. In that connection I need not remind the committee that there is very little difference between a man and a woman.

I will not challenge any man who contends that this bill is not the best legislation on this subject which could be written. To challenge such a contention would be to claim perfection, and the author of this bill has never laid any claim to that attribute. On the other hand, I believe firmly that this bill is good legislation. I believe it is necessary legislation. It attacks a problem which I believe must be dealt with promptly, in the interests of the welfare of this Nation. I shall welcome discussion of any and all objections which may be raised to any provisions of this bill, but I shall have no patience with haggling or obstructionism. On my own part, I stand ready to go along with any reasonable amendments which may be proposed, to the end that we may have prompt action on the bill. I do not believe it is asking too much to hope that those who may differ with me on certain specific provisions of the measure will exhibit a similar attitude of willingness to compromise. The important thing is to avoid too much delay in dealing with this problem. I feel quite strongly that a Federal-aid airport program should be authorized in ample time to become a very definite and early part of our Government's operations immediately following the end of the present war. I believe we shall make a mistake if we have not provided the legislative framework for such a Federal-aid airport program by the time the war in Europe is over. If the present trend of events in the European war continues favorable, and that war is brought to a speedy conclusion, as I pray may be the case, then I feel we should redouble our efforts to report a satisfactory Federal-aid airport bill at the earliest possible date.

I have given attention to the airport problems of this Nation for many years and have introduced legislation upon various phases of this subject on several occasions in the past. The present bill may require changes to meet the present and reasonably prospective airport needs of the Nation. I shall oppose no change in the bill which will serve that purpose. In framing the bill, I sought and received the advice and criticism of many of those who are interested in the future of aviation in this country. The bill reflects much earnest study in an effort to formulate legislation which will best serve the public interest of this great Nation. I have no pride of authorship to the extent that I will fight for a single word or phrase of the bill just because I wrote it. What I am mainly concerned with is seeking prompt action on sound legislation to set up a national airport program. While I believe this bill is sound legislation, I shall go along with any amendment which will strengthen it.

In discussing the provisions of this bill section by section, I shall necessarily mention some of the many considerations underlying those provisions. I cannot, in the time available, either mention or discuss all the points which it will be necessary for this committee to consider. I shall try to cover most of them. I shall also try to recognize some of the very intelligent and constructive criticisms of this measure which have come to me since it was introduced.

I have been asked why this bill excludes from its provisions the territories of the United States.

The purpose of this bill is to set up a strictly continental airport system. That is the primary reason the bill does not include Hawaii and Alaska.

The problems involved in setting up airfields outside the continental limits of the United States are different from the problems presented in setting up a network of airports within the boundaries of this country. It has been the thought of all concerned that provision for airports outside the continental limits of the United States, or in Alaska, should be made the subject of separate legislation. It is my understanding that the Civil Aeronautics Authority concurs in this view, and that the War and Navy Departments likewise concur. The latter two departments have a substantial interest in the entire airport problem, but they have a much greater interest, from the standpoint of national defense, in airports which are to be constructed or improved in any of our Territories or possessions.

It is a question whether the system of State contributions of matching funds, which this bill would establish, might have to be modified if Hawaii and Alaska were to be included within the provisions of the bill.

I wish to make it clear that I should never lend my support to any measure which unfairly discriminated against Hawaii or Alaska, or which excluded those Territories from benefits to which they are properly entitled. It may be pointed out in this connection that construction of airfields has been extensive, in both Hawaii and Alaska, as part of our military installations. It seems entirely proper that the question of providing funds for construction of civil airports in those Territories should wait until the war is over and the War and Navy Departments have had an opportunity to evaluate the facilities available there, and determine which of those facilities should be retained for purposes of national defense, and the extent to which such facilities may be made available for civilian use.

The purpose of legislative definitions is to avoid unnecessary repetition in the body of the bill of the meaning intended by the use of certain terms. I believe that each definition in this bill clearly expresses the connotation intended by its use; so individual definitions will not be explained in detail here, except in one instance.

I call the committee's attention to the fact that there is a typographical error in section 2, line 6, on page 1. The word "context" is misspelled.

I also call the attention of the committee to a typographical error at line 22, on page 3. Line 21 has been repeated. Line 22 should read "accomplishment of a project."

In connection with the definition of "State airport agency," on page 5, beginning with line 3, it should be pointed out that this definition was specifically drafted so as not to be limited to a State Department of aeronautics, but so as to include any State agency which is provided by the legislature of the State with adequate powers to go forward with airport development. It is true that this definition leaves it to the discretion of the Administrator to say whether a State airport agency has adequate powers and is suitably equipped and organized. There may be those who will contend this is objectionable. It seems clear that there must be some standard; and it is entirely logical that this standard should be whether the agency has the necessary powers to operate under the act, rather than whether it meets, in form and organization, some arbitrary standard to be imposed by the Congress upon the States. My own view is that the Congress must write legislation with the assumption that it will be ably and honestly administered. Assuming able and honest administration of this bill, I do not believe any valid objection can be raised to the definition in queston. On the other hand, I should be disposed to go along with any suggested change which is administratively workable and which does not involve any unnecessary derogation of States' rights.

Section 3 of this bill, beginning on page 5, in line 18, does not create a new division within the Civil Aeronautics Administration. It simply gives legislative recognition to the existing organization of the Administration, and expresses the intent of the Congress that certain functions of the Administrator relative to airports and landing areas shall have centralized responsibility. In this section, several sections of the Civil Aeronautics Act of 1938 are mentioned. These are sections which impose certain duties and obligations upon the Civil Aeronautics Administrator. I shall refer to them briefly for the information of the committee. Section 301 of the Civil Aeronautics Act of 1938 has to do with fostering air commerce. Section 302 concerns establishment of civil airways. Section 303 deals with limitations on the expenditure of Federal funds for airports and landing areas. Section 306 imposes a duty with regard to the collection and dissemination of information concerning airports and landing areas. Section 307 has to do with planning for airport development.

In performing the duties and functions imposed by the sections I have just mentioned, responsibility in the Civil Aeronautics Administration now is centralized. That has been an administrative matter. Section 3 of the bill now under consideration does not give nor purports to give to the Administrator the power to take over, operate, and maintain an airport, or any other power which the Administrator does not already have under existing legislation.

Section 4 gives the Administrator the necessary power to make grants of Federal funds to the States and cities for airport development. The program is divided equally on a Federal-city and a Federal-State basis.

This section sets up what has been called a dual program. It provides for a State program and an urban program. That is a matter of terminology. Actually, a single integrated program of airport construction is called for. Separation of this program at the point of initial consideration of project applications, into a State group and an urban group is the device chosen to meet strenuous objections from municipalities against a program channeled wholly through the States. In other words, this is a compromise proposal. I believe it is a happy compromise. It is my understanding that this program can be administrated without difficulty. It is my understanding that the Civil Aeronautics Administration shares this view.

It has been said that under this proposed program most airports would automatically be planned on a scale large enough to get them into the urban program. This implies that municipalities in general would be guilty of sharp practices and that the Administrator of Civil Aeronautic would condone such practices. I do not believe that is a sound implication. In any event, I cannot become greatly worried over a prediction that the bulk of airport construction will fall within the so-called urban program, because the bill specifically provides that funds to be expended under the urban program must be specifically earmarked for specific projects, by action of the Congress, before the money can be spent. If the Congress in its wisdom is to

approve every project—and that is what this bill provides—I am not greatly concerned about the danger that an unworthy or unsound project will get into the urban program.

If the compromise suggested in this section is eliminated from the bill, the committee will immediately be confronted with the problem of finding some other compromise which will satisfy the municipalities, or else the committee must choose the course of ignoring the views of those who represent municipalities, and report a bill which must be passed, if at all, over the opposition of the municipalities and their representative organizations.

It has been charged that the method provided in this bill for determining the class of airports would give the Administrator and a municipality a chance to bypass the State government. That is technically true. But any statement that a State would get only those airports which the C. A. A. did not want, cannot be supported without contending that the Administrator of Civil Aeronautics is opposed to dealing with the States. On the past record, the Administrator favors dealing with the States rather than with municipalities; and in any event, it must be obvious that neither a State nor a municipality would get Federal funds for any airport which the Civil Aeronautics Administration did not want, or which failed to fit into the national airport program. Under this bill the Civil Aeronautics Administration would have the final word on airports to be included in the program and airports to receive Federal funds. I believe that is a sound provision. I do not believe the Congress favors a policy of providing Federal funds for a construction program of any sort without holding a substantial measure of control over that program in the hands of a Federal agency. If those who criticize the provisions in this bill for such control are in favor of a program under which the Federal Government provides one-half the funds for an airport program but has no authority over the type or size or location of any airport to be built within the program, they are favoring a principle which I am confident will arouse strenuous opposition in both Houses of the Congress. I shall be numbered among that opposition.

Section 5 authorizes a Federal appropriation of $100,000,000 per year for 5 years, which when matched by an equal amount of State and city funds will provide the billion dollars needed to carry out the national airport plan. I realize that technically the C. A. A. plan calls for a slightly different amount but believe that if necessary we can amend this figure to conform to the C. A. A.'s plan before final adoption of this legislation. This bill also provides for a 5-year program instead of the 10-year program recommended by C. A. A., as I firmly believe that the sooner we get this program completed, the faster our civil aviation industry will grow. We should push rather than delay civil aviation so our Nation may speedily enjoy the great benefits of air travel.

The question has been raised whether it is necessary to provide, as this section does, that 5 percent of all the funds appropriated for the airport program shall be made available to the Administrator for planning, research, and other administrative expenses. I am open-minded in this question. It is my understanding that the Administrator of Civil Aeronautics feels a 5-percent allocation is necessary. If this is not the case, or if it can be shown that the Administrator is in error in holding such a view, I shall be willing to go along with any proposal for amendment of this provision.

This section contains a provision that up to 50 percent of the total funds appropriated may be spent on airports in the urban program. This is a maximum limitation. It is not a requirement that 50 percent of the funds appropriated shall be spent on airports in the urban program. Perhaps 50 percent is too large, and the limitation should be some lesser percentage. On the other hand, perhaps it should be greater than 50 percent. We must always remember that the bill provides that airport projects under the urban program shall be specifically approved by the Congress. With that check, we should not be concerned over whether the proportion fixed by the bill is too large. We should only be concerned with seeing that it is large enough to do equity to the municipalities of this country.

This section contains a provision, beginning at the end of line 13, page 7, authorizing an appropriation of $3,000,000 to the Civil Aeronautics Administration for preliminary planning and surveys. There is no provision in the bill to make funds available for preliminary planning by States or municipalities. This is an intentional omission. It should be borne in mind that certain planning costs of a project sponsor, whether a State or a municipality, will be shared by the Federal Government if and when the project is approved. This point is covered by the definition of "construction costs", on page 3, line 13. The point at issue, then, appears to be whether it is desirable to provide Federal money to the States for the planning of projects regardless of whether such projects are ever approved as part of the national airport program. I do not believe it is desirable to do so. The $3,000,000 appropriation for preliminary planning and surveys is made immediately available as I believe that such work should start at the earliest possible moment so as to have this program ready to go at once upon the end of the war. I have used the acceleration provision adopted in the post-war highway legislation so that the airport program can start even before the technical end of the war if such seems desirable.

Section 6 provides the legislative basis for the preparation and constant revision of a national airport plan. This plan will in turn be the basis of all airport development work upon which Federal funds are expended.

This section contains a provision for annual revision of the national airport plan, and I have heard criticism of that provision. Such criticism is argument for a program which has no flexibility, and under which a determination once arrived at would be as unchanging as the laws of the Medes and Persians, regardless of what changes might occur in population, industry, air traffic, or other factors. Obviously, the program must be able to change with changing conditions or it will accomplish little good. The purpose of the legislation which we are considering is not to freeze air transportation in this country but to help develop it toward its ultimate maximum. To the extent that we accomplish that objective, it will be necessary from time to time to make changes in the national airport program.

Under section 7 the C. A. A. is required to specify all projects which are to be developed in the urban program in a request to the Congress for funds with which to carry out this part of the national airport program. This gives the Congress an opportunity to review the Administrator's determination. The funds not appropriated in the urban program are then to go to the State program.

This section provides that projects in the urban program would be selected first; that is, they would be selected before selection of projects in the State program. That is because it is anticipated that the total of such projects would seldom equal the maximum limitation on funds provided for the urban program. The bill provides that all funds not specifically earmarked with the approval of the Congress, for projects in the urban program, shall be made available to projects in the State program. Selection of projects in the urban program is therefore a logical first step; a necessary provision to make possible fulfillment of the requirement that all projects in the urban program must be approved by the Congress before Federal funds for such projects are granted.

Provisions of this section authorizing States and State agencies to sponsor projects in the urban program, and permitting municipalities or other political subdivisions to sponsor projects in the State program, are designed to increase the flexibility of the program so as to achieve the largest measure of tangible results in the shortest possible time.

Section 8 apportions the Federal airport-aid funds among the States, one-half on the basis of population, one-half on the basis of area.

Provisions for reapportionment of funds, contains in subsection (C) on page 11, provide that if a State fails to use the full amount of any sum apportioned to it by either expending or obligating the funds apportioned the amount of such funds unused shall be reapportioned among those States in which substantially all currently apportioned funds have been matched by the State or by public agencies therein. The word "substantially" is used because a requirement for exact matching of all Federal funds might be technically a very difficult requirement to meet, and would, furthermore, impose a hardship upon States which might be able to provide most of the money necessary to match Federal funds, but not the whole amount. The alternative is to provide that reapportioned funds should be divided among all the States regardless of what percentage of Federal funds individual States may have matched. Upon first inspection there appears to be some argument in favor of this alternative. Upon closer examination it becomes obvious that it would be inefficient to allocate additional funds to a State which was unable to use a substantial portion of the funds already allocated. Any funds reallocated to such a State would necessarily remain idle until the appropriation lapsed, and would then fall back into the general fund of the Treasury without having served any useful purpose.

In section 9, on page 12 of the bill, in lines 6 and 7, language has been included which, upon careful reconsideration, I now believe should be eliminated. I refer to the phrase "or if the State is unable or unwilling to go forward with such project." It is my present thought that this language goes too far. Under this language a municipality would be able to go over the head of its State airport agency and seek approval of an airport project which did not fit into the State plan and which might, in the judgment of State aviation officials, be a potential "white elephant." I am willing that a municipality should have the opportunity to do this, provided it does so under the municipal program, where the proposed airport will be subject to a requirement that it shall be specifically approved by the Congress before funds are allocated. The general provisions under section 9 have been drafted with a view to permitting the speediest possible action under the proposed airport construction program. In line with this objective authority has been included for municipalities to sponsor projects under the State program, if located in a State in which no State airport agency exists. It is my present thought that this provision by itself goes far enough; and that if a State has created a State airport agency and that agency is functioning, then that agency should be in a position to control projects under the State program.

This section contains a provision, on page 13, beginning in line 4, under which the Administrator would not be authorized to approve any airport project unless the landing area, or the sight therefor, is wholly owned, in fee simple, absolute by a State or by a public agency. Such a provision has been urged, in connection with airport legislation, by numerous individuals and organizations. It has been strongly opposed by others. The purpose of the provision is to guard against

land speculation, and to avoid advance commitment of Federal funds to a project which involves any possibility that acquisition of the land therefor might necessitate payment of an excessive price, with unjustified profit to any individual. While I believe in this objective, my mind is not closed on the subject. I call to the attention of the committee the difference of opinion which exists on this question, and I shall be happy to abide by the decision of the committee in the determination of it.

My attention has been called to a situation in Birmingham, Ala., which has been cited as an argument for amendment of this provision requiring ownership in fee simple of the landing area of an airport. As it is represented to me, the Birmingham situation is this: The Civil Aeronautics Administration, and the Aviation Commission of Alabama, have plans for a new class 4 airport for the Birmingham district. The present municipal airport at Birmingham is not especially safe, due to the surrounding hills, and it cannot very well be expanded to any great extent. The Birmingham district is composed of small mountains and hills, and it has been difficult to find a location for the proposed new airport, on which approaches from all sides are clear. After much search, a site has been found which is only 7 miles from the Birmingham Courthouse, and which is out of the smoke zone of the valley in which Birmingham is located. This site has been determined to be the only suitable location for an airport within a radius of 25 miles from Birmingham. It is composed of a number of small hills located on a high plateau, and a first-class airport can be constructed on that location. The site is on a four-lane highway and easily accessible to Birmingham.

Underlying the property are coal mines. The mines are very deep, and would in no way interfere with an airport construction on the suface. A large part of the land included in the site is owned by the steel corporation which these coal mines serve. The corporation is willing to sell the property quite reasonably, giving title to the surface; but would not consider conveying a fee simple title, which would include valuable coal deposits underlying the property.

It is possible that similar situations exist or may arise in various other States. I believe it is for the committee to consider the desirability of attempting to amend the present language of the bill to meet such a situation.

As the language of the bill now stands, I believe a State or municipality would be entitled to include, as part of its contribution of funds to match the Federal allotment, any expenditures for development of an airport project, provided the work done fell within the limits of an approved project under the national airport program. The definition of "construction costs" in this bill, on page 3, line 13, includes "the making of field surveys, preparing plans and specifications, supervising and inspecting construction work, procuring the accomplishment of such work by contract, and acquiring property interests." While the bill provides, in section 9 (b), on page 13, line 4, that no project shall be approved "with respect to any airport the landing area of which, or the site therefor, is not wholly owned in fee simple, absolute by a State or by a public agency," the same subsection also provides, beginning in line 14, that "if and when a project is approved by the Administrator, however, such approval shall be deemed a contractual obligation of the United States for the payment of its proportional share of all the construction costs of the project." Considered in connection with the definition of "construction costs," which I have just read, I believe this language justifies my interpretation that a State or municipality would be able to take credit for expenditures, even expenditures for the acquisition of land, which fell within the limits of an approved project under the national airport program.

Suggestion has been made that a maximum limitation be placed upon the amount of such expenditures which might be considered as a contribution of matching funds, and it has also been suggested that some specific time limitation should be fixed, prior to which expenditures for airport construction would not be considered eligible for inclusion as a contribution of matching funds. Both these suggestions are extremely pertinent, and undoubtedly worthy of consideration. I can foresee considerable difficulty in working out satisfactory limitations of this nature; but perhaps the result would be worth the effort.

Section 10 provides the procedure for payment of Federal funds to States and cities for airport work undertaken pursuant to the bill.

Section 11, covering method of construction, minimum wages and maximum hours, and provisions giving employment preference to veterans and to local residents, is almost self-explanatory.

This section, which begins on page 14, line 20, is designed to afford maximum protection for labor, in the line with the best precedence set by previous legislation. It calls for establishment of minimum wage rates, and assures that contractors on airport projects shall pay such rates. It provides for a maximum workweek of 40 hours, except for executive, administrative, and supervisory positions. It provides that convict labor shall not be employed on any airport project under the program. Finally, it provides for employment preference first to honorably discharged veterans, and then in order, to residents of the municipality, county, and State in which an individual project is located.

This section also includes, in subsection (c), on page 16, provisions to require competitive bidding in the acquisition of supplies and materials.

I call the attention of the committee to a typographical error appearing on page 16 of the bill in line 15. Where the bill reads "title II," it should read "title III." The provisions of this title, which subsection (c) of section 11 of this act would make applicable to the airport program, call for preferential use of materials and articles produced and manufactured in the United States.

It has been said of section 12 that the requirements for eligibility to participate in the State program are too severe. I am open minded on this point. The provisions contained in this bill are in the nature of a compromise. It is my understanding that the Civil Aeronautics Administration would favor even stronger provisions than those contained in this bill. The question is, again, how much right the Federal Government is to have to control the program for which it is to supply half the money. I call the attention of the committee to the fact that subsection (b), beginning in line 8, on page 18, provides for suspension of six of these seven requirements, for a period of 3 years, so as to permit the airport program to get under way promptly and go forward effectively without hampering restrictions. Certainly, a period of 3 years is long enough to permit States desiring to participate in the program to enact the legislation necessary to comply with the eligibility requirements contained in this bill. Meanwhile, existing State airport laws would be utilized by the States and cities so that the airport program can go forward at once rather than wait for the adoption of new State laws and the raising of State funds to conform to a program proposed by the Congress.

Subsection (c), beginning on page 18, line 12, is another provision in the nature of a compromise. It does not attempt to say to the States that they cannot tax aviation activities. It does adopt the principle that the proceeds of certain specified taxes on aviation activities should be used for the development, construction, improvement, and repair of public airports. This subsection is, therefore, on the middle ground. I shall not be greatly concerned if the committee in its wisdom desires to move somewhat to the right or to the left of this middle course. I should not care to go so far as to infringe upon the power of States to levy taxes, nor should I care to go so far in the other direction as to permit the proceeds from taxes on aviation fuel to be used for purposes not even remotely concerned with the development of aviation. Aviation in this country is not a cow to be milked; it is an infant to be nurtured.

In section 13, the project sponsorship provisions are in general believed to be reasonable, although a reasonable attitude by the C. A. A. Administrator is required on the accounting provisions.

Subparagraph (5) of this subsection provides for a standing system of accounting for airport accounts and records. There has been considerable objection to this provision since the bill was introduced. Much of this objection has been based upon the contention that the airport operator or operators should be entitled to keep their records upon any basis they may select, without any compulsion by the Administrator of Civil Aeronautics. I can appreciate the reasoning back of this objection, and I shall be willing to see this subparagraph amended to provide that "project" accounts and records, rather than "airport" accounts and records, shall be kept in accordance with a standard system.

At the same time, I can see many virtues in a standard system of accounting for all airports. A public airport is a public utility. Standard systems of accounting are prescribed for railroads, for common carriers by motor bus, for steamship lines, and for air carriers. But if the committee deems it desirable to adopt a different policy with regard to airports and to exempt airport operators from any provision for standard accounting except in connection with projects for constructing or improving airports, I shall, as I have stated, raise no objection to such an amendment.

On page 22 of the bill, in line 19, there appears a proviso designed to facilitate action by the Administrator to place an airport in a proper condition of maintenance when the airport operator is unable or unwilling to do so. The language of this proviso has been challenged by representatives of contractors on the ground that it opens the way for the Administrator to have the necessary work performed on a day-labor basis rather than by contract; and that such authority, if extended, might be abused.

I have not been completely convinced by the arguments advanced on this point, but I am open-minded on the question. I call it to the attention of the committee for consideration. It seems to me that some such authority is necessary for proper administration of the duty which would be imposed on the Administrator by the bill. Perhaps the committtee can work out some new language which would grant the necessary authority and at the same time prevent any such abuses as the contractors seem fearful might occur.

In subsection (b), beginning on page 20, line 21, an attempt has been made to work out a formula which will insure adequate maintenance of airports constructed or improved under the proposed program. Perhaps it is not a perfect formula. I shall be glad to go along with any proposal for a better formula. I am firmly convinced, however, of the soundness of the principle that any State or municipality or other public agency sponsoring an airport project should be willing to accept responsibility for maintaining the airport in a safe condition after it has been constructed. That principle is

all I shall fight for. The exact language contained in the bill which the committee reports will not be a matter concerning which I shall enter into controversy, so long as it preserves and protects the principle.

Section 14 is in the bill because I understand that some States and cities have had trouble acquiring land for airport purposes under their existing condemnation laws. This provision makes Federal condemnation powers available to States and cities, but only upon their specific request.

In section 15, the provisions for use of Government-owned land are in substance the same as those fund in similar legislation. The language was patterned after that in the Federal Aid Highway Act.

Section 16 covers reimbursement for damage to public airports by the Army or Navy. It is my understanding that neither the Army or Navy now have funds available for this purpose and in reason they should have. The C. A. A. is best able to evaluate the amount of such damage.

In connection with the authority contained for reimbursement of States or other public agencies for the rehabilitation or repair of public airports substantially damaged by the Army or the Navy, I have come to the conclusion that the language of the bill does not go far enough. I believe this subsection should be amended to provide also for reimbursement of the increased cost of operation and maintenance resulting from use of an airport by the Army or the Navy. This seems to me a reasonable proposal. In many cases, use of an airport by military planes may have resulted in very little physical damage to the airport; but in almost every instance, such use has resulted in a substantial increase in the cost of operation and maintenance. I believe it is only simple justice that such increased costs should be repaid at Federal expense.

The remaining sections of the bill, which cover reporting to Congress, penalties for false statements, preservation of the existing airport programs, and the effective date of the legislation are self-explanatory.

Gift of Original of Bill of Rights to Library of Congress by Barney Balaban

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 20 (legislative day of Friday, March 16), 1945

Mr. PEPPER. Mr. President, a few days ago a very great gift was made to the Library of Congress by Mr. Barney Balaban, president of the Paramount Pictures, Inc., namely, an enrolled copy of the original Bill of Rights. There was an appropriate ceremony in the Library of Congress at the time of the presentation and acceptance of this valuable gift. A newspaper release was issued by the Library describing the occasion, an address of acceptance was made by Hon. Luther H. Evans, Acting Librarian of Congress, and some brief and fitting remarks of presentation by the donor himself.

I ask unanimous consent that the press release, together with the remarks of presentation and acceptance, be admitted to the Appendix of the RECORD.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

GIFT TO LIBRARY OF CONGRESS OF ORIGINAL OF BILL OF RIGHTS TO BE MARKED BY SPECIAL CEREMONIES WEDNESDAY, FEBRUARY 21

Byron Price, Director of Censorship, will discuss the significance of the Bill of Rights in wartime at evening meeting in the Coolidge Auditorium of the Library.

Informal public ceremonies in the morning at the shrine housing the Declaration of Independence and the Constitution of the United States and an evening lecture by Byron Price, Director of Censorship, on the Bill of Rights in wartime will mark the presentation to the Library of Congress on Wednesday, February 21, of one of the priceless originals of the Bill of Rights. The document, the gift to the American people of Barney Balaban, president of Paramount Pictures, Inc., is one of 14 copies engrossed in September 1789 at the order of the First Congress of the United States.

At 11 a. m. on Wednesday, Mr. Balaban will turn over to Luther H. Evans, the Acting Librarian of Congress, the copy he purchased for the Library as a token of gratitude for the freedom which his Russian-born parents found as immigrants to this country many years ago. The presentation will take place at the shrine, erected by special act of Congress approved March 20, 1922, to provide a place of permanent exhibition for the engrossed originals of the Declaration of Independence and the Constitution. Postmaster General Frank C. Walker and Supreme Court Justices Robert H. Jackson and Felix Frankfurter will be among the officials present. Following the presentation, the Bill of Rights original will be placed on public exhibition in a specially constructed case next to the shrine.

Mr. Price's address will be part of another gathering held in the Coolidge Auditorium of the Library, beginning at 8:30 p. m., in recognition of the significance of Mr. Balaban's gift. Archibald MacLeish, Assistant Secretary of State and former Librarian of Congress, will preside. He will speak briefly on the historical background of the Bill of Rights as an introduction to Mr. Price's lecture on its importance in the world today.

The document presented by Mr. Balaban is an autograph engrossment on vellum measuring 29¼ inches in height and varying from 26¾ to 27½ inches in width. It is enclosed in a black and gold frame under glass. While it contains 12 proposed amendments, only 10 of these were ratified. The 2 which were not adopted were the first, which relates to the apportionment of Representatives in Congress, and the second, which concerns the fixing of compensation for Members of Congress. The remainder, comprising what is now called the Bill of Rights, affirmed such rights as freedom of speech, religion, and assembly and established regulations to govern criminal trials, search and seizure and confiscation.

Dated September 25, 1789, the document is one of the 13 copies submitted by Congress to each of the Original States. It bears the signature of Frederick Augustus Muhlenberg, Speaker of the House of Representatives; John Adams, Vice President of the United States and President of the Senate; John Beckley, Clerk of the House of Representatives; and Sam A. Otis, Secretary of the Senate. Beckley's signature gives the document a special significance to its new custodians, inasmuch as President Jefferson appointed him the first Librarian of Congress in 1802.

Ranked by many authorities with the Magna Carta as a milestone in human progress, the Bill of Rights has heretofore been the only basic document of American history not included in the collections of the Library of Congress, although The National Archives possesses the fourteenth original copy reserved for the records of the Federal Government as well as another of the 13 other originals submitted to the States. Learning that the Library of Congress did not have an original of this document, Mr. Balaban in 1943 purchased his copy from Dr. A. S. W. Rosenbach, book collector and merchant, for the purpose of donating it to the Library.

Since its purchase, the document has been on exhibition at the Subtreasury Building, site of Federal Hall, the original Capitol of the United States where the Bill of Rights was engrossed and signed, in New York City. Its exhibition there was sponsored by the book and author committee of the Treasury Department's War Finance Division, originally as part of the Fourth War Loan, and more recently as part of its "schools at war" program.

Under the "school at war" program, some 13,525 elementary and high schools throughout the United States and Alaska have received exact collotype facsimiles of the Library of Congress copy as a gift from Mr. Balaban through the Treasury Department. A copy is awarded by the Department to each school in which 90 percent of the students participate in the War Savings bonds program by purchasing at least one War Savings stamp each month

Because of the limited seating capacity, admission to Mr Price's lecture will be by invitation only.

REMARKS OF MR. BARNEY BALABAN

The privilege of presenting this document to the Library of Congress is a source of deep satisfaction to me.

Upon learning that one of the original engrossments of the Bill of Rights was available and that the Library did not possess one, I was glad of the opportunity to restore it to the people in this way.

In acquiring it and in presenting it to you now, my feeling is one of humble gratitude for the freedom which my parents found when they came to this country nearly 70 years ago and for the opportunity made possible to them through these amendments to our Constitution

I present it to you as a token of that gratitude.

REMARKS MADE BY LUTHER H. EVANS, ACTING LIBRARIAN OF CONGRESS, ON THE OCCASION OF THE PRESENTATION TO THE LIBRARY OF CONGRESS OF A COPY OF THE BILL OF RIGHTS, BY BARNEY BALABAN, FEBRUARY 21, 1945

Mr. Balaban, I accept on behalf of the Library of Congress, and on behalf of the Government and people of the United States, one of the original enrolled copies of the Bill of Rights which you have so generously presented to me as Acting Librarian of Congress. Your patriotic and unselfish act is deeply appreciated and will be long remembered. The placing of a copy of the Bill of Rights at this shrine beside the Declaration of Independence and the original Constitution is particularly appropriate, because in the hearts of the people the three great documents of liberty under ordered government stand together as inseparable parts of the concept of America. It is well on this occasion to recall the vital connection which exists between them.

In the Declaration of Independence our forefathers enumerated the "long train of abuses and usurpations" and the violations by government of "unalienable rights" which made it necessary for them "to dissolve the political bands" which connected them with the mother country. The system of national government as it existed at that time and during the next decade was barely adequate to the task of waging the War of Independence to a successful conclusion it was not strong enough to provide the necessary

substitute in peacetime for the political bands which has been dissolved. A combination of excessive libertarianism and excessive state authority in affairs of national concern resulted after a few years of a peace in a situation from which the Nation's leaders sought an escape in the creation of a strong national government. The Constitution, which was wrought at Philadelphia in the hot summer of 1787, was the result of their efforts. But the pendulum was allowed to sing too far in the authoritarian direction, and liberties were taken for granted while delegations of authority were put in writing. No provision was made in the original Constitution for the protection from encroachment by the general government of many of the rights the violation of which by another government had brought forth the ringing charges of the Declaration of Independence, then 11 years old, but exceedingly fresh in the memories of men. Fresh in their minds also were the bills of rights which it was becoming a habit to include in State constitutions. The absence of guaranties of individual liberty became perhaps the strongest single argument against the ratification of the new instrument of government. In more than one State the campaign for ratification was won only because the Federalists gave a solemn promise to support amendments to the Constitution calculated to safeguard the liberties of the people as soon as the new government came into being.

In fulfillment of the solemn promise, President Washington asked the First Congress, in his inaugural address of April 30, 1789, to direct its attention to the matter of promoting "the characteristic rights of freemen" by the exercise of the amending power. Four days later, James Madison, one of the most eloquent advocates of a strong central government, and one of the principal authors of the new Constitution, notified the House of Representatives of his intention to propose amendments, and on June 8 he proposed 9 of them. After much debate as to the guaranties which were required to make liberty safe from the oppressions of government, the 12 proposed amendments which may be read on this parchment, were approved by joint resolution on September 25. A few days later they were sent to the 13 States for ratification by their legislatures. When the Virginia Legislature completed its act of ratification on December 15, 1791, the 10 amendments which we call the Bill of Rights came into effect.

These amendments are as follows:

"Congress of the United States begun and held at the city of New York, on Wednesday the 4th of March, 1789.

"The conventions of a number of the States, having at the time of their adopting the Constitution, expressed a desire, in order to prevent misconstruction or abuse of its powers, that further declaratory and restrictive clauses should be added: And as extending the ground of public confidence in the Government, will best ensure the beneficient ends of its institution.

"*Resolved, etc.*

"Amendment I: Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances.

"Amendment II: A well regulated militia, being necessary to the security of a free State, the right of the people to keep and bear arms, shall not be infringed.

"Amendment III: No soldier shall, in time of peace, be quartered in any house, without the consent of the owner, nor in time of war, but in a manner to be prescribed by law.

"Amendment IV: The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue, but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

"Amendment V: No person shall be held to answer for a capital, or otherwise infamous crime, unless on a presentment or indictment of a grand jury, except in cases arising in the land or naval forces, or in the militia, when in actual service in time of war or public danger; nor shall any person be subject for the same offense to be twice put in jeopardy of life or limb, nor shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use, without just compensation.

"Amendment VI: In all criminal prosecutions the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor; and to have the assistance of counsel for his defense.

"Amendment VII: In suits at common law, where the value in controversy shall exceed $20, the right of trial by jury shall be preserved, and no fact tried by a jury, shall be otherwise reexamined in any court of the United States, than according to the rules of the common law.

"Amendment VIII: Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.

"Amendment IX: The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people.

"Amendment X: The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively or to the people."

To you, Mr. Balaban, we are grateful for the addition of that document to this shrine, which, together with its magnificent predecessors, presents to "a candid world" the independence, power, and freedom of a great people.

A. C. Utterback

EXTENSION OF REMARKS

OF

HON. MALCOLM C. TARVER

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. TARVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and statement:

UNITED STATES DEPARTMENT
OF AGRICULTURE,
FARM CREDIT ADMINISTRATION,
Washington, D. C., March 19, 1945.

Hon. MALCOLM C. TARVER,
House of Representatives.

DEAR MR. TARVER: In response to your telephone request for a report on Mr. A. C. Utterback, Supervising Examiner, Farm Credit Administration, there follows a brief review of the case supplemented by a more detailed factual statement.

In Mr. Uttterback's capacity as Supervising Examiner he was instructed by the Chief Examiner to make an examination of the Houston Bank for Cooperatives at Houston, Tex., which operates under the supervision of the Farm Credit Administration. He commenced this assignment on April 1, 1944, and on May 4, 1944, he wrote the Chief Examiner taking the position that conditions in the bank were such that its management should be taken away from its president and that the bank be placed under special examination. The Chief Examiner talked with Mr. Utterback over the telephone and the Assistant Chief Examiner consulted with him in Houston. In their judgment, Mr. Utterback's recommendations were not supported by facts which would justify the suggested action. He was instructed to complete the examination and make his report. At no time have Mr. Utterback's official superiors suggested that he do other than submit facts which would support his conclusions, or confine his conclusions to such as are supported by the facts in accordance with established examination procedure.

Mr. Utterback never corrected his position in accordance with the instructions he received. Instead he submitted a voluminous but useless report containing conclusions which were not supported by the necessary evidential facts. Nevertheless, the Farm Credit Administration did not withhold Mr. Utterback's report, inadequate through it was, from the directors of the Houston Bank for Cooperatives. These directors are responsible for the management of the bank under the supervision of the Farm Credit Administration. Three of their seven members are elected by farmer interests and a fourth is selected by the Governor of the Farm Credit Administration from persons nominated by the farmer interests. The remaining three directors are appointed by the Governor. The Houston board of directors is intensely interested in the welfare of the institutions of which they are the directors, including the Federal Land Bank of Houston, the Federal Intermediate Credit Bank of Houston, the Production Credit Corporation of Houston, as well as the Houston Bank for Cooperatives. At their request the Utterback report was submitted to them, and they concurred in the conclusion of the Farm Credit Administration as to the inadequacy of the report.

Mr. Utterback's usefulness as an examiner was completely impaired by his work in connection with the examination of the Houston Bank for Cooperatives, and although the Farm Credit Administration has made an effort to avail itself of his services in some other capacity while he is still on the pay roll, the nature of the case is such as to make this difficult and unsatisfactory. The delay which has occurred in taking final action has been due almost entirely to the carrying out of sound personnel practices in the face of the circumstances of his particular case. These practices must be such as to protect an employee against arbitrary and unjust action on the part of his official superiors. Frequently they serve that purpose. In other cases they are taken advantage of by employees who are in the wrong, but the justification for the procedure is the protection which it gives to competent, conscientious employees.

The Department of Agriculture has established a procedure under which employees may appeal any grievance which they may have and which is not corrected by their supervisors. Mr. Utterback initiated action under this procedure but abandoned it before a hearing was held. Although Mr. Utterback did not complete the grievance procedure which he initiated under departmental rules, Mr. Roland Bush, whom he designated as his representative in the proceedings, gave a statement to the newspapers raising a question not only as to the good faith of the Farm Credit Administration in

its handling of the examination of the Houston Bank for Cooperatives, but also a question as to the soundness of the bank. Mr. Utterback unquestionably was a party to this action by Mr. Bush, who resigned immediately before giving his initial statement to the press. The Farm Credit Administration considers such conduct inconsistent with sound administration of its responsibilities.

Mr. Utterback is a veteran within the definition in the Veterans' Preference Act of 1944, and is entitled to the procedures prescribed by the act as a precedent to his dismissal from the service. Also, notwithstanding the unsoundness of Mr. Utterback's position with reference to his examination of the Houston Bank for Cooperatives, the Farm Credit Administration wished to have a proper examination completed before taking final action in Mr. Utterback's case. When a proper examination had been completed, it showed that there was no justification for the drastic recommendations and for the charges and implications of improper action on the part of officials of the Houston Bank for Cooperatives. After the completion of the report and a careful preparation by the Farm Credit Administration of a statement of the facts in his case, it was then necessary for the Farm Credit Administration, located at Kansas City pursuant to wartime decentralization, to submit the case to the offices of the Department of Agriculture in Washington, which, in turn gave the case careful consideration and exchanged views with the Kansas City office with reference to its proper handling.

The Farm Credit Administration has reached the conclusion that Mr. Utterback is not qualified to continue as an employee and that procedures complying with the requirements of the Veterans' Preference Act of 1944 and rules and regulations of the Civil Service Commission for his removal from office should be undertaken.

The Farm Credit Administration is cooperating effectively and actively to make reductions in its personnel, as is indicated by the following table, showing personnel strength as of June 30, 1942, shortly after its principal offices were moved to Kansas City, and December 31, 1944.

June 30, 1942:	
Departmental	1,073
Field	297
Subtotal, central office	1,370
Emergency crop and feed loan regional offices	1,264
Total	2,634
Dec. 31, 1944:	
Departmental	592
Field	211
Subtotal, central office	803
Emergency crop and feed loan regional offices	1,317
Total	1,940

Enclosed herewith is a more detailed statement of the facts in Mr. Utterback's case.

Your interest in this matter is appreciated.

Sincerely yours,

C. W. WARBURTON,
Deputy Governor.

STATEMENT ON THE CASE OF A. C. UTTERBACK, SUPERVISING EXAMINER, FARM CREDIT ADMINISTRATION, TO ACCOMPANY LETTER OF MARCH 19, 1945, TO HON. M. C. TARVER, OF GEORGIA

Under instructions from the Chief Examiner, Farm Credit Administration, an examination of the Houston Bank for Cooperatives was conducted by Mr. Utterback from April 1, 1944, to July 10, 1944, assisted part of the time by Farm Credit Examiner Roland W. Bush. Early in the course of the examination, Mr. Utterback wrote to the Chief Examiner, stating that he had found evidence of serious misconduct of the bank's affairs. The Assistant Chief Examiner went to Houston, reviewed the material assembled by Mr. Utterback, and advised him and the Chief Examiner that in his opinion this material did not warrant the charges of misconduct. After Mr. Utterback repeated these charges in subsequent letters to and telephone conversations with the Chief Examiner, the latter went to Houston, reviewed the subject with Mr. Utterback, and advised him that in his opinion Mr. Utterback's charges against the bank's personnel were not supported by the facts he had presented. The Chief Examiner instructed Mr. Utterback to complete the examination and make a full report of the facts.

Mr. Utterback submitted his report of the examination to the Chief Examiner on July 25, 1944. It contained several unsupported statements of conclusions charging or implying that personnel of the bank, as well as officers of a borrowing association, were guilty of serious misconduct. The Chief Examiner requested Mr. Utterback to eliminate or revise these unsupported statements of conclusion, most of which concerned a loan made to this association which Mr. Utterback's report classified in the group of loans which he believed would ultimately be paid in full but which had defects requiring special attention. Mr. Utterback refused to revise his report.

At the request of the Chief Examiner, one of the attorneys of the Solicitor's Office reviewed the portions of the report which Mr. Utterback pointed out to him as being pertinent to charges of violation of the Federal criminal statutes, and, in conference with Mr. Utterback and the Chief Examiner, the attorney advised them that the factual data pointed out to him would not, in his opinion, sustain any charge of criminal misconduct on the part of the bank's personnel. Mr. Utterback still refused to revise his report.

The Farm Credit Administration Examination Manual for guidance of the examiners in conducting examinations and preparing reports provides for a confidential supplement to examination reports to contain information regarding conditions which were disclosed during an examination in regard to the official personnel, the bank's functions, and operations, and suggestions in reference to improvements or procedures which have been developed. It is a well-established rule that an examiner's comments on matters which are controversial, and his opinions or inferences which are not conclusively established as facts, are to be omitted from the main report and, if reported, must be placed in the confidential supplement. Any failure to observe these requirements interferes seriously with the handling of these reports and the proper functioning of the Farm Credit Administration. Mr. Utterback included his unsupported opinions in the general rather than the confidential section of the report, in direct violation of the regular procedure.

In view of the inadequacy and uncertainty of the report prepared by Mr. Utterback and the consequent unwillingness of the Chief Examiner to endorse it, the Acting Supervising Examiner for the examination district which includes Houston was directed to conduct a reexamination of the Houston Bank for Cooperatives. This was begun on September 22, 1944. The reexamination report was submitted November 18, 1944, and was prepared in accordance with the examination requirements. This report did not support the charges and implications of misconduct on the part of the bank's officers made by Mr. Utterback.

Because of Mr. Utterback's approach in his examination and report on the Houston Bank and his failure to understand the impropriety of his conduct, the Farm Credit Administration concluded that he could not be entrusted to make further examinations. Mr. Utterback was so advised by the Chief Examiner and on September 5 was given an opportunity to resign, but declined to do so.

On September 25, Mr. Utterback informed the Chief of the Personnel Division, Farm Credit Administration, that he had a grievance to be presented under the personnel relations policy and procedure set forth in Secretary's Memorandum No. 753, revision 2, which prescribes the procedure for hearing employees' complaints and grievances, and requested that the Governor give him an oral interview. At the same time Mr. Utterback designated Roland W. Bush, the Farm Credit examiner who participated in the examination of the Houston bank as his representative. The Governor indicated that in view of all the circumstances he would prefer that the grievances be submitted in writing. A few days later Mr. Utterback and Mr. Bush requested that they be given an oral interview with the Governor, and indicated that if the request were not granted a story would be given to the newspapers. The Governor's decision was that any statement they wished to make should be in writing.

On October 3, 1944, Mr. Utterback wrote to the Governor formally requesting a hearing before a board of appeals under the provisions of the Secretary's memorandum referred to. Under this procedure the employee gives written notice of appeal, stating his grievance and naming his representative on the Appeal Board. The head of the Administration names a second representative on the board, and the two so-named representatives select a third. Mr. Utterback's letter of October 3 redesignated Mr. Bush as his representative, and the Governor proceeded to name the representative of the Farm Credit Administration and notified Mr. Bush accordingly. No reply was made by Mr. Utterback's representative to a letter from the Farm Credit Administration representative about selecting a third member, and the two members designated failed to meet and select the third representative within the time prescribed by the memorandum. Pursuant to the established procedure, the Governor named another representative of the Farm Credit Administration to serve on a new appeals board to be created, but Mr. Utterback did not name his representative.

On October 14, Mr. Utterback sent to the Governor a letter containing a further statement of his grievance, charging the Governor with suppressing the report which, he alleged, showed misconduct of the bank's affairs by its personnel. Some of the acts of misconduct by the bank's personnel alleged in the letter had not been mentioned in Mr. Utterback's examination report. Mr. Utterback sent to Mr. Bush, as his representative, copies of his letters of October 3 and October 14.

On October 15, Mr. Bush, who was then at his home in Houston on annual leave, telegraphed the Farm Credit Administration in Kansas City that he was resigning effective October 15 and was relinquishing his accrued leave. He further informed the Farm Credit Administration that he was doing this in order to be free to take action which he could not take as an employee of the Farm Credit Administration. On October 16 or 17, Mr. Bush gave the newspapers copies of Mr. Utterback's letters of October 3 and October 14 to the Governor, and made additional statements which have since appeared in the newspapers.

The Farm Credit Administration manual for the guidance of farm credit examiners provides that the report of the examiner is a strictly confidential communication to the Farm Credit Administration, and that all information obtained by the examiner relative to any institution or office examined by him must also be regarded as strictly confidential, to be imparted to no one other than the proper officials of the Farm Credit Administration or of the institution or office concerned, and that no opinion should be

expressed or no comment made regarding the condition of any institution or office, except to the proper officials thereof, without the special permission of the Farm Credit Administration.

Mr. Utterback's two letters to the Governor contained information that came to his knowledge by reason of his examination of the bank and which was of a confidential and restricted nature. The furnishing of this information by Mr. Utterback to Mr. Bush and its subsequent release to the newspapers is considered by the Farm Credit Administration as being in violation of the regulations and definitely prejudicial to the best interests of the Houston Bank for Cooperatives and of the Government.

In each farm credit district, in accordance with the provisions of sections 640b–640g, title 12, United States Code, there is a Farm Credit Board consisting of seven directors. Three of these directors are elected, one by the national farm loan associations in the district, one by the production credit associations, and one by the cooperative associations borrowing from and owning stock in the district bank for cooperatives. Three directors are appointed by the Governor of Farm Credit Administration. The seventh membe. is appointed by the Governor from the three persons receiving the highest number of votes in a nominating ballot cast by the national farm loan associations. They constitute the board of directors for each of the four district institutions, namely, the Federal land bank, Federal intermediate credit bank, Production Credit Corporation, and bank for cooperatives.

In accordance with the usual procedure, two of the directors came to the Houston office on October 16, 2 days in advance of the date fixed for a regular meeting of the board, for a preliminary review of the district's affairs. On October 13 the acting supervising examiner, who was in charge of the reexamination, was instructed to inform these two board members that Mr. Utterback's examination report was considered unsatisfactory, that it could not be endorsed by the Farm Credit Administration as its official report, and that a new examination had therefore been ordered, but that Mr. Utterback's report would be shown to them if they wished to see it. At the request of the two members the report was shown to them. They agreed that it appeared to be unsatisfactory and that the Farm Credit Administration had taken the proper action in refusing to endorse the report.

When the Farm Credit Board of Houston met in regular session on October 18, 1944, Mr. Utterback's report was shown to the board members at their request. They expressed agreement that the conclusions stated in the report regarding misconduct of the bank's affairs were unfounded, and issued a statement which has appeared in the newspapers, reading in part as follows:

"After careful investigation we are able to assure all concerned that the bank is in a sound financial condition. We find no evidence of any dishonesty or misconduct on the part of any officer or employee of the bank."

This definitely refutes Mr. Utterback's allegation that his examination report was being suppressed.

On October 30, 1944, Mr. Utterback indicated in a letter to the governor that his grievance complaint was being abandoned. In this letter he advised the governor that, "as to my report on the Houston bank, Mr. Bush has a copy of it, and as he contemplates further action it is incumbent upon me to offer nothing additional to the facts contained in my letters of October 3 and October 14, 1944."

The delay in disposing of this matter and determining Mr. Utterback's future status as an employee of the Farm Credit Administration has been due to the necessity for making a reexamination of the bank; Mr. Utterback's filing of a notice for a hearing of a grievance under the provisions of the Secretary's memorandum referred to; and, inasmuch as Mr. Utterback is a veteran, the provisions of section 14 of the Veterans' Preference Act of 1944 and the Civil Service Commission's regulations pursuant thereto.

The Farm Credit Administration has concluded that, by reason of the foregoing, Mr. Utterback's usefulness is at an end and has recommended to the Department, in view of Mr. Utterback's refusal to tender his resignation, that he be removed. The Department is now considering the preferment of charges against Mr. Utterback, and he will be given an opportunity to make answer thereto, in accordance with the provisions of the Veterans' Preference Act and the Civil Service rule with respect to removal in such cases.

She Couldn't Name One

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Times of March 13, 1945:

SHE COULDN'T NAME ONE

Recently Representative WRIGHT PATMAN, Texas Democrat, during a discussion on the House floor, got onto the subject of New Deal laws.

Well aware that most professional Republicans have now accepted the principles underlying such "reforms" as the Wagner Labor Relations Act, the Securities and Exchange Commission, Social Security Act, and others, which many of them fought at the time they were proposed, he challenged any Member on the other side of the aisle to name one such basic New Deal law that should be repealed.

Up popped the "Give 'em hell, JESSIE" SUMNER, Illinois Congresswoman from down Iroquois County way. We reprint from the CONGRESSIONAL RECORD just what happened:

"Mr. PATMAN. What are those New Deal laws? Our friends on the Republican side voted for every one of them. The Republican Party could very well be called a New Deal party, because they voted for all the New Deal laws. I do not believe the leader on the Republican side could name one New Deal law that the Republicans voted against, or would be willing to repeal if they came into power.

"Miss SUMNER. Will the gentleman yield? I think the gentleman should not forget that in 1939, the Republican Party voted unanimously against the $7,000,000,000 pump-priming bill, and the next day business started back up.

"Mr. PATMAN. 1939? Oh, that was just a temporary appropriation measure. I am talking about real, basic fundamental laws, New Deal laws. I would like the lady to name one she opposed.

"Miss SUMNER. To us $7,000,000,000 is real money.

"Mr. PATMAN. I know, but that was just a temporary proposition. I am talking about basic laws, permanent laws. Name one of them the lady opposed, so-called New Deal laws.

"Miss SUMNER. To do that would take the rest of the afternoon.

"Mr. PATMAN. No, name just one of them.

"Miss SUMNER. Very well, beginning with last week, the agricultural census bill.

"Mr. PATMAN. No, not last week; start with 1933 when the New Deal came into power and name any New Deal laws that the lady would repeal.

"Miss SUMNER. I was not a party to that.

"Mr. PATMAN. The gentlewoman would not be a party to repealing any of them, nor have I ever seen any bill that she has ever introduced seeking to repeal any of them. Neither would the American people be a party to repealing them. * * * I believe in a constructive, militant minority party, but why just criticize all the time? Why not help us construct? And then if we make mistakes show us how those mistakes can be corrected."

Well, it seems that Miss SUMNER could not name one basic New Deal innovation that she'd like to repeal. Miss SUMNER and every other Republican who found fault with needed New Deal reforms know that the people have accepted them and want to keep them. Governor Dewey recognized that when he ran for President last year.

Mr. PATMAN gave the party good advice when he warned against mere criticism. As time goes on, there will be new reforms the people will want, including world measures to preserve peace. If the Republican Party can learn, from the past, it will either agree, or suggest something better which will accomplish the result the people seek.

Too Little Training for Combat

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. BENDER. Mr. Speaker, it is one of the basic premises of military success that an army's strength is equal to the skill, power, and resistance of its foot soldiers. Planes play a tremendous role in paving the way for the infantryman, but in the last analysis it is the infantry regiment which must take the ground, destroy those defenses which even the most pulverizing air attack cannot yet reach, and hold the area won.

News out of the European theater in the past week has shown all too many cases of young boys 18 and 19 years of age with as little as 17 weeks of military service being killed in action. Four to 6 months of training barely suffice to strengthen the physical fiber of many soldiers, let alone teach them the highly specialized skills which a modern army employs in the use of new and formidable weapons. Surely, had not Congress been assured that the War Department intended to offer a year's training to our boys fresh from their high-school classrooms, there would have been great resistance to the establishment of the 18-year draft age.

More than this is the statement made by experienced soldiers that the presence of young and briefly trained men in their veteran outfits does not result in hastening the military maturity of the new additions; it more frequently tends to add difficulties to the tasks of the more

experienced. As the war moves along toward what appears to be rapidly approaching victory in Europe, it may be hoped that the military leadership of the War Department will modify this new practice.

Letter of Long Island General Assembly of the Fourth Degree, Knights of Columbus

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. O'KONSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

LONG ISLAND GENERAL ASSEMBLY,
KNIGHTS OF COLUMBUS,
Brooklyn, N. Y., January 29, 1945.

DEAR CONGRESSMAN: The Fourth Degree of the Knights of Columbus is dedicated specifically to the virtue of patriotism. There are 1,600 members of the Fourth Degree of the Long Island General Assembly. On the night of December 20, 1944, at Columbus Club, 1 Prospect Park West, Brooklyn, N. Y., the Long Island General Assembly of the Fourth Degree of the Knights of Columbus held its regular monthly meeting. By unanimous vote it was directed that the following facts and conclusions and petitions be sent to every Member of the Congress of the United States of America for appropriate action:

1. By repudiating the Polish government in exile in London, and by recognizing the communistically established and controlled so-called Lublin Committee in Moscow, Soviet Russia, who, side by side with Nazi Germany, ruthlessly invaded the Republic of Poland in September 1939, is seeking to take part of Poland into its communistic control, with a consequent denial of the Christian liberties of the Polish people in the part so desired by Soviet Russia.

In other words, Soviet Russia is attempting to hold on to the stolen goods which it received by treaty with Nazi Germany, after both had subjugated Poland in the beginning of the World War, and which it lost to Nazi Germany after communistic Russia and Nazi Germany ceased to be political and military allies in June 1941.

By its desire and plan to seize Polish territory, communistic Russia has violated the principles of the second proposal of the Atlantic Charter, which pledges our country to accept "no territorial changes that do not accord with the freely expressed wishes of the peoples concerned."

This contemplated territorial steal on the part of communistic Russia also violates the principles of the third proposal of the Atlantic Charter, which pledges our country "to see sovereign rights and self-government restored to those who have been forcibly deprived of them."

2. By requesting the Polish Nation to surrender part of Poland to communistic Russia, the British Government, speaking through Mr. Winston Churchill, the Prime Minister, has also violated the principles of the aforesaid second and third proposals of the Atlantic Charter.

By this course of action, the British Government has also violated its 1939 promise to restore the political and territorial integrity of Poland, that had been violated by the invasion of Nazi Germany and communistic Russia.

PETITIONS

1. In view of the foregoing facts, the Long Island General Assembly of the Fourth Degree of the Knights of Columbus petitions Congress to adopt the principles of the Atlantic Charter as the only principles upon which the future peace of the world can be secured.

2. The Long Island General Assembly of the Fourth Degree of the Knights of Columbus also petitions Congress to suspend the shipment of all lend-lease supplies to both communistic Russia and to Great Britain—

(a) Until Mr. Churchill, the Prime Minister, and the British Government declare their adherence to the principles of the Atlantic Charter, and

(b) Until both communistic Russia and Great Britain have publicly guaranteed the territorial and political independence and integrity of the Polish nation as it existed in 1939 before the outbreak of the war.

VINCENT A. KELLY,
Faithful Navigator, Long Island General Assembly of the Fourth Degree, Knights of Columbus.

Shortage of Pork

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. CURTIS. Mr. Speaker, by direction of the Nebraska delegation in Congress, I wish to insert in the RECORD a petition received from members of the Legislature of the State of Nebraska and the reply thereto made by the Representatives and Senators in Congress:

Whereas there is a shortage of all meats in the United States, and especially pork; and

Whereas there has been an increased cost of production to the producer of meats; and

Whereas the Office of Price Administration has placed a ceiling price on hogs below cattle and sheep; and

Whereas an increased production of pork could be encouraged by increasing the ceiling price on hogs by at least $1 per hundredweight.

Therefore, we, the undersigned members of the fifty-eighth session of the Nebraska State Legislature, petition the Members from Nebraska in the Senate of the United States, and in the House of Representatives of the United States, the War Food Administrator, and the Office of Price Administration, and each of you to take immediate action to increase the ceiling price on hogs by at least $1 per hundredweight.

Dwight W. Burney, Arthur Carmody, Ed Hoyt, George C. Weborg, Harry F. Burnham, John E. Mckota, Edwin Schultz, Lt. Gov. Roy W. Johnson, Cliff N. Ogden, Lloyd Cain, Thomas H. Adams, Roy B. Carlberg, J. H. Anderson, Don E. Hanna, Ladd J. Hubka, Joseph C. Reavis, Ed. F. Lusienski, Earl J. Lee, J. E. Conklin, Ray A. Babcock, Fred A. Mueller, H. P. Heiliger, A. J. Brodahl, Lester H. Anderson, Harry A. Foster, Harry L. Pizer, Fay Wood, D. Garber, William A. Crossland, John F. Doyle, Tom Dooley, Fred A. Seaton, Walter R. Raecke, Ernest C. Raasch (Norfolk), Sam Klaver, Charles Tvrdik, Sidney J. Cullingham, W. J. Norman, C. Petrus Peterson.

MARCH 20, 1945.

NEBRASKA STATE SENATORS,
Capitol Building, Lincoln, Nebr.

GENTLEMEN: We wish to acknowledge the letter of March 16, enclosing a petition signed by members of the State Legislature dealing with the shortage of meat and more particularly the shortage of pork.

We share your concern over this situation and we are of the opinion that the present meat shortage is due to unwise planning by Washington bureaus. Throughout the months and years, the President's executive agencies have turned a deaf ear to many constructive criticisms and suggestions. It has been pointed out to them not only by men in the Congress, but by leaders in Agriculture, that their regulations, rulings, and ceilings were producing empty feed lots and curtailing the production of both hogs and cattle.

In spite of this they blindly and stubbornly proceeded with their policies, laboring under the delusion that by paying cash subsidies from the public treasury they could solve any problem. They have failed to regard basic economic facts and laws and they have failed to understand that full production means more meat at lower prices.

We think your suggestion is good and ought to be adopted. In addition, the ceiling price on feeder pigs should be removed. Feeder pigs may be described as those weighing not more than 180 pounds each. Most of those feeder pigs are sold at public sale barns. If they were not subject to the ceiling price, the farmers could and would outbid the packers. The farmers would in turn feed some of this wet corn to them and return them to the market when they weighed about 330 pounds. The support price should be extended to hogs weighing up to 330 pounds.

At the present time, most of these feeder pigs are being bought by the packers. We submit that every time a feeder pig is withheld from the market until it becomes a 330-pound hog that the production of pork has been substantially doubled.

We also feel that increased cattle feeding should also be encouraged by making it possible for the feeder to realize a profit.

Following your directions, we are presenting your petition to the War Food Administration and the Office of Price Administration with the request that it be favorably considered. The Congress does not fix the ceiling, neither are they submitted to Congress for approval or disapproval.

Assuring you of our continued interest in this problem, we are

Yours truly,
KARL STEFAN,
Chairman, Nebraska Delegation.
HUGH BUTLER.
KENNETH S. WHERRY.
HOWARD H. BUFFETT.
A. L. MILLER.
CARL T. CURTIS.

Why Is Meat Scarce?

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. MILLER of Nebraska. Mr. Speaker, the Government agencies dealing with food production have recently become alarmed at the small amount of meat which may be available for the military, civilian, and lend-lease requirements.

The pencil-pushing arm-chair planners in Government are responsible for the present dearth of meat in this country. They are responsible because they have not followed the considered judgment and advice of men in the livestock and meat-producing business. They have called conferences and have had advice, but these bureaucrats thought they knew more about the business of producing meat than the rancher and feeder knew. They have merely outsmarted themselves.

Many men in Congress protested vigorously when the roll-back on meat was put into effect. This was done over the objections of the War Food Administration and Chester Davis, the Administrator at that time, who shortly resigned.

One reason there is a shortage of meat is that the average animal being marketed is below weight. This is easily established by a review of the average live weight of cattle going to Federally inspected markets. The figures are as follows: The 1931 to 1940 November average was 929 pounds; the 1943 November average was 920 pounds; the 1944 November average was 885 pounds.

Last year the country butchered approximately 20,000,000 cattle. The cattle averaged 44 pounds lighter than before controls started—this shrink amounted to 880,000,000 pounds of meat. This is 7 pounds for every man, woman, and child in the United States, and it is practically all meat. In addition to that the quality of all the meat was distinctly down and the consumer is paying for the higher proportion of bone. The people to blame for this bungling policy are those in Government. They have given the country less meat, of a poorer quality, and at a higher cost.

The one thing Government food policy has produced is a shortage of meat and an increase in the black market. The black market thrives because of a scarcity of supply and the high demands of the consumer. Someone has said there is no need of crying over spilled milk, but I want to call the attention of the House to the fact that much more milk is about to be spilled unless the several Government agencies dealing not only in the production of meat but of all foods recognize the difficulties involved and take steps to make proper corrections.

There is a simple way to overcome the shortage of meat. It is to adjust the ceiling so that the feeder—the man who puts the extra meat on each animal—can be assured a fair profit. Eight hundred and eighty million more pounds of meat would blast the black market and provide meat for all needs. But no, the official price must be kept down as a trading point in dealing with wage ceilings. Thus the cost of living is kept down on paper, but the people are not getting meat, except those who are able to buy through the black market.

Yes; more milk will be spilled and more food will spoil or not be produced unless these wild-eyed, pied-piping bureaucrats cease to bedevil and demoralize the production of food. Their boondoggling practices so far have been nothing but lethal blows to the food-producing industry of the country.

Development of the Arkansas River

EXTENSION OF REMARKS

OF

HON. FADJO CRAVENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. CRAVENS. Mr. Speaker, pursuant to the leave granted me to extend my remarks in the RECORD I include a statement of the issues involved in the determination of the policy to be followed in the development of the Arkansas River. This statement was prepared by Mr. C. F. Byrns, of Fort Smith, Ark., and appeared in the Southwest-Times Record published in that city under date of March 18, 1945, and is as follows:

OFF THE RECORD

(By C. F. Byrns)

Virtually all of us in the Arkansas Valley agree that the river should be harnessed to prevent flood destruction and to make possible the full use of the waters for the benefit of the people who live here.

There is some confusion about what can be done and what is the best way to go about it.

Public understanding of the questions now at issue is quite important. Hearings are to be held on May 4 and 5 at Tulsa and on May 7 at Little Rock which may have great influence on the future program on the river. Public sentiment about the whole matter will be important in determining what will be the verdict of the Board of Engineers, which is a sort of appellate court within the Corps of Engineers, now investigating the proposals for multiple-purpose development of the river.

This, then, is an effort to state as clearly as possible what the situation now is and what I think we ought to do about it.

Since 1936, by authority of Congress, the Corps of Engineers, United States Army, has been making investigations of the Arkansas drainage system, with a view to proper flood control, power production, irrigation, navigation, recreation, and other uses of the waters.

As a result of those studies, the Corps of Engineers has recommended and Congress has approved 20 reservoirs on the tributaries of the Arkansas for flood control, power, and other uses, which do not include navigation. Five of these 20 reservoirs have been built, 1 of them by the Grand River Dam Authority at Pensacola on Grand River in Oklahoma, the other 4 by the Corps of Engineers. Four others were underconstruction when war intervened and stopped work. Those 4 are ready for construction as soon as materials are available after the war emergency ends. The remaining 11 reservoirs have been approved or authorized and are ready for construction after the war when Congress makes the money available.

As a result of the 1943 flood, Congress asked the Corps of Engineers to investigate local protection works along the main stem of the Arkansas. That means levees and sea walls. Within 6 months, the engineers recommended $12,150,000 worth of levees and sea walls from Tulsa to Pine Bluff, including the sea walls at Fort Smith and Van Buren, and levees protecting important bottoms near here. That work has been authorized, and awaits appropriations, availability of materials, and local cooperation.

The approved reservoirs, plus the authorized levees, will give us substantial control of floods in the Arkansas, when all of them are in service. To get them built, we need vigorous and enthusiastic support from the people in the Arkansas Valley. Congress acts when it knows people want action.

Further responding to instructions from Congress, the Corps of Engineers has worked out a comprehensive plan for full development of the Arkansas River system, including additional flood control, navigation, irrigation, added power production, recreation, municipal and industrial water supplies, and other uses. That proposal is now under study by the Board of Engineers, which must approve it before it is sent to Congress for action. The hearings in May are part of that study. Public response is a vital factor in the final decision, because the engineers do things only when the people affected really want them.

A small group in the Muskogee area is urging now that an Arkansas Valley Authority be created to do the whole thing over and to take full responsibility for the river development, displacing the Corps of Engineers.

There are many reasons, often discussed here, why I think we should support the engineers and oppose an authority for this valley. Fundamentally, an authority will be concerned with power first and flood control and other uses as secondary issues. The engineers' first emphasis is always on flood control and navigation first, with whatever power is reasonably available without sacrifice of flood control. Clearly our interest lies with the engineers in that respect.

The engineers' plan is just what it is called—comprehensive. No authority could do more to develop the full uses of the rivers. We are far advanced with the engineers now, needing only an extra push of public support to assure the full program.

If we should reject the engineers now and advocate an authority we should be trading off a virtual certainty of the greatest value for an uncertain prospect of an unknown substitute somewhere further down the years. That kind of trade doesn't make sense.

Article in Boston Sunday Post by John Griffin

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include an article by John Griffin, which appeared in the Sunday, March 18, 1945, edition of the Boston (Mass.) Sunday Post, concerning the proposed strike of the United Mine Workers:

GOVERNMENT SPONSORING OF STRIKE VOTE REACHES NEW LOW IN ABSURDITY—WILL BE FIRST SHUT-DOWN PROMOTED BY GOVERNMENT ITSELF—INDUSTRY FACES COMPLETE STOPPAGE AS RESULT

(By John Griffin)

There is going to be an election in this country on March 28, but this time the men in the service overseas are not going to cast ballots, nor is the average citizen going to be given a chance to vote although he will be called upon to pay the expenses of the election.

This election will take place in 100 areas of the country which have been marked out by the National Labor Relations Board. Those voting will be members of the United Mine Workers. They will vote to decide

whether or not they want to strike in the event that their contract demands, recently set forth by John L. Lewis, are not met.

The ballot will contain only one question, as follows: "Do you wish to permit an interruption of war production in wartime as a result of this dispute?"

WILL COST $300,000

Agents of the National Labor Relations Board are now engaged in making arrangements for the balloting. Once the result has been tabulated, it will then be sent to the President of the United States. The election will cost the taxpayers of this country about $300,000.

There won't be any election on Iwo Jima or along the Rhine to see whether or not the fighting men of the United States will continue to fight. Nor will the citizens of this country have a chance to express, via ballots, whether or not they want to continue receiving coal and whether the plants which are producing war materials and the railroads that transport such materials should stop operating.

No, nothing of the sort. Instead, the citizens are requested by the politicians to go easy on the use of coal because Mr. Lewis and his miners might decide that they want to strike unless their demands are met. They are admonished to burn less fuel for fear there won't be any at all after the March 28 election.

All this, you understand, is strictly in accord with the law, for the system of having a union take a vote under the direction of the National War Labor Board before striking, is incorporated in the Smith-Connally Act.

John L. Lewis has done a lot for the miners who are members of his union, and in ordinary times this writer would be inclined to support the demands of the miners beyond ordinary limits, for surely coal mining is one of the most difficult jobs in the world, dangerous to health and usually underpaid.

UNION IMPROVED LOT

Without the work of the United Mine Workers the miners would still be working under some of the appalling conditions that used to prevail years ago. You can't get around that fact no matter how you try. Everything they have gained—and all of it was deserved—can be credited to the union.

They have had a long and persistent fight to improve their lot, and none of their successes have come easily. They will probably have to continue fighting in the future to gain some measurement of improvement. And good luck to them in the post-war future.

But when this spectacle of an election to decide whether or not the miners will interrupt the war production of the country unless they have their way is presented to the people, the depth of absurdity has been reached.

The union leaders assert that even if there is a war the rights of their members to strike still holds. They even go so far as to say that is what the American people are fighting for. They seem to be greatly impressed by their own argument that many, if not most of the miners, have sons or brothers in the fighting services and could therefore not possibly seek to damage the war effort.

Yet the people who were running night clubs and places of entertainment and their employees also have sons in the service and also have some rights, but the Government did not hesitate to tell them they must close up at midnight whether they liked it or not.

The Government did not hesitate to tell the race-track people to close and to order businessmen to give up their national conventions, and to order ordinary citizens to take less gasoline and house fuel in furtherance of the war effort.

HANDCUFFED NOW

But the Government seems completely handcuffed when it comes to dealing with the miners. All Government officials, or at least those who are responsible to the people, are opposed to strikes in the middle of the war effort.

President Roosevelt, at the time he vetoed the Smith-Connally Act and found it passed by Congress oved his veto, said: "I am unalterably opposed to strikes in wartime. I do not hesitate to use the powers of the Government to prevent them."

Yet here we find the Government making all the arrangements at the taxpayers' expense to conduct an election to see whether the miners will strike or not. The thing just doesn't make sense.

At the time of the above-mentioned veto, President Roosevelt cited particularly the provision for such an election as one of the chief reasons for his veto. He said that "far from discouraging strikes, the requirements for notice of a dispute's existence and a strike ballot would stimulate labor unrest and give Government sanction to strike agitations."

He was prophetic in that, for it has worked out in this case to give sanction to strike agitations. If the workers should decide in the balloting that they want to strike, they will have been supported by the Government, although almost everybody agrees that such a strike would be a terrific blow at the war effort.

PROBLEM NOT SOLVED

The whole matter of handling strikes during the war has been kicked around badly, but surely nothing quite as ridiculous as this situation has ever before turned up anywhere. There have been repeated no-strike pledges, yet the strikes have mounted up into the thousands.

But none of them has been promoted by the Government before. And in no instance has the public, which means millions of men and women who have sons and brothers facing death daily, been called upon to stand the expense of an election to see whether or not the war effort shall be crippled.

The whole thing is almost incredible, but there it is. And there apparently is nothing the citizens can do about it. They can wonder why, but they will get no answer. They can only stand amazed at the effort of the Government to force a group of New Bedford workers from one industry to another on the grounds that they are needed for vital production, and the same Government sponsoring an election to determine whether or not vital production shall stop entirely.

Letter of Merrill Woolen Mills Co., of Merrill, Wis.

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. O'KONSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

MERRILL WOOLEN MILLS CO.,
Merrill, Wis., March 17, 1945.

Hon. ALVIN E. O'KONSKI,
Congressman, Tenth District,
Washington, D. C.

MY DEAR ALVIN: Thanks much for the friendly interest you manifest in the recent application for Clicking machine priority and for your help with regard to this matter. We have for the time being dropped this and will subsequently refile as per your advice.

At this writing, we are completely overwhelmed and awe-stricken as well, over the mass of detail required for us to qualify to remain in business and comply with the joint orders of W. P. B. and O. P. A., affecting our industry and considered to roll back heavy outer woolen clothing prices by 20 percent for fall.

Chester Bowles, points out that this industry showed gross profits in 1936 to 1939 inclusive, of 2.2 percent on gross sales. In 1943, this industry he states shows profits of 11.2 percent on this same basis. This therefore is justifiable reason to reduce prices by 20 percent.

Has O. P. A. made any similar investigation as to what our Government is paying for their required war equipment? Have they investigated the war industries to determine what profits they made in 1943 doing business with Uncle Sam on needed war equipment? Have they asked for any roll-back in the cost of planes, of tanks, of guns, of trucks, of ammunition and all of this type of equipment?

In the first place, terms used in the orders we have are just about impossible to understand and impossible to comply with as outlined. What small business has the data and the records which enable them to cope with the information and data requested? What small business has a staff of attorneys, of legal counsel, of statisticians, that can understand and comply with the mass of detail they send a small concern such as ours?

They tell us how to compute direct costs of garments and in their instructions M. P. R. 572 we are told time-and-a-half labor is not and cannot be considered a cost as time alone must be taken. Why does one part of the Government pass a labor act making it mandatory to pay labor time and a half over 40 hours per week and another one come along and state this is not a direct cost of what is being produced? Why don't they get together and quit these conflicts and contradictory orders and regulations so a businessman may some time get to know where he is at in the conduct of business.

We have certain items in our business that today do not cost 100 percent more than they did a couple years ago but 300 percent more. Is this, then, an added cost of doing business? No; not according to O. P. A.

Items such as shipping costs, clerks, office, freight, taxes of all kinds, fuel, administrative costs, and all such items are not considered to be cost make-up items on these instructions.

Where is the money for these items to come from? We are asked to calculate our gross profit for 1943 and then to reduce that 20 percent for 1945. Does it take any stretch of the imagination for anyone not engaged in business to know that it costs more each and every year to conduct a business or have they some idea such costs are decreasing?

I have heard it repeated recently that every businessman in America violates the law 10 times every day in his conduct of business without even his own knowledge he is violating. Is that a situation to propound as one of merit or is it wrecking the nerves of men engaged in business all over America?

If it is the intent of our Government to use this war as the excuse to put every businessman out of business, why do they delay the day of hanging? Why not admit this to be the end and get it over with? If the New Dealers can operate business better than private business, why don't they prove that just a little in what they are undertaking?

I assure you that every businessman in my contacts is wondering what this is all about. Everywhere one hears them discuss the coming situation wondering what will be next detrimental to them. Small grocers, meat-market operators, and every type of business

are now being besieged with orders, regulations, checkers, enforcement officers, auditors, and what not delving into their daily operations, perpetrating that every man engaged in any kind of business is dishonest, is doing something wrong, is violating the law, and cannot otherwise be trusted to conduct his own little business. And to get this we are fighting a war, fighting to safeguard the "four freedoms," fighting to rid the world of oppressors, fighting to force upon the ignorant of the world the type of liberty we have enjoyed here which made this country the greatest Nation on earth. Where is there a businessman today that isn't sick of his business, that doesn't want to be a truck driver, or itch also to get on the Federal pay roll, which seems to be the ultimate design? I am conveying my feelings and those of countless thousands of other men engaged in small business, all of whom wonder what this is all about.

Yours very truly,

LYNDON B. EMERICH.

Wars Are Waged With Metals—Premiums Must Be Continued

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. ENGLE of California. Mr. Speaker, I should like to call to the attention of the gentlemen my bill (H. R. 2660), for extending the life of certain subsidy programs, including the very vital production of critical and strategic metals and minerals desperately needed for the conduct of the war.

The Senate has just passed a similar bill, S. 502. One of the features of the Senate bill, and of mine, also, is a mandate that premiums for copper, lead, and zinc shall be continued until June 30, 1946—that is, for the fiscal year of 1946—and no authority has been granted to the agencies to cancel these premiums until the end of the fiscal year. They are permitted, however, to adjust premiums granted to individual mines so that such payments will be on an equitable basis.

My honorable colleague, Mr. PATMAN, of Texas, recently made a spirited exposition before this House of the enormous benefits conferred on our economy by the operation of the premium price plan. It is my recollection that he stated an expenditure of some $170,000,000 had resulted in an estimated saving of around $2,000,000,000.

As metals are the foundations of any war, a plan which will procure an adequate supply and at the same time save the Government and the public so much money must be meritorious.

But, Mr. Speaker, there is a darker side to the matter. It is my belief that, while manufacturers and other war contractors have been and are being equitably dealt with, the agencies administering the premium price plan have set themselves up as arbiters over the very life and death of producers who, by reason of their dependence upon premiums, must take whatever the quota committee hands them. The margins allowed all too frequently are inadequate to permit reasonable returns on the investment and many producers whose mines will have to close at the termination of the premium price plan may never recover their wartime investment if the agencies are left in the saddle.

So seriously did the Senate consider this point that that body laid especial emphasis on a part of the bill which takes from the agencies their power to captiously close down 75 percent of America's non-ferrous mining industry by simple fiat.

The report of the Senate Banking and Currency Committee on S. 502, to which my bill is the companion measure, states:

> It was felt (by the committee) that, without a specific authorization on a noncancelable basis, producers and employees alike would be unable to plan ahead, and this would react unfavorably upon production.

This is precisely my feeling and that of the vast majority of our producers. I am informed certain Government agency executives feel differently, but those men obviously speak with the Cabots and the Lodges of the mining industry and not with the common miner. Besides, many of the huge mining corporations have foreign properties and can make up their losses, if any, from their foreign investments.

The Senate committee also stated:

> As mining is dependent upon development work, and development work will only be done if there is a specific guaranty of reasonable prices for a reasonable time, permitting the rules of the premium price plan in this respect to be changeable or subject to cancelation at the will of the executive agencies would make it impossible for the mining industry, and particularly the small mines, to plan ahead on a definite basis.

The Senate also refused to guess when the war will end—a popular agency pastime—and said:

> It is not safe to discourage production in anticipation of the war ending prior to June 30, 1946.

Mr. Speaker, my great State of California has a vast resource of metals and minerals. We have produced energetically as and when the agencies called for them and under a wholly Government-controlled price system. The least that can be done is to offer a modicum of price security for a definite time, as the Senate pointed out forcefully. It is my belief that there is a resistance in the agencies responsible for the administration of the premium price plan to giving the mining industry this security, and that this resistance centers in the War Production Board, extraordinary to relate. One would think W. P. B. would be all out for production. This is its function, not to worry about the purse strings. That is a function of the Congress, although it is hard, sometimes, to get the executive agencies to appreciate that. In this case, for instance, it was clear the agencies expected Congress to sign a blank check and to announce the terms of the plan later.

But the Senate decided otherwise and so, I trust, will the House by adopting my bill or the Senate bill as it comes over with a proviso checking arbitrary and high-handed action on the part of the War Production Board.

Mr. Speaker, incidentally it might be a good idea for an appropriate committee of the House to take a good look at the Office of the Vice Chairman for Metals and Minerals. This is the policy-making group which eventually would decide, if left to its own devices and without congressional check, when premiums would be canceled. If it guesses no better than when it authorized the cancelation of the mercury and tungsten programs the first part of last year, this division is scarcely to be trusted.

As is common in the War Production Board and perhaps necessary, the office of the Metals and Minerals Vice Chairman is made up of men who never personally had to meet a pay roll in their lives, or struggled through the vicissitudes of making a small mine into a big mine. Some, in point of fact, have had little or nothing to do with mining. There are many fine, conscientious engineers in the division but whose experience principally has been that of hirelings of great mining trusts.

Mr. Speaker, I had occasion recently to inquire who heads the Office of the Vice Chairman for Metals and Minerals. It seems that Mr. Krug, in his wisdom, evidently believing that so highly a technical subject as producing the basic material for our war can be handled by any Tom, Dick, or Harry, has appointed a new vice chairman who is, I have not the slightest doubt, a fine and amiable gentleman whose qualifications and character are beyond reproach. But listen to this announcement I have just received from the War Production Board:

> Wednesday, February 28, 1945: "Appointment of William C. Keeley as consultant on production to the Chairman was announced today by the War Production Board. Mr. Keeley is vice president of the Air Reduction Co., Inc., New York City, with which company he has been associated for 24 years. Prior to that he was with General Motors Corporation. He is a resident of Fairfield, Conn."

Mr. Keeley actually has been made Vice Chairman for Metals and Minerals. Mr. Speaker, I ask the honorable gentlemen here, could anything be more ridiculous? As well put me in charge of a naval fleet. What bothers me is why a man with Mr. Keeley's qualifications would take such a job.

Before closing let us take a look at Mr. Keeley's deputy, Mr. James Douglas, a man reported to me to be of exceptional character and integrity, derived from an old and wealthy mining family, but who, as far as I can discover, has had little or no practical experience which would qualify him for what, in view of Mr. Keeley's lack of qualifications, amounts to the dictatorship of our Metals and Minerals program.

Mr. Speaker, I believe it is time for Congress to listen to the voice of industry, firmly make up its mind what is the proper and beneficial thing to do for the Nation, and firmly tell the executive agencies what they are expected to do. It is my earnest hope that our Committee on Banking and Currency will concur with the Senate in placing in the law the limitations upon the agencies I mentioned at the first part of my address.

Distrust in Military Management

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. O'KONSKI. Mr. Speaker, I think a lot of people in the War Department are wondering right now whether Americans have lost their patriotism. The armed forces have been singularly disappointed in the small number of nurses who have volunteered, even though the urgency of the situation has been published in every conceivable manner.

I believe that the Army's chickens are finally coming home to roost. If my services were requested in the armed forces, and I was assured in official black and white that I would be commissioned shortly after enlistment, I would have to be governed by the knowledge that I could place no faith whatsoever in any of this recruiting propaganda.

The 12,335 men who enlisted in the War Training Service had solemn, official assurances—not once but many times—that they had an opportunity to qualify for commissions. They made untold sacrifices of time, money, and other opportunities, on the basis of those assurances; they fulfilled their share of the agreement in every respect. Yet the Army welshed on these assurances and gave those men the most shameful kicking around I have ever seen as a reward for their patriotism and sacrifice.

How can you expect people to rush to the colors the moment some general sounds an alarm? How can they know that they will not be swindled, degraded, humiliated, and financially ruined for their pains?

Congress has stood by and allowed the integrity of the United States Government to be compromised. More than a year has passed since the W. T. S. program was closed and its men thrown into the discard. Oh, there have been murmurs of objection in Congress, but the Army has its lobbyists, and all they had to do was whisper "Military necessity" and promptly all heads nodded wisely. Of course, the men are unfortunate, they say, but anyone who is not exactly bleeding and dying on the battle front has not any right to complain.

Well, that is all right—until you stop to consider what we are fighting for in the first place. It is not uncommon for man to love honor more than life itself. And if a man is wronged and humiliated to the point where he is distrustful of his own government, cynical of humanity and life itself, who is there to say that he is more fortunate than one who loses his life in battle?

The men of the War Training Service are suffering as a result of one of the most foolish, prodigal wastes of manpower yet to come to my attention. After hundreds of millions of dollars had been spent on their training—after they had endured many hardships in training on practically no pay at all for twice the period they should have been in training—they were washed out, for no other reason, it seems to me, than to make room for a group of smart society girls in uniforms tailored on Fifth Avenue.

The Army Air Forces did not already have too many noncombat pilots. They said so themselves in trying to put over the WASPS.

The Army Air Forces did not need these men in other capacities for which women are not suited, because they went right ahead and put them in activities where women are engaged. At first they did not know, apparently, what to do with them at all. It seems that the main idea was to get them out of the way.

I consider it imperative that we inquire into these things—even more so now when the whip is being cracked at the American people by the various agencies demanding manpower legislation.

Why is it that such a splendid group of men never had a chance? Why is it that destiny marked them for failure almost from the start? Why is it that the Army's well-oiled propaganda machine, which employs thousands of men to ballyhoo the various branches of service, never told the public about this deserving group of pilots? Why has the amazingly low accident and fatality record of the War Training Service been played down?

It adds up to this: The Army Air Forces have had manpower allotted to them lavishly and have used it the same way. In spite of General Arnold's statement that they have attempted to put square pegs in square holes and round pegs in round holes wherever possible, they have made KP's, radio mechanics, gunners, and flunkies out of seasoned airplane pilots and tried to make airplane pilots out of waitresses, beauticians, and society girls, at one and the same time.

They have got large numbers of men employed in "public relations"; they have men enough to put a variety of radio programs on the networks; they are in the vaudeville business; they can operate a call-for-and-deliver service for dogs. Still the armed forces are so badly in need of manpower that essential farm labor is being drafted at a time when we face unprecedented shortages of food.

Throughout the war Congress has had to act as a governor on the military machine. It has been our job to analyze and control, to some extent to act as arbiters between the needs of the civilian economy and the demands of the war effort. By helping to maintain a semblance of balance, we have been able to see the United States in a position of unequaled military strength. If we allow any agency to run hog wild, we tend to destroy that balance and the war effort suffers as a result.

In the case of the War Training Service men, as in any other case, the United States should be big enough, honorable enough, to conduct its business without welshing on its promises. If we treat men as these men have been treated, we suffer with them. Their disillusionment, distrust, and cynicism spread through the rest of the armed forces and into the civilian population, and you have Government in the position of creating its own "fifth column."

The trainees and instructors of the War Training Service have been victimized in a "heads I win, tails you lose" game. Every throw has been stacked against them. It is time they got a decent break.

Let us have some action on this and let us have action in the resolve that these men shall for once be given the benefit of any doubts that may arise.

They deserve it.

The Perfectionists and the Peace

EXTENSION OF REMARKS

OF

HON. HUGH DE LACY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. DE LACY. Mr. Speaker, under leave extended to me, I wish to call the attention of the House to an editorial, appearing in the March 13, 1945, edition of the Seattle Times. While I do not agree with the editorial in every respect, this opinion of one of the outstanding newspapers on the Pacific coast and a leading organ of conservative opinion, is worth the attention of every Member of Congress.

I believe that our future peace is not so greatly threatened today by isolationists, as by perfectionists—those who want to dot every "i" and cross every "t". We cannot expect to find in Dumbarton Oaks or in the conference which is soon to open in San Francisco the whole answer to all the problems of securing the peace.

Just as our own Constitution was the result of compromise between conflicting points of view, so will be any charter of world peace. If we ask perfection now, if we seek to enforce our own particular and perfectionist point of view today against other prevailing views, then we shall surely have no organization of United Nations and we shall have no peace.

Much has been said by some of our perfectionists about the little nations. America's heart is a big heart and we are always impressed by the need to aid the weak or the oppressed. It is good that this is so. Little nations, even when they have been wrong, have had our sympathy.

There are some today who would play upon this deep sympathy and our own democratic traditions of protecting the weak, to redefine our attitude toward Dumbarton Oaks. These perfectionists are every bit as dangerous to us and to our future as are the most outspoken isolationists. Perhaps they are even more dangerous since their own righteousness intrigues us, and their own seeking for perfection catches our ear. Therefore, I believe the Seattle Times has made a considerable contribution to our thinking with the following editorial:

GOOD FAITH STILL THE BASIS OF HOPE FOR LASTING PEACE

Sir William Beveridge says the voting procedure in the proposed world peace or-

ganization, agreed on by the Big Three at Yalta, will provide "a short way to the Third World War." It will, he says, put the five permanent members of the Security Council above the law, which all other nations are expected to observe, and so drive those nations into separate alliances and spheres of influence.

In the general assembly of the proposed organization, each member nation, of whatever size, is to have 1 vote. The only question here is whether or not the British are to have 1 vote for each of their 5 major "nations," and the Soviet Union 1 vote for each of its 22 autonomous republics. Lesser states may well object to multiple voting by Britain and Russia.

But the peace organization must have leadership; and if any good results are to be achieved, leadership must be stabilized and dependable. That is why the Dumbarton Oaks planners would give permanent council seats to the five greater powers—the only powers capable of enforcing the "law" for themselves and for all concerned. To have leadership subject to change by shifting coalitions of small nations would mean utter confusion.

The member nations of the general assembly would have opportunity, every 2 years, to elect six of their number to the Security Council. That would be a majority of one over the five permanent council members. The permanent members could take no radical action, no extreme step, without the votes of at least two of the elective members. To that extent, which seems fairly sufficient, the smaller nations of the general assembly would influence and control the big fellows.

In recalling attention to such details of the Dumbarton Oaks plan, we do not necessarily subscribe to the opinion of enthusiasts that it is perfect in all respects. Actual and painful experiences cannot be forgotten. The League of Nations consisted of Council and Assembly. There were five permanent and nine elective seats in the Council. Twelve years ago the permanent Council members were France, Germany, Great Britain, Japan, and Italy. No present need to recount ensuing events.

The Dumbarton Oaks Conference did not produce an altogether new plan. The Covenant of the League of Nations provided the model. The plan now offered is freshly inspired and more firmly shaped. There can be no contention that the organization would be better guided under the leadership of five little nations.

Just as with the old League, success depends upon the good faith and continuing cooperation of the greater powers. Should they fall apart, the new league, whatever its name may be, will survive stress no better than the old. No coalition of lesser states could avert collapse.

The outcry for more power for the little nations, such as that voiced by Sir William Beveridge, is superficial and prejudicial. The world's hope for lasting peace can be fostered toward fulfillment only by a combination of nations strong enough to restrain themselves, while exercising salutary restraint of others.

A Telegram to the President

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. O'KONSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram to the President:

DEAR MR. PRESIDENT: Poland, the first Allied belligerent in this war, will not be represented at the United Nations Conference at San Francisco. She will not participate in the conference, because the legal Polish Government, recognized as such for 5 years by the United States, Great Britain, and all other nations with the exception of Germany and Russia, is not invited. This is a tragic scandal almost unprecedented in diplomatic history, and yet it would be even worse to have Poland misrepresented at San Francisco by a government without any mandate from the Polish people, as some have proposed.

Any government that may be created by the commission in Moscow, headed by Mr. Molotov who signed the Molotov-Ribbentrop Pact, will not be recognized by the Polish people or by the friends of Poland throughout the world as anything more than an instrument of foreign powers, especially of the Soviet Government. The declaration of March 9 issued by our general organization, the American Polish Congress, stresses this beyond any doubt, and it is an expression of the views of the whole 6,000,000 community of Americans of Polish descent.

You and your colleagues, Mr. President, have promised a free election in Poland, and we welcome that promise. But we note with sadness that there is no possibility of such an election being held in time for the San Francisco Conference. There can be no free election in Poland as long as there is not even personal safety for the heroic leaders of the 5-year resistance to Nazi domination. The tragic conditions prevailing in Poland today have been revealed not only by the Polish underground, whose reports of German atrocities were always believed and always confirmed, but by members of the British Government, who have confirmed some of the terrible facts themselves in the House of Commons.

Because America at the Yalta Conference assumed coresponsibility for conditions in Poland our national honor is involved by every violation of civil liberty and human rights. We shall have the honor to submit a special memorandum to you giving the facts in our possession in which we make specific recommendations as to the only way America's promises can be carried out.

But it is already clear that in view of the absence of even elementary freedom in Poland, including freedom from fear, any such election held now before the conference would be a mockery.

We therefore respectfully suggest another method by which this injustice can at least be mitigated. Since Poland herself is not free to speak at San Francisco it is in America—not in Russia—that those can be found who have some right to speak for her.

We therefore appeal to you, Mr. President, to make it possible for the American Polish community to help the cause of Poland by choosing one or more of our number as observers to be attached to the American delegation at San Francisco. The presence of such observers would not only serve to reassure the hard-pressed Polish people that their interests would not be entirely forgotten at the conference, but it would convince the entire democratic world that the charter member of the United Nations would neither be utterly disregarded nor misrepresented at San Francisco.

There are many special reasons which justify such a request. It was in America that Poland was reborn during the last war, and it was your own great leader, Woodrow Wilson, who first proclaimed her rebirth in his Fourteen Points. It was his administration, of which you were a leading member, which implemented that promise by enlisting American Poles in the effort to reestablish Polish freedom.

In order to help create an independent Poland, a Polish army was raised in America with the full support and consent of the United States Government. Tens of thousands of Americans of Polish descent answered the call to volunteer. They fought and died for Polish independence, their bodies scattered on all the battlefields of the western front. So the Polish-American community invested not only their money but their blood for the re-creation of Poland in harmony with President Wilson's ideals.

Mr. Wilson's heritage was handed on to you, Mr. President, and it was presented to humanity in the Atlantic Charter as America's aims in this war for which our sons are fighting and dying on all the battlefronts of the world. As Americans of Polish descent who carry the responsibility for preserving the heritage of our father who fought in the last war and of our sons and brothers who are fighting now, we feel endowed with the moral right to have a voice in the settlements where Poland's existence is concerned. Since the legitimate Polish Government is not allowed to officially speak for her at San Francisco, let Americans of Polish descent at least be present as official observers.

For although the San Francisco Conference will not technically be concerned with the details of the Polish settlement it is concerned with the establishment of the international organization on which the future peace not only for America but for Poland will depend. The conditions in Poland today are sowing the seeds of future war so Poland's fate intimately concerns and may even determine the fate of the organization you hope to establish in San Francisco.

Respectfully yours,

COORDINATING COMMITTEE OF AMERICAN POLISH ASSOCIATIONS IN THE EAST,
JOS. S. KASZUBOWSKI, *President.*
Rev. A. A. SKONIECKI,
Executive Secretary.

NEW YORK, N. Y.

Universal Military Training

EXTENSION OF REMARKS

OF

HON. SAM M. RUSSELL

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. RUSSELL. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a resolution adopted by the Guy Taylor Post, American Legion, of Albany, Tex.

This resolution explains the attitude and the feeling of the American Legion in general in regard to universal military training, which I understand will be submitted sometime in the near future by resolution known as the May bill. The resolution of the American Legion post is as follows:

Whereas the American Legion has for 25 years diligently and consistently petitioned the Congress of the United States to pass a law requiring universal military training for the protection and security of the Government and people; and

Whereas veterans of World War No. 1 are thoroughly convinced that universal military training is absolutely necessary to prevent future wars involving the Government of the United States, this conviction being shared by a large majority of veterans of World War No. 2, as indicated by a Gallup poll and personal opinions of returned veterans; and

Whereas the failure of Congress, following World War No. 1, to pass laws requiring necessary and adequate preparedness has proven to be a catastrophe of astronomical expenditure of lifeblood and material that we could ill afford: Therefore be it

Resolved, That members of Guy Taylor Post, No. 61, Department of Texas, American Legion, do hereby sincerely request and seriously urge the Congress of the United States Government to pass the universal military training program as submitted by the American Legion, as a measure of safety and means of preparedness against another world war in which we will surely be involved; be it further

Resolved, That all appeals, requests, and petitions made by isolationists and pacifists are repulsive to American patriots, destructive to the lives and property of American citizens and detrimental to the cause of peace and security of the Government and people; be it further

Resolved, That it is the sacred duty of Congress, insofar as possible, to secure the Government and people from war, and adequately prepare them against invasion or aggression by hostile governments; and be it further

Resolved, That a copy of this resolution be sent to Senator TOM CONNALLY, Senator W. LEE O'DANIEL, Representative SAM RUSSELL, a copy to the press, and a copy reserved for the minutes of this post.

The above resolution passed unanimously by a large membership at regular meeting, March 1, 1945.

F. D. R. the Leader

EXTENSION OF REMARKS

OF

HON. HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. SHEPPARD. Mr. Speaker, in the past there have been many comments by the Members of the House relative to the attitude of the press and radio commentators pertaining to the support and, in some instances, lack of support of the war program.

I am presenting the following comments published as an editorial in the San Bernardino Daily Sun, date lined Wednesday, February 28, 1945. The San Bernardino Sun is not an administration newspaper but, in my opinion, this editorial is one of the finest statements of fact I have had the pleasure of reading in a long time and I am presenting it to the Members of the House in order that they may have an opportunity to observe some newspapers in this country, although they are not administration-minded, are still capable of presenting to the people whom they serve a realistic picture of national interest that I think is most splendid.

F. D. R., THE LEADER

We listened the other night to a couple of radio commentators shriek to high heaven regarding phases of the American foreign policy that is now unfolding. The United States, so they charged, is coercing a group of small and defenseless nations to declare war on Germany. They implied Uncle Sam was using a club in the shape of a threat not to permit the small nations, including several in the Western Hemisphere, to participate in the San Francisco Conference and in the world league of tomorrow.

These same commentators 5 months ago were extravagant in their support of Franklin D. Roosevelt for President. Yet it is Mr. Roosevelt who is responsible for whatever may or may not have been said to the small nations of this hemisphere.

It is time for orderly thinking in this business of a foreign policy. Last fall the people of this country split up, chose their leaders, and went to the polls. The results were clear—this Nation elected to follow a course of leadership in world affairs. The time for recriminations over that issue has passed. Certainly those who followed Mr. Roosevelt last November must, by any sensible rule of public thinking, now lend him support in the course of world action which he clearly indicated last fall he intended to follow if elected. And we think the rest of us also have that obligation.

The people of this country certainly instructed Mr. Roosevelt to sit down with Messrs. Churchill and Stalin and formulate the best program he could for the creation of a world organization charged with the responsibility of preventing war and establishing justice for all nations, large and small.

To refuse to follow a leadership that undertakes such a global program is dangerous business. Mr. Roosevelt, with a mandate from the people of his Nation, had the right to make commitments. We think he errs in not making public the details of what is proposed, but nevertheless the people accepted his leadership and gave him specific authority to proceed with his foreign policy platform.

This Nation must have a foreign policy. It must be a policy to which the large majority of the people subscribe; otherwise it cannot be continuous and without continuity in our attitude toward world affairs there would be chaos ahead.

Mr. Roosevelt's leadership is the only leadership in foreign affairs. The opposition is without any plan of its own and is composed exclusively of dissenters who show no signs of agreeing among themselves.

We have no hope that the peace that will be written will be a perfect peace; that justice will be done to all peoples. Nevertheless, there has to be a peace, and we think Mr. Roosevelt will get the peace with the highest ideals that he can get. This criticism that Mr. Roosevelt lets the foreigns tell him what to do is distressing. Mr. Roosevelt could not, if he wanted to, dictate the thinking of all the conflicting interests in this world. He has to yield here and there if the greater cause of a world organization empowered to enforce peace and justice is to come out of this war.

Yet the two commentators to whom we referred at the opening of these editorial comments were boldly intimating that the President of the United States did only what "the foreigners" told him to do. And yet they did their bit to secure his reelection.

It is well known to all commentators that it is much easier to criticize a public leader than to defend him. The mob likes that kind of stuff. We respectfully suggest, however, that the interests of this Nation call for united support for Mr. Roosevelt in the field of foreign policy. He has little more to gain in this vale of tears than a place in history. To go down in history as a really great man he must do his share in world leadership to devise the kind of a world organization that can enforce justice for all peoples. Obviously that is what he is trying to do.

For those who desire to attract attention to themselves as dissenters there is the wide-open field of domestic politics. In that field the President is vulnerable in a dozen spots.

But in the field of international relations wise Americans will accept the leadership of the President, for if this Nation's leadership again fails in world affairs there can be no hope for the future. This world, including the United States of America, could not survive another world war.

Mr. Roosevelt is doing his part of the big job; the rest of us should at least do what we can to lighten the burden of his task.

Henry A. Wallace

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

"WHERE THERE IS NO VISION THE PEOPLE PERISH."—PROVERBS: TWENTY-NINTH CHAPTER, EIGHTEENTH VERSE

Mr. HOLIFIELD. Mr. Speaker, on February 16, 1945, the House had under consideration the separation of the Reconstruction Finance Corporation from the Department of Commerce. By a combination of circumstances, the confirmation of Mr. Henry A. Wallace as Secretary of the Department of Commerce depended on the passage of the George bill, Senate 375. The discussion of the merits of the bill was negligible. Those who opposed the bill attacked Mr. Wallace with a venom which I can only describe as fanatical. The bill was passed however, and Mr. Wallace has recently been confirmed as Secretary of the Department of Commerce. I am confident that he will do an outstanding piece of work in this position. His stature will increase in the critical years that lie ahead. In my speech of February 16 I showed where Mr. Wallace laid down a blueprint for the future.

Control of Federal Expenditures

EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. CANNON of Missouri. Mr. Speaker, under leave granted, I include an article from the Accounting Review, by Eric Lewis Kohler, a noted economist who has had wide experience in both Government and private accounting:

EXPENDITURE CONTROLS IN THE UNITED STATES GOVERNMENT

(By E. L. Kohler)

PREPARATION OF ESTIMATES

Estimates of future expenditures originate annually within each spending agency. The Budget and Accounting Act of 1921 provides for the appointment by the head of each agency of a Budget officer who prepares such estimates, and the Bureau of the Budget each year issues regulations governing their form and content. For the old-line establish-

ments, the estimates for the fiscal year 1946 must be in the hands of the Bureau of the Budget by September 15, 1944; the war agencies, including the War and Navy Departments, will submit summary estimates on December 15, 1944, and detailed estimates, which will naturally differ in total from the preliminary figures, on March 15, 1945.

No uniformity exists among Government agencies as to the method followed by Budget officers in obtaining future estimates. Only the general content of the estimates presented to the Bureau of the Budget is prescribed. This consists of four items: a brief one- or two-page letter of transmittal which summarizes the agency's estimates; a proposed appropriation bill covering the estimates; a detailed list of jobs the total of which agrees with the labor cost appearing in the summary, a total of each of the other objects of expenditure such as travel and office supplies, and a functional recapitulation, if obtainable; and finally, a narrative describing the proposed expenditures, with particular emphasis upon changes in expenditures.

* * * * *

REVIEW BY THE BUREAU OF THE BUDGET

Since 1939 the Bureau of the Budget has been an independent agency which has acted as a direct aid to the President in the preparation of the annual Budget called for by the Budget and Accounting Act of 1921; it also aids him in other ways. To obtain the annual Budget it combines the estimates of the various agencies after their approval by the Estimates Division and the Bureau's top staff.

The Estimates Division consists of groups of specialists who follow the work programs of the agencies assigned to them, and the agencies in the preparation of their annual estimates, and advise with them during the year on any major problem that may affect the original work plan or the amount or nature of the expenditures authorized in appropriation acts. These specialists, after their review of formally prepared agency estimates, conduct hearings attended by agency heads and their assistants, thus obtaining a more accurate picture of prospective activities. The presentation of the agency's case follows whatever pattern the agency head may determine, and the hearings, which for the larger agencies may require several weeks, are informal. Additional information is frequently asked for, and a number of proposed activities may be eliminated. At the same time the opportunity is offered for policy discussions and clearance at a time and under conditions that cause the least embarrassment to the agency and its staff.

* * * * *

ACTION BY CONGRESS

Relations between the Congress and the spending agencies are maintained through standing committees and Appropriations Committees. The former exist only for the old-line establishments; war agencies have derived their authority largely from delegations of wartime powers conferred on the President by congressional acts. In general, the separation of authorization from appropriation has become a well-established working plan within the Congress. Appropriation bills of the old-line agencies are filled with parenthetical references to enabling statutes, and Members of both Houses are insistent on the omission from appropriation acts of legislation creating new powers or jurisdictions.

There is but one Appropriations Committee in each House, with, however, numerous subcommittees to which specific agencies are assigned and a deficiency subcommittee made up of other subcommittee chairmen. Assisting the committee are a clerk and a number of assistant clerks. By custom, appropriation bills are first considered by the House of Representatives, and it is there that they receive their principal review. Hearings are held by the Appropriations Committee of each House, but before the Senate committee they are usually limited to situations in which an agency is dissatisfied with the cuts which the House committee has made in the agency's proposals. The Senate as a rule acts on the basis of its consideration of the House bill, the agency justification, the transcript of the House hearings and the House report.

* * * * *

The spending power of the agencies has been curtailed by the adoption of numerous controls, the principal ones being:

1. Most appropriations extend over a single fiscal year. Obligations authorized must therefore be made within a relatively short period; to continue operations thereafter, the agency and its program must be again reviewed by the Appropriations Committee before the end of the period. Occasionally appropriations unspent at the end of a fiscal year do not lapse but, as in the case of current War and Navy appropriations, they may continue over a period not exceeding 2 years. A variant of this last procedure is found in contract authorizations, whereby a specific sum is named in an appropriation measure permitting the initiation of commitments in the current year and their payment in a subsequent year.

2. The House Appropriations Committee will consider no request for an appropriation that has not first cleared the Bureau of the Budget. This conforms to the indirect requirement of the Budget and Accounting Act of 1921 that "no request for an appropriation * * * shall be submitted to Congress or any committee thereof by any officer or employee * * * except on the request of either House of Congress." (NOTE.—This investigatory procedure has described it at length in the CONGRESSIONAL RECORD, vol. 89, p. 10994. Exposition of the safeguards that should accompany legislative investigations of executive agencies is both able and forthright.)

3. Independent investigations of spending agencies are made by the House Appropriations Committee whenever a subcommittee wishes further information. For this purpose experts from other agencies, employed under ingenious conditions which have been established by the committee to keep them away from politically-minded members, study the problems assigned to them, interview agency representatives, review procedures, and make independent reports to the committee, thereafter returning to the agency from which they were borrowed.

4. Limitations of various kinds may appear in appropriation legislation; some of them are inserted by the Bureau of the Budget, but the bulk of them have originated at one time or another in the House Appropriations Committee. Although the Federal system of appropriations is commonly referred to as a lump-sum-appropriation system, the effect of the various forms of limitations, particularly in recent years, has been to create a hybrid which approaches the detailed-appropriation plan of some States and many municipal bodies. A common limitation is the top figure set for certain types of expenditure within an appropriation. For example, the Securities and Exchange Commission is allowed to spend $4,651,704 during the current fiscal year, of which an allotment is made "not to exceed $1,000 for the purchase of newspapers"; in addition to the total sum indicated it is permitted to spend $45,000 "for all printing and binding"; no other monetary amounts appear in the S. E. C.'s appropriation act.

Many of these monetary limitations are lost in history. Others, of comparatively recent origin, have been occasioned by agency abuses—at least the Congress has so regarded them—of unqualified spending privileges. Other monetary limitations which creep into the appropriations of various agencies relate to such items as travel, attendance at conventions, the purchase of automobiles, and the employment of consultants: particularly in instances in which the agency itself has, in the eyes of Congress, been at fault.

Limitations of a qualitative character appear everywhere in appropriation acts. The appropriation act covering the Department of Agriculture is a document of 45 pages, lump-sum amounts appear for more than 40 heterogeneous suborganizations, and there are more than 200 express limitations on various objects of expenditure. Most of the act is, however, a definition of the particular scope of activity which may be followed during te current year by the various suborganizations.

5. During hearings before the House Appropriations subcommittees, administrators have frequently been warned by committee members regarding the modification of practices followed by the agency. The impression may have been gained that certain activities or expenditures were contrary to congressional intent. The warnings may be no more than adjurations, but they are often regarded by the agency head as restricting his actions. The same may be said of formal committee statements which accompany the appropriation measures when they are reported back to the House or Senate. A committee cut in an appropriation request may be ascribed in a report to a particular item, but if the language of the act does not expressly prohibit, the agency is free to apply the cut to some other item; although if it does it may face a hostile subcommittee in the year following.

6. Interim contacts are a further source of congressional control over individual agencies. These contacts are of two types—voluntary from the point of view of the agency, or involuntary. The voluntary contact arises if a change in an agency's program is brought about by circumstances that could not be foreseen at the time when its future budget was under consideration, or if it finds it has underestimated its future financial requirements and now seeks what is known as a deficiency appropriation in order to carry through the year. At deficiency hearings, the progress to date of the agency's program or a section of it is commonly reviewed. The involuntary review may be made by one of the standing committees or by the Appropriations Committee, and is usually occasioned by criticisms of the agency's program.

When a large degree of policy making must be delegated to an agency or when a none-too-certain policy has just been created by the Congress, there has not infrequently been an agitation for congressional representation in the controlling group. Most Congressmen, however, appear to doubt the constitutionality of such a procedure and are afraid of the consequences that would arise from saddling administrative responsibilities on already overworked Senators and Representatives.

On the whole, the work by congressional committees on the affairs of agencies seems to outsiders to be as intelligent and well done as time permits, even though clouded on occasion by the public comments of individual Congressmen whose attempts at intervention in agency administration have been unsuccessful. Party differences have little effect on agency operations—a fact probably insufficiently appreciated outside of Washington. The lay criticism of agency activities, which has so often resulted in better administration of the Government's work program, has been one of the chief contributions by the Congress in the war of controls over administrative practices.

Telegram to the Members of the Foreign Affairs Committee of the United States Senate

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. O'KONSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram from Joseph S. Kaszubowski, president, and Rev. A. A. Skoniecki, executive secretary, Coordinating Committee of American Polish Associations in the East:

After 5 years of indomitable struggle on our side as the first nation to fight Hitler, the Yalta agreements deprived Poland of 47 percent of her pre-war territory, one-third of her population, and 85 percent of her oil and natural gas. These sacrifices were imposed on the Polish people and the Polish Government without their consultation or consent.

Eleven million Polish citizens, most of them Catholics, were transferred to the jurisdiction of a totalitarian power without opportunity to vote on their own fate, in direct violation of the Atlantic Charter to which the honor of all the United Nations has been pledged.

As so-called compensation for these sacrifices and injustices Poland was offered the doubtful assets of hostile territory which may sow the seeds of future war; and the Polish people were promised their total freedom in what remains of Poland.

We charge that even that promise is not being kept.

The Polish Government in London has been informed through the Polish underground, whose reports of Nazi atrocities were tragically confirmed, that persecution is continuing in Poland under Russian occupation, even since the Yalta Conference. Some of these revelations were published in the New York Times of February 21. Others have been revealed since and their authenticity has been verified in the British Government.

On February 21 the Polish underground reported that deportations to Russia continue on a vast scale; that five permanent and several temporary concentration camps were opened by Russia for members of the home army and underground movement because there was no room in prison for all those arrested; that by October 10, 21,000 Poles had been arrested in the Lublin area alone.

These charges were confirmed by the British Government on February 20 when the Under Secretary of the Foreign Office, G. H. Hall, said in the House of Commons: "The British Government attaches great importance to the freeing by the Soviet Union of all members of the Polish underground and Army who fought against the Germans."

On March 1 the Polish Government announced that the wife of Premier Tomasz Arciszewski had been arrested by the N. K. V. D., Russian political police, on February 20, long after the Yalta Conference. She was working as an officer of the Polish Red Cross, and other Red Cross officers were arrested with her.

On March 7 Anthony Eden confirmed the truth of this charge in the House of Commons, reporting that Russia had promised to free Madam Arciszewski under pressure from the British Government, but saying nothing of the others arrested. Eden further confirmed the terrible conditions by calling on the Lublin Government to end persecution in Poland.

These facts are a challenge to the defense of the Yalta agreements by Mr. Churchill and by the President in his speech to Congress. They are a challenge to the American Congress because of the promises we have made to Poland.

The systematic war of extermination against the Polish underground, against all who led the Polish people in their 5 years' death struggle with Hitler goes on under a new guise. Hitler sought to destroy the Polish nation by killing all its educated democratic leaders because only a leaderless people can be enslaved. The Communist totalitarians now carry on where the Nazis left off.

As long as there is not even elementary personal security in Poland it is a mockery for the President and Mr. Churchill to speak of free elections. No one can dare speak of a free election if the heroes of the underground are treated as criminals; if there is no freedom of the press or assembly; if Russia, a totalitarian power, occupies Poland alone; if the 200,000 soldiers of the Polish Army who fought for our side on most of the bloodiest battlefields of this war are not allowed to vote; and if the millions of Poles deported to Germany or Russia are not returned.

A free election demands more than a secret ballot. It demands freedom to campaign, to organize parties, to nominate candidates, and to do all this without fear of reprisals. Above all, it demands freedom from fear. But none of these freedoms exist in Poland today.

At Yalta the American Government assumed coresponsibility for conditions in Poland; therefore we, too, are responsible for every violation of civil liberty and human rights which occurs in Poland today. We have made promises to the Polish people without securing the power to carry them out. It is the duty of the Congress to demand either that we are given that power or that we repudiate our responsibility before the world for what is done in Poland, partly in our name.

Unless American officials, social workers, and newspapermen can go to Poland now in sufficient numbers and with sufficient freedom to supervise conditions in the whole of Poland, our promises cannot be kept. We therefore call on the Senate Foreign Relations Committee to fulfill its responsibility by calling a hearing on the situation in Poland. We request the right to appear before such a hearing where we will supply evidence to support every one of the statements in this telegram to help the committee in its decisions.

Veterans Hospital at Saratoga Springs, N. Y.

EXTENSION OF REMARKS

OF

HON. DEAN P. TAYLOR

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1945

Mr. TAYLOR. Mr. Speaker, I take great pleasure in placing the following resolution in the CONGRESSIONAL RECORD:

Resolution 44

Resolved, That the Board of Supervisors of Saratoga County, N. Y., hereby expresses its approval of the proposed erection by the Federal Government of a veterans' hospital at Saratoga Springs, N. Y., and urges its representatives in the Federal Government to take appropriate action to bring about the commencement of this project in the immediate future, and that copies of this resolution be forwarded by the clerk of this board to United States Senators WAGNER and MEAD, and Congressman DEAN TAYLOR.

STATE OF NEW YORK,
County of Saratoga, ss:

I, George I. Yost, clerk of the Board of Supervisors of Saratoga County, do hereby certify that the foregoing is a true copy, and the whole thereof, of a resolution duly adopted by the board of supervisors of said county, on the 12th day of March 1945.

In witness whereof, I have hereunto subscribed my name and affixed hereto the official seal of said board of supervisors, this 13th day of March 1945.

GEORGE I. YOST,
Clerk, Board of Supervisors, Saratoga County.

This action on the part of the Board of Supervisors of Saratoga County, N. Y., in memorializing the representatives of the Federal Government to take appropriate and immediate action for the erection of a veterans' facility is indicative of the spirit that has followed the demand for a Federal hospital in Saratoga by the chamber of commerce, religious, civic, political, and social organizations, the Saratogian, and many individuals in the community.

As the Representative in Congress from the district embracing the County of Saratoga, I shall, in deference to the wishes of the community, continue my efforts toward the erection of a veterans' facility at Saratoga Springs.

The Pending Mexican Treaty Should Not Be Ratified Without Reservations

EXTENSION OF REMARKS

OF

HON. CLARENCE F. LEA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. LEA. Mr. Speaker, at a time when such friendly and cooperative disposition exists between the United States and our neighbor of the South, it is unfortunate that the proposed Mexican treaty now pending in the Senate should have some unwarranted provisions which violate good governmental practice.

In my judgment this treaty should not be ratified as it stands. It should be adopted with reservations to correct these undesirable provisions, or referred for further negotiation to provide for their elimination. These provisions could be eliminated from the treaty without impairing the just rights of either of the two nations..

There are two fundamental objectionable phases of the treaty to which I call attention.

TREATY VIOLATES PRIOR OBLIGATIONS OF GOVERNMENT

The first is that the treaty, in violation of rights heretofore established in favor of the water users of the Colorado River project, transfers water rights and confers ownership in water and reservoirs

which now belong solely to the United States and its citizens.

The Colorado River project was established by law by a compact between the watershed States, approved by Congress, and by contracts with the Federal Government. It provides for the long-time allotment and use of the water of the Colorado River; and that all the waters impounded in Boulder Dam should be for exclusive use within the United States. The rights of the basin States to the use of that water are protected for the future with a clear recognition that the immediate consumptive use of the waters of the river was impossible and that the rights should be reserved and available for an orderly future development.

By the Colorado River compact, definite assurance was given to the upper and lower basins of proportional allotments for all time to come. The delivery of 7,500,000 acre-feet per year, on a basis of the average annual delivery of that quantity over 10-year periods, was assured the lower basin.

On the assurance of these provisions, water users in the lower basin entered into contracts with the United States in advance of any construction by the Government by which the repayment of the costs to the Government were assured.

On the faith of these assurances, the people of the lower basin obligated themselves to pay for waterworks and supply facilities, to transport such water to the places of use, to the extent of over $500,000,000 up to this time.

The treaty now comes into the situation and proposes to guarantee Mexico 1,500,000 acre-feet per year. This amount is specifically guaranteed, notwithstanding prior committal to the lower basin, and is not based upon a 10-year average but requires this delivery every year.

In other words, notwithstanding the committal of the Government to the lower basin, the treaty comes along and gives a prior right out of those waters to Mexico.

The flow of the Colorado River greatly varies from year to year; sometimes an extreme deficiency of water covers several years. The object of the Boulder Canyon project and of the contemplated future developments on the Colorado River is to provide a storage that will reach over these years of deficient supply. The 10-year average provision is intended to assure, so far as is possible, this stabilized supply for use in the lower basin.

The provision to satisfy the annual demands of Mexico on a priority basis each year impairs the ability of the Government to keep its promises to the lower basin.

Prior to Boulder Dam, Mexico had applied to beneficial use not exceeding 750,000 acre-feet of water per year. This right was greatly impaired for the lack of any storage reservoirs and a great deficiency of the stream flow in some years.

It may be conceded that Mexico might properly expect a supply of water equal to her established uses from the normal flow of the river before Boulder Dam was constructed. If it be conceded that she should be given enlarged rights to use the waters of the Colorado, nevertheless provisions for such additional supply should be consistent with the obligations heretofore assumed by our Government to the people of our own country.

It violates good morals and good governmental practice for the Government to make a contract for the delivery of water to its citizens, and after they have acted upon that assumption by incurring obligations exceeding $500,000,000, to come along and give prior rights in the same waters to other users, either of our own or of Mexico. This subordinates the rights of existing users to these newly granted rights and thus impairs the ability of the Government to perform its obligation to existing users.

Under these circumstances, any provision for additional waters for Mexico should be consistent with prior engagements of our Government with American users. The water should be supplied to Mexico only out of quantities available after prior obligations to American users are fulfilled.

Water is the very life blood of our Colorado River Basin areas. Their development is limited by the ultimate water supply. Even under this vital importance of water, we might properly share with Mexico waters, if any, which time may prove available in excess of those now obligated.

EXTREME GRANT OF POWER TO COMMISSION

The second fundamental objection to the treaty, as I see it, is the extreme extent to which it goes in apparent abrogation of the ordinary functions of Congress and its normal control over administrative agencies. Powers are conferred upon a single Commissioner, subject only to the approval of the Secretary of State, to incur obligations against the Federal Government, acquire title to land; to construct, control and operate water, flood control, storage and hydroelectric projects, and confer on other nations joint ownership therein.

Apparently the only restraint provided against the abuse of these powers is the necessity of appropriations by Congress to carry out agreements made by the Commissioner. Such a remedy, however, cannot be applied without congressional repudiation of the solemn treaty obligations here proposed.

The Commission is, subject to the approval of the Secretary of State, authorized to settle all disputes that may arise between the two nations and to interpret any provisions of the treaty which may be called in question, and this without any specific authority or approval of Congress and without the protective power that lies in a review of its decisions by the courts.

In practical effect, the ratification of this treaty as it stands would give this Commissioner in the name of our Government, and subject only to the approval of the Secretary of State, an irrevocable power of attorney to transfer title to properties of the United States, to construct and operate reservoirs, power-generating facilities, and to engage in the sale and distribution of water and power. The treaty is to be changed, modified, or terminated only by consent of both parties.

The authority to create such obligations against the United States now rests in Congress and its agencies that are specifically prepared to deal with such problems. The Office of the Secretary of State neither by its functions nor experience has any special qualifications for the design or execution of the work assigned to it by this treaty.

I shall not attempt to cite the numerous provisions of the treaty which I believe justify the criticism I have just expressed. These citations are readily available in the hearings before the Senate Foreign Relations Committee and presentations made in opposition to this treaty.

ATTITUDE OF CALIFORNIA DELEGATION

As chairman of the California delegation, I presented at the Senate hearings a statement, signed by all the 23 members of the California delegation of the House opposing the ratification of the treaty as it stands. According to my way of thinking, these objectionable features are not necessary to accomplish the essential purposes of the treaty. Give Mexico such proper share of the water of the Colorado as may be warranted and give to the Commission such authority as is necessary to accomplish these purposes without granting to a single Commissioner, subject only to the approval of the Secretary of State, what I regard as a wholly unwarranted investment of power.

Our delegation has an utmost friendly feeling for our good neighbor Republic. We desire to concur in any proper arrangement that can be made for the benefit of Mexico without doing an injustice to our own country.

We regard it as extremely unfortunate if this treaty should be approved as it is now written. We deplore the necessity of appearing in opposition to provisions which we feel are so out of harmony with good governmental practice in the disposal of American rights and in the broad undefined irresponsible grant of power the treaty would confer upon a single commissioner. We would like to see the matter so handled that these unwarranted provision may be removed from the treaty either by negotiation or by reservations, and that the meritorious features of this treaty may be thus accomplished.

We feel it would be unfortunate that this controversy should be considered in advance of the meeting of the Allied Nations in San Francisco. The merits of this treaty should be considered without extraneous influences that tend to obscure its objectionable features. These objectionable provisions are so violative of good governmental practice that it is very unfortunate they should be embodied in a treaty, the general purposes of which are commendable. We sincerely hope that the treaty may be referred for further negotiation to eliminate these objectionable features or that suitable protection be secured by reservations.

Military Training of Teen-Age Draftees

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. CARLSON. Mr. Speaker, it was not the intention of Congress that teen-age boys should be sent to the battlefront without at least 1 year of training. The War Department cannot relieve themselves of this responsibility by stating that 12 months' training is not required by law. Those of us who remember the discussion on the drafting of teen-age boys well remember there was an implied understanding from the War Department that these boys would be given at least 1 year's training. Every mail brings in letters which are positive proof that the War Department has failed to give consideration to congressional intent. None of the writers of these letters are objecting to the drafting of the 18-year-old boys but they are insisting that they be given a training period of at least 1 year before they are sent overseas. Many of these same parents have older sons who are serving in the Army in some menial capacity and they object strenuously and rightfully so to having their 18-year-old boys sent to the battlefront within 3 months after induction.

Typical of the letters I have received are quotations from the following:

From Thomas County, Kans., a mother writes, referring to Senator TAFT's recent statement in this regard, and she says:

Thank God that someone has had the courage to raise their voice in behalf of the teen-age boys who have been rushed to the battle front. I do not have a son in that group, but I have talked to many boys home on short leave at Christmas time who had been given their basic, flown home on 5-day furloughs, and then to Camp Meade to be sent overseas.

From Russell County, Kans., a mother writes as follows:

I am writing you to protest something that I think is very unfair. My son is a private in the United States Infantry. He is just 18 years old, was drafted into the Army from Russell, and has been given 3½ months of infantry training, and now has to report to Fort Meade, Md., the 26th of this month for overseas. I do not like it. I think it is unfair and undemocratic. The Army has men in uniform lying around Russell and many other camps throughout the United States who have had 1, 2, and more years of training, who are 24 or 25 years and older, and yet our Government is very eager and anxious to take our boys of 18 years, and every one of them I know has to go right over, and I am pretty sure they have to go right into the front lines and fight and die.

From Rawlins County, Kans., I received a petition signed by over 40 citizens of that community. It reads as follows:

MARCH 12, 1945.

To the Honorable FRANK CARLSON,
Member of Congress, Washington, D. C.:

We, the undersigned citizens of Rawlins County, Kans., respectfully ask you to give this petition your honest and diligent study and consideration.

Our understanding of the draft law pertaining to the drafting of boys when they attain the age of 18 years, is that these 18-year-old boys would not be assigned to shipment overseas nor put into combat duty until they either had 12 months of training, or had attained the age of 19 years. It has come to our attention that some boys inducted at the age of 18 have been sent overseas within 3 months after induction. As far as we know, this is not according to the wishes of Congress nor is it embodied in the law pertaining to this subject.

We are of the opinion that boys at the age of 18 are not properly fitted nor matured to be put into combat duty with 3- to 6-months training. On the contrary, we believe that boys of 18 must have at least 12 months training and have attained the age of 19 in order to put them into the proper condition for combat duty, and that anything less than 12 months training or a maturity of 19 leaves them under par for combat and for self-defense. Thus the casualties to our boys would materially increase and the death losses to our boys would be enlarged.

Now we, the undersigned, earnestly petition you to use your best efforts in your office as representatives of the undersigned citizens, to see that our boys get a square deal in this matter. Our casualties are high enough among our best trained and matured troops, and it would seem that we at home should try and protect the boys all we could in this war.

Respectfully submitted by:

(SIGNATURES OMITTED.)

Resolution Adopted by the Order Sons of Italy in America, New York, N. Y., February 8, 1945

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

At this moment when Your Excellency, the President of our country, is meeting with, or about to meet with, the heads of the Governments of Great Britain and Russia in what promises to be the most momentous conference concerning the future well-being of the world in all history, we would respectfully call attention to the indescribable sufferings and hardships now being endured by the unfortunate people of Italy.

While it is true that an armistice was signed in September 1943 between the Kingdom of Italy and the governments of the United Nations whereby military action was suspended and a state of peace declared, that fact is that suffering, privation, hunger, and disease are more acute now than when open warfare was being waged in the so-called liberated regions, and this despite the repeated promises of economic readjustment and relief and the implied protection of the lofty aims of the Atlantic Charter.

It should be observed that the people of Italy are entitled to humane consideration, if for no other reason than the fact that having been the first to lose their liberties through the terrorism of their Nazi-Fascist oppressors, they were the first of all enslaved peoples to overthrow their oppressors and join hands militarily with the United Nations to expel the foe from their country. In this unequal struggle thousands have died, many of whom fought with their bare hands because arms were not procurable. These Italian patriots have fought the foe fearlessly on the field, underground, and in the air in every possible way since the armistice to bring victory to the allied cause. Resistance groups have been organized in the very midst of the enemy and await the signal for uprising when the time is ripe.

In this period since the armistice the plight of the Italian people has grown progressively worse politically as well as economically. Living conditions have reached the bare subsistence level in some regions while in other regions actual starvation is general. Disease among the old and the very young is decimating the cities and it will not be long before disintegration as a nation becomes a fact.

While we do not wish to criticize the policy of our Department of State with reference to the rehabilitation of Italy on the political side, it is a sad fact that the terms imposed by the armistice agreement are most harsh and severe. And when it is considered that the execution of the treaty terms have been left primarily to one major ally out of sympathy with the plight of the Italian people, an ally that steadfastly refuses to distinguish between the Italian people and their Fascist oppressors, contrary to every notion of human clemency and Christian forbearance, it becomes apparent that the situation will not change for the better save for a complete change in the system of control. Unless a change is made, revolution is inevitable. It is not an exaggeration to add that this revolution cannot long be delayed if we read between the lines of a statement issued by a former distinguished Under Secretary of State, who says:

"If the recent policy of studied insult, and of flagrant administrative inefficiency and neglect, pursued in varying degrees by the major powers, is persisted in, Italy will be plunged into a long protracted period of hopeless anarchy."

Long before and ever since the outbreak of hostilities, our organization has been solicitous of the welfare of the Italian people in the trying situation they found themselves, knowing well that they are a liberty-loving people who did not want war and were forced into it by a ruthless totalitarian government which enslaved, terrorized, and imprisoned them. They are paying a terrible price in suffering and destruction for the sins of a government which they were powerless to overthrow until the invasion by our American forces supplied the help and the means necessary.

We have made repeated pleas to the authorities in Washington to take heed to the terrible shortage of food in Italy and pointed out how vitally necessary it was to supply this lack to the starving masses if democracy is to be revived and the nation started on its way to rehabilitation. As late as last November, our supreme head, Judge Felix Forte, made representations as to the dire necessity for food in a personal interview with Your Excellency at the White House, in the course of which interview he requested aid in obtaining a vessel to be sent to Italy which our organization would stock with food and medical supplies. Your Excellency considered the matter and on November 3, 1944, replied to Judge Forte saying, among other things:

"I have been giving consideration to the question of whether a special appeal might be made for a million dollars to finance a relief ship to Italy. On the whole, I think it would probably be unwise in view of the fact that private funds are now available to provide all the relief supplies that our shipping will permit to be sent.

"You will be interested to know that I have arranged with the Allied Control Commission to increase the food allotment to

300 grams a day for all the people in those parts of Italy which we control, and we are also going to get some trucks in there so that it can be distributed properly."

At this late day—although months have passed since Your Excellency's directive raising the food ration was made—the sad fact is that the increase ordered has not been put into effect. We are informed by revelations in the press, confirmed by responsible officials, that the failure was due to British opposition. As this opposition appears to be a matter of policy on the part of those who raise it, and will, in all likelihood, continue undiminished and take different forms, to the further harassment of the people of Italy, it behooves us as the largest organization of American citizens of Italian origin in the Nation, and because it is the right and moral duty of every citizen of the United States, irrespective of his origin or racial stock, to ask consideration for the people of any friendly nation on the grounds of humanity and justice—it behooves us, we respectfully repeat, to request Your Excellency to make proper representations at the ensuing conference of the three major powers now about to take place concerning the critical situation of the Italian people and the government they are trying to establish: Therefore be it

Resolved, That Your Excellency be and is hereby respectfully petitioned to make known to the conference aforesaid—

1. That the arrangement now in effect in Italy and other areas permitting unilateral action without previous consultation and consent of the other powers involved in the matter of the supply, shipment, and distribution of food and other relief, be discontinued.

2. As a step in the relief of the food shortage in Italy, the powers involved permit the allocation of vessels formerly constituting the Italian Navy to be used as food transports, following the example just recently set by the War Shipping Administration which has turned back to the French some French ships recently used by it.

3. That the status of Italy be changed from that of a cobelligerent to that of a full ally and, thereupon, Italy be made eligible for lend-lease aid, to the end that the present economic distress may be relieved by the resumption of industry and production made possible through said aid in order to help Italy help herself.

4. That regardless of previous political ideologies held, or thought to have been held, by the people of Italy, the stark truth is that starvation, hunger, and disease are now prevalent throughout the country, that money is worthless, and civilian morale has fallen so low as to bring the country to the verge of social revolution. In this posture of affairs it would be un-Christian and inhuman because of past errors to withhold food, using it as a lever of punishment, or discrimination, or to force the choice of a government or its personnel to the liking of any particular power now concerned.

5. That the terms of the Atlantic Charter be applied for the benefit of the people of Italy, particularly the following:

(a) That sovereign rights and self-government be restored to those who have been forcibly deprived of them.

(b) The right to choose the form of government under which they live.

(c) That there be no aggrandizement, territorial or otherwise.

(d) That there be no territorial changes, which do not accord with the freely expressed wishes of the people concerned; and be it further

Resolved, That a copy of this resolution be spread upon the minutes and forwarded to His Excellency the President of the United States.

For the Committee to Promote World Peace, Supreme Lodge, Order Sons of Italy in America:

FRANK J. V. GIMINO,
Chairman.
SALVATORE LO PRESTI.
FRANK PALLERIA.
Judge EUGENE V. ALESSANDRONI.
Judge FRANCIS GIACCONE.

Control of Water Pollution

EXTENSION OF REMARKS
OF
HON. BARTEL J. JONKMAN
OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. JONKMAN. Mr. Speaker, legislation for the control of water pollution has repeatedly in the past Congresses, and in the present one, been introduced. It is my understanding that 9 years have elapsed since the original legislation was introduced in the Congress, and to date, even in the face of dire necessity for the control of water pollution, final enactment thereof has not been had.

In the present Congress companion bills H. R. 519, by Representative MUNDT, and S. 535 by Senator MYERS, have been introduced. The urgent necessity of the enactment of such legislation has become acutely recognized, particularly at this time when post-war plans and programs are being proposed and advocated.

The Izaak Walton League of America, in an article published in the issue of February 1945 of State Government, stresses the importance of pollution control as a post-war public works opportunity for the States. I quote some brief extracts therefrom, as follows:

The criterion for approval should be broad public benefits on the long-time basis, rather than mere temporary financial advantage to a particular locality; and the restoration of natural resources impaired or destroyed by mistakes of the past rather than a new construction program which may further damage our natural resource base. Water pollution is a national problem that has defied the efforts of State and local enforcement agencies these many years. Congress has wrestled with the problem for 8 years without specific accomplishment. What more logical public works programs could be found for the benefit of all the people of the United States than a frontal attack on water pollution as a number one post-war public works project?

* * * * *

While offending municipalities were putting in sewage treatment plants, with State or Federal aid, others which had previously done so could select other public works.

* * * * *

It would provide employment where employment will be most needed because the degree of water pollution is in close ratio to the density of population.

Federal control of pollution has been an important factor in the opposition which prevented passage in the past of legislation proposing Federal control, as well as the continued opposition of industrial polluters to any positive control thereof.

These forms of opposition must be recognized, and as the aforementioned article of the Izaak Walton League, adds:

It logically follows that control of pollution should be uniform and Nation-wide, thereby putting all industries on a common basis and causing the argument of competitive disadvantage to evaporate into thin air.

The pending legislation referred to has the endorsement of the Izaak Walton League of America, as emphasized by its statement that it favors national legislation to control pollution on a uniform basis throughout the Nation, with a distinct provision that the State governments and any interstate compact that may be formed, will be given full opportunity to take the needed action for correction before the Federal authority is invoked. We believe such legislation would be a powerful aid to the States that want to do the job, and we believe it is essential to bring the recalcitrants into line—and there will always be recalcitrants in anything of this nature.

The League sets forth most timely that this problem of water pollution is a vital and immediate problem which is ideally suited for post-war work; it should be a challenge to the States to prove that State governments can and will function in this field. The problem is squarely in the lap of the States. If they tackle it immediately and aggressively there will be no need of Federal control. If they fail, that failure will invite Federal control.

In closing, attention is drawn to section 5 of the Mundt and Myers bills, as follows:

SEC. 5. It is hereby declared to be the policy of Congress in the administration of this act to encourage State and inter-State compact agencies to exercise their statutory authority in prevention and abatement of pollution, and that action by the Federal board will be taken only after such existing authorities have been given an opportunity to act, and 6 months after written notice by the Board have failed to do so.

The members of the Izaak Walton League in the district I represent are strongly and unanimously in favor of the pending legislation, and I trust it will be made the subject of prompt hearings by the committees of Congress having jurisdiction, receive their favorable reports, and be enacted into law at the earliest possible time.

Relation of the District of Columbia to the National Government

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, March 21 (legislative day of Friday, March 16), 1945

Mr. CAPPER. Mr. President, two recent editorials in the Washington Evening Star are of special interest and deserve careful reading by Members of the

Senate and House of Representatives. They are both excellent and informative discussions of subjects of timely interest regarding the District of Columbia and its relation to the National Government.

The first of these editorials appeared on May 16 under the title "The Fundamental Remedy," and treated of the voteless and unrepresented plight of the people of the District of Columbia and supported, as a solution of this problem of fair government, the pending proposed amendment to the Constitution, which provides that "there shall be in the Congress and among the electors of President and Vice President members elected by the people of the District constituting the seat of the Government of the United States, in such numbers and with such powers as the Congress shall determine"—Senate Joint Resolution 9 and House Joint Resolution 62.

The editorial also emphasizes the value both to the Congress and to these, now unrepresented, fellow citizens of such grant of the franchise and representation.

The second editorial, under the heading "Not Onerous—If Tried," appeared under date of March 20 and discusses the alleged onerous burden on Members of the Congress acting as members of a local legislative body for the National Capital community. This is pertinent to testimony before the congressional joint committee now engaged in the task of endeavoring to formulate a modified plan for congressional procedure which will eliminate some of the cumbersome methods and increase greatly the efficiency and thoroughness of our National Legislature.

The irony of the situation lies in the fact that the Members of the Congress who most loudly complain of the onerous burden of performing their legislative duties for the District of Columbia, as required by the Constitution, are usually among those who have habitually avoided assuming such burden.

For the information of the Senate I ask that the two editorials be inserted in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

THE FUNDAMENTAL REMEDY

A more efficient discharge by Congress of its constitutionally derived, exclusive legislative control over the District of Columbia would undoubtedly accompany voting representation of Washingtonians in Congress and the electoral college.

It is gratifying that this fact—for it is undoubtedly a fact—was discussed with manifest approval at the meeting yesterday of the joint committee on reorganizing Congress. Representative SUMNERS of Texas, the respected chairman of the House Judiciary Committee, and a veteran in Congress, expressed the same thought recently in his argument for the Sumners-Capper resolution.

In explaining the resolution Mr. SUMNERS pointed out that it "gives to the Congress, which has the constitutional responsibility for providing the government for the District, an opportunity to use the additional facility which this resolution, if adopted, would provide. * * * It would be a valuable aid to the Congress in the discharge of that responsibility. It would make it possible for the Congress in its judgment to have the people of the District send up to the Congress, to become a part of the Congress, their selected Representatives to be spokesmen for the people of the District in the council that is to determine their government. * * * That is the proposition from the Congress' standpoint. When some proposition comes up affecting the people of the District of Columbia, I would like to have somebody here who is a part of the District of Columbia, who represents the people, who is a spokesman for the people of the District. I would like to have him handy—handy all the time to consult with about these things."

Members of Congress are finding it increasingly difficult to meet the complex problems of a municipality as large as Washington and at the same time to discharge their obligations to their own voting constituents. The present system is admittedly cumbersome and, as Senator LA FOLLETTE pointed out yesterday, at times borders on the ridiculous in the necessarily detailed consideration by Congress of essentially trivial local matters.

Some improvement undoubtedly would follow a more specific delegation of authority to the Commissioners, and Chairman RANDOLPH, of the House District Committee, is sound in his suggestion of a joint committee on the District of Columbia. But the paramount objective is voting representation for the Washingtonian in his government, which is the National Government. From that would follow, in the natural course of events, the remedy for most of the things that are wrong in the relationship between Congress and the Washington community. For that is fundamental to all improvement.

[From the Evening Star of March 20, 1945]

NOT ONEROUS—IF TRIED

Some Members of Congress undoubtedly feel that service on the District Committees is onerous and, feeling as they do, avoid it. Yet few of those who complain about the burden of local legislation speak from any personal experience of fatigue in its consideration.

Some Members of Congress also look on work with the District Committees as politically hazardous. Representative KEFAUVER, of Tennessee, says that sometimes the voting constituents resent it. Chairman RANDOLPH, of the House District Committee, who really works for the District, says he was embarrassed in the past campaign by an opponent's attempt to make capital of his alleged preoccupation with local bills. Yet, Mr. RANDOLPH was reelected. Members of Congress who have made themselves annoyingly conspicuous in local matters have been defeated at home. But the Star knows of no defeat attributed to really constructive work for Washington by such men as Mr. RANDOLPH.

The fact is that the men in Congress who have accomplished most for the welfare and development of the American Capital have looked on their labors in local affairs as an opportunity for national service rather than as a politically dangerous or onerous burden. They have taken seriously the constitutional provision which places control over the seat of Government exclusively with Congress. The people of the United States are proud of their Capital and are indebted to the Members who have played a part in its improvement. They are pleased rather than resentful.

There should be practical methods of avoiding congressional concern with trivial District legislation which could as well be the subject of local regulations, issued by the Commissioners under grants of authority in such matters. The Hébert bill, approved in the last Congress, continued a progressive movement in that direction begun several years ago. A joint committee on the District of Columbia, as suggested by Mr. RANDOLPH, has many things to commend it as was shown by former Senator King, long a Senate District Committee chairman, in joint consideration by the two legislative committees of the District's liquor law. Greater prestige should attach to service on District committees, a matter to which the leadership in both Houses could appropriately give some attention.

But it is to be doubted that Congress will ever delegate much of its exclusive legislative control over the District or share it in any mutually satisfactory manner with a local government. For despite the occasional suggestions to the contrary, Congress is jealous of its control over the District. The additional power that Congress needs is the power to admit the people of the District to voting representation in their Government; to create, here in Washington, a voting constituency whose representatives in Congress will receive the respect accorded their peers.

Unrepresented, politically impotent people may expect the contemptuous indifference of their rulers, some of whom will always look upon them as the recipients of royal favor which it may be necessary, if onerous, occasionally to bestow.

The Secretary of State

EXTENSION OF REMARKS

OF

HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 21 (legislative day of Friday, March 16), 1945

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Stettinius Called Brave or Innocent," by David Lawrence, and recently published in the Washington Star.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STETTINIUS CALLED BRAVE OR INNOCENT—WRITER ASKS IF SECRETARY OF STATE KNOWS FACTS OF INTERNATIONAL LIFE

(By David Lawrence)

Secretary of State Stettinius is certainly a courageous man, or perhaps he has the strength of innocence. He has just inquired about published reports of Soviet Russia's unilateral action in setting up the beginnings of a puppet government in Rumania which appears to be a violation of the spirit as well as the letter of the Yalta agreement. Doesn't he now he must not question what was done at Yalta or what Russia does on her own?

The Associated Press declares that "under apparent Russian pressure, the Rumanian Government of Premier Radescu was overthrown and succeeded on March 6 by the administration of Premier Groza of the Communist-controlled National Democratic Front."

Now the Secretary of State, in a formal statement, says:

"We think that some aspects of the political situation require consultation among the three principal Allies and we are discussing the situation with the British and Soviet Governments."

FACTS OF INTERNATIONAL LIFE

Doesn't Mr. Stettinius realize that a great victory for Allied unity was achieved at Yalta and that the important thing is the Allied accord and that any questioning of what

Russia has done is merely furnishing ammunition to Goebbels and Hitler in their effort to create dissension among the Allies?

Or does Mr. Stettinius really know the facts of international life, which are that might makes right and that pledges solemnly promised even as little as a month ago can be disregarded by any of the big powers with impunity? If he persists in asking questions, he may be called a perfectionist or characterized as one of those idealists who believes that international agreements mean what they say.

There is a war on, and to question Russia's motives in seeking to communize the smaller states within her sphere of influence will bring down upon Mr. Stettinius the denunciation of the Communist press in this country and abroad.

And also what does the Associated Press mean by reporting the following piece of news, which so many observers would doubtless wish had been suppressed:

"Foreign Minister Eden publicly told the House of Commons this week what had been commonly talked about by Allied diplomats for many days, that it was the Moscow Government, acting without consultation with the United States and Britain, which ousted the Radescu administration and helped set up the present regime."

Isn't this just another case of unilateral action which, quite recently, President Roosevelt promise the Congress wouldn't happen again, as it did in Greece, Italy, and Poland, and that hereafter such matters in Europe would be handled by joint action of all three Allied Governments? The creation of the puppet government at Lublin was glossed over by the President and Prime Minister Churchill, and, to be consistent, Mr. Stettinius should really ignore what has happened in Rumania.

For several days official Washington has been buzzing with stories about the violation by Russia of the Yalta agreement, but American officials did not permit any confirmation. The President in his press conference this week waved aside questions about it and directed inquirers to the State Department.

ASSOCIATED PRESS PULLED CURTAIN

The Associated Press, however, has pulled the curtain, as the following quotation from its Washington dispatch reveals:

"The Crimea Conference ended February 11. About that time there was increasing criticism in the Soviet press of the Radescu administration. It was blamed for failing to eliminate Nazi-Fascist elements and for inability to maintain order. Those criticisms were generally rejected here. Washington considered the Radescu government bumbling but about the best that could be done in the circumstances.

"On February 27 the Russian Vice Commissar of Foreign Affairs, Vishinsky, arrived in Bucharest. He had an immediate audience with King Mihai.

"On February 28 Radescu was dismissed * * * the leaders of the two largest parties refused to join the Groza administration on the ground that they would not submit to minority control."

Doesn't Secretary Stettinius know that this is the modern or practical way to ascertain the "freely expressed wishes of the people" as provided in the Atlantic Charter?

The thing for Mr. Stettinius to have done was not to write notes to Russia about it but to wait till the next meeting of the Big Three, when the matter could be regarded as an accomplished fact and when announcement could be made of the appointment of another joint commission to deal with liberated areas—as was done at Teheran in 1943 and at Yalta last month—after which a chorus of approval and praise for the great Allied unity achieved would be forthcoming. That is the pattern for appeasement which has been set for this war period anyway.

Capitol Stuff

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1945

Mr. WOODRUFF of Michigan. Mr. Speaker, under unanimous consent to extend my remarks, I include the following article by John O'Donnell from the Washington Times-Herald:

CAPITOL STUFF

(By John O'Donnell)

If the citizens of the Republic wish to get a rough idea of what their rulers have in mind in the way of global propaganda for New Deal ideas, control of information, and news on a world-wide scale, we suggest that they pay very close attention to what is now taking shape in testimony offered to the Senate Interstate Commerce Committee.

Under discussion, sponsored by the administration, is a proposal that is astounding in its boldness and scope.

No trivial censorship of news here, or two-bit discrimination against papers disliked by the White House. Or a casual outburst of blah by Government press agents and fobbed off as honest reporting. Nothing as petty as that. This is the real thing.

It's a plan for Government control in the coming brave new world of international communications through which must pass all messages—every reporter's dispatch written to tell the American people what's going on abroad and, just as importantly, every dispatch designed to inform the rest of the world how we're doing here and what we're thinking.

The proposal is to take all the existing means of telecommunication—cable, radio, telephone, telegraph, telephoto, facsimile, all long-distance communications by electrical means—put them into one big monopoly and then give officials of the administration the right to have the final say or veto power on how things will be run.

It means that such great communication companies as International Telephone and Telegraph, R. C. A. Communications, Western Union, Press Wireless, etc., merge under Government supervision into one big outfit. And that after the merger the decision regarding facilities for transmission of news stories, or radio news broadcasts, or news pictures, will, in the final analysis, rest on the decisions of five appointees of the President—the Secretaries of State, War, Navy, and Commerce, and the Postmaster General.

What is in the back of the mind of the long-range New Deal global planners here in Washington is the creation of one great universal one-world belt of electrical transmission of knowledge by which the peoples of the world will get mental nourishment and entertainment; what the political propaganda engineers controlling the switch decide is best.

The proposal now before the Senate committee is the first step.

It could control international broadcasts and frequencies so far as the No. 1 nation of the world is concerned under a system which will take a lot of word twisting to make out anything except Government ownership and White House control.

Just how much strength the proposal will develop is uncertain at this date. Certainly the White House is behind it with all pressure, and some of the great corporations—R. C. A. and International Tel and Tel—are going along with the proposal.

Significantly, the service engineers who are aiding the Army and Navy spokesmen in these opening rounds were in private life important individuals in the communications corporations.

Secretary of the Navy Forrestal surprised some of the questioning Senators—Montana's Chairman BURTON WHEELER and Kansas' CLYDE REED—with the far-reaching proposals of the Navy for this post-war set-up.

Forrestal came out flat-footed with the demand in the interests of national defense that the consolidation should "be mandatory," and must not be "total, not partial."

WHEELER asked the important question:

"How would press and radio, devoted exclusively to gathering news, in any way interfere with your over-all Government policy?"

The youthful Navy Secretary stuck to his guns: "You can't separate the segment from the whole."

Now this administration line reverses the New Deal policy back in the piping days of peace. In 1933, during his first months in the White House, F. D. R. appointed a commission to study just this question of Government ownership and operation of communications. F. D. R.'s commission turned down the proposal because of these objections:

1. The danger of political domination and interference.

2. Government red type.

3. The charge that the Government does not conduct its business economically.

4. The conjecture that Government ownership would discourage initiative, technical research, and advancement.

5. The belief that the communication service under Government ownership in foreign countries is inferior to ours under private ownership.

6. The belief that the people do not want Government ownership.

The Basis for the Independence of the Republic of Lithuania

REMARKS

OF

HON. EDWARD A. KELLY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1945

Mr. KELLY of Illinois. Mr. Speaker, on March 23 and 24, 1945, the American Lithuanian Mission meets in Washington to bring the cause of small nations and particularly Lithuania into a clearer perspective before our officials. As a part of this Mission, Members of Congress are being invited to a dinner at the Hotel Statler on March 23, at 7 p. m., where a preview of a short subject film will be shown depicting Lithuania's progress during the period of independence. A group of service mothers, whose sons are serving in Uncle Sam's armed forces, are bringing a petition with hundreds of thousands of signatures addressed to President Roosevelt, requesting that he support the Lithuanian cause for independence.

The success of the above program will lead to a constructive rebuilding of public opinion among the Americans of Lithuanian origin. It is part of our war effort that a permanent peace program have the wholehearted support and confidence of our citizens. We will have such support and confidence of the Americans of Lithuanian descent if our Government

supports the principles of the Atlantic Charter to which it dedicated itself when we entered the present conflict.

The Republic of Lithuania was established on February 16, 1918, as a modern nation under a constitutional government. However, from the earliest times it had developed its own language, similar to the ancient Sanskrit, and its own culture and traditions. Its people are not related to the Slavs, but have been welded together into a distinct nationality through common interests and ideals.

The Atlantic Charter, proclaimed by President Roosevelt and Prime Minister Churchill on August 14, 1941, sets forth as one of the principles for which we are fighting the Axis, the right of small nations to self-determination and independence. The charter states:

Second, they desire to see no territorial changes that do not accord with the freely expressed wishes of the people concerned;

Third, they respect the right of all peoples to choose the form of government under which they will live, and they wish to see sovereign rights and self-government restored to those who have been forcibly deprived of them.

In a speech on September 12, 1943, Secretary of State Cordell Hull reaffirmed these principles in declaring:

All peoples who, with a decent respect for the opinions of mankind, have qualified themselves to assume and to discharge the responsibilities of liberty are entitled to its enjoyment.

Each sovereign nation, large or small, is in law and under law the equal of every other nation.

All nations, large and small, which respect the rights of others, are entitled to freedom from outside interference in their internal affairs.

No people have a stronger claim to the right of self-government and independence than do the 3,000,000 people of Lithuania. This independence was lost for no other reason than its geographical location. It is occupied by other nations during World War No. 2 for the same reason that the countries of Belgium and Czechoslovakia are now occupied.

The Republic of Lithuania has maintained friendly relations with its neighbors. When it asks for independence, it asks only that its national identity, its culture, language, and traditions be preserved.

At the present time, a nonagression treaty is still in effect between the Republic of Lithuania and Soviet Russia, signed on September 28, 1926, and subsequently extended to December 31, 1945.

The nonaggression pact contained the following articles:

Article 2: The Republic of Lithuania and the Union of Soviet Socialist Republics mutually undertake to respect in all circumstances the sovereignty and territorial integrity and inviolability of each other.

Article 3: Each of the two contracting parties undertakes to refrain from any aggressive action whatsoever against the other party.

Article 5: Should a conflict arise, and if impossible to liquidate it in a diplomatic way, both contracting parties agree in such cases to nominate conciliatory commissions.

On October 10, 1939, Lithuania and Russia entered into a mutual assistance pact. Article 7 reads:

The realization of this treaty must not infringe the sovereign rights of the contracting parties, especially the structure of their state, their economic and social systems, military instruments, and altogether the principles on nonintervention of one state in the internal affairs of another state.

Americans of Lithuanian descent are mighty proud to be citizens of the United States. And as Americans they are doing their share in fighting this war. The records of the Treasury Department in Washington will reveal that Americans of Lithuanian descent have purchased in excess of their quota of War bonds and that they are among the first at the head of the list of nationality groups. The fact that many of them have only been Americans for one generation or possibly two gives them a stronger appreciation of the blessings of American citizenship. More so, perhaps, than is the appreciation of many of our fellow citizens whose families have never known another land since the Mayflower established one of its first beachheads on this continent.

It is only natural, though, that they have an affection for the land of their forefathers, just as our fellow Americans are concerned with other lands. Many have a special concern for China or France, for England or Switzerland, Americans of Lithuanian descent have a special concern for Lithuania.

We, Americans, are sending our boys overseas to fight our enemy primarily because we do not want them to have to do this same fighting on our very coast lines or even on our mountain ridges. But we are also in this world conflict to rid the world of Fascist aggressors, and to reestablish freedom and independence in those countries whose innocent peoples have been trampled upon. We had hoped that Lithuania was one of the small nations whose rights and independence would be respected and restored after the war.

But, there are some people who say, despite the pronouncement of the Atlantic Charter, Lithuania should not be given its independence, but, on the contrary, should become one of Russia's 16 spheres of influence. This development, I believe, does not square with the letter or the spirit of the Atlantic Charter, and is a violation of the treaties which have existed and are still in effect between Lithuania and Russia. We believe from our first-hand knowledge that the people of Lithuania do not want a partial autonomy under the influence of any power whatsoever, but rather do they want the reestablishment of an independent Lithuania, the independence Lithuania won 26 years ago, and the independence Lithuania deserves to have and keep in the post-war world.

The State Department has continued to recognize the Lithuanian Minister to the United States. However, there has been no report that Lithuania's future was discussed at any of the Big Three conferences. There was no mention of Lithuania in the Yalta declaration, nor in the President's recent report to Congress. Hence, Americans of Lithuanian descent are deeply concerned about the future of Lithuania's independence.

World Watches Debate on Bretton Woods Bill

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1945

Mr. GAMBLE. Mr. Speaker, under permission granted me by the House on February 23, 1945, to insert in the CONGRESSIONAL RECORD several newspaper articles and editorials, I submit an article by John H. Crider, The World Watches Debate on Bretton Woods Bill, which appeared in the New York Times on February 18, 1945:

WORLD WATCHES DEBATE ON BRETTON WOODS BILL—BANKERS' VIEWS SHARPEN THE FIGHT OVER PROPOSED MONETARY FUND

(By John H. Crider)

WASHINGTON, February 17.—The Bretton Woods agreement, conceived by 44 nations last July in the calm of a New Hampshire plateau under the shadow of the Presidential Range of the White Mountains, started its stormy course through the houses of Congress this week, while all of the other 43 signatory nations watched to see what the United States would do.

The bill embodying the Bretton Woods proposals for an international monetary fund and a bank for reconstruction and development was introduced on Thursday, only a few days after President Roosevelt had urged prompt action in a message in which he said it would be a tragedy if differences of opinion on minor details should lead us to sacrifice the basic agreement achieved on the major problems.

The reference to differences of opinion on minor details was generally regarded in Washington as relating to the objections raised by American bankers to the proposed fund about 2 weeks ago. But what are the monetary and financial measures which provoke so much debate?

The Bretton Woods proposals grew out of about 2 years of prior consultation between the technical experts of the various countries with regard to the fund, and a somewhat shorter period with regard to the bank.

PROBLEMS INVOLVED

To discuss what the proposals are, it is first essential to understand the problems to which they are addressed. The fund is designed to prevent or minimize the possibilities of the temporary shortages of foreign exchange which sometimes cause nations to resort to violent nationalistic and discriminatory monetary practices, such as were common during the turbulent trade conditions of most of the 1930's.

The bank is designed to pool the resources and responsibility of the nations in meeting the valid needs of countries for loans with which to reconstruct war-torn areas, rehabilitate their industries, or promote general improvement in economic conditions.

While both projects are novel in that never before have so many countries of the world joined for action to promote the conditions of healthy international trade and finance, they are in reality merely universal applications of stabilization and banking techniques which have been tried out in more limited areas in the past.

OLD IDEAS APPLIED

The United States' share in the proposed $9,100,000,000 capital of the bank would be $3,175,000,000, of which only a small part

would need to be paid in at the outset. Our share in the voting power would be 31.4 percent.

The bank would be much more conservative in its reserve-to-loan ratios than any commercial bank in the United States, the agreement providing for 100-percent capital, reserve and surplus backing of all loans, guaranties and participations. The bulk of the bank's business would be in guaranteeing private commercial loans, as not more than 20 percent of its capital could be used for loans of its own.

The bank is not only much easier to understand than the fund, it is not even controversial.

In trying to visualize what the monetary fund is all about an American might imagine that each of the 48 States had different kinds of money. He might also imagine how difficult it would be to carry on trade between the States if these currencies were always fluctuating in value.

PARALLEL IN WORLD TRADE

It is exactly that way in trade between the nations when currencies are unstable, but it is even worse when nations engage in the competitive currency practices which were popular during the thirties, when, without notice, countries would alter the value of their currencies in surprise moves to gain temporary advantage.

Above all of its many other features, the one held most important by the fund's proponents is that its general acceptance would assure notice of intention to revalue currencies and, after an opening revaluation of no more than 10 percent, no changes could be made in currency value without approval of the fund.

What is important is the assurance of prior consultation. This would be something new in this world and is generally regarded as one of the most commendable features of the fund.

On the mechanical side, the fund is an international pool of $8,800,000,000 in gold and currencies which would supply central banks of member countries with such foreign currencies as they do not possess, owing to temporary shortages, with which to make possible payments for imports on current trade account.

OUR SHARE IN FUND

The United States' contribution to the fund would be $2,750,000,000. It would have 28 percent of the total voting power, against 26 percent for the British Commonwealth.

The economic policy committee of the American Bankers Association made public a report 2 weeks ago which framed the issue for the coming debate.

The bankers, shy of the fund, which they regard as novel and embodying "lending methods that are unproved and impractical," would scrap this half of the 44-nation agreement. They would retain just the bank, permitting it to perform very limited stabilization functions compared with those proposed for the fund.

The issue, then, is whether the tentative 44-nation proposal for a virtually universal monetary pool to stabilize currencies on a semiautomatic basis should be scrapped in favor of the much more cautious borrower-lender proposal of the American bankers.

The basic argument of the bankers against the fund is that member countries would be entitled to use of the resources as a matter of right and would, therefore, be obtaining loans of currency by right rather than on the basis of sound banking criteria.

POINTS IN ARGUMENT

Much of this argument turns on the points (1) whether the advances are in fact loans, and (2) whether the use of the fund's resources is as unrestricted as the following generalized discussion in section 3 on page 8 of the bankers' report suggests:

"Under the system of quotas in the fund, a member country would be virtually entitled to borrow in certain specified annual amounts from the international pool of resources, provided the purposes of such borrowing were represented by it to accord with the broad purposes of the fund. The borrowing would be subject to certain limitations, but with no stipulation that the loans should be good loans as—once a country has been admitted to full rights of membership—that the loans should be based on prior consideration of the economic condition and prospects of the borrowing countries."

On the other hand, Treasury sponsors of the fund regard the withdrawing of currency from the fund as "purchases," as distinguished from "loans."

One factor in the banker attitude which has attracted attention of officials here is that some of their most prominent spokesmen committed themselves as opposed to the indicated Government approach to the currency stabilization problem even before the Bretton Woods Conference had reached its conclusions. Much of the reasoning of New York bankers originated with Dean John H. Williams, of the Harvard Graduate School of Public Administration, who also is vice chairman of the New York Federal Reserve Bank and one of that institution's most esteemed advisers.

Dean Williams, from the earliest discussion of the international stabilization proposal, has held to the idea that the "key country" approach was the real and most simple solution to the problem—that if the dollar and pound sterling were kept in line, the other currencies would not fluctuate dangerously.

The Administration's objection to this approach, aside from technical considerations, is that the whole post-war international structure is based upon the concept of multilateralism, if not universalism, and that to limit such an important part of the total economic structure as currency stabilization to a few countries would be diametrically opposed to that principle.

European Confederation

EXTENSION OF REMARKS

OF

HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 21 (legislative day of Friday, March 16), 1945

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article on the subject of a European confederation, written by Dorothy Thompson, and recently published in the Washington Star. The article advocates the same kind of a program which I have already proposed for Europe, namely, a confederation of European states.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ON THE RECORD

(By Dorothy Thompson)

Fifteen distinguished Europeans, or Americans of European background, most of them scholars, from 10 European countries, have addressed a declaration and appeal to the President and Congress, asking support for the establishment of an all-European confederation at the end of the war, and setting forth eight points in support and description of such a program.

The idea is not new. It has been advocated for years by the pan-European movement headed by Richard Goudenhove-Kalergi. It has had the support in Britain of eminent publicists, such as Sir Walter Layton. It is believed that Mr. Churchill supports it, and edged toward it in his famous Guild Hall speech, calling for a council of Europe, and a council of Asia, to be established after the war.

As the great power world emerges, the problem of post-war Europe becomes more and more urgent. Will Europe fall into social and political anarchy? Are all the petty and anachronistic sovereignties to be restored? Has not this way demonstrated the essential weakness of all the European States? And has it not also proved that this weakness is a temptation to direct aggression, and to indirect interventionisms, spheres of influence, and all the other power games which led to this dreadful struggle? Is Europe, as a civilization and culture, finished? Is it to be further Balkanized, or will there again in some future, be an attempt to write it under another domination, by force or the threat of force?

These leading questions have so far not received a statesmanlike answer. In fact, reading the various declarations, from Tehran, for instance, or from Yalta, one receives the impression that Europe, that great complex of 350,000,000 people, is henceforth of negligible importance.

Yet the answer to these questions lies in the heart of the German problem. This column has contended—with perhaps boring repetitiveness—that there is no solution to the German problem until the European problem, of which it is a part, is solved. If the European problem is solved, the German problem can be. And only if the European problem is solved can the world count on peace. The authors of the Declaration of European Interdependence know it. They advance the same thesis as that of Albert Guerard, in his new book published by the Stanford University Press, "Europe, Free and United." I hope it gets the attention ,in high places, that it deserves.

The thesis of the declaration is:

1. That the nations of Europe constitute by reasons of geography and history an interdependent region of the world.

2. That nothing short of confederation can secure for Europe lasting peace, speedy recovery, and personal liberty.

3. That a confederation authority should create a confederation armed force to protect all European peoples against aggression and tyranny.

4. That no fourth Reich should ever be established, but when Hitlerism and pan-German imperialism have been overcome the various states of the Reich should enter the confederation.

5. That the confederation should protect all Europeans against racial, social, and religious discrimination and guarantee civil liberties and cultural autonomies.

6. That a social bill of rights should aim at assuring all Europeans "freedom from want."

7. That the confederation should gradually liquidate all inter-European trade barriers and transform Europe into a single market with a common currency and a coordinated transportation system.

8. That within these limits of continental solidarity the European confederation should respect the various democratic constitutions of its member states and guarantee their security and equality.

Sooner or later Europe must emerge free and united, or Europe will be, as the authors of this declaration state, an all but certain source of another war, as well as a breeding ground for tyranny, putsches, and adventurisms of all sorts. Never in modern history has Europe been so fragmented, especially economically, as it has been since the last war. In England especially there is growing dismay lest a broken Europe slowly drag down with it the whole of western civilization.

Above all, the United States, out of her own wonderful experience of the Union of the States, should support a European confederation plan. Victory must be translated into new life, and that means a modern political, social, and economic system.

Rejections From the Armed Forces

REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1945

Mr. REES of Kansas. Mr. Speaker, there has been some discussion on the floor of the House recently with respect to rejections of men inducted into the armed forces in the various States. I am sure the House and the the country will be interested in a sample report I secured from General Hershey, Director of the Selective Service System, covering a period of 6 months from February 1943 to August 1943, including all men examined for the armed forces.

I am glad to report that the physical perfection and health of Kansas' young men is far above the average of those of other States called for physical examination in selective service. Kansas is a close second from the top among the States of the Union with a percentage of 25.4 Oregon being first, having 24.4. The percentage in many States runs more than 50 percent. The average for the country is 39.2. A complete list of the States and the average during the 6 months' period is included herewith.

Your attention is also called to the fact that in World War No. 1 Kansas ranked first in the Nation with respect to physical perfection and health of men inducted into the armed forces. Kansas people have good reason to be proud of this record.

A list of all States and their percentages of rejections during the period mentioned is as follows:

Percent of rejections per 100 registrants

Oregon	24.4
Kansas	25.4
Utah	26.1
Washington	28.2
Wyoming	29.1
Idaho	29.3
Connecticut	31.0
South Dakota	31.1
Nebraska	31.6
Pennsylvania	31.8
Delaware	31.9
Illinois	32.9
Nevada	32.9
New Jersey	33.0
Iowa	33.1
North Dakota	33.8
California	35.6
Minnesota	35.7
Ohio	35.8
Indiana	36.2
Montana	36.5
Missouri	37.2
Rhode Island	37.3
Maryland	37.4
Michigan	37.4
Maine	37.5
Massachusetts	37.7
New York	37.7
West Virginia	37.7
New Hampshire	38.9
Wisconsin	38.9
Arizona	39.0
National average	39.2
New Mexico	40.1
Oklahoma	40.6
Texas	42.9
Colorado	43.1
Tennessee	44.7
Mississippi	45.0
District of Columbia	45.4
Kentucky	45.4
Vermont	45.7
Alabama	49.0
Georgia	51.5
Virginia	52.2
Louisiana	52.6
Florida	53.2
Arkansas	55.9
South Carolina	55.9
North Carolina	56.8

Poland, 1922 to 1939; a Nation Is Built Up

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1945

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Ann Su Cardwell, that appeared in the Detroit News of March 20, 1945:

POLAND, 1922 TO 1939; A NATION IS BUILT UP

(EDITOR'S NOTE.—Ann Su Cardwell, an American student of eastern European affairs, lived in Poland 17 years. She speaks and reads Polish, has traveled over the country from one end to the other, knows Poland's neighbors. For several years she has been contributing to American magazines and newspapers on European questions and is the author of Poland and Russia: The Last Quarter Century, now in its third printing. Miss Cardwell has written a series of articles for the News in which she describes the Poland she saw between World War No. 1 and World War No. 2.)

(By Ann Su Cardwell)

Poland between two wars is a Poland I know. I went there in 1922, just after the Polish-Bolshevik war, and left September 17, 1939—the day the Red armies, after the German invasion of western Poland, invaded and occupied the eastern portion. I can, therefore, begin at the beginning. The story requires a book; here it is limited to a few paragraphs.

In 1919 the three partitioned parts of the Polish commonwealth united after more than a century of separation. Economically the new Poland was backward. The partitioning powers had not been interested in developing Polish agriculture or industry. The German-controlled area had been the most advanced, the Russian the most backward. The large inherited peasant population in former Russian Poland was poor and 70-percent illiterate. One area had lived under German law and administration, another under Austrian, the third under Russian. The same applies to school systems and currency. Imagine the confusion when the Poles threw off the foreign yokes.

War destruction in Poland exceeded that suffered in any other country. The withdrawing occupying powers had stripped factories and land of products and equipment. Some 1,800,000 buildings had been destroyed. Poverty, devastation and dilapidation characterized the Poland I saw in 1922.

Beggars were omnipresent and that winter I saw people who were not beggars barefoot in the snow. My red-cheeked sons were stared at as if they were children from another world—as indeed they were.

Yet with all the terrible price Poland had paid for freedom it got no reparations. On the contrary, certain liabilities were imposed on the new state in the liquidation of the old Austro-Hungarian empire. Germany, the defeated enemy, received huge British and American loans; Poland got very little.

With these brief references to the general situation, discouraging in every aspect, let us see what the Poles, rejoicing in their newfound freedom, accomplished in the 20 years fate allotted them.

The first achievement was unification. Proud of their Polish citizenship, in an amazingly short time the Poles had set up their national administrative, legislative, and judicial machinery. Experts were sent abroad to study educational systems, municipal government, housing, banking—everything. The Poles, laying foundations of national life, were eager to profit from the experience of other peoples.

The rural problem was the first approached. A program was inaugurated and by 1938, 6,560,000 acres of land had been parcelled, by which action 153,600 new homesteads averaging 23 acres had been created and 503,000 dwarf holdings enlarged.

Equally important was consolidation of scattered strips. In former Russian Poland division of land among heirs had resulted in the existence of fields in some instances only a few feet wide. A man might own several of them, widely separated. Obviously consolidation, through exchange, was beneficial to all concerned. A total of 859,000 workable farms had been the result of consolidation by 1938.

UP FROM A BATTLEFIELD

Rural life practically had to start anew, for five-sixths of Poland was not only supplying the home market, but exporting grain, livestock, meat, and dairy products in large quantities. Polish ham was well known in America. Bacon, sausages, and a score of other items were figuring more and more on Polish export lists. Poland, famous for its horses, had state and privately owned stud farms and exported horses to all parts of the world.

Agriculture could not provide occupation and income for the large rural population. Immediate rehabilitation of damaged industries and establishment of new ones was a necessity.

Lodz, under the Germans a great textile center, quickly regained its reputation as the "city of a thousand smokestacks," surpassed its earlier records in supplying the West with fine cottons and the East with exotic goods. Lodz and Bielsk were both noted for their woolens. In other centers plants producing railroad rolling stock, machine tools, farm machinery, and armament arose, and Poland not only supplied her own needs in these respects, but exported. Chemical and drug industries flourished, fertilizer being an extremely important item.

Hemp and flax thrive in Poland and almost every peasant cottage has its loom. How many lengths of homespun linen I have bought from the women who wove it. In

the last years of free Poland factories were entering this field and well I remember the flourishing and fascinating shop the Vilno producers opened in Warsaw. That was just one of thousands of newer and smaller industries over the country.

GERMANS' OUTPUT BETTERED

Everybody has heard about upper Silesian coal. But not all know that when the Germans had to relinquish this area in 1919 to the Poles they jeered at the idea that Poles could operate the coal and ore mines and that the Poles even bettered production and kept it at a high level when coal mining was termed a "contracting industry."

Polish forests had suffered severely during the war, but, thanks to wise reforestation, Polish lumber was a leading export.

Finally there was the great central industrial district project of the later thirties, comprising an area equal to one-fifth of Poland. Here heavy industries were being developed, away from the danger to which those in Upper Silesia were subjected through proximity to Germany. Cheap electric power was drawing all sorts of private industries. This project was destined to raise the level of life both of that depressed area and of the eastern provinces to tie all Poland together economically and at the same time drain off the excess rural population into industry.

Production implied delivery, which in turn necessitated transportation and communication improvement. Highways and streets were resurfaced, and what that means you cannot appreciate unless you have walked or ridden over the "cats' heads," as the Poles called the cobbles of Russian days.

River regulation was begun. Rivers, especially the Vistula, are important in freight transportation. A railroad was built, connecting the coal fields with Gdynia, Poland's one port, which—a fisher hamlet in 1924—in 1938 had the largest turn-over—9,173,438 tons—of all the Baltic ports, while that of Danzig, which had so feared Gdynia's rise, trebled its average during the three most prosperous years under Prussian rule.

SCHOOL SYSTEM SET UP

The Poles had to establish a school system to serve millions demanding education, when every cabinet minister was, with good reason, asking that his field be given priority in the budget.

The army had to be built up and maintained; defense of the state is the first principle when there is an uncertain neighbor on either side. The ministry of social welfare had to have funds; people could not be left to starve until work was found.

Yet gradually classes moved from makeshift quarters into well-equipped modern school buildings, the adopted educational system was put into effect, and by 1939 Poland had one of the most progressive school systems in Europe, with compulsory school laws and 91 percent attendance.

The social program of Poland was far more progressive than the American. Take only the matter of health insurance. Membership was compulsory for all employed whose monthly salary was below 750 zloty (roughly $70). Domestic workers' assessments were paid by the employer. I know, having paid them for 17 years. But when my cook was in a hospital for 6 weeks neither she nor I paid anything.

As for the appearance of the country, the Poland of 1939 was very different from that gray, drab, poverty-stricken land of 1922. Peasant cottages had been repaired and newroofed and thousands of new ones built. Good modern business and apartment houses replaced ancient city structures; attractive residential suburbs appeared. Parks and playgrounds were a feature of every community. Splendid museums, built wing at a time and housing patiently assembled collections, and small regional museums—for every Polish locality has historic associations in which it takes great pride—arose.

LONG-RANGE PLANNING

The Poles made long-term plans, thinking in years and not in weeks, carrying out those plans by stages, as they had the means.

They wanted a beautiful as well as a prosperous Poland. In summer, for example, Warsaw was a mass of flowers. An English house guest with us one year was continually exclaiming over the cleanliness of Warsaw streets, the innumerable window-boxes of blossoms and trailing vines, the perfectly kept parks and flower- and tree-bordered avenues.

Dr. W. J. Rose, who had known Poland at its worst, after a summer tour of the country in 1938 came in exclaiming, "At last we have the Poland we dreamed about!"

Perhaps he was a bit exuberant. There was still much room for improvement, of course. No one knew that so well as the Poles themselves.

"If only we could have had 10 years more," they said sadly in September 1939. But what they did achieve in 20 years was a convincing demonstration of their ability both to plan wisely and to execute those plans.

Bretton Woods

EXTENSION OF REMARKS

OF

HON. MATTHEW M. NEELY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1945

Mr. NEELY. Mr. Speaker, in pursuance of permission duly granted, I extend my remarks in the RECORD for the purpose of inserting two editorials from the Philadelphia Record, which are as follows:

BRETTON WOODS ALSO VITAL TO WORLD PEACE

Adolf Hitler was the spawn of a German depression.

That is a fact none of us should forget during the critical days ahead in which President Roosevelt will be rounding out his program for an enduring peace.

It has not been emphasized nearly enough that the Roosevelt program has two parts, that the two parts dovetail, and that both are essential.

The one peace program is political. It was begun at Dumbarton Oaks; will be carried on at San Francisco.

The other peace program is economic. It was begun at Bretton Woods; is now being weighed by the Congress of the United States.

NOT ARMS ALONE

The Dumbarton Oaks program is immensely important. But man cannot preserve a stable, peaceful world by arms alone. All the police forces in America were no answer to the great depression of 1929-33.

That's why the Record is publishing a detailed and simplified explanation of this part of the Roosevelt program. It is called "Mr. Abbott Leads His Wife Through Bretton Woods." It is contained in a pamphlet supplementing this issue of the Record "digest."

Our purpose in offering this explanation in words that anybody can understand is to drive home the fact that if our people do not stand by the President in supporting this program the speculators who waxed fat on unstable foreign exchange in the past, the vultures who preyed on impoverished governments and peoples, may either scuttle the Bretton Woods program or gain control of it through dangerous amendments.

HOW MANY CARE?

It all depends on how many people understand, and care.

Dumbarton Oaks will probably succeed because the power of public opinion is behind it.

If Americans understood Bretton Woods as clearly, they would be as united behind that, too.

Already the monetary experts of 44 other nations have agreed on this program. That in itself is a great achievement. So we suggest that you read carefully Mr. Abbott Leads His Wife Through Bretton Woods.

Then write your Congressmen and Senators and urge them to support the Bretton Woods program 100 percent, and to oppose any chiseling or crippling amendments.

History tells us that when masses of people cry in vain "When do we eat?" it is not long before they mutter "When do we fight?"

A NEW LINE TO HOLD

When President Roosevelt made Fred M. Vinson the Nation's Director of Economic Stabilization, and told him to hold the line against inflation—

Vinson held the line.

He held it against all comers. He held it ably and diplomatically, without creating needless ill will.

Now Fred Vinson has a new line to hold, as Federal Loan Administrator.

Instead of holding the line against inflation after the war he'll have to hold the line against deflation.

It will be a line of jobs to stem depression before it starts.

Naturally we are glad that in his first press conference since taking his new post—the post stripped from Henry Wallace's Commerce Department—Vinson plumps squarely for the Roosevelt program of 60,000,000 jobs.

There is much that can be done by the Federal Loan Administration when peace comes. And we are only too glad to take Vinson at his word—that it will be done.

With the same determination and courage, we are sure Vinson can hold the line against deflation after the war as successfully as he has held it against inflation during the war.

Predischarge Leave Favored To Ease Return to Civilian Life

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1945

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Maj. George Fielding Eliot:

PREDISCHARGE LEAVE FAVORED TO EASE RETURN TO CIVILIAN LIFE—CONGRESS IS URGED TO APPROVE ADMIRAL STANDLEY'S PLAN FOR 30-DAY FURLOUGHS TO PERMIT SERVICEMEN TO READJUST SELVES IN OWN HOMES

(By Maj. George Fielding Eliot)

Here is a truly splendid suggestion.

It comes from Admiral William H. Standley, United States Navy, former Chief of Naval Operations and commander, Battle Force, United States Fleet, and it appears in the current (March 10) issue of the Army and Navy Journal.

Admiral Standley suggests that every American soldier, sailor, and marine who has seen foreign service shall, when he is returned to the United States for final discharge, be given a month's leave at the earliest moment that his services can be spared in order that he

may go home and spend that time with his family in readjusting himself to civilian life and renewing those home-town contacts with which he has lost touch during his period of service.

CAN SEE ABOUT OLD JOB

Then, when he is finally discharged, he will not be thrown all at once and without any preparation into scenes and conditions which will have changed greatly while he has been away. He will be more or less prepared, both psychologically and economically, for the new conditions under which he must live. He will have a chance to learn something of what has been happening at home. His old friends, who will have acquired new interests and new ideas while he has been gone, will not seem so strange to him. He will have a chance to think things over, to adjust himself, to make plans. He will have a chance to see about his old job, or a new one; to get some idea of where and how he is going to live; perhaps to make tentative arrangements for a new home. There is every possible advantage, to the individual and to the Nation, in thus cushioning the shock of change from the military life to the civilian life.

It takes a long time to discharge millions of men from the service. As Admiral Standley points out, "even if we discharge 1,000 men an hour, it would take 10 months to get rid of 2,500,000 men"—and the fall of Germany may, according to some estimates, permit the release of that many. The end of the Japanese war will result, of course, in the discharge of many more millions.

Now, this writer knows from experience that the period between the close of hostilities and actual discharge is the most trying ordeal a citizen soldier can go through. Most soldiers do not see any reason why they cannot go home immediately. They enlisted to fight for their country; they won the fight; they want to go home. There is an essential justice in this point of view with which it is impossible to argue. Yet, as the Army and Navy Journal says editorially in commenting on Admiral Standley's suggestion: "The mechanics of issuing final discharges from the armed forces are not simple. There are many steps which must be taken to safeguard the interests of the individual and of the Government, many records which must be completed before the man is legally out of the service."

PROCESS CANNOT BE HURRIED

This process cannot be hurried too much. If it is, it provides a vast legacy of trouble for the future. No one who has had any experience with the affairs of veterans of the last war will suggest that we seek any short cuts in the process of making sure that every record is complete and every individual case receives all proper attention. But soldiers back from the wars, held in camps scattered throughout the country awaiting discharge, are not happy men. They are miserable, restless, impatient, sometimes even mutinous. To such men the boon of 30 days' home leave at the earliest possible moment after their return from abroad would make all the difference in the world.

Furthermore—again to quote the Army and Navy Journal—"their return to their organization to await final discharge would afford an opportunity to consider their civilian life and business from all angles, make plans based on late and intimate knowledge, so that when they finally break off their military attachments, they would know exactly what to expect in picking up the threads of their old civilian life." The period of readjustment through which each of these men must pass—and we must remember that some of them will have been away from home for years—will be difficult enough at best. Admiral Standley's plan makes the change in easy stages instead of suddenly and abruptly.

Moreover, the admiral suggests that the Congress should make provision by law for this period of leave, thus making it mandatory upon the military and naval authorities instead of a privilege to be granted or withheld as individual commanders may think proper. It is to be hoped that so simple and sound a means of helping millions of young Americans to make this great change will commend itself to the Congress.

By enacting Admiral Standley's plan into law, the Congress will be contributing as much to the sum total of human happiness and national well-being as with any statute that it has ever ordered to be engrossed on parchment.

Detroit Asks Direct Air Service to South

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1945

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Mr. Allen Dean, manager, transportation bureau, Detroit Board of Commerce:

DETROIT ASKS DIRECT AIR SERVICE TO SOUTH

Detroit's railroad service with Florida is the poorest of any major American city. Its air service is also wholly inadequate.

Of the 6 principal cities of the North—New York, Chicago, Philadelphia, Detroit, Cleveland, and Baltimore—Detroit reaches the least number of metropolitan districts in the Southeast by one-plane service—Detroit reaches 8, New York 28, Chicago 18, Philadelphia 25, Cleveland 11, Baltimore 19.

If we are meticulously fair and add to the one-plane cities, those reached by one-carrier service, we find that only Cleveland has less service than Detroit—Detroit then reaches a total by one-carrier service of 19 cites, Cleveland 17, New York 31, Chicago 32, Philadelphia 31, Baltimore 30.

The fastest passenger train from Detroit to Jacksonville takes 32½ hours for the 1,110 miles—an average speed of slightly over 31 miles an hour. The Seaboard Railway maintains a 51 mile-an-hour clip between New York and Jacksonville, the Burlington Zephyrs 64 miles an hour between Chicago and Denver, the Rock Island Rockets 52 miles an hour on a similar run. Even on a relatively unimportant run like Chicago-Dalhart, Tex., the Rock Island averages 40 miles per hour.

Let's look at Detroit's present air service with Florida. The volume of traffic moves via either Washington or Chicago to take advantage of two-carrier connecting service. The fares via those routes are $15 higher than over the shorter three-carrier route via Cincinnati. Thus the public shrinks away from three-carrier service at a $15 saving and trusts itself to the least number of companies available.

What do the applicants hold out for our people with their proposed services?

1. Direct one-plane service over a 1,200-mile route where only two-carrier and three-carrier services now exist.

2. A reduction of 4 hours' elapsed time to Jacksonville and 5 hours to Miami, with the use of four-engined equipment.

3. A service to important intermediate points such as Columbus, Charleston, and Roanoke where only connecting service is now available and to the Piedmont area where present surface and air services are particularly poor.

Detroit is unique among air-line stations. With the poor air-line service that existed during the Board's survey months.. Detroit never ranked lower than fifth. In September 1940, fourth.

Now that the Board has recognized and ministered somewhat to Detroit's needs in the Memphis and New York cases, we are confident of becoming one of the Nation's heaviest-volume traffic centers.

There is every reason why Detroit can support this Florida route. The 3,000,000 people living within 1 hour's driving time of our airport are largely employed in manufacturing products which are distributed worldwide and which return a value that is third only among American cities and produce wages for workers that likewise aggregate third highest in the country.

It is the fourth city of the land in population, fifth in retail sales, sixth in wholesale sales, third in value of manufactured products, third in the value added by manufacture, third in individual income-tax returns, and third in air express.

But, of course, Detroit will not need to support the route all alone. In Michigan and Ohio in 1940, the principal northern traffic generators for the route, there were 12,000,000 people. Further, encompassed within the 260,000 square miles of Southeastern States on this route there were 15,000,000 other people.

Aside from the fact that Florida and Michigan are two of the most important resort States in the United States and thereby generate a high volume of traffic, there are considerable other reason why shorter, cheaper, direct air service is justifiable.

Detroit is an important producer of consumer goods. They are distributed in heavy volume in the Southern States along the route here proposed.

The first of these commodities in volume, I hardly need mention because it is so well identified with Detroit. But I will point out that Detroit, with but 1.2 percent of the country's population, produced 41.2 percent of the motor vehicles and motor-vehicle parts; and, further, that in 1941, 3,396 dealers in Florida, Georgia, North Carolina, South Carolina, Virginia, and West Virginia, sold 2,750,000 vehicles.

There are other commodities that are produced in our city and sold in substantial quantities in the affected areas: Refrigerators, household appliances, business machines, iron and steel products, paints, drugs and pharmaceuticals, chemicals and allied products, machine tools, and other metalworking machinery.

We did a detailed analysis of the distribution system of 4 typical Detroit firms—Eureka Vacuum Cleaner Co., Chevrolet, Chrysler, Nash-Kelvinator Corporation (Kelvinator division). We learned that they had 700 dealers, branches, warehouses, and representatives in the corridor of this route.

In another study we found that 600 companies domiciled in the southern cities maintained establishments in our community.

We have a great stake in the international aspects of this route, too. Detroit has 500 exporters and the out-State cities of Michigan another 300 exporters. Many of them do business in the Caribbean area and in other South American countries. In fact, one-fifth of all 1940 automotive exports went to South America, and a fine prospect for post-war expansion is fully expected as a compliment of the good-neighbor policy.

You are accustomed to being told of the convenience to passengers that arises out of dealing with just one company from origin to destination. This is very real. At present it is probably the most important argument in favor of through routes.

But we in Detroit see another vital need for our gaining all the one-company services our economics can justify. I am speaking of air cargo; and I am not talking strictly of the desirability of escaping transfer of lading. I am thinking of the specific commodity rates that the carriers must install if they are to gain any appreciable amount of freight. They cannot expect that the air express rates or even the rates they are now publishing in their freight tariffs to make serious contributions to any great volume.

They will soon get down to making rates between specific points that are designed to move particular traffic. If there is a through one-company route between the origin and destination the problem will be simple. But, if two or more lines must squabble over both the level of the experimental rate and how they are going to divide the revenue, there will be much delay and perhaps indefinite postponement.

Ultimately cargo will return several times the revenue that passengers will. We have only to look at the amount of transportation that goes into our shelter, our food, our clothing and our recreation as compared with the number of personal trips that we take to appreciate how this may well be possible.

We have made some cargo studies of the hauling of tomatoes and strawberries from Florida and Louisiana to Detroit in converted surplus military aircraft operated as contract carriers. Return loads would be of manufactured goods for cities near to the growing fields. The charges we found could be way under anything the common carriers have ever looked at. Yet, I know that those carriers subject to your jurisdiction will want to tap that traffic. You can make that possible by installing direct service to high-capacity consuming points such as Detroit.

Detroit needs from this proceeding: (1) a through one-carrier service with as many cities of the South as possible; (2) a high-class through operation between the winter playground of Florida and the summer playground of Michigan, and (3) a service to as many intermediate points as possible.

It is not pleasant to be forced to argue a choice as between carriers. But, we feel duty-bound to point out to you that the principal city on this route is Detroit, that Detroit's greatest need must be the concern of the Board.

National Airlines is of minor importance to Detroit. There are no cities on National's route that we cannot reach as well or better via existing routes or via that here recommended for Eastern. Further, National has just acquired a gigantic operation between Jacksonville and New York which it has exploited but very little. This service should be given to a carrier that can activate it immediately.

Pennsylvania-Central Airlines is in somewhat the same fix as National. It has just acquired two of the most lucrative routes in the country—New York entry and Detroit-Chicago nonstop. It has launched the Chicago service with 7 daily round trips and will probably double that as soon as possible; certainly the volume is there. It is now straining to open the New York route, which will certainly entertain a terrific volume of service. P. C. A. would connect Detroit with no new stations other than the proposed route.

The same is true of America. And Detroit needs to break out of that category of reaching less stations without transfer than any other major city. This is our chance. It may not come again in a generation—this opportunity to get on the lines of Eastern that lace and interlace the whole South.

We, therefore, urge that the board authorize a Detroit-Miami route and that it certificate Eastern Air Lines to operate it.

The Battle of Bretton Woods

EXTENSION OF REMARKS

OF

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1945

Mr. SMITH of Ohio. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD a radio address of Mr. Herbert Bratter made over the Columbia Broadcasting System through the facilities of WTOP, Washington, D. C., Saturday, March 17, 1945, 10:45 to 11 p. m., relating to the agreements made at the Bretton Woods Conference.

Mr. Bratter is Washington correspondent for the magazine Banking, and former Department of Commerce and Treasury Department monetary expert. The topic of Mr. Bratter's address is the Battle of Bretton Woods.

Washington has been seeing the opening stages of what history may record as the Battle of Bretton Woods. Never have we had an issue quite like this one; never such an unprecedented Government publicity campaign; lobbying such as to entirely dwarf the gold and silver campaigns of the early 1930's.

The very matters at issue are open evidence of how far we Americans have moved toward statism since the carefree days of the 1920's.

If you are a typical American listening to this broadcast from Washington, you are doubtless all for "international cooperation" of every kind. When World War No. 1 ended, you were 3 years old. You personally remember nothing of the international cooperation that followed the big armistice. You probably have never heard of the billions this country lent abroad in the 1920's, or of the defaults which followed that lending.

As the typical American, you live in Indiana, 550 miles from Washington; and Bretton Woods, N. H., is about 900 miles away from you. So you may feel that you do not know as much as you ought to know about the Bretton Woods agreements, which the newspapers and radio have been mentioning so much, all of a sudden.

In this short broadcast, I can tell you only a little about those agreements, which fill nearly 100 pages with legal and financial phraseology. Even in moneywise London experts are arguing heatedly about the meaning of Bretton Woods; warning their own people and us that it is foolhardy to hurry into a plan, the leading members of which have diametrically different interpretations of what it means.

The ancestors of the Bretton Woods program were drawn up by technicians in the United States Treasury and by Lord Keynes and his staff in London. At various times technicians of other governments were consulted; at first only informally, later more formally. In the end, the experts' program for monetary and financial stabilization was publicly unveiled in London and Washington. To consider that program—but only that program—the United States Government last summer convoked at Bretton Woods a full-dress intergovernmental conference of 44 United and Associated Nations. That conference was not at the technicians' level, but at the political level; and political forces distorted somewhat the carefully measured scheme of the experts.

While the Bretton Woods Agreements reflect the wishes of militarily important countries, basically they constitute a marriage of the original, and in important respects, incompatible British and Americans plans.

At Bretton Woods, as I have mentioned, there were 44 national delegations. All were heard; but actually, a few big governments dominated the proceedings. There was our own large delegation, headed by Secretary of the Treasury Morgenthau. There was the British delegation under Lord Keynes. And there were the Chinese, who padded their already unnecessarily large contingent with a miscellaneous personnel because of the prestige which they imagine mere numbers would give.

Also, there were many small delegations. Guatemala's, for example, consisted of only a single university student; Guatemala's lonely technician. I recall that one of the busy Russian delegates commented a bit enviously that delegates of the smaller countries could enjoy their holiday at Bretton Woods, swimming in the outdoor pool, and playing golf and tennis, while the big countries worked.

Just what is a Bretton Woods technician? He is an official who buys and sells foreign currency for his treasury; a man who can pick up the overseas phone and lend a few million dollars to stabilize some troubled currency abroad. The civil-service rolls probably call him an economist. He is most likely a former college professor. He may or may not have a passion for anonymity, but a passion he certainly possesses, for his is the power and the glory—and the salary, incidentally, is not at all bad compared with what the university used to pay.

The Bretton Woods Conference agreed to submit to the governments, although without any recommendation, the two agreements—one for an international monetary fund; the other for an international bank for reconstruction and development. That is the program which is now being high pressured in Congress and throughout the country.

The fund would make loans to its members for currency stabilization—short-term loans presumably, but not solely.

The bank would make or guarantee long-term loans, maturing sometime around 1980.

If the monetary unit of China, for example, showed weakness, that country, as a member of the fund, could apply to the fund for relief. If Russia wanted to build a dam, or Mexico a highway, they would presumably receive long-term assistance.

In the fund and the bank, at the start, the principal assets would be the dollars which the United States would pay in. Our total commitments would be about $6,000,000,000; although the fund and bank both would be enabled by the terms of the agreements to apply to us for more dollars later. Our legal commitment would approximate $6,000,000,000. Our moral commitment, as the prime authors of the plan and as the too-anxious hosts at Bretton Woods, no one can measure.

The Administration is very proud and extremely earnest about the plan. Many able spokesmen have been working both days and nights to get the plan adopted. They say Bretton Woods is the first test of our willingness to cooperate for an enduring peace.

Indeed we are told lasting peace is not possible at all without this fund and this bank; that Congress must approve Bretton Woods before the San Francisco International Conference meets next month; or at the very least, before the San Francisco meeting is concluded.

Secretary Morgenthau has frankly undertaken to sell the program to the Nation. And by selling, he doesn't mean any half-way publicity measures. He has employed a publicity man solely to promote Bretton Woods.

For months there have been articles by advocates of the fund and bank in all sorts of private and public publications. Thousands of reprints of those articles have been distributed.

Columnists and radio commentators have taken lunch with the Treasury's Secretary, with Bretton Woods served for desert. The movies have not been overlooked. Government speakers have been dispatched to all parts of the country to address any group willing to listen. On one recent occasion, the mountain was brought to Mohammed, when 106 pressure groups were invited to send representatives to an all-day lecture course in Washington.

You may wonder, has this program any opponents. For a long time they were not, but now you can hear them get up an argument on Bretton Woods at the drop of a hat.

The most conspicuous skeptics are bankers. This isn't so hard to understand, because bankers cannot get used to the idea of a lending institution in which our dollars are lent by a board of directors on which the borrowers with bad debts records themselves sit. Also, many bankers—and others too—object to the fund since, as they see it, the borrowers would have an automatic right under very flexible safeguards to borrow within more or less arbitrary quotas. When bankers are against something, it is popular here to argue that that something must be good. Somewhat like the Jews in Hitler-Germany, the bankers are a handy whipping boy here. And do not think that the advocates of Bretton Woods don't know it.

Because foreign exchange and investment is something which certain bankers know better than any other group of taxpayers, the two reports issued by various bankers' committees last month deserve examination on their merits. The authors of those reports, it may be noted in passing, while criticising the proposed fund, endorse the Bretton Woods Bank. And they also endorse other lending proposals of the Administration.

Unfortunately, high Treasury officials have taken the eye off the ball by questioning the motives of bankers and others who oppose the Bretton Woods Fund. They state or imply that such opponents are a small and unrepresentative group of Wall Street international bankers who seek, if not profits from speculating in exchange, then power.

When the American Bankers Association has to decide a problem involving savings banks, they naturally appoint a committee of savings bankers to make a study and report. So with Bretton Woods; the bankers naturally appointed committees of members familiar with international exchange. These committees contained bankers from all parts of the country. Only 9 of the 42 A. B. A. committee members were New York bankers.

So I repeat; what those committees had to say about Bretton Woods should be examined dispassionately and not elbowed aside with appeals to emotion, such as we have been hearing. Believe it or not, Bretton Woods supporters have searched as far back as 1913 to support their statement that banker are blind and unprogressive when they do not support the Bretton Woods program; progressive when they do it. They tell us that bankers opposed the Federal Reserve Act; that they opposed Federal Deposit Insurance. Well, if the bankers association or its committee did oppose deposit insurance, so did Senator CARTER GLASS; and so did Franklin D. Roosevelt.

The bankers did not poll the Nation's 15,000 banks before making their Bretton Woods report. At the same time other organizations have come out for Bretton Woods without having polled their membership.

You can see that the Bretton Woods debate in Washington is getting derailed. The country is interested in the meaning of Bretton Woods and not in motives and personalities, which only confuse the issue.

Here are the outstanding points about the Bretton Woods program:

1. Both the fund and the bank would lend American dollars abroad, would stimulate foreign purchases of our goods with our money. By lending dollars, the fund aims to eliminate so-called currency wars. It seeks international trade balanced at a high level, not by Bulgaria's accepting payment for its exports in the form of harmonicas and aspirin, but by the United States, the world's banker, either taking the harmonicas and aspirin, or else not getting paid in full.

2. The fund and bank would stimulate our exports, would make jobs here. They would contribute toward the so long sought goal of full employment in the years just ahead.

3. The Bretton Woods bill would, for most countries, repeal our Johnson Act of 1934, the act prohibiting foreign governments not up to date on their debts to our Treasury from borrowing more money in Wall Street. This repeal would make possible the outflow abroad of billions of American private capital, for investment in new foreign bonds.

Such an outflow of money eventually would far exceed the $6,000,000,000 to which, under the bill, our Government would be committed.

4. Viewed in perspective, the fund and bank are only a small part of a much vaster plan to lend and lend-lease abroad. The Export-Import Bank is certain to be expanded severalfold. And private businesses are being urged to extend credits and invest abroad and so to make exports and jobs for workers. The Undersecretary of Commerce has made the incredible observation that we can go on making well conceived foreign investments indefinitely—something like Tennyson's brook—without ever bringing repayment home.

Post-war lend-lease commitments totaling a rumored $20,000,000,000, and on 30-year repayment terms, are under consideration, and the first such loan, to France, has actually been announced; with a clause providing for practical cancelation if repayment becomes inconvenient.

5. These enormous Government export plans, which in most respects are unopposed if not actually endorsed by leading agricultural, labor, manufacturing, and banking organizations, constitute an unthought-through plan for trying to make prosperity. Unless our tariffs are materially reduced, there will not be the remotest chance that we can recover all we put into this great lend-and-export boom.

Such a dreamer's program of making jobs will cover up the basic economic problem of post-war America and the post-war world. For a few years it may give us the semblance of prosperity. But, if the outside debtor world this time makes a real effort to repay the loans, there will still be the insuperable obstacle of America's tariff policy.

For example, if we lend China the additional billions which some Chinese leaders want for that country's industrialization, and, if thereby China's coolie labor is enabled to lay electric-light bulbs, vacuum cleaners, sheets, bicycles, radios, and whatnot behind our tariff walls, shall we welcome that development? Will our labor leaders who are now supporting the idea of big foreign loans and our manufacturers close down gracefully?

Not on your life. They will even object to Chinese cheap-labor competition in our export markets.

This tremendous lend-and-export program is not a plan. It is a half plan which, a writer in the February issue of Harper's Magazine strikingly argues, "can only lead us to World War No. 3, rather than to the promised peace."

Perhaps there is no satisfactory solution. Maybe there is no easy escape from the painful readjustment from the exertions of global war to peaceful employment. If Bretton Woods loans would help us make five or six million jobs for Americans we need to find out at what cost to us in depleted natural resources. And we need to know something about the lend-lease and other plans for distributing our taxpayers' dollars, your dollars, through political bodies in exchange for foreign I O U's with escape clauses.

Even Dr. Harry White, Assistant Secretary of the Treasury, before he joined the Government service stated: "The assumption that capital exports benefit both the lending country and the world at large is not unassailable * * * capital exports are not always beneficial to the exporting country.[1]

It looks like this whole proposition should be carefully thought through, lest it fall through.

The Only Hope of Victory

EXTENSION OF REMARKS

OF

HON. W. STERLING COLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1945

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address entitled "The Only Hope of Victory," delivered by Clarence Budington Kelland, National Republican committeeman for Arizona, at Lincoln Day meeting, Nogales, Ariz., February 12, 1945:

We have met tonight to venerate the memory of Abraham Lincoln, first Republican President of the United States. It seems to me that there is no more reverend way to pay tribute to the memory of this greatest of Americans than to seek, by study of his character and of his words, to find and to express what advice he might desire to give, in these tragic days, to the great political party of which he was the leader.

He would have looked backward at 12 years of defeat, and he would have sought to determine the reasons for our defeats, and the reasons why, in four national campaigns the voters of this country have retained in power an administration whose principles are the contrary of the principles which were his own. He would have studied and weighed, in an effort to discover why the voters of the United States maintained in power an administration they mistrusted; whose intentions they feared; with whose planning of our domestic life they disagreed; and whose integrity they doubted.

I am confident he would have reached the conclusion that these New Deal victories were not the result of superior political organization on the part of our opponents; not because of vast sums of money squandered to influence votes; not because of spurious humanitarian principles, nor because of alliance with such radical organizations as the Committee for Political Action. Most certainly he would have been assured in his fine mind that these victories were not the result of splendid principles calculated to better the common condition of our citizens and to make of America a finer, happier, healthier land.

He would have found, I fear, that our defeats were due to ourselves and our own leadership. He would have found, I fear, that most notably in the election campaigns of 1940 and of 1944, the Republican Party was

---

lacking in that most vital of all political assets—the courage to stand for what it knew was right and to condemn boldly what it knew was wrong.

The Republican Party for 8 years has not stood like a rock; it has allowed itself to be blown aimlessly about like a tumbleweed.

The Republican Party has compromised its integrity in an effort to make itself attractive to voters it never can win. It has sold its birthright for a mess of pottage. It has tried to be all things to all men. It has side-tepped. It has appeased. It has been untrue to its traditions in a scramble for votes. With weak-kneed opportunism it has out-promised the New Deal. In two elections it fished for votes with New Deal bait—and came home with no fish.

The Republican Party will never win again until it has courage to say to the people of the United States, "Damn the votes. These are the principles we stand for and will fight for. This is our platform in which we believe and on which we will stand because we know it is good for our Nation. Because we know that only by making it the law of the land can this Republic be restored, the freedom of the individual be reestablished, the moral fiber of the Nation be brought to life again, and happiness, security, serenity, liberty, and opportunity be guaranteed to every man, woman, and child within our borders."

The only way the Republican Party can marshal votes behind its banner is by casting away forever the demagog's method of winning votes. The only way the Republican Party can win the next election is by opposing what seems to be popular and by standing fearlessly for what is right.

A thousand men in a thousand places from coast to coast have asked me, "What has the Republican Party to offer?"

That is a question the Republican Party must answer, and answer quickly. It will not be enough to answer it with philippic against Franklin Roosevelt. It will not be enough to answer it by saying that we stand for most of the things the New Deal stands for, but that we can administer them more efficiently.

We must have the courage to tell the country that we do not stand for most of the things the New Deal stands for; and we must specify the things we oppose and give our reasons. But that will not be enough. In this world you get nowhere merely by accusing other people of doing wrong; you must tell them what you will do that is right, and you must make them believe that you mean what you say.

You cannot sell your bill of goods by telling the customers that your competitor carries an inferior line of merchandise. You must stock your shelves with honest wares, honestly manufactured and worth the customer's money. And you must advertise those wares and display those wares until the customers see for themselves that you are running a better store than the firm across the street. You must convince them that you carry in stock articles it is to their advantage to buy, and that your business methods are honest and that you stand back of your advertisements.

I am a Republican. I am proud of the history and the accomplishments of my party, and of the merchandise it has carried upon its shelves from the day Abraham Lincoln was inaugurated until the day Franklin Roosevelt was inauguarated. But, since the New Deal went into business I cannot be proud of my party nor of its merchandising methods, nor of the shoddy stock of goods it has placed upon its shelves. We have lost because we have deserved to lose; and we will never win until we burn our shoddy stock and replace it with cloth that is all wool and a yard wide. Nor until we change our business methods and reorganize our affairs and our management and convince the public that courage, integrity, true patriotism, and a desire to serve our country honorably are once more the backbone of our party.

We must not be afraid of the word "conservative" in this day when the multitude is shouting the word "radical." To conserve means to save. It does not mean a shellback who does not believe in human progress. It does not mean a flint heart who has no sympathy for the poor and the hungry and the oppressed. It does not mean a reactionary who places property rights above human rights. It does not mean a fool who believes we can go back to the bad old days of greed and exploitation and unregulated gouging of the people by the avaricious. It means—the word "conservative" means—a man who labors to save. First, to save the Nation from ruin; second, to save the individual from the serfdom of regimentation; third, to save the sacred right of equal opportunity for all; fourth, to save the right of every man to make the most of his abilities in the business or calling which he chooses, and the right to lay aside and keep his surplus earnings to insure him security in old age. And next it means to save, to conserve, to insure those national morals, that national virtue, which made this Nation great and rich and happy for a hundred and fifty years. That is the meaning of conservative. The Republican Party must adopt it and make it its own, and have courage to use it as a challenge and a watchword and a battle cry in the tragic days that lie before us.

The Republican Party must realize and emphasize the truth, made manifest in the dictator countries in Europe, that there is but one road to freedom and stability, and that is the road of true democracy. It must realize and preach to the people that the road to the greatest happiness for the greatest number can never come from aping and adopting the slogans of socialism or nazi-ism or communism—which after all end in one and the same thing. It must prove to all that illusory social gains are not worth the real moral losses they cause.

It must announce the great truth that democracy seeks equality in liberty; the New Deal trend seeks equality in restraint and servitude. A great Frenchman saw and stated this a hundred years ago. Democracy fights for equality among freemen; the New Deal fights for equality among servants of the state.

The Republican Party must realize and state as the text of its revival sermons that democratic socialism, the end and aim of the New Deal—and the great Utopia toward which Europe has been traveling for a generation—results not in happiness, freedom, security for all; but inevitably in unhappiness, misery, coercion of the individual to the point of serfdom, and in the end to dictatorship, tyranny, and the loss of all those great benefits for which mankind had been fighting and dying for a hundred years.

My faith in the American people is firm. If they are given the opportunity to choose between right and wrong they will make the good choice. The Republican Party must give them the chance to choose.

The New Deal has been positive, concrete, and definite in stating its principles and its aims. The Nation knows what the New Deal stands for. A positive program must always win against an indefinite program or no program at all. Bad principles will win if no good principles are stated in opposition to them. You cannot beat an army with a mob. You cannot upset a lie with a mere denial and without a statement of the truth; you cannot make the people choose between something and nothing which is what we have been trying to do. You can't smash a rock with a puffball.

Therefore we must set definite program against definite program, concrete principles against concrete principles. We must make the difference plain as black and white. We must give the voters of America a chance to choose between a definite thing and a definite thing. We must force a choice. We must give an opportunity to choose. The New Deal has told us what they have to offer; we must tell the Nation what we have to offer.

You cannot bamboozle an intelligent people forever. Not if the opposition to the bamboozling offers integrity and honesty and right thinking in its place. But you can sell a fake patent medicine forever to a community that has no doctor. We have been sick. The New Deal has sold its Umatilla Indian quack remedy to a nation suffering from cramps in the stomach. Because there has been no doctor to diagnose and to prescribe. The Republican Party must be the doctor and it must write its prescription calling for honest drugs expertly compounded by a chemist. The New Deal has been trying to cure a national cancer with incantations, spells, and vanilla-flavorerd rain water. The Republican Party must prove that cancer can be cured only by an operation, and it must prove that it has the skill and the surgical instruments to operate successfully.

In the past two elections the Republican Party has nominated for the high office of national surgeon two different men. We lost those two elections—and why? Because both of our candidates for the high position promised 10-percent knife work and 90-percent spells, incantations and flavored rain water. The answer of the country was emphatic that they preferred a full-fledged medicine man to a 10-percent doctor.

Upon foreign issues we have spoken well. We have stated our position insofar as it can be stated until all the post-war facts are in our possession. We cannot speak with exact definiteness until we know in what respects our allies, Great Britain and Russia, will be willing to cooperate with us to prevent future wars; until we are informed of their territorial war aims. We have defined our position and our willingness to do our part, and the country is satisfied with our declaration.

But there remain vital domestic matters, the most important of which I shall list. Until we make clear to the voters what we have to offer with respect to these, and until we compel them to believe in our sincerity they will not entrust us with the administration of our affairs.

First in importance—and it comes close to solving the whole problem if it be guaranteed to us—is the matter of the civil rights and privileges of the individual. This is the very foundation of democracy. All else is erected upon it. Nothing can stand and be permanent unless the foundation of the rights of life, liberty, and the pursuit of happiness be made certain and indestructible to the common man.

Under the guise of war necessity we have been required to surrender our personal rights to freedom of action. We have not been watchful. We have given up more than was essential in our common eagerness to bring the war to a speedy and victorious conclusion.

These rights must be returned to us when peace shall come, not curtailed but enlarged, and so surrounded by safeguards that they never can be taken away from us again.

The matter is simple. Each and every individual, every man, woman, and child must be guaranteed in his rights to live his life as he shall choose within the framework of just laws enacted for the protection of his neighbors. He shall be guaranteed in his rights to maintain his home, to create a family and to educate it, and within his doors to worship God according to the dictates of his conscience. He shall be assured of the right to choose whatever calling may appeal to him as a means of livelihood. He shall be assured of the right to change that calling at will. He shall be assured of the right to utilize his savings to go into business if he desires, and to conduct that business without improper meddling by any governmental agency. He shall be permitted to compete fairly with his business rivals. He shall be permitted to conduct his store, his shop, his factory, his farm according to his own best

judgment and not in accord with a set of rules devised by some Government bureau. He shall be permitted to buy upon an open, competitive market, and to sell upon an open, competitive market. The only laws that shall circumscribe and limit his freedom of action and his freedom of will shall be those properly enacted to protect his neighbors from dishonesty, his competitors from unfair practices, and his employees from injustice. Within these limits his will shall be his law, and his success shall be limited only by his individual ability. He shall be permitted to make a profit, and the amount of that profit shall be limited only by regulations against greed, extortion, cheating, exploitation of his employees, and impairing the health of his neighbors, customers, and employees. He shall be permitted to invest his surplus earnings in any manner he shall deem wise, and so to lay up a reserve to support him in his old age or incapacity, or to tide him over bad times in business. He shall not be limited in the amount of his sales or his production or his crops, and the prices at which he shall sell shall be limited, not by artificial regulation but by the laws of supply and demand. He shall be permitted to buy where he will and to sell where he will; to advertise, to use his skill and his sagacity to make the most of his opportunities. He shall be permitted to risk his capital in new ventures and to derive an adequate profit from such ventures. He shall not be cramped, hampered, supervised, or otherwise meddled with except as the laws of health and of honest business and the protection of the public shall require. He shall be a freeman, encouraged to do his best, to achieve his utmost, and by his own success to contribute to the general welfare and prosperity of the Nation.

If the Republican Party will affirm and guarantee these individual rights it will have gone far to cure the ills from which this Nation has suffered and bring us back to safety, security, and true prosperity.

Second, the Republican Party must take a definite, fair, and statesmanlike position upon the question of labor.

Every intelligent man knows that one of the greatest stabilizing forces in the world is organized labor. So long as labor is permitted to organize socialism, communism, nazi-ism fascism, cannot come into control of the state. Before any one of these parties can impose itself upon the Nation it must first destroy organized labor and organized religion. The right of any individual to associate himself with other individuals for their common protection and betterment is an essential part of democracy. But to make their will and their desires effective democratic processes must govern the union as well as the Nation. Union action must come as the result of the will of a majority of its members just as national action must come as a result of the will of the majority of the Nation's citizens. There must be no dictatorship in labor unions as there must be no dictatorship in the Nation. Each union must be a republic within a republic, acting as a unit for the benefit of its members, dealing for them, bargaining for them, negotiating for them.

But, just as monopolies are abhorrent in business, so monopolies are abhorrent in labor. Just as business must be fairly supervised to prevent excesses and injury to the people, so must labor be supervised for the same reason. The individual must be assured of protection against labor exactly as the individual must be assured of protection against capital. Every individual shall be defended in his right to join a labor organization, but equally every man must be defended in his right to refrain from joining a labor organization if he believes he can do better for himself as an individual. He must be protected in his right to seek employment wherever he desires, and he shall not be excluded from employment because he is not a member of any organized body.

Concentrations of capital are forbidden to contribute money to any political party or organization; concentrations of labor, for the same reason, should be forbidden to contribute money to any political party or organization. And neither capital nor labor should be permitted to evade the law by subterfuge.

The Republican Party must constitute itself the defender and the champion of organized labor against the New Deal which, by devious methods, dear to the heart of revolutionists, has sought to undermine the integrity and the strength of organized labor. But it must also champion the rights of the individual laborer who, for reasons sufficient to himself, declines to become a member of nonmembership; no man must be deprived of the right to earn a living by reason of nonmembership; no man must be deprived of a right to earn a living because he becomes a member.

Third, the Republican Party must pledge itself to revise and to make efficient our present cumbersome, inequitable, and blundering system of taxation. We must tax for revenue and not for revolution. We shall, for years to come, be crushed under a great burden of taxation. But that burden must be made as light as possible to the individual and to the industry of the Nation. It must be given stability so that the individual will know what he will have to pay and for a reasonable time into the future, in order that he may plan to meet the requirements and organize his affairs. Taxes must be fairly distributed. They must be so levied as to encourage and not to discourage; to create and not to destroy.

Fourth, the Republican Party must pledge itself to decrease the powers of the Federal Government and to increase the powers of the several States. It must divest itself of powers and responsibilities better performed by the States, and it must compel the States to assume those powers and responsibilities. Local self-government must be strengthened; centralized government must be lessened and distributed.

Fifth, the Republican Party must realize and state with all the power at its command that the greatest course that could fall upon any nation would be complete economic security for every citizen. If, through Government bounty we free every citizen from anxiety as to the future financial security of himself and his family you destroy the greatest asset of the Nation. And that is the ambition of its citizens to better themselves. If a man knows that he and his family will be supported by a beneficent state he will not have the greatest impelling reason to support himself and his family. The greatest spur to endeavor in the world is fear; the most appalling catastrophe that could overtake any nation would be the removal of that spur. If, by some fantastic miracle every man, woman, and child in America could be assured of enough money to supply his needs, then the nation would die. Only that nation lives and becomes great which supplies, not state-given security, but the opportunity to become secure through the initiative, the industry, the economy, the foresight, the invention, and the integrity of each citizen. Only that state is great which provides opportunity, equal for all. The Republican Party must say to the Nation that it will guarantee to every man the right and the opportunity to work and to save for himself, to amass a competence, and to earn happiness and leisure and plenty; but that it will not go along with those who would remove ambition, initiative, and driving force of necessity by insuring to all that they will be secure without earning their security.

We cannot go back to the old days of "root hog or die"—though it was that practice which made this Nation the magnificent structure that it is. We must care for the sick, we must keep starvation and misery from the door of the unfit and the helpless aged, and the worthy who have, through no fault of their own, fallen upon evil days. We must give sufficient aid in flood, famine, and calamity. But, in season and out of season, by day and by night, we must preach the doctrine that the dignity of man, the integrity of the individual demand that he exert himself to the utmost to provide for himself, to support his wife, his children, his aged parents—and that the only thing that can be safely guaranteed to him is the opportunity to work, to earn, to save, and to become secure through his own splendid efforts. We must guarantee opportunity; the citizen must avail himself of it—under any other way of life the Nation dies.

These are but a few of the points upon which the Republican Party must make itself clear. The rest are supplemental. I believe that Abraham Lincoln would be in agreement with each of them and that he would applaud our party if it took its stand upon them.

Let us then—our Republican Party—be bold, be courageous, be daring to stand for what we know is right. This Nation will know the right when it sees it, and will rally around the cause of right, of wisdom, of integrity. Down this road, and only down this road, does victory lie—and with victory the safety and permanence and happiness and serenity of this land that we love.

Understanding France Today

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1945

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I include part of the excellent address of Maury Maverick, Chairman of S. W. P. C., delivered before France Forever Society, Washington, D. C., March 15, 1945. The address is as follows:

A NATION OF SMALL BUSINESS AND SMALL FARMERS

France at the outbreak of this war was a nation of small farmers, of thousands of small plants and small businesses. It also had great combines, cartels, big monopolies, as any nation has. There were large textile, iron, and steel factories. But the heart of French industry was small business.

France produced about five-sixths of its own food before the war. Now little or no food is coming in, and French farm production has been greatly reduced because there is an acute shortage of fertilizer, and most farm implements have worn out. The war has prevented the making of new implements or the delivering of them if made. Lack of transportation makes it difficult to distribute even the reduced food supply available to the French people, especially in the urban centers.

Iron and steel manufacture was the chief industry of France before the war. It is now laid low.

Textiles ranked second, and textiles are laid low.

Mining was a great industry, but even before the war, a third of French coal was imported.

The conclusion is that France was not wholly self-sufficient before the war.

This will help us understand the desperate plight of the French people today. Likewise, we must remember the ordeals, the strains, the depletions, the stresses, the losses of nearly 6 years of war, catastrophe, horror, occupation.

WHAT GERMANY DID TO FRANCE

Germany enslaves and deports French labor; likewise robs her of production

Let us consider the condition of France today. Approximately 400,000 soldiers, sailors, and civilians have been killed. Three million Frenchmen were taken to Germany as prisoners of war or as forced laborers. Over a million French homes have been destroyed.

First in occupied France, and then all over France, the Germans destroyed the basis of French economy, which was ordinary little business, and the free-enterprise system. This they did to compel all raw materials to go to big businesses, so airplanes and munitions would be fabricated for Germany. In such manner were the people of France robbed by the Nazis.

France was forced to produce much war equipment for German account. Indeed, France produced 22 percent of the trucks used by Germany, 10 percent of locomotives, 12 percent of airplane engines, 6 percent of aircraft, plus practically the total ouput of steel, iron and textiles. Practically none of this production was available to the civilian population.

This meant that there was a sharp decrease in the production of consumers' goods—clothing, shoes, processed foods, and the like—for French civilians. Many Frenchmen have not obtained any consumers' goods whatsoever since the war began. The list is endless; it is the list of consumers' goods, no tooth paste or tooth brushes, socks, shoes, and the most primitive necessities of sanitation or cooking.

During the German occupation, the French standard of living dropped precipitately and seriously. Food and goods were shipped to Germany in great quantities. Millions of tons of grain, meat, vegetables and fruit were sent to Germany—seized away from the children and people of France. Besides the coal, steel, iron and food, French shipping was seized by Germans. Foreign commerce ceased for France, except forced trading with Spain and Germany, and a very small or negligible amount with close-by neutral countries, while the blockade in effect meant France had no foreign trade. There was transportation by rail, canal and truck for a low level of subsistence, but that was all.

Germany commits actual thievery of money from French people—Steals banking system and purloins by printing francs

Germany levied tribute on France. In 1939, France had 130,000,000,000 francs in circulation. The Germans printed francs and brought this total up to 600,000,000,000—an increase of 360 percent. This and other measures wrecked the franc and the French financial system.

Due to the increasingly bad industrial situation and worsened living conditions, the death rate among old people and children greatly increased, and births decreased. In Paris I visited a police station. The sergeant showed me death certificates of many old people, who, being missed by their neighbors, were found to have died of cold and starvation in their beds. Also I saw death certificates of many children who had died from malnutrition or from diseases aggravated by malnutrition.

Now let us understand the psychological repercussions of allied occupation and intelligently analyze rather than smugly moralize.

Destruction in fight for liberation necessarily had some bad psychological effects

No Frenchman criticized the Americans for the cost of liberation.

But there are situations which we as Americans must understand.

First, even though we brought in our own food, the food supplies available to the French people, particularly in urban centers, have declined alarmingly since the liberation. Hunger and starvation cannot be answered by flowery speeches on liberty.

Second, the Germans stole the French financial system, controlled the franc, inflated it, and then wrecked the whole system. Then they "paid" lavishly with these stolen francs for goods and services, a roundabout substitute for stealing it all in the first place. This will someday be known among intellectuals as the mystic prestidigitation of purloining the French financial system, but among the common people as the gymnastics of Nazi thievery. And the day must come when France will get revenge upon these barbarian burglars and murderers.

We Americans honestly attempted to cooperate in giving France a sound financial system. Indeed, it is based on an agreement with the French themselves, setting the franc at 50 to to the dollar. But because of the unfortunate circumstances we have mentioned, this attempt to stabilize the franc has not worked out well.

When the value of the franc was set at 50 to the dollar, it was greatly overvalued and created an artificial condition of exchange for France, also made prices high to Americans in France. It created an active, monstrous black market in money. Anyhow, so long as there is little or no industry or deliverable food in France, francs and dollars cannot buy much of anything at any price. These are statements of fact, not criticism.

All I say is, something must be done, and done soon.

The foregoing conditions—the lack of industry and employment, the hunger, the suffering, can be remedied only by the rehabilitation of French industry from the ground up, starting now. France must have shipping. It must have raw materials.

Can it be done?

Yes—at least we can make a substantial beginning.

WHAT FRANCE IS LIKE TODAY

Most of the physical plant for manufacture—85 percent still remains intact—and there is manpower available.

But transportation, insofar as the civilian economic life of France itself is concerned, is so badly crippled as to be almost nonexistent. What there is is used for military operations practically altogether. The plants and manpower are largely unused because of the lack of fuel, transportation, and industrial electricity, and because of the weakness of the semi-starving population.

Manpower of France in desperate condition—3,000,000 in Germany, heavy unemployment and disorganization in France

Now about manpower. Before the war, France had a labor force of 10,000,000 industrial workers. This has been reduced by war and Nazi occupation. Since 3,000,000 Frenchmen are still in Germany, there are only about six or seven million left. Of these a million are totally idle and three million more have been thrown out of work by factory shut-downs due to shortages of raw materials and coal.

FUEL: THERE IS NO OIL, NOT MUCH WOOD, AND COAL PRODUCTION IS WAY DOWN

Let us look at the fuel situation in France. This means coal. There is no oil available, because our French and American and other Allied soldiers must use all the oil that is brought in the country. France does not have much wood. There are no candles, tallow, or fats for heat or light. When I was in France as a soldier in 1918, I saw people praying before tallow candles; now in churches people pray before artificial candles by inserting weak light bulbs, and there is no light at all in some churches.

Coal mining has been held back by lack of mine props which come from the forests—usually small trunks. This is now being remedied by the use of concrete props, and in some mines coal production is back to 80 percent of pre-war production. But it will be months before French coal production hits a higher level, nor is it known when coal can be imported. And even when coal is mined, the shortage of cars and trucks makes it impossible to move much to the factories, powerhouses, and homes where it is needed. Get this point, it's important: Even if you had coal, you couldn't move it to the user.

The electric power plant of France is about 90-percent intact, and repairs are being made. When coal ,can be made available to the powerhouses, the normal supply of electricity can quickly be made available.

HIGHWAYS AND TRANSPORTATION

Highways have been badly worn, many worn out; and many bridges destroyed. The Germans destroyed half the French motor vehicles during the retreat. Most of those which remain are old, half worn out, and cannot be operated because of shortages of tires, batteries, and gasoline.

The railroads, freight yards, and stations were bombed by our soldiers or destroyed by the Maquis to disable the Germans, and we already know the Germans destroyed or stole many cars and locomotives as they left; we know that when trains left for Germany they left never to return. The crippling of transportation keeps fuel from factories and homes and food from the cities and towns.

The waterways of France have been blocked. Some have been blocked by being bombed. Many of the dams and locks had been torn out or blown up by the Germans. Fallen bridges, and wrecked barges, obstruct transportation even now. Floods prevented barges from getting under bridges. In addition, during this worst of winters in 50 years, some rivers and canals have been frozen over.

Inflation is terrible—Only a very few rich can buy clothing and many other articles

The clothing situation is as bad, if not worse, than the food supply. When I left France, I gave away a worn suit. I priced the comparative value of this suit, and even at second hand, it would have cost at least $200. New suits cost $350 to $400. Neckties $15, shoes $50 to $100.

Oh, yes, you can still buy things in France. But only the few rich, the collaborators and racketeers who use the black market can get what they want.

You can buy medicines and antitoxins—that is, one-tenth of 1 percent of the population. At that, medicine sometimes would not do any good anyway. Resistance to diseases is reduced by cold and starvation. The contraction of many diseases, especially colds and pulmonary disorders, is increased. Tuberculosis is on the gain. There are fewer doctors in France than ever before. Hospital equipment has deteriorated, being practically absent in some places, and there are not enough nurses. Many hospitals are practically without heat.

Again I merely cite these as facts. I am not trying to be dramatic. But I do say that something has got to be done about it.

These facts should be widely known.

I say again, we must act upon these facts.

SOME THINGS WE HAVE DONE FOR FRANCE

What I have just told you makes it clear that we must help to remedy specific hardsh'ps, and what we must do to help France get on her feet. We have made some beginning on this.

We have helped to start France fighting her old foe, Germany, which she is anxious to do. Because we respect French courage, military leadership, and ability, we have equipped eight French divisions and have agreed to help equip eight more, along with many air-combat units. Because we respect the fighting French sailor, we have repaired and modernized a score of French naval vessels and transferred to France some 200 of our own naval craft. Altogether, we have provided the French Navy with $200,000,000

worth of materials and services since D-day. Because we can get value received, we plan to award to French industries contracts which in 1945 are expected to reach a billion dollars worth of military supplies to be made in France. These French contracts for French production are being given under reverse lend-lease and represent one of France's contributions to the common war effort. However, I must add, nowhere all the essential raw materials have yet been shipped. I call upon the American people to note that we respect the honor and integrity of France.

The American Army has rebuilt the destroyed French port facilities of Cherbourg and LeHarve sufficiently for maximum unloadings of war materials. Our Army has repaired most of the main highway bridges necessary for military operations. We have rebuilt main-line railroad bridges and eliminated long detours, almost entirely for military purposes. French civilian life is not provided for. We have helped to clean out the waterways and repair dams and locks. We have restored most of the utilities and sewage-disposal plants of bombed cities. Down to March 9, 1945, we had sent 273,010 tons of civilian supplies to France, which was very little indeed, but a start. We have assigned 31 ships to carry civilian goods to France in the first quarter of 1945. Of these, 9 or 10 ships have actually arrived in France. This may be increased in April.

A lend-lease agreement with the French was signed on February 28, 1945. This lend-lease arrangement provides for $2,575,000,000 worth of raw materials, food, rolling stock for railroads, essential heavy capital goods and machinery, desperately needed for the prosecution of the war. Though this material is specifically designated for aid in the Franco-American war effort, it is provided that France may buy long-life supplies which may have peacetime uses and any balance of supplies which may not be delivered in time for use in the war. The payments are to be made by France over a long period of time.

A FIVE-STAR MILITARY (AND CIVILIAN) PROGRAM TO HELP FRANCE

Here is a five-star program for the rehabilitation of France.

1. As a national policy we must want, and insure, a healthy and strong France in order to help win the war and hasten victory, to have good commercial relations in the future, and to maintain a strong military ally in the generations to come.

2. We must have more shipments by faster turn-arounds, unloadings, and distributions within France. This is crucial and is emphasized as a single point. Unless France has the needed goods within France, she cannot help herself or help us.

3. We must get more raw materials, food, and medicine to France. French industry and French life cannot fully contribute to the United Nations war effort, unless France has the materials for manufacture, plus some starters such as food, medicine, and other consumer goods.

4. Enough Allied civilians, technicians, should be established in France, just as in the War Production Board, and the Ministry of Supply and other necessary civilians with appropriate knowledge are now utilized in other nations. Some problems of France are grave, needing immediate attention, and military men should not be forced to give their time to such problems.

5. Let us promote understanding and good relations between the United States and France. One way is the exchange of 25,000 each of our citizens for training and education in each other's country.

Concerning this last point, my suggestion is a specific one. Let us bring to the United States at our expense on any available shipping, not necessarily passenger ships, 25,000 French men and boys and offer them training and education. These men could attend our universities, schools and colleges. They can go to our smaller war plants and our giant factories. They can learn American mass production. Remember, France has been in a technical and scientific black-out for nearly 5 years; let us teach these men all we can, and let them learn all they can.

By helping France, we help ourselves

Fellow Americans, let me return to the very beginning of my address. We love France. We must help France restore herself. We must do so, not only because we are indebted to France for past aid and because we love her. We must rebuild France because of our sense of honor, our respect for public morality, and our prestige in the world—indeed, for the sake of our very existence.

Let me repeat and emphasize that I do not recommend anything in the way of aiding France that would, in the slightest diminish the extent or effectiveness of our military effort in Europe. On the contrary, it would quicken our war effort.

In this war, one cannot divorce the military scene from the human beings who reside in France, any more than we can ignore 130,000,000 American civilians here in America. If the civilian front in France should be torn to pieces by further distress and resentment—and even if not by distress, by collapse—this may well prolong the war. And even if it does not prolong the war, it will bring us greater miseries in the future, lasting wounds, and more wars again. I do not suggest that France, patriotic and brave, may rise against the American people. The patience of France is great, but we must not overtax it.

We must do our duty to France and do it now.

Here is a word of caution, and let freedom-loving nations remember it as long as they care to exist. The warning is, beware of the Nazi, Prussian, and German military madness forever. Defeated, the Germans will go underground. At the moment of our victory, they will begin their work of disruption. The Nazis will speak darkly of the Bolshevik menace; they will do everything in their power to confound the allies, to encourage the democracies to fall out with one another so that they, the Nazis, can rise again, and try once more to destroy us.

If I have one solemn prayer, it is that our children and our children's children will not fall for such horrible lies and propaganda. When I returned from the last war I did so quite gayly, naively believing war was "over." And now our sons are fighting and dying again, this time all over the world.

Pray God we shall not be stupid enough for the same thing to happen to our grandchildren.

And we who are Americans, let us bow our heads in prayer for the French who are now in Nazi prison camps. We pray God for their return to their motherland, the great Republic of France, and we pledge our arms, our blood, and our honor that this shall be done.

My friends, there is one thing that we must have today: courage. Give us bravery, give us manhood, give us spirit. And we Americans now salute the Tricolor of the Republic of France.

But let me repeat and emphasize a point in my closing remarks; let my remark be realistic. It is that there can be no liberty without food and clothing. There can be no culture without factories running and homes heated.

But besides the food and clothing which is essential to liberty is the true spirit of America and the true spirit of France. Let us not forget the American Revolution and the ringing words of our great philosopher and patriot, Thomas Jefferson, the author of our Declaration of Independence. Let neither Frenchmen nor Americans forget the old and calm-souled man, Dr. Benjamin Franklin, nor that great and young man, General Lafayette, our friend in the time of our own Revolution for liberty and independence.

Let us not forget the French Revolution. The political philosophy of France—that of culture, progress, education, freedom of religion, press, and speech—must rise and flower once again.

But let us also feel in our breast the soft, the sentimental, but yet the military and strident tones of the Marseillaise. March on! We in America have heard the march of liberty, the cadenced step of our soldiers.

With freedom in her heart, yet let France hear the shrill cry of liberty once again. Let the French Navy sail the Seven Seas and her ensigns and symbols will carry the power of a proud nation all over the world.

With liberty in the breast of every Frenchman, let also France hear the cadenced step of her brave soldiers, protecting the liberty of their beautiful land, as well as the liberty of a new and enlightened world.

With equality in her heart for mankind, let us, in America, return that feeling, and freely respond to this equality she so richly deserves.

With fraternity in the hearts of all Frenchmen, and fraternity in our hearts for France, let France also, a great political power, live with other nations in true fraternity.

Liberty! Equality! Fraternity!

Fellow Americans, there is such a thing as triumph and glory. The day will yet come, and may we hasten it, when the troops of France, accompanied by her brave allies, shall march down the Champs de Elyses in final triumph; and this time of the march of our troops under the arc will not be an empty march, but will be a symbol of enduring peace, of modern science for production, for a high standard of living, and for the military power, and the security of a great and powerful nation, the Republic of France.

Vive la France!

Red Tape and Buck Passing

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1945

Mr. BENDER. Mr. Speaker, we are headed for a serious jam in the entire administration of veterans' affairs. The Cleveland Plain Dealer this past week end printed a series of stories dealing with the problems faced by returning war veterans which closely parallel the experiences of soldiers coming home to other communities. These articles report the disillusionment of our veterans. Rights which they believed guaranteed under the famous G. I. bill of rights, in the hands of routine-minded, uninformed, bureaucratic employees become meaningless. The report of a soldier seeking to reopen his business and finding it impossible to obtain materials from the W. P. B. while those who stayed at home continued to receive such materials is unfortunately all too common.

Another story revealing the refusal of the O. D. T. to cooperate in furnishing gasoline for a truck necessary to a small business after the truck had been purchased and the business begun, also illustrates the manner in which petty restrictions can destroy hope and confidence in our returning servicemen. There is mounting evidence that the confusion in the minds of the veterans is shared by those administrators who are supposed to

know the servicemen's rights. We are beginning to hear complaints that the entire purpose of Congress in authorizing loans to veterans is being hamstrung in some quarters. The G. I. bill of rights is being entangled by red tape and buck-passing. Men going to one office are sent to another and after being driven from pillar to post become embittered and resentful. This state of affairs affecting able-bodied servicemen taken in conjunction with recent national reports of hopelessly antiquated administration by our Veterans' Administration affecting disabled veterans make it imperative that steps be taken at once to clarify and reconstruct the entire administration of servicemen's affairs. I feel strongly that we must immediately make plans for intelligent work on behalf of our servicemen of every category. If they are to be given the treatment and assistance which their sacrifices merit, we must at once provide in every large metropolitan area for a central clearing house which will give correct information at one place to every returning veteran. We must provide at this place methods whereby all the available benefits to which veterans are entitled can be processed. Such a veterans' center ought to have the proper information dealing with the care, hospitalization, pension rights, and other servicemen's benefits to which our veterans are entitled under the law. Nothing short of such a system will begin to compensate these men and their families for the suffering and depredation they have undergone on behalf of all of us at home.

Polish Government Note on San Francisco Conference

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1945

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following:

Below is the full text of the Polish Government note dealing with the fact that Poland has not been invited to participate in the United Nations Conference at San Francisco. The note was delivered March 12 to the American, British, and Chinese Governments and communicated to all United Nations as well as neutral governments:

"On March 15, 1945, the Polish Government learned from a radio broadcast and from the press, that the Government of the United States had sent, on their behalf and on that of Great Britain, China, and the Soviet Union, an invitation to 39 States to take part in a United Nations Conference to be held on April 25, 1945, at San Francisco, to prepare a charter for a general international organization for the maintenance of international peace and security. The Polish Government notes that it has not received an invitation to take part in this conference, despite the fact that Poland was one of the original signers of the United Nations declaration January 1, 1942, in Washington.

"Considering that the Polish Nation took up arms in the defense of freedom, security and right on September 1, 1939 and was the first nation to make a stand against German aggression, and that from that time on, relentlessly and regardless of the sacrifice, it has been fighting at home and abroad, on land, on sea and in the air; considering also, that the Polish Nation has fought the longest in the defense of these ideals, it has sustained in relation to its potentialities heavier losses in human life and property than any other nation in the world, furthermore, considering that the war, begun in the defense of Poland, has created a spirit of unity among free nations of the world which led to promulgation and realization of the ideals of the United Nations; and finally, considering that at the San Francisco Conference the United Nations are to create a permanent world peace organization for the prevention of future aggression which is to be based on the respect of law and the sovereign equality of all peace-loving nations—the Polish Government as the sole legal and independent representative of the Polish state, emphatically insists on its indisputable right to take part in the world security conference and solemnly protests against its omission from invitations to the San Francisco Conference.

"The Polish Government wishes to state that not inviting to the San Francisco Conference Poland, whose constitutional President and Government are generally recognized by all the United Nations with the exception of only one of the powers and also by neutral states, is the first disquieting case of the application of the right to veto by a great power, which has been made even before the United Nations have approved or accepted proposals concerning an international security organization.

"The Polish Government has already submitted certain preliminary suggestions on the Dumbarton Oaks proposals and intended participating to the fullest in the work of setting up an international security organization. In these circumstances, the Polish Government declares that it has been deprived of the possibility of presenting to the conference their considered comments on the Dumbarton Oaks proposals, also on the suggestions regarding the voting procedure in the security council worked out at the Crimea Conference."

Cost of Production of Wool, Sheep, and Lambs

EXTENSION OF REMARKS

OF

HON. WALTER K. GRANGER

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1945

Mr. GRANGER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am inserting a document prepared by the United States Tariff Commission estimating the cost of production of wool, sheep, and lambs in 1944 campared with costs in 1940–43. I am inserting this information in the RECORD because of a statement made in the committee's report of the Agriculture appropriation bill for the fiscal year 1946. On page 13 of that report the committee says:

One of the matters falling within the province of the work under this appropriation is the regulation of grazing on national-forest ranges and the fixing of grazing fees therefor. The committee, from evidence presented, was impressed with the need for revising grazing fees upward in view of the increased value to stock raisers of the grazing privilege. Such an upward revision would be more in keeping with the present price levels of livestock and livestock products.

In view of this statement, I am submitting this report of the Tariff Commission which shows that the production of wool, sheep, and lambs were produced at a loss as shown by the Commission's report:

COSTS OF PRODUCTION OF WOOL, SHEEP, AND LAMBS IN 1944

In 1943 and 1944 the Tariff Commission issued reports [1] showing the costs of producing wool, sheep, and lambs (excluding and including interest) in 1940–43. These reports were based on data supplied through the cooperation of the Farm Credit Administration. The present report summarizes the costs presented in the two earlier reports and gives in addition estimated costs of producing wool and sheep and lambs in 1944. The estimated costs for 1944 were obtained by the Commission at the request of a subcommittee of the Committee on Agriculture of the House of Representatives.

In obtaining the estimated cost for 1944, the Commission prepared schedules calling for the required information. These schedules were sent to field offices of the Farm Credit Administration (production credit associations), to banks making loans to sheep ranchers in competition with the Farm Credit Administration in the same areas, and to a few leading ranchers. The completed schedules which were returned to the Commission provided estimates for 1,038 ranches in 11 of the 13 States in the western region. The 11 States were South Dakota, Montana, Wyoming, Colorado, Texas, Nevada, Utah, Idaho, Oregon, California, and New Mexico, which together account for over 96 percent of all the stock sheep in the western region. The two States for which data were not obtained were Arizona and Washington, which are of minor importance in the production of wool, sheep, and lambs and their inclusion in the survey would not have changed the results to any significant extent.

The estimated costs of producing wool and sheep and lambs for 1944 are summarized in table 1 and compared with reported costs for 1940, 1941, 1942, and 1943. Table 2, from which table 1 was prepared, presents the data in detail. Although the costs presented in these tables relate to a varying number of ranches and to a varying number of States, it is believed that the reported costs given for 1940–43 and the estimated costs for 1944, are in general representative for these periods of the costs of producing wool and sheep and lambs in the western region as a whole. It should be noted, however, that the data represent ranching operations under war conditions and are not necessarily indicative of costs in this country in more normal periods or appropriate for comparison with costs in other countries under more normal conditions of production. Perhaps the greatest question as to the representativeness of the data arises in the case of the data for 1943, which relate only to 233 ranches in 9 [2] of the 13 States in the western region. On account of the limited number of ranches and States covered by the 1943 reported costs, the Commission obtained estimates of the cost actually incurred in that year for the larger number of ranches

[1] The first report, the Costs of Wool, Sheep, and Lambs, 1940–43, was issued in May 1943 and the second report, Cost of Production of Wool in 1943, was issued in June 1944.

[2] These nine States are South Dakota, Montana, Wyoming, Colorado, Texas, Nevada, Utah, and Oregon, and account for about 81 percent of all stock sheep in the western region.

(1,038)[3] and States (11)[1] for which it obtained estimates of 1944 costs. The estimate costs for 1943 were not significally different from the reported costs for 1943 shown in tables 1 and 2.

Table 1 shows ranch income from wool and sheep and lambs, costs of production, and the profit or loss on ranching operations for 1940–44. As previously noted, the figures for 1940–43 were prepared by the Commission from data supplied by the Farm Credit Administration; those for 1944 were based upon estimates supplied by the Farm Credit Administration, banks, and others. Costs are shown both excluding and including interest, that is, interest actually paid on money borrowed and interest imputed on the rancher's equity or on his own capital invested in sheep and in ranch property. The data pertaining to wool are shown both per head of sheep inspected and per pound of wool; data for sheep and lambs and for sheep, lambs, and wool combined are shown per head inspected.

As shown in table 1, income from wool, sheep, and lambs combined increased sharply from 1940 to 1942 and declined in 1943. It will[4] probably decline still further in 1944 but will still be about 27 percent larger than the $5.26 per head reported in 1940. Estimated total cost per head (including an allowance of 65 cents per head for the managerial services of the ranch operator) both excluding and including interest actually paid and interest imputed on the rancher's equity, increased continuously from 1940 to 1943 and will probably increase again in 1944. The cost, excluding interest, of $6.71 per head in 1944 is 64 percent higher than the $4.10 reported in 1940. The cost, including interest, of $7.88 per head in 1944 is about 50 percent higher than the $5.32 per head reported in 1940. The profit per head, with interest excluded from cost, amounted to $1.17 in 1940, was $2.39 in 1942, was $1.18 in 1943, and there will probably be a loss of about 5 cents per head in 1944. With interest included in cost, ranch operations resulted in a loss[5] of 6 cents in 1940, a profit of $1.14 in 1942, and will result in an estimated loss of $1.22 in 1944.

Income from sheep and lambs increased much more in 1940–42 than income from wool. It declined substantially in 1943, however, whereas income from wool increased slightly. Both items are expected to be smaller in 1944 than they were in 1943. Costs of wool, and of sheep and lambs, both excluding and including interest, rose continuously after 1940. The net profit from sheep and lambs, with interest excluded from costs, was 70 cents per head in 1940, was $1.49 in 1942, was 76 cents in 1943, and will probably be about 18 cents per head in 1944. The profit from wool, with interest excluded from costs, was 46 cents per head in 1940; was 90 cents in 1942; and was 42 cents in 1943. A loss of 23 cents per head is indicated for 1944. With interest included in cost, the profit from sheep and lambs of 6 cents per head in 1940 compares with an indicated loss of 42 cents per head in 1944. In the case of wool there was a loss of 12 cents per head in 1940, profits of 31 and 35 cents respectively in the next 2 years, a loss of 23 cents in 1943, and a loss of 80 cents per head is indicated for 1944.

It will be noted from table 1 that the trend of profits and losses on wool is about the same irrespective of whether the data are expressed per pound of wool produced or per head of sheep inspected. With interest excluded from cost, profits of 5 to 11 cents per pound were made in the first 4 years of the 5-year period, and a loss of 3.1 cents per pound is indicated for 1944. With interest included in cost, there was a loss of 1.5 cents per pound in 1940 compared with profits of about 4 cents in 1941–42, and a probable loss of 2.9 cents in 1943. A loss of 10.8 cents per pound is indicated for 1944.

TABLE 1.—*Wool, sheep, and lambs: Income, approximate cost, and profit or loss, for a specified number of ranches in a specified number of States, 1940–44*

[Joint costs prorated according to ratio of income from wool and from sheep and lambs to total income in each year]

Source: Basic data supplied by the Farm Credit Administration (columns 1 to 4) and by the Administration and other lending agencies (column 5); cost analysis made by the U. S. Tariff Commission.

BASIC DATA AND METHOD OF ADJUSTMENT

The costs of producing wool, sheep, and lambs presented in this report were derived from basic data covering the operations of individual ranches. As already indicated, the basic data for 1944 represent estimates of the Farm Credit Administration and certain private banks which also make loans to sheep ranchers in the same areas. The data for 1940–43, however, are based on actual reports in each year by ranchers who borrowed from the Farm Credit Administration.

The Farm Credit Administration, in order not to disclose confidential data pertaining to individual ranches, has always submitted the basic data to the Commission either in the form of area averages for different areas within the respective States or in the form of State averages. (For administrative purposes the Farm Credit Administration divides most States into two or more areas.) When in the form of area averages, the data for each area within a State were weighted by the total number of ranches covered in the respective areas to obtain a weighted average for the State. The averages of each State were then weighted by the total number of stock sheep [9] in the State to obtain a weighted average for all the States covered by the survey.

The Commission attempted to obtain estimated prices in 1944 of wool, sheep, and lambs at the time it obtained the data from which were prepared the estimated costs given in this report. Though the response with respect to cost data was satisfactory, comparatively little information on prices was obtained owing to the fact that at the time the survey was made the ranchers had not made sufficient sales of their products to be in a position to estimate prices for 1944. In the present report, therefore, prices of wool, sheep, and lambs and ranch income for 1944 were derived from estimated prices issued by the Department of Agriculture.

An item of "other ranch income," chiefly from the sale of sheep and lamb pelts, was included in "total ranch income." It was distributed about equally between wool and sheep and lambs. Over a period of years the wool pulled from pelts is approximately as valuable as the skin or "slat" from which it is pulled.

Except for shearing costs, which are charged to wool alone, all operating costs and interest (paid and imputed) are allocated to wool, and to sheep and lambs, on the basis of the relative importance of income from wool and from sheep and lambs during the given year. The Commission has included in operating costs a managerial allowance of 65 cents per head of sheep inspected

[9] Stock sheep consist of animals, largely ewes, retained on the ranches for breeding and maintenance as distinguished from sheep and lambs retained for fattening preparatory to slaughter, that is, animals "on feed." The figures used in weighting the data were the average number of stock sheep in each State in the western region on January 1, as estimated by the Department of Agriculture.

at the beginning of the operating year.[1] This is the only allowance made in costs for the labor of the operator and his family. (The results obtained by a different method of allocating joint costs for the years 1940–43 are discussed on pages 12–13 of the costs of wool production in 1943, issued by the Commission in June 1944.)

In determining the equity in the ranch property (land, buildings, wagons, etc.) per head of sheep inspected for each year, the total investment per ranch in 1941 (about December 1, 1940) was divided by the number of sheep inspected at the beginning of each year. Interest on ranch investment was computed at 5 percent (item 29 in table 2).

In order to determine investment in sheep, the Commission obtained from the Farm Credit Administration the average value of sheep per head inspected in 1941 and 1942, the only years for which such data were available. These values were adjusted to obtain investment in sheep for 1940, 1943, and 1944, by using the same percentage differences found in changes in the values of all sheep in the western region on January 1 in the respective years, as reported by the Department of Agriculture. Interest on these sheep investment values was computed at 5 percent (item 30 in table 2).

The value of sheep and of fixed capital in ranches does not account for all the capital required for ranch operation. Short-term outlays are made throughout the year for feed, wages, supplies, and so forth. The interest actually paid by the reporting ranches on borrowed capital was smaller in years after 1941 because the ranchers borrowed less than formerly for such current expenses and covered more of them from their own funds. Data are not available which would allow an accurate estimate of the total amount of the interest allowance which might be properly imputed as cost resulting from this greater use of the rancher's own funds. An adjustment of 2 to 3 cents per head was made in the item of interest paid shown for 1942, 1943, and 1944 in order to offset this omission.

[1] The sheep on a ranch at the beginning of an operating year (about December 1) are inspected by field agents of the local production credit associations. These associations, in effect, are field offices of the Farm Credit Administration and make the loans to ranchers. The allowance of 65 cents per head agrees with conclusions of the United States Forest Service in a pre-war investigation of various cost factors in the far West. On a ranch which carries about 3,000 sheep into the winter, this allowance is equivalent to the salary of a good foreman under conditions of normal cost. In 1943 this allowance averaged about one-fourth larger, and in 1944 about one-seventh smaller, than the loans made for family living expenses.

Work or Jail

EXTENSION OF REMARKS

OF

HON. FRANK FELLOWS

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1945

Mr. FELLOWS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech by Hon. James B. Perkins, of Boothbay Harbor, Maine, delivered February 8, 1945, at Augusta, Maine, in the Maine House of Representatives:

Mr. PERKINS. Mr. Speaker, I move the acceptance of the unanimous ought-to-be adopted report of the Committee on Federal Relations on this bill.

Now, Mr. Speaker and members of the house, I never have, and I never again expect to address this or any other body in any more serious a manner than I do at the present time.

While at home over this week end, I noted in my county paper a little prayer which I would like to call to your attention.

"Dear Lord
Lest I continue
My complacent way;
Help me to remember
Somewhere out there
A man died for me today.

As long as there be war;
I then must
Ask and answer
Am I worth dying for?"

Each one of us must answer that question for himself. I only know that I would not meet that test unless I spoke to you today about the dearest thing that you and I possess: our liberty and our freedom. I speak to you today, not only as a member of this house, but as a student of my profession.

These are the days when the world and our own liberty here, must be saved by the efforts and sacrifices of the ordinary man and the ordinary lawyer, when this ordinary man gathers from his familiar way of life, from the traditions and the practice and the wide companionship of his craft, all that he has and is and throws it humbly and resolutely into the struggle which will decide whether our American way of life, that liberty under the law and our Constitution, which he can understand, if he cannot define it, shall perish from the earth.

The ordinary lawyer shares and rejoices in the memory of the great masters of the common law—he draws his inspiration from their learning, their wisdom and their example. But he makes his own contribution. He has learnt, and in none too easy a school, to think honestly, to speak fearlessly, not, I hope, to rate himself too highly, to understand the troubles and difficulties of other men and to give himself ungrudgingly in their service.

When we became involved in this conflict, there were many who prophesied that total war would prove incompatible with the essential civil freedoms. This is where the danger lies. I, however, do not believe it is necessary to give up or sacrifice any of our freedoms to win this war. To believe otherwise is to say that democracy is a failure and that we must have a totalitarian government. To this I cannot agree.

I look to the court for approval.

In *Ex parte Milligan*, 4 Wallace at page 120, Mr. Justice Davis, of the Supreme Court of the United States, said:

"The Constitution of the United States is a law for rulers and people, equally in war and in peace, and covers with the shield of its protection all classes of men at all times and under all circumstances. No doctrine involving more pernicious consequences was ever invented by the wit of man than that any of its provisions can be suspended during any of the great exigencies of government. Such a doctrine leads directly to anarchy and despotism, but the theory of necessity on which it is based is false; for the Government within the Constitution has all the powers granted to it which are necessary to preserve its existence." Thus spoke the Court.

It is one of the examples of living in times like these that life becomes reduced to simple issues—life and death—and as in the question now before this House—liberty and voluntary servitude.

The pursuit of these virtues to which I have just alluded by the ordinary lawyer, though they may not be colorful, does not mean that we lawyers are untouched by the fire of enthusiasm. There are causes for which we, like others, are prepared to die. One such cause there is that will always be sacred to us and that now stands assailed—the cause of liberty under the law.

We know what liberty means. It is a tradition which we share, for which our forefathers died, for which we risked our lives and our sons now risk theirs.

And we lawyers, as practitioners of the common law, have had committed to us to carry in our day and generation the eternal torch of liberty and justice. Today men stalk through the world and even in our own beloved country to put that light out, to set up the relentless and miserable darkness of an iron tyranny in the place of the immortal lamp of liberty. The lamp is ours to shield with our lives, our bodies, our minds, and our spirits, with all we have and are. And we cannot fail.

Walls and cities may fall, but that lamp will stand. Men may die, and we among them, but that lamp will burn on. We are mortal men and our poor lights must some day flicker and burn out. But that lamp is eternal and can never be quenched. For, in very truth, that lamp, the lamp of liberty, the lamp of law and life, is kindled by the light which lighteth every man who comes into the world.

I light my lamp, this morning, at Runnymede, at the signing of the Mayflower Compact, at Lexington, and Concord, and at Gettysburg.

The crusade for liberty will continue as long as there prevails the pursuit of human happiness. God not only made man in His image; He breathed into him the breath of life and kindled within him that infinite spark, and he will be free—if he desires liberty above all earthly things.

The question now before this house, is whether or not we shall send a memorial or petition to Congress in opposition to any law which would authorize and empower anyone to compel men, now free, to work for a private employer who would make a profit on his labor.

Such a law violates the thirteenth amendment to our Federal Constitution, which is as follows:

"SECTION 1. Neither slavery nor involuntary servitude, except as a punishment for crime, whereof the party shall have been duly convicted, shall exist within the United States or any place subject to their jurisdiction."

What is "involuntary servitude"?

To compel one to labor for a private employer, who would make a profit on one's labor is "involuntary servitude."

The bill now before Congress is known as the May bill, and relates only to those between the ages of 18 and 45—the age limits are unimportant. It is my contention that Congress does not have the power to compel anyone of whatever age to work for a private employer. Our sons and daughters may be victorious over the enemy on foreign fields, but we, who have the guardianship of the home front, shall have lost the war here, if Congress passes this legislation, and we shall have betrayed those who have died and those who will die for the preservation of our American way of life. For our liberty and our freedom are its very keystone. Take that away and there is nothing left.

At the beginning of this session, we took a solemn oath to support and defend the Constitution of the United States.

Two years ago in this very hall, our then Governor delivered a message in which he said:

"You and I are trustees at this time for a freedom and a kind of government which has been obtained at the cost of tremendous human sacrifice in the past and is now being

maintained by further sacrifices of our own sons of this generation.

"To let deteriorate this right of free representative government would be to betray a trust; to build and strengthen it so that it may remain a symbol worth fighting for and a living force to help those who have preserved it, is the solemn duty of us who now remain at home.

"May God guide us in this sacred trust."

Thus spake the Governor.

A so-called National Service Act was recommended to Congress by the President in his message on January 11, 1944, over a year ago.

In his message, he said:

"A national-service law—which, for the duration of the war, will prevent strikes and with certain appropriate exceptions, will make available for war production or any other essential service, every able-bodied adult of the Nation." This means men and women of whatever age.

At the same time he suggested four other measures, and said:

"These five measures form a just and equitable whole. I would not recommend a National Service Act unless other laws were passed to keep down the cost of living, to share equitably the burdens of taxation, to hold the stabilization line, and to prevent profits."

These measures were not passed. The need for this law is not nearly so great as it was a year ago.

The President also said:

"The Federal Government already has the basic power to draft capital and property of all kinds for war purposes on a basis of just compensation."

What he should have said is that the Government can take private property for a public purpose, under the law of eminent domain, if the Government pays for it, but the Federal Government or anyone else, cannot take private property for a private purpose, even if it does pay for it. And the Government cannot take the liberty of even one of the most humble of our citizens and make him work for a private employer, because that is involuntary servitude and specifically prohibited by the thirteenth amendment.

If the Government wants to take over all the factories and operate them for the benefit of the Government, without profit to anyone else—the situation is entirely different. Ever since the above message—the proponents of such legislation have steadily advocated its passage by the Congress. The best statement of their position has been contained in the editorials of the New York Times, and always in these words—they have repeated them at least a dozen times in the last year:

"If it is fair and proper and consistent with democracy for the Government to select a man for military duty and send him for an indefinite period across the seas to endure hardship and danger, then it is no less fair and proper and consistent with democracy to require another man to do war work at home, if and when necessary to meet the Nation's needs. Recognition of the essential soundness of this principle has been forced on other democracies by the crisis in which we are involved. Britain, Australia, and New Zealand all have National Service Acts, including compulsory powers. These countries are no less jealous than we are of individual rights and civil liberties."

The trouble with that position and that editorial is that it does not tell the whole truth; England does not have a written constitution. We have. We fought a war more than 150 years ago to get away from the sort of government that they have over there.

I am filled with dismay when a newspaper like the New York Times and leading commentators advocate a "work or jail" bill—when they know it violates the fundamental law of our land.

Mr. Justice Davis, to whom I have alluded, has said that the Constitution cannot be violated in time of war any more than in time of peace.

This statement on the question of a National Service Act omits consideration of every vital question which it raised, but no omission is so remarkable as that of an even passing reference to the fact that such an act would be in direct violation of the thirteenth amendment to the Federal Constitution, which prohibits involuntary servitude. They do not pay any attention to the Constitution.

Instead, this statement fallaciously assumes an exact analogy between conscription of the individual for military service in defense of his country and his conscription for employment in privately owned and controlled industry. The duty of the citizen to fight for his country is discharged under the direct command of its military organization, with the President as Commander in Chief. For labor conscription to be analogous, the Federal Government would have to nationalize war industry, in order that the conscripted worker might produce under the direct command of his Government, with no profits from his labor accruing to private individuals.

Such an act if it means anything at all, means coercion.

It means that the Government shall be empowered to decide where and how every American required to register for service shall be employed and that the individual shall be forced to accept work assigned at the wages fixed without regard to his personal interest or preference or his previous capacity to earn. And since there was not included confiscation of war industries among the conditions precedent to such Service Act, it means also that the conscripts would be forced by the Government to work for private profit.

But forced labor for private profit is involuntary servitude and has been so recognized by our courts.

In our law dictionaries involuntary servitude is defined as: "The condition of one who is compelled by force, coercion, or imprisonment, and against his will, to labor for another, whether he is paid for it or not."

Such proposed legislation is clearly unconstitutional.

The fact is, that free American labor has far outstripped the slave labor of the Axis. The fact is—that when our ally Stalin, raised his glass at Teheran and toasted the American machines without which the United Nations could not have won the great victories so far won, he was toasting the achievement of free American labor. It is astonishing and affirming to be confronted with this proposal to reward the American people who have wrought this miracle by depriving them of their constitutional freedom of the person—the dearest freedom of them all—on the ground that enslavement will make them more productive.

On January 23, 1944, 12 days after the President had delivered the message to which I have alluded, there appeared in the Sunday magazine section of the New York Times, an article by James B. Reston entitled "If We Have National Service," which is the authority for the statements that I now make. That article was cabled from London to the New York Times.

What were the conditions under which England, having no written constitution, passed its Service Act?

It is May 22, 1940. The House of Commons met in a mood of impending disaster. The new Prime Minister, Winston Churchill, had gone to France. The aged white-wigged Speaker opened the session appropriately enough by announcing the death of a member. Across the channel the Germans had taken Brussels, reached the old battlefield of the Somme, familiar to some of you boys here, and captured British general headquarters at Arras—the Belgian Government had fled to Bruges, Boulogne was falling, and the British Expeditionary Force was retreating to a small French coastal town called Dunkerque. It was in these dark days that the ordinary man in England sailed across the channel in his little ship and trusted his life to God and his memory to his friends.

This, in brief, was the situation when at 3:26 o'clock in the afternoon, Clement Attlee, the Lord Privy Seal, rose in the House and asked for immediate passage of an extraordinary emergency-powers bill.

In less than 2 hours the House had passed into law the severest act in the history of the British Parliament; together with an order in council, which it sanctioned. The act, among other things, conferred upon the Minister of Labor and National Service power to direct any person in Great Britain to perform any service in any place in the United Kingdom, to take over any piece of property for any purpose which he deemed necessary, and to place a 100-percent tax on all excess profits made out of the war.

Under like circumstances, the President would have, under our Constitution, declared martial law.

What are conditions here in America now? The Germans are not at our gates; neither have we any Dunkerque. On the contrary, the best argument against the necessity of such an act is, that the Russians have crossed the Oder, and are now within 30 miles of Berlin; our own lads are through the Siegfried line, and the Germans are doomed. In the South Pacific, MacArthur is in Manila, and the sword of impending doom is steadily approaching the heart of Japan.

What have they done in England under this act?

I quote from Mr. Reston's article:

"Tens and hundreds of thousands of men and women have been moved from their normal communities and their normal jobs and have been dumped into sections of the country and into work which they knew nothing about. These migrant workers have often had to live in homes much worse than even the temporary structures thrown up for our workers at home in America, and, in many cases, they have been billeted compulsorily in homes where they were not wanted.

"Whole towns in Scotland have been stripped of their young women, who have been moved into England to supply the labor shortage in aircraft factories, and the British people would be the last to claim that this vast migration of women and men, with its doubling up of families in unnatural surroundings, has been accomplished without unfortunate moral and social effects."

Does anyone want this in America? Can it be possible that there is anyone who thinks that any law conferring such powers is constitutional in view of the positive and definite language of the thirteenth amendment?

Jefferson may have violated the Constitution in the purchase of Louisiana, but later days proved his wisdom; we forgave him, and Congress ratified his action.

Lincoln may have violated the Constitution when he suspended the writ of habeas corpus, and advised his general there to defy the writ, although it was issued by the Chief Justice himself. What was the situation? There was rioting in Baltimore; the southern sympathizers were numerous; Lincoln put them in jail and by his action saved Maryland and other border States to the Union. Lincoln may have violated the Constitution when he issued his Emancipation Proclamation freeing the slaves in the rebellious States as a war measure. This did not abolish slavery as an institution; that was done by the thirteenth amendment.

But the situation is far different when our Congress, with no emergency, votes to give anyone the power to compel a freeman to work for a private employer.

When that day comes, America is no longer the land of the free. And the Bill of Rights, that charter of civil liberties, as well as the thirteenth amendment, have become mere scraps of paper.

In any event, I feel that those who have someone near and dear to them over there, or who have already lost someone near and dear to them, will understand what I am trying to say. The ideals of America have a real meaning to them. The mothers and fathers of America are not walking with Pleasure in these anxious days, but with Sorrow.

"I walked a mile with Pleasure,
She chatted all the way;
But she left me none the wiser
For all she had to say.

"I walked a mile with Sorrow
And never a word said she;
But, oh! the things I learned from her
When Sorrow walked with me."

What are we fighting for? What are our sons dying to preserve?

There may be confusion in the minds of some, but there is none in mine, nor do I believe there is any in your minds, or in the minds of our boys over there.

Certain facts are crystal clear.

Clearly we fight to destroy Hitler and Hirohito and their plans for world domination. But we also fight for the preservation of our liberty, for the right to rule ourselves in our chosen way.

But, unless, while winning the war, we yet would lose, it must be equally clear that we are fighting to preserve our Constitution. We must defend that Constitution, as well as our rights, with our lives.

Only thus can we defend our constitutional form of government, from which spring all our liberties—all that makes the lives of freemen worth living.

The liberty of America is its very soul. And the act now pending in Congress would destroy it—would destroy the very thing for which our boys have died and are dying, as I speak here this morning.

What is this liberty?—What is this freedom?

You understand what I mean, even if you cannot define it. If you do not know what I mean, go out into the open and lift up your eyes unto the hills from whence cometh all courage and strength. Look to the hills, and you will then know what I mean, what it is that our boys are dying for—freedom, liberty—our American way of life and all that goes to make it up, but the greatest of these is liberty.

We cannot betray these boys who died and who will die for liberty and freedom, these boys of ours whom we shall never see until the resurrection.

And as we vote on the pending question before this house, let us hope that those boys of ours from their places beyond the stars will say, "Yes, they were worth dying for."

And let us, by the same token, say to them:

"They shall not grow old, as we who are left grow old,
Age shall not weary them, nor the years condemn,
At the going down of the sun in the morning,
We shall remember them."

[Applause.]

Joseph F. Kelly

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1945

Mr. CANFIELD. Mr. Speaker, Joseph F. Kelly, administrative assistant in New York City to the Atlantic coast director, War Shipping Administration, is paid deserved tribute in a special article in the March issue of the Marine News, the occasion being the beginning of his tenth year of service for the Government.

"Joe" Kelly, as he is known throughout shipping circles along the Atlantic coast, signed up with the old Shipping Board early in 1936. One of his first assignments, according to the Marine News, was the establishment of the Food Inspection Service. Later he was named as marine adviser to Henry Schweinhaut, Assistant Attorney General of the United States, during some marine investigations. Early in 1941 he made an inspection of eastern port facilities for lend-lease operations, and in 1942 he was named special investigator for the House Naval Affairs subcommittee inquiring into the *Normandy* disaster.

More recently he has handled censorship and has directed the War Shipping Administration's public relations in the New York area.

Summarizing its tribute the Marine News concludes:

Despite his many duties and continual clutching of the telephone to answer questions from all sides, all day long, "Joe" Kelly found time to think out loud for the inauguration of one of the most gratifying tributes yet made to the American merchant marine—the 1-minute silent period observed on Maritime Day, May 22, 1944, in remembrance of those who died at sea. At his request the mayor of the city of New York issued a proclamation commemorating this day, and New York again set the example for the rest of the country.

The Marine News is but reflecting the feeling in maritime circles by setting forth this brief summary of the progressive activities of one of the most colorful, hard-working, and always helpful personalities rounding out his tenth anniversary with Government shipping agencies, the possessor of an always open-minded attitude and an eagerness to aid wherever any problem should arise in the marine field in wartime as in peacetime. We congratulate "Joe" Kelly and are grateful for his grasp of the wide range of duties his fine work involves as he enters his tenth year of maritime activities.

Memorandum of Scottish Polish Society to Anthony Eden

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1945

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following:

The Scottish Polish Society, Scottish organization of friends of Poland, sent the following memorandum (March 9) to British Foreign Secretary Anthony Eden. The memorandum deals with issues arising from the Yalta decisions on Poland:

"1. The Scottish Polish Society admits, that for the moment it may be necessary for military reasons to have some Russian control in what was pre-1939 Poland, but it is its definite and sincere conviction that in regard to the future of the inhabitants of those parts of the Ukraine and White Russia forming part of Poland in 1939, no final decision should be made without giving the population an opportunity of voicing their desires free from external influence. In short, the decision must be that of the people concerned, and so give them the freedom for which we are fighting. It is, therefore, asked: (a) Will His Majesty's Government guarantee that the peoples within the frontier of Poland in 1939 be given a future in accordance with Churchill's definition of 'title deeds' of freedom included in his farewell message to the Italian people on August 28, 1944, and in particular, will His Majesty's Government guarantee to give their peoples as defined above the right stated in Churchill's first point, namely, free expression of opinion and of opposition to and criticism of the Government of the day? (b) Will His Majesty's Government guarantee the same rights to the people of Poland within such boundaries as may be finally agreed between a Polish Government genuinely representative of the Polish people and the three great powers, signatories to the Yalta declaration?

"2. In addition to the above, the Scottish Polish Society desires an assurance from His Majesty's Government on the following points:

"(a) Immediate cessation of deportation to Russia those who were Polish citizens in 1939, and the repatriation of all such Polish citizens who have been deported since September 1939 by Russia and Germany.

"(b) That the Polish forces serving with the western Allies be given the right to vote and a free and unfettered opportunity officially recognized and organized as accorded to the British forces to submit the mandate of their desires regarding the future of their country.

"(c) The Scottish Polish Society is seriously perturbed at the reported arrest and confinement in concentration camps of members of the Polish Home Army and the underground administration loyal to the Polish Government in London which is recognized by His Majesty's Government and the Government of the United States.

"(d) Will His Majesty's Government approach the Soviet Government immediately, to permit a committee consisting of Scots and Poles to enter Poland at once, with full facilities to move by any means of transport to any part of or place in Poland, and to visit anyone in Poland, and to invite two representatives of the Scottish Polish Society to serve on this committee? After 6 years, during which the Polish people have been denied all contact with western Europe, and with Great Britain in particular, it is necessary for the healthy development of Poland that these contacts be renewed. It is hoped that the committee of Scots and Poles will consist of competent representatives of various aspects of public and social life; the aim of the committee is to renew those extranational relations with corresponding groups in Poland and which have been served by the war.

"(e) Will His Majesty's Government give an assurance that steps will be taken to enable the International Red Cross and U. N. R. R. A. to enter Poland at once, with full facilities to assist in the rehabilitation of the country and representatives of the press to be present to transmit information to the world as to existing conditions?

"(f) Will His Majesty's Government give assurance that there will be no general election in Poland until those deported have returned and arrangement can be made for the fighting forces and prisoners of war to take part and, further, that such elections shall be supervised by a commission appointed by His Majesty's Government and the Governments of the United States of America and France, to insure as far as it is humanly possible that every citizen is given full opportunity of voting according to his convictions without fear of subsequent victimization?"

Address of Hon. William L. Clayton

EXTENSION OF REMARKS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1945

Mr. LUTHER A. JOHNSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable William L. Clayton, Assistant Secretary of State, before the Women's National Press Club, Washington, D. C., March 13, 1945:

The post-war foreign policy of the Department of State centers in measures and instrumentalities for the preservation of peace in the world.

The peace structure must be seen as a great arch supported by two strong columns, one political and the other economic.

If either column fails, the whole structure collapses.

Political peace will not long endure if economic warfare is to continue throughout the world in the way in which it was waged during the period between the two World Wars.

The Dumbarton Oaks propcsals represent our foreign policy for the maintenance and promotion of peace through international organization.

Our foreign economic policy revolves around an expansion in world economy—free and equal access for all nations to the trade and raw materials of the world, increased production, much greater exchange of goods and services between nations, and higher levels of living for all peoples everywhere.

Now, there is not one single element of the Santa Claus philosophy in this policy.

On the contrary, quite aside from the question of future peace, the United States will be one of its principal beneficiaries.

Next to this question of future peace and security, the post-war problem which concerns the greatest number of people in the United States is the problem of employment. This is doubtless also true of every other section of the world which has been fortunate enough to escape physical destruction in this war and the hunger and misery and desolation which have followed.

In these latter areas, preoccupations are even more elemental—food, clothing, housing, reconstruction.

The United States is the country in best position to supply promptly the machinery, tools, equipment, and technical knowledge necessary for rebuilding devastated areas and for developing the resources of other parts of the world.

The difficulty will be for these areas to find the dollars with which to pay for such goods and services. They cannot promptly pay in their own goods because they have neither the goods nor the necessary facilities for producing them. Even if it were otherwise, our tariff walls would largely prevent payment in this way.

It is definitely in the interest of the United States to assist in reconstruction and development. If we are to reach a high level of employment, we must have immediate markets for our surplus production of the very kind of goods which many countries will so desperately need. Moreover, the normal life and productive capacity of the world must be restored and expanded as quickly as possible if we are to have markets for our surplus peacetime production of all kinds of goods.

Now, it has been estimated that if we supply these demands, our exports may exceed our imports in the first 5 years after the war by a total of fifteen to twenty billions of dollars.

This huge excess will be balanced in several ways:

By the use of existing gold and dollar balances held by the rest of the world, by credits extended by the proposed International Bank if it should be adopted, by other credit facilities, private and governmental, and by the investments of American business concerns and American citizens in industrial and commercial activities abroad.

What we come to then is a great expansion in the creditor position which the United States already occupies in the world.

This creditor position developed as a result of the First World War.

A debtor Nation for over 100 years, we were unable quickly to adjust ourselves to the circumstances of a world creditor in which position we were suddenly and accidentally thrust.

We continued to act as a debtor, refusing, by three separate advances in tariffs and by other means, to accept payment from the rest of the world of the sums which they owed us.

Now we find ourselves inevitably approaching a status in which the world will be indebted to us in much greater sums than ever before.

For the most part, we must take payment in goods and services and we can only get paid in this way if world-wide discriminations in trade are eliminated and tariffs and other barriers to the exchange of goods and services are reduced.

We may never wish to bring back to the United States the principal sum of our foreign loans and investments, but we will certainly wish to receive the interest and dividends and this will involve for us an excess of imports over exports.

Failure to recognize this position and to adjust to it will inevitably result in the sacrifice of a large part of our foreign loans and investments, resulting in charges of bad faith and the creation of international irritations of a serious character.

Most wars originate in economic causes.

The bounties of nature are distributed unequally over the earth.

Some countres are rich in one resource and some in another; still others possess almost no subsoil resources.

Hence, equality of opportunity for development in the modern world is only possible if all nations have free and equal access to the trade and raw materials of the world.

It is not enough to say that the raw materials are available to all who have the desire and the means to purchase.

Trade discriminations and excessive tariffs are just as effective in barring access to raw materials as any other method, and are highly provocative.

The most elaborate political and military arrangements for the preservation of physical peace will soon disintegrate in an atmosphere of bitterness created by international economic warfare.

As the greatest military, economic, and financial power in the world, the United States faces colossal responsibilities and opportunities. It cannot meet these responsibilities, it cannot grasp these opportunities in an atmosphere of economic isolationism such as that created by our policies following the First World War, culminating in the Smoot-Hawley tariff bill which practically destroyed our international trade and provoked retaliatory measures on the part of 31 nations.

Democracy and free enterprise will not survive another world war.

For the second time in this generation, our country is faced with the responsibilities and opportunities of world leadership.

At the end of the First World War, we stepped aside and the mantle fell to the ground. This time, the mantle is already around our shoulders, and a devastated and terrified world is hopefully looking to us to show the way back to peace and life.

We can do this, but only if our wisdom and vision are equal to our power and influence.

Freedom of the Press

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1945

Mr. GILLIE. Mr. Speaker, the widespread public interest in freedom of the press and its extension to all nations is heartening to those of us who look hopefully toward a post-war world in which cooperation among all peoples will guarantee enduring peace. I hope that the plans laid at the coming San Francisco Peace Conference will include provision for the free exchange of news.

A democratic country which permits government control of its press to exist cannot long remain free, and an organization of nations to maintain peace would have little chance for fulfillment of its purposes if the truth and information essential to an understanding of each other were withheld from the people in those nations.

History has demonstrated conclusively that under the protection of a government-controlled press, war-making leaders have been able to throw the world into conflict before being checked by their own people or by peace-loving countries. It is my firm belief that if the people of any nation had a thorough understanding of the peoples of all other nations, it would be difficult for any war lord to lead them into war against their fellow men. Without the free exchange of news that understanding would be impossible to attain.

Many groups and many individuals have spoken out in favor of adoption by the United Nations Conference at San Francisco of plans calling for free exchange of information and news among the nations of the world. On February 6, 1945, the Costello Post of the American Legion, largest post in the District of Columbia, adopted a free-press resolution, and is now launching a movement to have veterans' organizations throughout the Nation push the proposition to a successful conclusion. I am glad to include here a copy of that resolution and two newspaper clippings concerning this action:

[From the Richmond (Va.) News-Leader of March 2, 1945]

LEGION URGED TO ENDORSE NEWS FLOW

WASHINGTON, March 2.—American Legion posts throughout the country are being urged to endorse the principle of a free flow of world news as an essential to establishment of permanent peace.

Members of the Vincent B. Costello Post of Washington are seeking Nation-wide support of their pledged "efforts toward the incorporation of a charter of freedom of news and communications in the forthcoming peace settlements."

Officials of the post, largest in the District of Columbia, today mailed to 500 Legion organizations copies of a resolution expressing enthusiastic approval of the free-press principles advocated by Mr. Kent Cooper, general manager of the Associated Press.

Joseph Leib, of Arlington, Va., vice commander of the post and author of the resolution, said he thought "every veteran should consider this proposal seriously."

"It is of vital concern to every one of them," he told a reporter. "We know that the press of Europe has always been controlled, and the people of that Continent knew and read in their newspapers only what the war lords wanted them to see. This must not happen again.

"The membership of the American Legion should be wholeheartedly behind this great objective of a world free press. I sincerely hope that Legion posts throughout America will push the Associated Press proposal to a successful conclusion."

[From the New York Times of March 18, 1945]

STETTINIUS ENDORSES FREE WORLD NEWS

WASHINGTON, March 17.—Secretary Stettinius "earnestly" hopes that the principle of free exchange of news will be included in international peace plans adopted by the United Nations at San Francisco in April.

He declared in a letter made public today by Joseph Leib, of Arlington, Va., that international acceptance of the idea would be an important contribution toward lasting peace.

Mr. Leib, vice commander of the Vincent B. Costello Post of the American Legion, sponsored a resolution urging that "free press principles advocated by Kent Cooper, general manager of the Associated Press," be included in the peace treaty. Mr. Leib, who made public Mr. Stettinius' comment, had sent the Secretary a copy of the resolution. Mr. Stettinius' reply said:

"The whole question of freedom of information has been under study in the Department of State for some time. It is our view that the acceptance by the United Nations of the principle of free access to and free exchange of information would be an important contribution toward establishing a permanent peace".

Recalling that the Inter-American Conference at Mexico City adopted a resolution calling for free exchange of information, the Secretary added:

"I think you will agree that the acceptance of the principles urged by the United States delegation at this conference is a long step forward."

[From the Costello News of March 1, 1945]

FREE PRESS

A resolution endorsing the principles of free press as adopted by our post at its February 6 meeting:

"Whereas it is our contention that the adoption of the principle of a free flow of world news would be instrumental in paving the way toward a more permanent peace;

"Whereas recognizing that international exchange of truthful, unbiased news throughout the world, free from any government or private control and unhampered by greed or prejudice, is in part essential to the maintenance of peace and universal cooperation: and

"Whereas both great political parties have embodied said theory in party platforms, and in a concurrent resolution recently adopted by the Congress of the United States: Therefore be it

"*Resolved*, That the Vincent B. Costello Post, No. 15, of the American Legion, Department of the District of Columbia is authorized and directed to express its enthusiastic approval of the free-press principle advocated by Mr. Kent Cooper, general manager of the Associated Press, and pledge our efforts toward the incorporation of a charter of freedom of news and communications in the forthcoming peace settlements."

THOMAS COSTELLO,
Commander.
DAVID E. MILLER,
Adjutant.

Dumbarton Oaks

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1945

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post of March 21, 1945, by Ernest Lindley:

DUMBARTON OAKS

(By Ernest Lindley)

AMENDMENTS WILL BE OFFERED

Although the Dumbarton Oaks agreement has, on the whole, weathered critical examination, a number of amendments will be offered at San Francisco and at least a few almost certainly will have to be adopted.

Senator VANDENBERG wants to be sure that the world organization will have power to review and revise political settlements made during the present war. Under Dumbarton Oaks, it already has been given that power, and more. According to the agreement, any situation may be brought to the attention of the world organization. Whether the situation in question arose from a political settlement made during this war or from one made earlier would make no difference. But the Senator apparently wants the final charter of the world organization to be more explicit about this.

The voting procedure agreed upon at Yalta almost certainly will be opposed by some of the smaller nations. But there is little likelihood that it will be altered in any important way. Whether a great power has, or is denied, the right to veto action against itself is a question rather far removed from reality. Either way, a great power cannot be restrained or coerced without a major war, and the other great nations will not restrain or coerce it unless they consider the issue important enough to justify fighting a major war. It would seem honest intellectually to recognize this by permitting a great power to veto action against iself.

Sumner Welles has suggested that the proposed Big Five—the United States, Soviet Union, Britain, China, and France—be made a Big Six by giving Brazil a permanent seat on the world security council, with a corresponding increase in the total size of the council from 11 to 13 members. Some of the other Latin-American nations probably will be less interested in that than in making sure that one or two of the temporary seats on the council are always filled from the Western Hemisphere.

The San Francisco Conference clearly will have to go into the question of regional security arrangements more thoroughly than was done at Dumbarton Oaks. Regional arrangements were specifically authorized at Dumbarton Oaks. But the tendency there was to heap the responsibility for keeping the peace on the world organization, instead of decentralizing it. Under Dumbarton Oaks the nations of the Western Hemisphere could not act to preserve the peace within the hemisphere without the prior authorization of the world security council. This discovery came as a shock to many during the discussions at Mexico City which led to the Act of Chapultepec.

Regional agreements and all special alliances must be consistent with the purposes and principles of the world security organization as the Act of Chapultepec certainly is. If the close neighbors of a threatening aggressor can deal with him effectively, so much the better. The world organization would want to be sure that they were, in fact, dealing with a threat to the peace and not ganging up on an innocent party. But this safeguard might be established without requiring a prior authorization from the world security organization before a regional group could act. The close neighbors usually know what is going on sooner than more distant observers do. In most cases, what should cause concern to the world organization is not regional action to curb an aggressor, but failure by the regional group to act promptly and effectively.

St. Patrick's Day

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an editorial on St. Patrick's Day which appeared in the Lynn Telegram-News, Lynn, Mass., March 18, 1945:

ST. PATRICK'S DAY

Yesterday was St. Patrick's day!

Throughout the length and breadth of the world, wherever Irishmen traverse this temporal coil, the patron saint of the Emerald Isle was honored. Honored for his having performed one of the greatest miracles in the history of mankind, when he converted an entire pagan nation without the shedding of a single drop of blood.

In the paralyzing cold of the silent north; beneath the blistering rays of an equatorial sun; in the east and in the west, Erin's sons and daughters observed, in a fitting manner, the anniversary of St. Patrick, whose undying spirit still roams the moors and glens of the land of saints and scholars, and in truth, is present in every nation under God's canopy, blessed by the presence of native-born Irish or their illustrious progeny.

St. Patrick was honored in the steaming, smelly, insect-infested jungles of Iwo Jima when her courageous sons and daughters, fighting under the Stars and Stripes of freedom, hummed The Wearin' of the Green to the accompaniment of the staccato notes of machine guns. St. Patrick was honored within the very precincts of the reich's holy soil as the intrepid descendants of the fighting race crossed the much vaunted Rhine whistling the River Shannon to the deep-throated, reverberating tones of the mighty howitzers. In fact, Ireland and St. Patrick were honored in every section of the globe where stricken liberty lay bleeding and in need of succor, by the Irish and their offspring, who today, as in days of yore, are found fighting and dying for the preservation of the God-given rights of man.

One cannot think of the Irish without thinking of their great contribution to America.

The Irish were trail blazers in the early history of this country; sturdy, God-loving, stout-hearted men and women before whose powerful blows great forests fell prostrate, and under whose magic touch thriving cities came into being, roads were built where highways never ran, shining steel rails pierced the hinterlands, and civilization's boundaries extended through unchartered wildernesses, which rang with their cheery song and hearty, fearless laughter.

The Irish were great teachers in the early days of America, even as they are today. Driven from their homeland by cruel and vicious laws, what was Ireland's loss became America's great gain. Teachers with the spirit of missionaries, they roamed the primeval forests and taught the children of the colonists to love that which had been denied them in their native land. So effective were their techniques that when the tyrant king attempted to deny them their inherent rights, they took up arms and won for America the freedom which we hold today so priceless.

The Irish were and still are great statesmen. Statesmen whose passionate appeals whipped the spark of patriotism into a great conflagration which loosed the shackles of tyranny from people in bondage and made them freemen. Soldiers, pioneers, teachers, builders, poets, literati, and statesmen, the Irish in America have made a contribution to our way of life that merits the eternal gratitude of all America.

We need not go back into the weighty tomes of by-gone days to find proof of this. If we but gaze about us, we will see incontrovertible evidence of the greatness of the Celt and his descendants. We need but to look to our great Governor, Maurice J. Tobin, to see the heights to which the Irish have risen in honor, esteem, love and appreciation, here in America. Maurice J. Tobin is more than a great Governor; he is more than a brilliant statesman; he is more than a kind and sympathetic humanitarian; he is more than a courageous leader and fearless champion of the rights of the people; he is the symbol of America at her very best. He is the hope of every child born into humble circumstances; he is the inspiration of the youth of vision; he is the fulfillment of the promise which was made to posterity by the founding fathers; the promise of equality, opportunity, justice, and tolerance.

Let the little men of this age as in other days, filled with envy, jealousy or other ignoble emotions, endeavor to impede his progress, their efforts will be of no avail. For fate, noting the heritage that was transmitted to him at birth by his devoted parents; noting his acquired and perfected talents; noting his manly qualities; decreed that he is a man of destiny.

Erin go Bragh!

Address by Hon. Thomas J. Lane, of Massachusetts, Before the Polish Relief Committee, Lawrence, Mass.

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a speech which I made before the Polish Relief Committee in Lawrence, Mass., March 18, 1945:

The Polish Nation has given to the world some of the most inspiring examples of courage, and at a time when larger and stronger nations were surrendering to Nazi blackmail. Poland knew that she could not hope to defeat the giant militarism of her greedy neighbor. But Poland knew that she was right in defending her sovereignty against unwarranted attack. With passionate faith in freedom she fought against the brutal onslaught of Nazi barbarism. She fought and bled and to the world it seemed that Poland had died. The Nazis, however, were not sure. The Gestapo set up its gangster rule, determined to suppress all flickering signs of life. Hitler ordered that this nation should be exterminated. But somehow, in spite of overwhelming tyranny, the Poles fought on, fought on with heartening words and too few weapons, in the back streets of cities, in the forests, and in the new dimension of war, the underground. The Nazis used planes and tanks, bribery, and torture against this will-of-the-wisp enemy but German patrols continually disappeared and trains were systematically wrecked. The Nazis had occupied Poland but they had not conquered her. The great material power of militarism was powerless against the spirit of the Polish people.

To a world confused and weakened by Nazi propaganda, the tenacious resistance of the Poles was an inspiring "shot in the arm." Why did these men fight on against impossible odds. Because they did not waver in their belief that the goal of man is freedom, not slavery.

And so, all over the world, ordinary men were encouraged to face the task of beating back the menace of modern tyranny. In the critical days of 1940, when the fate of all humanity was at stake, these men of many nations fought wing to wing in the skies over Britain, fought day in and day out to hold back the Nazi storm of destruction.

You and I will never forget those grim days when the few fought against the many and the end of all that we cherished most seemed near. But they held and the world took hope again. Conspicuous among those few to whom we owe so much, were Poles who had escaped from the Nazi yoke to write one of the most inspiring pages of history in the flaming skies over Britain and the English Channel.

Since then they have fought the common enemy in Africa, and in Normandy. They are fighting him in Holland, Italy, and in Germany. For 5½ years they fought him at home with a will and ingenuity unequaled in this or any other war. Surrounded by Nazis and covered by Nazis they nevertheless managed to mobilize an army and in August of 1944 they rose against their oppressors in the now famous battle of Warsaw. For 63 heroic days they held out against greatly superior forces in one of the most remarkable uprisings in military experience. This epic stand required bravery of the highest order but more than that, it demanded the organizational skill and the adaptability one finds only in a freedom-loving people. Though now but a ghost of her former self, Warsaw will rise again and her name will stir men centuries from now as a shining symbol of the dignity of man.

The democratic faith of the Polish people was refined and strengthened in spite of the terrible sacrifices she endured. The Christian Labor Party, the Peasant Party, the Nationalist and Socialist Parties had no place in the government that ruled Poland in the years before the present war. Those in power at the time believed that the structure of Polish politics should be strong and centralized, in conformity with the regimes of its powerful eastern and western neighbors. In view of the constant international tension, the government discouraged parliamentary and democratic movements, allowing them no voice in the administration of the country. These parties, in turn, reacted by refusing to enter the elections.

With the coming of war, all these restrictions disappeared. The underground state which was formed, returned to the still older traditions of Polish parliamentary democracy. The people were fighting not only for freedom but for a greater measure of freedom, economic as well as political. They fought together as brothers-in-arms, not for any particular class or faction, but for the common welfare. For this, unknown to some people, is a war within a war. Outwardly, we fight against Fascist cruelty and aggression. We also fight against the injustices that exist within every country. For the people in every nation are dissatisfied with things as they were. Their eyes are lifted to new horizons and they are determined to make this a better world for the hundreds of millions who are suppressed. How to maintain our liberties and still solve the great problems which the machine age has imposed on society, this is the great challenge facing all nations and peoples today.

We who have followed the struggles of the Polish underground have been amazed by their ability to organize and govern, even under the heel of the conqueror. The secret press has flourished; secret schools have been established; traitors are tried and punished and the underground even found ways and means to finance its many activities. All this was splendid proof of the vitality of the Polish people; of their determination to govern themselves under any and all conditions.

The German occupation was never recognized. In Poland, alone of all the occupied countries, the word "collaboration" was unknown. To her eternal glory, her people were completely faithful to their birthright. To them freedom meant all or nothing.

As the war in Europe nears an end, the question of Poland looms large in the councils of the Allied Nations. Upon the just solution of her case will depend the confidence of the world in the peace that follows. This is indeed the test. Will Poland retain all her old borders, including the vexing problem of the Corridor which disturbed Europe for so many years, or will some compromise, some adjustment be necessary under the pressure of power politics? Will the Polish people have the opportunity to freely choose the men who are to represent them in the government?

What happened at Yalta? What the future holds for Poland was not fully decided, but on the question of boundaries, the leaders of the "Big Three" expressed agreement. Russia seeks the eastern two-fifths of prewar Poland, all territory east of the Curzon line proposed after the last war. This runs from the southernmost point of Lithuania through Brest-Litovsk and down to the Czechoslovak border in the Carpathians. Much of this large tract is taken up by the Pripet marshes; the rest is agricultural. For these losses along the eastern frontier, it was said that Poland would receive "substantial accessions" in the north and west which might include agricultural East Prussia and part of industrial Silesia.

Politically, also, the Polish people were expected to agree to certain changes. The Government in exile in London, which rejected the revision of boundaries was bypassed. The so-called Lublin government, put forward by the Russians now functioning in Poland was to be recognized, provided that it would add representative elements from within Poland and from abroad. At Yalta, it was said that this government was to be a provisional one, that as soon as possible, free elections would be held to determine the wishes of the people.

Many Americans are genuinely disturbed by this turn of events. They believe that the Yalta decisions are a repudiation of the

high sentiments expressed in the Atlantic Charter, that rallying cry for freedom which was drawn up at a time when our fortunes were low and we appealed to liberty-loving men the world over to join us in resistance to aggression. Points one and two of this charter state clearly: "Their countries (meaning the United States and Great Britain as signatories and Russia which later endorsed it)—seek no aggrandizement, territorial or other"; and they "desire to see no territorial changes that do not accord with the freely expressed wishes of the people concerned."

We have witnessed in 1939, the tragic consequences of appeasement. Not only did it fail to stop this war but it encouraged aggression because it was a confession of weakness, both moral and material. We believe that any present or future appeasement will undo the very ends that we are working and fighting and dying for.

A new world—one in which the constituent members must work together—lies before us. In that world, the United States because of its prestige and because of the moral worth it has established in the eyes of all people, must assume the burdens of great leadership. The responsibility will be heavy and the precedents we set by our example will influence the course of history for centuries to come. It is no easy matter, and we shall not always find that our viewpoint is shared and supported by others in the family of nations. But we mean to do our level best. We shall never forget that we are sons and daughters of a nation founded on the ideals of fair play and human brotherhood. As one of the major architects of world security and world justice, we know that we must start right. The conscience of the American people will never be satisfied with anything less.

This brings us to the coming conference to be held at San Francisco starting April 25. The United States will have six delegates in attendance, some Democrats and some Republicans. In this nonpartisan atmosphere shall be voiced a truly representative and American viewpoint. Many subjects will be discussed and many important decisions will be made at this full United Nations conference.

In the true American tradition you are holding this meeting to mobilize public opinion in support of Poland's cause. And you may wonder, as I do, why Poland must plead her case when she was the first to resist Nazi aggression, the first to inspire a spiritually weakened world with the fervor of moral greatness. It is hard to believe, even now, that this nation which sacrificed more on the altar of freedom than any other should be forced to stand as a suppliant and not as a judge. For her whole record during this assault on civilization has been one of leadership in defense of the rights of man and for the democratic ideals of genuine Christian culture.

What the future holds for Poland was not fully decided at Yalta. Therein lies the hope that an aroused public opinion may have some influence on the forthcoming deliberations at San Francisco. For the door has not been closed. The people of the United States, which means the United States, have yet to be heard from. Five weeks remain for that opinion to form and to express itself. Through protest meetings like this one, you are helping to crystallize that opinion and to set in motion a tide of opposition that will speak, not only for Poland but for the aroused conscience of the American people.

Our first objective is to win this war. Our second objective, in many ways a more difficult one, is to establish the foundations for a just and lasting peace. Any treaty which simply extends, though in another form, the tensions following the last World War, will only give us a breathing spell between this, the present war, and a yet more terrible conflict to follow.

On this one point the American people are unanimous in their resolve. There must not be another world tragedy. We expect our leaders to summon every resource of mind and soul; to work persistently and successfully toward this goal. We sought no material gain from the last war and we seek none now. We seek no tribute for ourselves in the form of land, reparations, or economic conquest. We do, however, want a moral basis for international relations. And that basis must be law, before which all nations, the weak, the strong, the small, the large, must stand, equal alike in their rights and their responsibilities. This, then, we have a right to expect from our allies, the establishment of a collective system for world security and a world court to settle disputes among the nations. As this is all we ask, we have a right to insist upon it. I am certain that the people in all countries are with us in this, even though some of their leaders are not. Now is the time for American public opinion, free in its thought and its expression, to come forward not only with logic but with a flaming passion for truth and justice, with a moral fervor that will be heard and felt around the world.

Poland is the first test of our ability for world leadership. We have the material might and the potential moral right. The question is: "Shall the indignation of the American people make itself felt before it is too late?"

April 25, that is the deadline. The merits of Poland's case must be brought to the attention of our delegates before that date. This is the wish of most Americans, but it must be reinforced by democratic action, by resolutions, letters, and telegrams, by personal representations to the delegates. As your Congressman, I stand ready at all times to help in any way within my power for a free, complete, and united Poland.

Address of Hon. Charles P. Taft

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1945

Mr. VOORHIS of California. Mr. Speaker, I take pleasure in asking consent to include with my remarks the text of an address delivered by Hon. Charles P. Taft, Acting Chairman of the War Relief Control Board, before the Potomac Cooperative Federation, on Tuesday, February 27, 1945.

In this speech Mr. Taft outlines the general programs of relief for distressed peoples:

You of this cooperative federation, as well as the cooperatives associated with your national organization, are deeply concerned with the situation of cooperatives in the liberated areas, and you have launched a drive to give them advice and assistance. I propose tonight to describe how the governments, the public organizations, and the private organizations function in the occupied and liberated areas, in order to show you the framework within which your assistance must be given. That requires me to describe first what the governments and U. N. R. R. A. and the American and International Red Cross do in those areas, for the private agency function will normally be a supplementary and residual one.

There is the greatest confusion in this country with reference to the function of U. N. R. R. A., even among those whose experience or present duties should lead them to understand. That makes it necessary to give a clear and authoritative explanation. I shall cover the Nazi-occupied areas first and then the liberated areas.

In the Nazi-occupied areas only certain church organizations, the International Red Cross and the World Council of the Y. M. C. A. may go, and even those agencies have their troubles in some places. They serve prisoner-of-war camps and civilian internees. The Red Cross has the administration of the Geneva Convention of 1929, which establishes the sanitary and nutritional standards of these camps. It handles the food packages and comfort kits which are sent through the blockade by the national Red Cross societies, like the American or British Red Cross, or by private relief agencies, like United Yugoslav Relief, or by national governments, or by United States lend-lease on behalf of national governments eligible for such aid. Some food packages have even been sent by direct mail.

The World Council of the Y. M. C. A., represented in the United States by War Prisoners Aid, furnishes (1) books, athletic goods, and similar articles; (2) morale, athletic, and organizational service in the camps.

The Greek relief scheme was a special project administered by the Swedish Red Cross and the International Red Cross to meet the special needs of the starving population of Greece, and has continued in part since liberation.

The War Refugee Board (Stettinius, Stimson, Morgenthau) leads and coordinates the efforts of the interested private groups to rescue the individuals who suffer from the special attentions of the Gestapo within Axis territory. Its emergency work for any individual ends as he reaches an area where other private or public agencies can begin to function in his service.

So much for the Nazi-occupied areas.

The first thing one must appreciate about the liberated areas is the state of the commercial economy when an area is liberated. Under the Germans there was a stringently regulated economy with rationing, price control, and reasonably adequate distribution. If the front area between the armies is stable for a while, the towns are devastated. Even if the front moves fast, the Germans take or destroy, or our airmen destroy, all transport and bridges. When our Army civil affairs organization comes in all business and all distribution is stopped and very likely completely upset, yet, strangely enough, many people have money of some kind. What is needed therefore at once in all cases is primarily civilian supplies and only secondarily relief. This was true in north Africa and it was true in France.

The United States "relief" organization in north Africa, the forerunner of U. N. R. R. A., arranged for supplies to come to the north African ports, took them over, arranged with the Army for transportation to other depots by rail or ship, secured trucks and took the supplies inland to the important towns, and had a 1- or 2-day sale in each town. The mayor made up a list of his citizens and distributed tickets to them. For a few he indicated they could not pay. The people took the goods then needed, turned in the tickets, and paid for them, unless the ticket indicated otherwise. While the distribution organization had a net loss, it was nothing like what had been expected.

The process in France was different, but was built on that experience. The Greek process was the same except that the free distribution was relatively greater, the revolution upset things, and the inflation and currency situation complicated them further. So it may be said that the term "relief" is a good deal of a misnomer for what is done in the first emergency period after the military turns over. It is civilian supply, with

only a proportion of free distribution. It is not a social welfare operation.

The second completely erroneous impression about the liberated areas held by most Americans, I find, is that U. N. R. R. A. operates in all countries, France, Belgium, or Germany, for instance. Even the Times of London erred in this regard in a recent editorial on French supply problems. Mr. Richard Law had to correct this idea in Parliament 2 weeks ago.

Who, then, does handle this problem of emergency civilian supply immediately after liberation? So far as the American side is concerned, the President placed the major responsibility on the Army for the military period. That, in turn, has two phases. Close behind the fighting it is handled by G–5 of the Army, as seen in recent stories from the Philippines. But as soon as possible the Army turns it over either to the indigenous government or to U. N. R. R. A., even though the Army still retains the over-all responsibility. Thus, in France or Belgium, although it is still the military period for supply purposes, the supplies are turned over to the Government for distribution. In Greece it was the Army, using U. N. R. R. A. personnel and at Army expense until the revolution forced the civilian personnel out.

Well, you say, where does U. N. R. R. A. come in at all? What does U. N. R. R. A. do with all that money, then?

When any one of the Allied Governments does not have foreign exchange with which to pay for the necessary supplies, it may request U. N. R. R. A. to come in and provide the goods. The Greeks, for example, have made that request, and U. N. R. R. A. will operate there.

At some cut-off date the Army withdraws entirely, and the government takes over. It gets its own shipping allocation and takes over also the goods in the Army pipe line. So in Yugoslavia, Czechoslovakia, and Poland it will be U. N. R. R. A. which will then assume the responsibility for securing allocations for procurement, shipping, and major distribution. But even in supply matters, U. N. R. R. A. is a supervisory service organization, not a glorified international family welfare society.

France, Belgium, Holland, and Norway have not as yet asked for U. N. R. R. A.'s help in normal civilian supply, and U. N. R. R. A. does not operate there in supply matters. It will operate in Greece, Yugoslavia, Albania, Czechoslovakia, and Poland, by request and agreement of the governments. But you must understand that in those countries it is doing a government job, parallel to that of the French or Norwegian Governments in their territory. It is not doing an individual case-work relief job. Like France or Belgium, it will get an allocation of ships for its areas. It is a part of the total governmental supply service, whose objective is to get goods into regular channels of distribution for civilian use. Its first assigned ship is soon leaving for the Black Sea, with goods for Poland and Czechoslovakia.

I should note that at the suggestion of the European Council of U. N. R. R. A., proposals have now been approved for the extension of U. N. R. R. A.'s functions in relief into the paying countries. This would be an emergency type of assistance, worked out on a mutually satisfactory basis, and deserves thorough investigation.

U. N. R. R. A., however, does have a unique major responsibility in connection with supply. It is required to review all the governmental supply programs, including its own, and to insure that the standards of supply in each Allied country are as nearly equal to each other as circumstances will permit, especially in those essential items like clothing, textiles, or fats and oils, which are desperately short. It is the equalization board, so to speak.

Does U. N. R. R. A. operate in the ex-enemy territories? Only if the U. N. R. R. A. council specifically approves, and it may be said that the democratically organized U. N. R. R. A. council is not enthusiastic about doing it. In the case of Italy the council finally voted $50,000,000 for special foods for mothers and children in Italy and for Italian refugees in Italy who had been driven out of their home towns, as well as for some of its general health work.

U. N. R. R. A. has another major responsibility which does take it into ex-enemy territory. It is the helper and expediter in connection with displaced persons of Allied nationality. The Allied nations send liaison officers into Germany or Italy to screen and repatriate their nationals, but U. N. R. R. A. helps S. H. A. E. F., which makes the general plans and has to take care of the many for whom no government will take responsibility. U. N. R. R. A. is managing a number of refugee camps in north Africa, and in cooperation with the Intergovernmental Committee on Refugees is planning for the vanguard of stateless persons who will be the most tragic backwash of this war.

Apart from supply, U. N. R. R. A. may be requested to provide advisory services of many kinds, in the fields of health, welfare and agricultural and other rehabilitation. Many governments have already made such requests, and no question of ability to pay is involved.

The major U. N. R. R. A. responsibility among these is in the field of health, already mentioned in Italy. It is, in cooperation with the armies and the governments, giving leadership in preventing disease and epidemics in all areas. There has been less said about this, although in many ways it is the most important of its functions. The top medical officer of U. N. R. R. A. is Dr. Wilbur Sawyer, formerly of the Rockefeller Foundation.

I have spoken about the immediate emergency supply problem after liberation. But that, too, gives a most incomplete picture. Neither the armies nor U. N. R. R. A. nor the paying governments can go on indefinitely in the wholesale distribution business. Besides, the armies as they move forward take the trucks along. They fix the main bridges but not the back roads. They bring some seed and fish nets and agricultural machinery, but not much. They are faced with the restoration of a working economy, and one does not realize what a complicated system feeds and clothes and pays us all until one has to build it from the ground up.

In that rebuilding process one finds at once that trucks and factories need spare parts or complete rebuilding of machinery. Then they need fuel and raw materials. Even if the raw materials and fuel are within the country, there is no adequate way to transport them. When the first coal barges came down the canals and the Seine to Paris the populace turned out with music and flags to greet them, like a victorious fleet of battleships. Gradually, the old channels of traffic were smoothed out and restored, and the ports partially opened up and then came global shortages of material, steel, or textiles, or many others, and shortages of ships to bring any of them.

As one is faced with competing demands, for ammunition or tents or uniforms or food for the troops on the two great world battle grounds, who is to choose whether MacArthur shall move into Manila, or Eisenhower toward Berlin—or Frenchmen or Greeks shall be given work to do, useful, necessary work in necessary plants, that may prevent unrest and even revolution?

One first effort obviously must be to see whether it is better to ship raw materials to France or Belgium to be fabricated, instead of shipping the fabricated goods across the ocean. Then the utilization of shipping must be studied to make sure every ship has the optimum use. That is being done. And it may well be hoped that the choice will never have to be made between progress on both fronts at once, and chaos in the liberated countries. Nevertheless, in the last analysis no one of the Allied Nations can afford to allow chaos to exist, comparable in any way to the cruel domination of the Nazis, even for a few months. The Government of the United States cannot permit that to happen. We are fighting for liberty, not chaos, and there is no short cut.

In this major supply of the raw materials of a reviving economy in a liberated area, U. N. R. R. A. has only a limited responsibility. Its terms of reference in the field of rehabilitation are specifically limited to those activities which are necessary to relief. "The Administration cannot be called upon to help restore continuous employment in the world," is the language of Resolution 12 at the Atlantic City meeting of the U. N. R. R. A. Council. Its functions cannot go very much beyond the same scope as Army supply in the military period before U. N. R. R. A or the governments take over.

One more operation needs to be described—the relief work of the Red Cross—before I come to the private agencies.

It should be noted first that the American Red Cross does not usually operate abroad itself except in the service of the American soldier and sailor. In foreign countries its operations are through the national Red Cross societies or the International Red Cross. Its responsibilities for prisoners of war and internees have already been described. The great bulk of its funds, raised from the American public, go for the recreation service of the armed forces abroad, including the Red Cross clubs and hotels, for the services to individual soldiers and sailors in connection with their families and dependents, and for the recreation and other lay services and supplies in hospitals.

But the Red Cross does have civilian relief responsibilities in addition to peace- or wartime disaster relief. It spends for this about $5,000,000 a year of its own funds, and it has now spent nearly all of the $85,000,000 appropriated by Congress to the President during 5 years, since early 1940, for the purchase and transportation of relief supplies, to be procured exclusively in the United States, for distribution abroad, "through the American Red Cross or such governmental or other agencies as he may designate."

None of these Government funds, as a matter of Red Cross and congressional policy, has been spent in Axis-occupied territory. They have gone principally for medical supplies of all kinds, and textiles which the chapters make up into garments.

The Red Cross has, of course, made in its chapters large amounts of bandages, and new garments, which have been stock-piled and shipped out to the countries in greatest need. The Red Cross has been the principal shipping agency for its own goods and those of private agencies to Europe and elsewhere.

Everything I have said to this point has been a matter of public record, but it is extraordinary how many intelligent supporters, and even officers of private relief, are firmly convinced that only through American relief for Graustark or Ruritania will Graustarkians or Ruritanians be fed or clothed.

Consider the cost of feeding 40,000,000 Italians 2,000 calories a day, or even the cost of that part of the 2,000-calories diet that must come from overseas. No private agency could do even a fraction of it, to say nothing of fuel and clothing and medicine and shelter. That is not the job of the private agency. It is a basic, public, governmental responsibility.

The major problem today is not supply, but transportation, and only a government can compete with military demands today and get ships allocated. A private agency can only ship filler cargo, which is most helpful, but only a filler.

Finally, the bulk of the supplies sent are for distribution through regular civilian channels, not for "give away." The head of one recently liberated state has insisted on

this, as he said, to preserve the morale of his people, and called for the chance to work, not gifts; supplies through which jobs can be provided, not hand-outs.

Well, you may ask, what can the private agency do? It can do a lot, but it must have a full understanding of the problem, and knowledge of how to fit its supplementary gifts and services into these other basic and established programs. Enthusiasm and promotional ability are fine in a private agency staff, but what a mess these qualities can make in the absence of sound administrative experience in the welfare field.

Here are what the private agencies can do and are doing effectively:

They can provide special food and services for specialized groups, like mothers, children, or students.

They can make or collect garments, new or used.

They can give leadership in recreational and morale work.

They can care for refugees who for one reason or another are not cared for by any government. This is one of the largest single fields of service.

Obviously, their appeals for funds and costs of administration need to be regulated, and their use of the funds supervised. That is the job of the President's War Relief Control Board.

We have reduced the foreign relief agencies to a limited number of international agencies, like the American Friends Service Committee, or the American Jewish Joint Distribution Committee, and to one or two agencies for each country to be served. Having started from over 60 agencies for Britain alone, for example, we think that is not a bad job.

To simplify the appeals, we organized the National War Fund, which includes 60 percent of the money, and many of the agencies. The times of all appeals are adjusted to avoid interferences. The War Fund Budget Committee reviews all requests of its agencies and fixes totals subject to approval of the War Relief Control Board. The others are reviewed by the Board itself.

But the great problem remains of coordination of efforts in the field. The Board first helped to establish firmly the Council of Voluntary Agencies which brings together, not for money raising, but for coordination of programs, all agencies, in or out of the War Fund. This is related to the War Fund policies under the leadership of President Henry Wriston of Brown. This council has committees for each country where all agencies contributing to that country are brought together.

The Board is now taking one more step. We called together last week the first of a series of conferences, one on each country, at which we have presented the Army program, the program of that country's government, the U. N. R. R. A. program, the Red Cross program, and the private agency programs. That gives an essential over-all picture of the need and how it may be met in each place.

The next step is coordination in the foreign country. In the military period it is obviously up to the Army, and under its control. In France or Belgium, for example, the Government thereafter takes over through some agency of government, and exercises general supervision. In the U. N. R. R. A. countries, U. N. R. R. A. by the agreement has that control. Proposals have recently been discussed, suggesting that such control should be extended to the paying countries, but this Government has not concurred. As I have said, U. N. R. R. A. must see to it that what goes to liberated areas goes on an equal basis to all countries, but supervision of the private agencies is clearly the job of the Government when it is in charge of civilian supply and relief distribution.

But in addition to Government supervision over them the agencies themselves need to work together. No less than 32 agencies want to send something to France. American Relief for France covers half the amount, and the Friends and Joint Distribution Committee 30 percent more. But the others should have their chance, too, and the need is great. An excellent pattern has been worked out in Italy. Mr. Myron Taylor has organized a coordinating and distributing organization over there. He is the head of American voluntary relief, and his director is a former Red Cross director. He works through an Italian committee, including representatives of the Italian Government, Italian Red Cross, the church, and Italian labor organizations. His main contact in the United States is with American Relief for Italy, the largest single organization for Italy on this side of the water, and all must work through these two. We have already set out to secure similar results in the Philippines, and after that will come France.

So in each country as the situation develops, the War Relief Control Board expects to lend its assistance to see to it (1) that there is a single main "country" organization in the United States; (2) that all organizations interested in that country work with the "country" organizaion in planning; (3) that there is an integrated operation of American relief activities in the foreign country itself, under American leadership.

I understand that your freedom fund proposals have nothing to do with money relief, but it might well be that you would wish to relate your advice and assistance to this operation in the foreign country.

Thus we hope that to match basic governmental provisions for civilian supply, there will be developed an adequate machinery to express freely, not the divisions of foreign politics, or of domestic either, but the generous humanitarian impulses of the whole American people for victims of war and aggression.

Statistical Summary, Bureau of Agricultural Economics

REMARKS

OF

HON. STEPHEN PACE

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1945

Mr. PACE. Mr. Speaker, each month the Bureau of Agricultural Economics issues a summary showing the farm supply situation, the farm labor situation, and so forth. In connection with the current discussion of food shortages and farm products shortages it has occurred to me that it would be very helpful to the Members of the House to study this summary for March, as it outlines the cattle, hogs, wheat, and so forth, on hand. I believe it will be very helpful to the Members to have this information before them, so I include it as a part of my remarks:

STATISTICAL SUMMARY, BUREAU OF AGRICULTURAL ECONOMICS, UNITED STATES DEPARTMENT OF AGRICULTURE, MARCH 12, 1945

SHARP DECREASE IN LIVESTOCK NUMBERS

Annual livestock inventory as of January 1 showed marked decline in numbers last year. During 1944 number of cattle decreased from 82.3 million head to 81.8 million; hogs from 83.8 million to 60.7 million; sheep from 51.8 million to 47.9 million; milk cows alone held their own in numbers, 27.7 million to 27.8 million; but there was a record slaughter of calves.

Total farm value of livestock, including poultry, fell from $9,500,000,000 a year ago to $8,900,000,000 at beginning of 1945.

FEWER GRAIN-EATING ANIMALS

The number of grain-consuming animals (horses, mules, cattle, sheep, hogs, and chickens) expressed in turns of animal units—each unit equivalent to 1 cow—stood at 147 million this January, compared with a peak of 171 million in January 1944; with 160 million in 1943 and a low of 120 million in 1935.

Thus the upswing in livestock production, which went on from 1938 up to 1944, was reversed last year and set into a sharp decline.

MORE MATURE CATTLE THAN YEAR AGO BUT FEWER CALVES

The number of steers on farms and ranches increased 158,000 last year and totaled 7.6 million head this January 1. The number of beef cows and heifers also increased almost 600,000 in the year. Number of milk cows also increased slightly (five-tenths of 1 percent), standing at 27.8 million head this January, an all-time high.

Calf numbers, off 7 percent in the year, showed sharpest decrease ever recorded; stood at 19.1 million head this January, compared with 20.5 million year previous. Calf slaughter last year was around 14 million head, a record.

ELEVEN PERCENT FEWER CHICKENS

Number of chickens on farms fell 11 percent, from 576,000,000 a year ago to 511,000,000 this year. Turkeys decreased only slightly, 7,600,000 to 7,500,000. Lower egg and higher feed prices last year presumably was the main reason. Flocks this January averaged 59 percent pullets, 33 percent hens, 8 percent other chickens. Whereas chickens are on the decline, holdings of turkey breeder hens are 6 percent above last year.

THE VANISHING HORSE

Draft animals have been declining steadily steadily in favor of mechanical power. Number horses and colts decreased last year from 9,300,000 to 8,900,000, smallest since 1874. Number of mules down from 3,500,000 to 3,400,000. Average farm value of horses this year $65, down about $14 below previous year—help shortages makes demand for tractors rather than horses. Number colts raised in 1944 estimated at 372,000, fewest in the 25 years of record. At present rate of decline, will be about 10,000,000 horses and mules on farms and ranches by 1950, compared with 12,400,000 now and high point of 26,700,000 in 1917.

DAIRY PRODUCTION

Production of milk on farms in 1944 amounted to 119,200,000,000 pounds, compared with 118,100,000,000 in 1943, and 103,600,000,000 for the 1935–39 average. Output of creamery butter, 1,486,000,000 pounds in 1944, compared with 1,673,000,000 in 1943 and 1,691,000,000 for the average. American cheese production, 800,000,000 pounds in 1944, compared with 765,000,000 in 1943, and 509,000,000 average. Evaporated and condensed milk output, 3,757,000,000 pounds in 1944, compared with 3,352,000,000 in 1943, and 2,225,000,000 the average.

Present forecasts suggest slightly less total milk output for 1945, slightly less butter, slightly more cheese and condensed and evaporated milk.

DECREASING WOOL PRODUCTION

Production of wool, shorn and pulled, in 1944 estimated 418,000,000 pounds, of which 384,000,000 pounds was shorn and around 65,000,000 pulled wool. This compares with 450,000,000 pounds in 1943 and a 10-year average (1933–42) of 434,000,000. The num-

ber of sheep shorn in 1944 was estimated at 44,300,000 head, about 9 percent fewer than were shorn in 1943. The average weight of fleece in 1944 was 7.83 pounds, compared with 7.91 pounds in 1943.

MARKETING CHARGES

Charges for marketing a family market basket of farm foods amounted to $218 in January, same as in December. This represented a decline of about 2 percent from previous January but was 8 percent above the 1935-39 average of $201.

The farmer's share of the consumer's dollar spent for farm foods stood at 55 cents in January, same as in December. This share equalled the record high of 1918.

Retail cost of the family market basket of foods (average for family of three) rose from $453 in December to $455 in January 1945, matching high point of 1944.

MORE GRAIN FEED BUT LESS HAY

Stocks of corn and oats on farms, at terminal markets, and Government owned, January 1, were equal to about forty-nine one hundredths ton per grain-consuming animal unit on farms. This quantity was 26 percent more than a year earlier, but was slightly less than in preceding 3 years of large supplies. Stocks of hay on farms, January 1, per hay-consuming animal unit, were 1 percent smaller than a year pervious and 7 percent below average for that date during 1939-43.

FARM PRODUCT PRICES DOWN A LITTLE

General prices received by farmers for their products stood at an index of 199 percent of prewar (1909-19 taken as 100) in mid-February. This was a decline of 2 points from the previous month and compared with 195 a year previous. Farm product prices averaged 116 percent of parity, compared with 117 in January and 115 in February last year. Marked declines were shown from the previous month in indexes of truck crops, eggs, dairy products and cotton. Food grains remained at 169, fruit rose 6 points to 211, meat animals up 6 to 209. Cotton, corn, and wheat prices were still below parity in mid-February but most other major products were well above.

RECORD ORANGE CROP

Record orange crop, 105,000,000 boxes, estimated for 1944-45, compared with 103,000,000 a year ago and 85,000,000 in 1942-43. Florida tangerine crop placed at 4,100,000 boxes, half a million more than last season but 100,000 less than in 1942-43. Total grapefruit output estimated 51,191,000 boxes, compared with last season's record crop of 55,970,000 boxes and 50,481,000 produced in 1942-43. Prospective California lemon crop 13,321,000 boxes, 21 percent above last year but 11 percent below the 1942-43 crop of 14,940,000 boxes.

MORE MOHAIR

Mohair production in the 7 leading States in 1944 estimated at 20,581,000 pounds, which was 2 percent increase over the 20,196,000 pounds produced in 1943, and 14 percent above the 10-year average (1933-42). The number of goats clipped in 1944 was 4,130,000 head, smallest number since 1939; compared with 4,284,000 clipped in in 1943. Average quantity of hair per goat and kid clipped was 5 pounds in 1944, compared with 4.7 pounds in 1943.

MEAT PRODUCTION

Number cattle slaughtered under Federal inspection in January 1945 was 1,284,000 head, compared with 1,141,000 in January 1944. Number calves slaughtered 560,000, compared with 468,000 year ago. Hogs slaughtered 5,299,000 head, compared with 7,839,000 year ago. Sheep and lambs 2,073,000, compared with 1,933,000 last year. Thus it will be seen that slaughter of cattle, calves, sheep, and lambs is running considerably higher this winter than last, while the slaughter of hogs has fallen off sharply.

The total dressed weight of meat (excluding condemned) represented by the above slaughter figures in January was as follows: Beef, 618,000,000 pounds, compared with 582,000,000 a year previous; veal, 60,000,000 pounds, compared with 49,000,000 a year ago; pork (carcass weight), 978,000,000, compared with 1,476,000,000 a year ago; pork, excluding lard, 761,000,000, compared with 1,112,000,000 a year ago; lamb and mutton, 90,000,000, compared with 81,000,000 a year ago.

Cattle and hogs are running lighter weights this winter than last, while calves average heavier. Average live weights this January: Cattle, 940 pounds, compared with 969 pounds a year previous; hogs, 244 pounds, compared with 249 a year ago; calves, 198 pounds, compared with 191 pounds last year.

NUMBER OF FARM WORKERS DOWN

Number of workers on farms February 1 totaled 8,051,000, about 4 percent under a year previous and 11 percent below February average, 1935-39. Employment was lowest for date in 2 decades of record, a fact perhaps partly due to bad weather. Number of family workers, 6,557,000 or a decline of 14,000 in a month, and compared with 6,702,000 the previous February. Number hired workers increased 60,000 during month to a total of 1,494,000 by February 1, compared with 1,681,000 a year previous. Both family and hired workers are lowest February numbers of record.

Number of foreign workers on farms (transported by W. P. A.) January 31, 1945: Mexicans, 29,590; Jamaicans, 4,250; Bahamians, 4,580; Newfoundlanders, 791.

FARMERS' INCOME

Farmers' cash receipts during January 1945 from products sold amounted to $1,630,000,000, compared with $1,628,000,000 the previous January. These figures included $70,000,000 of Government payments this January, compared with $92,000,000 the year previous.

Parity prices for farm products and actual prices received

Commodity and unit	Actual price		Parity price Feb. 15, 1945
	Jan. 15, 1945	Feb. 15, 1945	
Wheat, bushel, dollars	1.46	1.47	1.52
Corn, bushel, do	1.07	1.06	1.10
Oats, bushel, do	.72	.73	.685
Cotton, pound, cents	20.20	19.19	21.33
Potatoes, bushel, dollars	1.58	1.65	1.25
Hogs, 100 pounds, do	13.80	14.00	12.50
Beef cattle, 100 pounds, do	11.70	12.10	9.32
Veal calves, 100 pounds, do	13.20	13.60	11.60
Lambs, 100 pounds, do	13.00	13.60	10.10
Butterfat, pound, cents	50.9	50.8	46.3
Milk, wholesale, 100 pounds, dollars	3.35	3.31	[1] 2.84
Chickens, live, pound, cents	24.2	24.5	19.6
Eggs, dozen, do	41.0	35.8	[1] 34.0

[1] Adjusted for seasonal variation.

Current indexes for agriculture

Index numbers	Base period	February 1945
Prices received by farmers	1910-14=100	199
Prices paid by farmers, interest and taxes	1910-14=100	172
Parity ratio	1910-14=100	116
Wholesale prices of food	1910-14=100	163
Retail prices of food	1910-14=100	[1] 177
Farm wage rates	1910-14=100	324
Weekly factory earnings	1910-14=100	[2] 429

[1] January figure.
[2] Factory pay roll per employed worker adjusted for seasonal variation.

Current index for agriculture—Continued

Ratios	Long-time February average	February 1945
Hog-corn ratio, United States	12.5	13.2
Butterfat-feed ratio, United States	24.8	26.4
Milk-feed ratio, United States	1.27	1.49
Egg-feed ratio United States	11.6	12.5

Production comparisons	January-December 1943	January-December 1944
Milk (billion pounds)	118.1	119.2
Eggs (billions)	54.2	57.5
Beef (dry weight, million pounds)	5,970	6,665
Lamb and mutton (dry weight, million pounds)	958	887
Pork and lard (million pounds)	12,161	12,608
All meats (dry weight, million pounds)	19,686	21,166

Membership Rolls of the Democratic Steering Committee From Its Inauguration

EXTENSION OF REMARKS

OF

HON. WILLIAM M. WHITTINGTON

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1945

Mr. WHITTINGTON. Mr. Speaker, in the Appendix of the CONGRESSIONAL RECORD, page A53, the gentleman from Missouri, Representative CLARENCE CANNON, extended his remarks and included the membership rolls of the Democratic Steering Committee from its inauguration down to and including the Seventy-seventh Congress, and also included the chairmen of the Democratic caucus down to and including the Seventy-eighth Congress. Under leave to extend my remarks, I now include the membership rolls of the Democratic Steering Committee from its inauguration in the Seventy-third Congress down to and including the Seventy-ninth Congress:

DEMOCRATIC STEERING COMMITTEES

SEVENTY-THIRD CONGRESS

Robert Crosser, chairman.

William P. Connery, Massachusetts; John F. Boylan, New York; Patrick J. Boland, Pennsylvania; Patrick H. Drewry, Virginia; E. E. Cox, Georgia; Lister Hill, Alabama; William V. Gregory, Kentucky; Robert Crosser, Ohio; William H. Larrabee, Indiana; Adolph J. Sabath, Illinois; Ralph F. Lozier, Missouri; W. W. Hastings, Oklahoma; Sam Rayburn, Texas; Edward T. Taylor, Colorado; Sam B. Hill, Washington.

Ex officio: Henry T. Rainey, Illinois, Speaker; Joseph W. Byrns, Tennessee, floor leader; Clarence F. Lea, California, caucus chairman; Edward W. Pou, North Carolina, chairman, Rules Committee; Patrick J. Boland, Pennsylvania, chairman, whip.

SEVENTY-FOURTH CONGRESS

Adolph J. Sabath, chairman.

William P. Connery, Massachusetts, John J. Boylan, New York; Francis E. Walter, Pennsylvania; Zebulon Weaver, North Carolina; Hampton P. Fulmer, South Carolina; Lister Hill, Alabama; W. V. Gregory, Kentucky; Robert Crosser, Ohio; William H. Larrabee,

Indiana; Adolph Sabath, Illinois, Clarence Cannon, Missouri; Jed Johnson, Oklahoma; Luther Johnson, Texas; James G. Scrugham, Nevada; Clarence F. Lea, California.

Ex officio: Joseph W. Byrns, Tennessee, Speaker; William B. Bankhead, Alabama, floor leader; Edward T. Taylor, Colorado, caucus chairman; John J. O'Connor, New York, chairman, Rules Committee; Patrick J. Boland, Pennsylvania, whip.

SEVENTY-FIFTH CONGRESS

Jed Johnson, chairman.

William P. Connery, Massachusetts; John T. Boylan, New York; Francis E. Walter, Pennsylvania; T. Alan Goldsborough, Maryland; J. Hardin Peterson, Florida; Lister Hill, Alabama; John E. Miller, Arkansas; Robert Crosser, Ohio; William H. Larrabee, Indiana; Adolph Sabath, Illinois; Clarence Cannon, Missouri; Jed Johnson, Oklahoma; Luther Johnson, Texas; James G. Scrugham, Nevada; Walter M. Pierce, Oregon.

Ex officio: William B. Bankhead, Alabama, Speaker; Sam Rayburn, Texas, floor leader; Robert L. Doughton, North Carolina, caucus chairman; John J. O'Connor, New York, chairman, Rules Committee; Patrick J. Boland, Pennsylvania, whip.

SEVENTY-SIXTH CONGRESS

James G. Scrugham, chairman.

Joseph E. Casey, Massachusetts; William T. Byrne, New York; Charles I. Faddis, Pennsylvania; Howard W. Smith, Virginia; Malcolm C. Tarver, Georgia; Wall Doxey, Mississippi; Jere Cooper, Tennessee; Robert Crosser, Ohio; William H. Larrabee, Indiana; Harry P. Beam, Illinois; Clarence Cannon, Missouri; Jed Johnson, Oklahoma; Marvin Jones, Texas; James G. Scrugham, Nevada; Charles Kramer, California.

Ex officio: William B. Bankhead, Alabama, Speaker; Sam Rayburn, Texas, floor leader; John W. McCormack, Massachusetts, caucus chairman; Robert L. Doughton, North Carolina, chairman, Ways and Means Committee; Edward T. Taylor, Colorado, chairman, Appropriations Committee; A. J. Sabath, Illinois, chairman, Rules Committee; Patrick J. Boland, Pennsylvania, whip.

SEVENTY-SEVENTH CONGRESS

Clarence Cannon, chairman.

Le Roy D. Downs, Connecticut; William T. Byrne, New York; Francis J. Myers, Pennsylvania; John H. Kerr, North Carolina; James P. Richards, South Carolina; A. Leonard Allen, Louisiana; Jere Cooper, Tennessee; Robert Crosser, Ohio; William H. Larrabee, Indiana; Harry P. Beam, Illinois; John J. Cochran, Missouri; Jed Johnson, Oklahoma; Luther A. Johnson, Texas; James G. Scrugham, Nevada; Harry R. Sheppard, California.

Ex officio: Sam Rayburn, Texas, Speaker; John W. McCormack, Massachusetts, floor leader; Richard M. Duncan, Missouri, chairman, caucus; Robert L. Doughton, North Carolina, chairman, Ways and Means Committee; Clarence Cannon, Missouri, chairman, Appropriations Committee; Adolph J. Sabath, Illinois, chairman, Rules Committee; Patrick J. Boland, Pennsylvania, whip.

SEVENTY-EIGHTH CONGRESS

Robert Crosser, chairman.

Thomas J. Lane, Massachusetts; William T. Byrne, New York; Edward J. Hart, New Jersey; Thomas D'Alesandro, Jr., Maryland; John H. Kerr, North Carolina; Paul Brown, Georgia; J. Hardin Peterson, Florida; Joe Starnes, Alabama; Will M. Whittington, Mississippi; Virgil Chapman, Kentucky; Jere Cooper, Tennessee; Robert Crosser, Ohio; John Lesinski, Michigan; Thomas J. O'Brien, Illinois; Orville Zimmerman, Missouri; Jed Johnson, Oklahoma; Wright Patman, Texas; J. W. Robinson, Utah; Ed. V. Izac, California.

Ex officio: Sam Rayburn, Texas, Speaker; John W. McCormack, Massachusetts, floor leader; Harry R. Sheppard, California, chairman, caucus; Robert L. Doughton, North Carolina, chairman, Ways and Means Committee; Clarence Cannon, Missouri, chairman, Appropriations Committee; Adolph J. Sabath, Illinois, chairman, Rules Committee; Robert Ramspeck, Georgia, whip.

SEVENTY-NINTH CONGRESS

Will M. Whittington, chairman.

Herman P. Kopplemann, Connecticut; William T. Byrne, New York; Edward J. Hart, New Jersey; John H. Kerr, North Carolina; Thomas G. Burch, Virginia; Paul Brown, Georgia; J. Hardin Peterson, Florida; Will M. Whittington, Mississippi; Overton Brooks, Louisiana; Fadjo Cravens, Arkansas; Virgil Chapman, Kentucky; Robert Crosser, Ohio; John Lesinski, Michigan; Thomas J. O'Brien, Illinois; C. Jasper Bell, Missouri; Jed Johnson, Oklahoma; R. Ewing Thomason, Texas; J. W. Robinson, Utah; Henry M. Jackson, Washington.

Ex-officio: Sam Rayburn, Texas, Speaker; John W. McCormack, Massachusetts, floor leader; Robert Ramspeck, Georgia, whip; Jere Cooper, Tennessee, chairman, caucus; Robert L. Doughton, North Carolina, chairman, Ways and Means Committee; Clarence Cannon, Missouri, chairman, Appropriations Committee; Adolph J. Sabath, Illinois, chairman, Rules Committee.

Mr. Speaker, I also include the available list of chairmen who have presided over the Democratic caucus. Unfortunately the list is fragmentary as no known record remains of the proceedings of any session prior to the Thirty-first Congress:

Congress	Chairman
31st (1849–51)	James Thompson (Pennsylvania).
32d (1851–53)	
33d (1853–55)	Edson B. Olds (Ohio).
34th (1855–57)	George W. Jones (Tennessee).
35th (1857–59)	
36th (1859–61)	George S. Houston (Alabama).
37th (1861–63)	
38th (1863–65)	
39th (1865–67)	
40th (1867–69)	
41st (1869–71)	{Samuel J. Randall (Pennsylvania). {William E. Niblack (Indiana).
42d (1871–73)	
43d (1873–75)	William E. Niblack (Indiana).
44th (1875–77)	L. Q. C. Lamar (Mississippi).
45th (1877–79)	Hiester Clymer (Pennsylvania).
46th (1879–81)	John F. House (Tennessee).
47th (1881–83)	
48th (1883–85)	George W. Geddes (Ohio).
49th (1885–87)	J. Randolph Tucker (Virginia).
50th (1887–89)	{Samuel S. Cox (New York). {James B. McCreary (Kentucky).
51st (1889–91)	William S. Holman (Indiana).
52d (1891–93)	Do.
53d (1893–95)	Do.
54th (1895–97)	David B. Culberson (Texas).
55th (1897–99)	James D. Richardson (Tennessee).
56th (1899–1901)	James Hay (Virginia).
57th (1901–03)	Do.
58th (1903–05)	Do.
59th (1905–07)	Robert L. Henry (Texas).
60th (1907–09)	Henry D. Clayton (Alabama).
61st (1909–11)	Do.
62d (1911–13)	{James Hay (Virginia). {Albert S. Burleson (Texas).
63d (1913–15)	A. Mitchell Palmer (Pennsylvania).
64th (1915–17)	E. W. Saunders (Virginia).
65th (1917–19)	Do.
66th (1919–21)	Arthur G. Dewalt (Pennsylvania).
67th (1921–23)	Sam Rayburn (Texas).
68th (1923–25)	Henry T. Rainey (Illinois).
69th (1925–27)	Charles D. Carter (Oklahoma).
70th (1927–29)	Arthur H. Greenwood (Indiana).
71st (1929–31)	David H. Kincheloe (Kentucky).
72d (1931–33)	William W. Arnold (Illinois).
73d (1933–35)	Clarence F. Lea (California).
74th (1935–37)	Edward T. Taylor (Colorado).
75th (1937–39)	Robert L. Doughton (North Carolina).
76th (1939–41)	John W. McCormack (Massachusetts).
77th (1941–43)	Richard M. Duncan (Missouri).
78th (1943–45)	Harry R. Sheppard (California).
79th (1945–47)	Jere Cooper (Tennessee).

Less Coal

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1945

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Manchester Union, Manchester, N. H., of March 20, 1945:

LESS COAL

Again Washington bureaucrats are possessed by the false idea that early spring up here in New England means that houses do not have to be heated. From the Solid Fuels Administration, as the current instance in point, comes the order that all deliveries of anthracite and bituminous coal used for heating purposes shall be charged against the consumer's allotment for the 1945–46 season. Moreover, these consumers are to be limited to a maximum of 80 percent of their normal supply, compared with 87½ percent during the past two winters.

Every householder knows that coal must be conserved, and why. And few are the consumers who do not conscientiously try to cut down on their own tonnage. Thanks to efficient handling of burners, insulation, and anything but cosy room temperature they get along with considerably less coal than they would use if times were normal.

Average citizens also realize that Federal bureaucracy has its own problems. They have heard, for instance, that the estimated anthracite production during 1945 is expected to be 4,500,000 tons less than last year, that the estimated bituminous production will be 50,000,000 tons short. And John L. Lewis is no hero to them. They do not minimize the transportation, manpower, and economic problems imposed by war; and they want a part in helping to alleviate conditions.

But it is their opinion that this order charging coal deliveries after March 31 to next winter's scant supply is an example of crowding the mourners more than a little bit. Time was when it was the accepted practice to run boilers through April and well into May, not because folks here are "soft" but because of the inconsistencies of the weather. On their own initiative they have set back the dead line for letting out the fire. But they can't put it back to March 31 without jeopardizing health both this spring and next winter, especially when the maximum to be available has been cut to 7½ percent.

Erection of Veterans' Hospital at Brooklyn, N. Y.

EXTENSION OF REMARKS

OF

HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1945

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks, I include the following letter which was sent to the Secretary of War by Mr. Harold J. Burke,

chairman of the committee for the erection of a veterans' hospital in Brooklyn:

COMMITTEE FOR THE ERECTION
OF A VETERANS' HOSPITAL IN BROOKLYN,
Brooklyn, N. Y., March 9, 1945.

The Honorable HENRY L. STIMSON,
Secretary of War, Washington, D. C.

DEAR MR. SECRETARY: After many years of persistant effort to present to the Veterans' Administration the facts favoring the erection of a veterans' hospital in Brooklyn, we the veterans of Brooklyn were finally rewarded for our activity by the Veterans' Administration's commitment to build a hospital facility in our borough.

The reasons for the urgency of immediate construction of this hospital, Mr. Secretary, should be apparent to you. They were presented to Brig. Gen. Frank T. Hines, Veterans' Administrator, in a 40 page brochure; a copy of which is being forwarded to you. However, Sir, while the Veterans' Administration is prepared to begin building of the project immediately, your department is stalemating the action by its refusal to deed over a small portion of the many acres of Fort Hamilton in Brooklyn for the facility.

Fort Hamilton is an historic site of old Brooklyn. It is not for that reason alone however, that the people of Brooklyn are asking for it as the site of the veterans' hospital for their returning wounded sons, brothers and husbands. Fort Hamilton provides an excellent location because of its geography and because of the many other reasons that have made it acceptable to the Veterans' Administration.

Mr. Secretary, Brooklyn wants to know your position. Brooklyn wants to know whether you are willing to give up a portion of the Fort Hamilton land in return for the lives of several thousand casualties from our borough. We remind you, sir, that Brooklyn, as a borough, is greater in population than a number of States of our Nation, and that its record of achievement in the war effort is unparalleled.

Sir, Brooklyn has grown more than trees—it has grown the finest manhood in America, which it has not spared in order to bring victory to our country. Does Brooklyn, then, merit the deed to land at Fort Hamilton?

Your consideration must tell you that it does. In that case Brig. Gen. Frank T. Hines, Veterans' Administrator, who has been most cooperative in our campaign, I feel certain will be happy to accept the deed in the name of the wounded veterans of Brooklyn.

Respectfully yours,

HAROLD J. BURKE,
Chairman.

Hay in History

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 21, 1945

Mr. MURDOCK. Mr. Speaker, there is a slang expression frequently heard when reference is made to a large amount of money or a great amount of wealth, which makes contrasts with the words "That ain't hay." From such slang expression one might suppose that hay is bulky in volume but slight in value. I do not know that we should ever think of hay as insignificant in value. Certainly hay has played a great part in the history of civilization. If you expand the word "hay" broadly enough to include all forage for animals, one could write an economic history of the human race, based upon the part that forage has played in supporting and determining man's spread over the face of the earth and in the stages of his development in civilization.

Hay in history hints at man's dependence upon his livestock and explains countless migrations and wars of conquest as nomadic peoples sought better pasture lands or fought with other nomads even as the tribesmen of Abram and Lot fought with each other before their leaders parted to go their separate ways. However, forage and pasture for livestock is not alone important in the nomadic stage of man's progress. In fact it has grown more important relatively when man turned to agriculture and a more settled way of life. Today the grass crop is relatively far more important in the general picture of agricultural production than the average person imagines it to be.

When I point with pride to a quarter million acres of land in the valley surrounding Phoenix, Ariz., and say that in the last 12 months these acres have produced on an average more than $165 per acre of food and fiber, I'm pointing to only a small spot of the total area of that State. Like other intermountain communities, four-fifths of the area of Arizona is uncultivated now and useful only for grazing. While this grazing portion does produce a total of considerable wealth, it is far less than it might produce under better management and man's scientific care. Everyone who has traveled throughout the West must have been impressed by the vast areas which can never be turned by the plow. These vast areas are not necessarily waste lands though they may convey that impression on first sight. The livestock industry of the West in general still holds first position in contributing to the Nation's wealth. While recognizing that fact we must deplore the additional fact that the livestock industry depending upon the natural pasturage is but a fraction of what it might be and should be.

It is with a great deal of satisfaction that I note on page 40 of the pending bill a sizable sum for range investigation. The terms is a broad one and I can see great possibilities in improving our ranges and conserving the soil. The protection of the vegetation on the water sheds will save much of later costs in connection with our irrigation projects. The head of one of the greatest irrigation projects in the West, who is a level-headed businessman has urged me to support this item in the agricultural appropriation bill. He is thinking less of pasturage on the watershed but more in hoping to minimize silting of the reservoirs on his $50,000,000 reclamation project.

How great would be the increase of the wealth of the Intermountain States, where more than 80 percent of the area is fit only for grazing, if man could double or treble the carrying capacity of the ranges. I think such can be done and I am not referring now to irrigation, important as that is to my way of thinking. Our ranges have been overgrazed, and given time nature could restore them, but that would take a long time. I think the process can be shortened by proper reseeding of the overgrazed lands. New methods and new techniques have lately been developed. I have a firm conviction that this important work will pay many fold for our proper expenditures for it, and that good management requires us to do it. From every viewpoint we cannot afford not to do it.

Problem of Philippines

EXTENSION OF REMARKS
OF
HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 21, 1945

Mr. STEFAN. Mr. Speaker, any realistic appraisal of the campaign for the liberation of the Philippines must take into consideration what has been accomplished and what remains to be accomplished—our liabilities as well as our assets.

One hundred and forty five thousand Japanese have been either killed or captured in the first 9 weeks of the Luzon operation—the numerical equivalent of 11 full Japanese divisions—bring to 282,000 the number of casualties the Japanese have suffered since our landing on Leyte. We have successfully completed 25 triphibious actions, the twenty-fifth being on the northwest shore of Luzon's Batangas Bay. From Manila's airfields and from those of central Luzon, American planes fan out to strike at enemy shipping from the Formosa Straits to Borneo. Our own lifeline of transport to Manila has been guarded by the liberation of the Lubang Islands, Verde, Marinduque, and Capul. From the airfields of Palawan and Mindanao oil-rich Borneo and the southern supply lines of Japan are being subjected to an unrelenting crossfire from the air.

In contrast to these accomplishments, it would seem at first glance that the Japanese could be easily wrested from their remaining foothold in the Philippines. Yet, such is not the case. It will take weeks, perhaps months, before the last of the Japanese invaders are either killed or captured. Much of the Mindanao Province of Zamboanga remains to be liberated. Cetabato and Davao, also on Mindanao, must be freed. The Japanese must be rooted from the Vosayan Islands of Cebu, Negros, and Panay. On Luzon, the campaign for liberation will go on until there are no Japanese in the mountainous terrain from Baguio to the north coast, in the Cagayan Valley, the Bicol region, and the Province of Tayabas.

The continuing cooperation extended to the American forces of liberation by

Filipino guerrillas that made all the Philippines a hostile territory for the Japanese can be expected as an important part of our future offensive pattern. The Filipino guerrillas on Luzon will furnish vital intelligence and go on with their slashing attacks against the Japanese aggressor. Yet, with the Japanese now concentrated in heavily fortified positions, it cannot be anticipated that these positions will readily fall before the comparatively light equipment of the Filipino guerrilla forces. We must and we will attack with our heavy combat weapons in close coordination with our Filipino allies. On Philippine islands other than Luzon the need for employment of American heavy combat weapons is equally great and, in those areas, the time of liberation depends to a great extent upon the availability of such weapons.

Filipinos and Americans alike have a great stake in driving the Japanese out of the Philippines. The total liberation of the Philippines will mean a tremendous advance toward complete defeat of the militarists of Japan—an event which will bring peace and security to both our peoples.

Renegotiation of Contracts

EXTENSION OF REMARKS

OF

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, March 22 (legislative day of Friday, March 16), 1945

Mr. McKELLAR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement of the War Contract Price Adjustment Board relating to renegotiation of war contracts, together with the letter of transmission and my reply thereto.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

WAR DEPARTMENT,
OFFICE OF THE UNDER SECRETARY,
Washington, D. C., March 21, 1945.

Hon. KENNETH D. McKELLAR,
United States Senator from Tennessee, Senate Office Building, Washington, D. C.

DEAR SENATOR McKELLAR: Knowing of your interest in the renegotiation of war contracts, I am sending you herewith a copy of news release which highlights some of the main achievements under contract renegotiation and is being issued for tomorrow's papers.

Sincerely yours,

ROBERT P. PATTERSON,
Under Secretary of War.

MARCH 22, 1945.

Hon. ROBERT P. PATTERSON,
Under Secretary of War, the War Department, Washington, D. C.

MY DEAR MR. SECRETARY: Many, many thanks for your kind letter of the 21st, with enclosure about the operation of the renegotiation law.

This is great news for me, as the law was one of my bills and I took the greatest interest in getting it through.

I am taking the liberty of putting your letter and Colonel Hirsch's statement in the RECORD today.

With kindest regards and thanking you for sending it to me, I am,

Very sincerely yours,

KENNETH MCKELLAR.

As a result of renegotiation of war contracts in the past 3 years, contractors have refunded or agreed to refund more than $5,800,000,000 of excessive profits to the United States Treasury, Col. Maurice Hirsch, Chairman of the War Contracts Price Adjustment Board, announced today.

In addition, savings vast but impossible to estimate stem from the fact that contractors, knowing their earnings will be reviewed and any excessive profits recaptured, tend to avoid excessive profits by holding prices down when making contracts This is particularly true because of the announced principle in renegotiation that a contractor whose pricing policy on renegotiable business results in comparatively reasonable profit margins on his original billing prices should receive more favorable consideration than a contractor whose pricing policy results in substantially excessive profits.

"The sums saved to taxpayers through renegotiation and later procurement are great," Colonel Hirsch stated, "even allowing for the fact that a large part of the excessive earnings would even without renegotiation or price reductions ultimately be recaptured through Federal income and excess-profits taxes."

The cash refunds reflect for the most part the renegotiation or prices for the business of contractors in 1942 and 1943. Renegotiation for business in 1944 has just begun.

"The cooperation given by contractors to those administering the Renegotiation Act is well evidenced," Colonel Hirsch said, "by the record of renegotiations for the year 1943 which have been completed up to March 9, 1945, the most recent date for which full data is now compiled. As of that date the cases of more than 31,500 contractors had been reviewed for that year, in 24,395 of which no refund was required either because of the nonapplicability of the act or because no excessive profits appeared to have been realized. In over 7,000 of the cases, refunds were made under voluntary agreements entered into by the contractors. In only 175 cases was it necessary for the Government to use its authority to compel refunds. Up to March 9, 1945, only 19 of those cases had been appealed to the tax court."

Congress, by the Renegotiation Act, authorized the renegotiation of most Government war contracts and subcontracts as one means of eliminating excessive war profits, through the review of the earnings of war contractors. Contracts are ordinarily renegotiated on an over-all fiscal-year basis, and any portion of the profits found to be excessive must be refunded to the Government.

The Renegotiation Act applies to contracts of the War Department, Navy Department, Treasury Department, Maritime Commission, War Shipping Administration, and four of the subsidiaries of the Reconstruction Finance Corporation and to related subcontracts. The War Contracts Price Adjustment Board is the statutory agency having authority in the administration of the act, but actual renegotiations are conducted under the direction of the price-adjustment boards of the Government agencies included under the act.

The savings resulting from the authority to renegotiate war contracts are of three types:

1. From refunds: The amount of renegotiation refunds relating to work already performed, and determined since the Renegotiation Act became effective on April 28, 1942, up to March 9, 1945, follows:

For business in—	*Amount of refund*
1942	$3,177,761,219
1943	2,577,994,520
1944	46,697,243
Total	5,802,452,932

Renegotiation of war business in 1942 is practically finished. However, about 15 percent of the assignments for renegotiation on business completed in 1943 are still in process. Renegotiation on 1944 business has just begun. Hence the total recovery for the entire period 1942–44 will be much greater than the amount above noted.

2. From price reductions under existing contracts: Under the present Renegotiation Act, the renegotiation agencies cannot require price reductions relating to future performance under renegotiated contracts but have the authority to enter into agreements providing for them. Under another provision of law the department can require such reductions in appropriate cases. Such reductions are accomplished by renegotiation agencies or by contracting officers or by the joint efforts of both. So far, these reductions, including both those in renegotiation and those resulting from other efforts of the departments, are estimated to aggregate at least as much as the refunds.

3. From contractors' voluntary price reductions on future contracts and future deliveries: Large savings result from the voluntary application of renegotiated prices to future contracts and from voluntary reduction in prices by companies which recognize that excessive prices will be reduced through renegotiation.

The amount of savings of this third type cannot be estimated with any accuracy. It is believed, however, that these savings exceed the savings through cash refunds and through application of lowered prices to existing contracts.

"Renegotiation," Colonel Hirsch stated, "is in addition an important tool for full and effective industrial mobilization. One of the factors considered in renegotiation is the efficiency of the contractor, with particular regard to the attainment of quantity and quality production, reduction of costs and economy in the use of materials, facilities and manpower. Renegotiation also concerns itself with the pricing policy of the contractor. Close pricing is regarded as a favorable factor. Close pricing is effective not only in relation to the savings accomplished for the Government, and not only because it is a deterrent to inflation, but also because it of itself impels efficient use of labor, materials and the other elements required in war production.

"Only in most infrequent and unusual cases does the recovery of excessive profits or the necessity of reducing prices under the amounts initially agreed upon result from any attempt on the part of the contractor to take advantage of the necessities of the Government in procuring for war.

"Excessive profits in almost every instance have arisen because neither the contractor nor the contracting officer was able in advance to estimate accurately the cost of the items required.

"Even after 3 years of war, in those cases where there are changes in required volume or in specifications of old products, demand for new products, modifications in processes, in skills, or in materials, or fluctuating costs, accurate initial pricing is difficult. Renegotiation is then effective in recovering for the Government any excessve profits which may result."

United Nations War Crimes Commission

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1945

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD. I include the following statement made by me before the House Foreign Affairs Committee on the resolution (H. J. Res. 93) to create a commission to work with United Nations War Crimes Commission:

Right under our noses there seem to be numerous agencies set up to meet the problem of war criminals. The Navy Department has its Division of War Crimes under Admiral Gatch; the Army, under General Weir, has its Division of War Crimes, as has the State Department. What do we know about them? Is there any coordination among them? Are they, and to what extent, working in conjunction with the United Nations War Crimes Commission, now operating in London, or are they proceeding independently? Congress and the people are kept in the dark. Should Congress and the people continue in ignorance?

The questions in our minds pile up.

Has our country as yet developed a policy as to war crimes? If so, what is it? Numerous other countries have already announced their policy. Are the war criminals to be tried at all? What procedure, if any, is to be used in the trials of war criminals? What criminal codes and of what countries are involved? Are there to be new laws to fit new crimes or existing law utilized? Do laws exist to punish the perpetrators of the mass murders of their own nationals in the Reich? If new laws are invoked for past offenses, will they be ruled out as ex post facto? As far as I am concerned, I am willing to invoke new laws to fit the bestiality of the Axis. We have to stamp out the Nazi plague, and it can only be done completely by the punishment of war criminals, ex post facto laws notwithstanding. Are there to be international courts or any national courts or both? Will military tribunals or civil courts or both be set up? Certainly it is our concern when we recall that after the last war the American representatives joined with the Japanese to protest against the establishment of international tribunals to try the Huns and Junkers. A repetition of the farce of lack of trial and punishment of war criminals of the last war will not be countenanced. Then out of a list of 896 culprits only 12 were tried before the High German Court at Leipzig, 6 acquitted, and 6 convicted with nonsensically light sentences. Of the 6, 2 escaped and 4 spent 6 months in jail. That was the lamentable results—a mere international wink of the eye.

What shall we ultimately define to be a war crime? How much weight is to be attached to the defense of superior orders? What shall be done with heads of states? Shall they escape trial and be subject to political disposition only? Shall they be given the treatment accorded Napoleon and the Kaiser? Shall they be hanged on a gibbet five times higher than the one from which Haman was hanged? Shall they be summarily tried?

What shall be our attitude toward neutral countries who reserve the right to grant asylum to escaping war criminals? It is interesting to note that recently King Ibn Saud declared war on Germany and Japan but not unconditionally. He requested that the "zone of the holy shrines" be declared neutral. For the first time in modern war history such an exception is stipulated. If such condition is accepted, Moslem war criminals like the Grand Mufti of Jerusalem can escape into these zones and receive asylum therein. Japanese and Nazi war criminals can do likewise.

The questions I have asked are vital ones. Upon how they are answered will depend not only the stability of international relations but the successful maintenance of a durable peace.

This war is a prolongation of the last war. The boldness of the Junker and military caste received impetus from what they considered our soft-heartedness. Just punishment meted out this time will serve as a deterrent in the making of a third world war. When we survey the bestiality and brutality of the Axis jackals, the conclusion crushes in on us that should we permit the escape of those who have loosed such horror upon innocents we are thereby violating the laws of decency and condoning criminality in all its forms.

There are some, for instance, who feel that Hirohito and the ruling class of Japan should not be punished; that the Office of Mikado would remain intact, that the Mikado and his barons will be the only form of responsible life in Japan and, therefore, we'll need them to keep order. Some high officials have even objected to any irreverent reference to Hirohito and have asked that his palace be spared blasting from the air. These reservationists have recently received some severe jolts; their attitude has been gravely questioned. I question it. So does Admiral Halsey who recently said that of course during an overcast we might bomb the palace of the emperor, but he does hope that the emperor's white horse will be spared since he would like to ride him. I feel that the Mikado, be he god or devil (no matter how regarded), must go.

Actually, why was the resolution offered?

Firstly, because we get disquieting information about the activities or nonactivities of the United Nations War Crimes Commission. That Commission has been in session over a year and a half. Some will state much has been accomplished, but that it has been hamstrung by the British Foreign Office and/or by our State Department. Whichever is the case we ought to know. The people are entitled to know. This is a people's war; it is not a war between heads of states. This is a war against nazi-ism and fascism; it is a war against backstairs diplomacy; it is a war against secret covenants.

The work of the United Nations War Crimes Commission cannot remain secret. Whatever impediments exist in bringing its work to fruitful completion must be removed. If there are differences, those differences must be resolved in the open. Let the pitiless light of publicity reveal the places where ineptitude and indecision are crippling its efforts. The nation wants action; it is tired of waiting.

It is worthy of comment that a full-stage debate on war crimes was held in the House of Lords on March 21. The members' comments reflected reports of dissension within the War Crimes Commission and showed a marked disposition to question the vigor with which Nazi and Fascist punishment problem were being attacked. It is high time such a full-time debate were staged in the House.

The ex-chairman of the United Nations War Crimes Commission, Sir Cecil Hurst, wrote three letters to the British Foreign Office. The first, written last May, asked for the extension of the Commission's power to try the Nazis for crimes against their own nationals; that is, for crimes against the Jews and other minorities particularly. The reply came 4 months later from Anthony Eden, British Foreign Secretary, which, in common parlance, said, "No soap." Sir Cecil then wrote a second letter asking for international courts to try the Axis jackals like Hitler, Himmler, Quisling, and the Grand Mufti of Jerusalem. Anthony Eden took 3 months to answer that one, and again it was "no soap." Does that mean that Hitler and his gang will not be tried by judicial processes, and is the possibility thus revealed that whatever punishment is meted out to these officers and officials may only be imposed, shall we say, as the result of the caprices of political leaders of the United Nations? They could decree that the criminals be shot or hanged, or, as in the case of the Kaiser, sentenced to comfortable exile. Or it might be that Herr Hitler and company will receive the Napoleon treatment. Such tender treatment for Hitler, murderer of millions, would be fitting, would it not?

The excuse given by Mr. Eden for the delay in answering the letters is that no central body exists in the United Nations to which such problems can be forwarded, and that the British Foreign Office is the most convenient channel.

Sir Cecil's third letter to the British Foreign Office was very properly a letter of resignation.

Meanwhile our representative, Herbert Claiborne Pell, has been shelved. Is this a temporary absence or a permanent one? What's behind this cloak of secrecy and silence? We are told he is out of the picture because of the failure on our part to appropriate moneys for representation on the United War Crimes Commission. We have now restored the appropriation in the sum of $25,000. What now?

It is customary for our representative on any commission abroad to report findings to our State Department or other accredited agencies. Reports must have been filed. What do they disclose? Are they on Mr. Hackworth's desk? Mr. Hackworth is legal adviser to the Secretary of State. It is natural for those to clear through him. Are they on his desk to gather the dust of centuries? It is imperative to know what the score is. It is not my purpose to have divulged matters that concern military security, but when it comes to the question of policy, bearing on the future peace, bearing on the sacrifices we are making and will be called upon to make in the future, we must not be kept in the dark.

We want American participation in the United Nations War Crimes Commission strengthened. That strength can the more readily be attained if the Members of Congress realize the magnitude of the problem. It is not a problem for diplomats only. In fact, it is interesting to note that the Soviet Commission of War Crimes, functioning independently, has not a single diplomat on it.

I cannot put my finger on the reason or reasons for the break-down of the United Nations War Crimes Commission. The fault may not lie with the Commission. It may lie elsewhere. Ought we not to know?

I am quite sure that the Commission realizes the need for prompt action, particularly in the examination of records and for the preservation of testimony and evidence. Witnesses disappear or become reluctant to testify. Accused defendants deliberately lose their identity. They assume other names and stations and become lost in the shift of population. Thousands of depositions must be taken while memory is still fresh. That's why it is so important to establish policy, for without a policy nobody can know in what direction to proceed. And their policy must be established with promptitude.

Furthermore we should be interested in learning something about the terms of surrender with reference to war criminals. It is all very well to provide for elaborate machinery for trials, but what does that avail if there be no defendants. The Lord Chancelor (Viscount Simon), speaking for the British Government in the House of Lords on October 7, 1942, said: "Named criminals wanted for war crimes should be caught and handed over at the time of, and as a condition of, the armistice, with the right to require the delivery of others as soon as the supplementary investigations are complete." He emphasized that his prerequisite to an armistice was agreed to by all the Allies.

In the collective declaration of the United Nations signed by Stalin, Churchill, and Roosevelt, the following appears: "At the time of granting of any armistice to any government which may be set up in Germany those German officers and men and members of the Nazi Party who have been responsible for or have taken a consenting part in atrocities, massacres, and executions will be sent back to the countries in which their abominable deeds were done in order that they may be judged and punished according to the laws of these liberated countries and of the free government which will be erected therein."

It is now pertinent to ask what of the Italian war brutes? And those of Rumania, Hungary, and Bulgaria? Were the war criminals handed over and apprehended as a condition of the armistice? Certainly this Congress should know about this. Where are these men? Are they in jail? Are they free? Are they to b tried? What of the members of the Gestapo and SS guards who have been caught in liberated countries and in the liberated parts of Germany? What are our plans for the punishment of men like Laval, Antonescu, and other Quislings?

Viscount Simon also stated in the House of Lords: "The Commission will investigate war crimes committed against nationals of the United Nations recording the testimony available, and the Commission will report from time to time to the Governments of those nations cases in which such crimes appear to have been committed, naming and identifying wherever possible the persons responsible."

Have such reports actually been filed from time to time with our own Government? Certainly, our Congress should know the contents of these reports, if any. I want to know, you want to know what these reports contain.

Recently, there appeared in Life magazine an article entitled "Dino Grandi Explains." He was one of the Fascist big four and is probably as much responsible for the havoc and crimes caused by the Fascists as anyone else. He seeks in this article to excuse these foul offenses. It shows the subtlety and cunning that will be used by the war criminals in an effort to save their own skins after they have been responsible for the torture and death of thousands of defenseless peoples. Of course, Count Grandi's apology won't wash, but the mere fact that the columns of Life were used is most significant. Grandi is now in Lisbon. It is mete for the group to be set up by my bill to go into the publication of articles of this kind, as well as what th^ fate of a Grandi shall be.

Recently, Mussolini's ex-chief of staff, Gen. Mario Roatta very conveniently escaped by walking out of a hospital in Rome. That was a very strange occurrence. What was behind it? The members of the High Commission for the Suppression of Fascists Crimes were very bitter about it and Count Carlo Sforza, head of the Commission recalled that when he had ordered his arrest he had been subjected to a lot of pressure and threats. Fascists are escaping and while Italy is not sitting with the United Nations War Commission, the problem of escaping Fascists is our concern.

A refreshing statement was made recently by Acting Secretary of State Grew. He said: "I wish, however, to state categorically that these proposals (meaning the punishment of war criminals) which cannot be published are as forthright and far-reaching as the objectives announced by the President which they are intended to implement. They provide for the punishment of German leaders and their associates for their responsibility for the whole broad criminal enterprise devised and executed with ruthless disregard of the very foundations of law and morality, including offenses wherever committed against the rules of war and against minority elements, Jewish and other groups and individuals."

However, we have had similar statements from the President, from former Secretary of State Hull, and others high in authority. We had the same kind of statements from similar officials before the end of the last war. They are meaningless unless implemented by action. Unless Congress takes a hand in the proceedings, the purpose of Mr. Grew's statement will evaporate in an atmosphere of apathy, indifference, and back-stage maneuvering.

The question might be asked: Why trials?

The practice of the Nazis in their use of the charnel house and slave pens and asphyxiation chambers, the establishment of death camps such as Treblinka and Oscicien, the killing of prisoners of war contrary to the Hague Conventions both by the Nazis and Japanese must be made known to all. That is necessary so that we can trace to their source the basis for these foul practices and discover the history and motivation that activated the commission of such atrocities. The base must be found if we are to find the cure for so perverted an outlook of the German people. In this way we will be on guard against any subsequent development of so depraved an ideology and can study the economic and social soil that bred such monstrous crimes against humanity. There are many people who are skeptical about the reports of these atrocities. The trials will remove all doubt. Moreover, the future Hitlers will learn thereby that they cannot send to death millions of people and with impunity save their own skins. A trial will obviate the possibility of a martyr's death for these criminals. Certainly, we could have lynching parties and wholesale indiscriminate slaughter, but that would be revenge and not justice. Without trials, many innocent ones may suffer and to punish without trial is contrary to democratic processes. We are fighting to restore law and order and cannot begin a constructive rehabilitation based on our own lawlessness. We are a nation dedicated to the Anglo-Saxon tradition of fair trial. To punish indiscriminately would be taking a page out of the Nazi black book and reverting to their brutal way of life. We should not seek to inaugurate a saturnalia of blood.

The trials will promote the evolution of international law, a most significant factor in view of the coming international structure for peace.

In all this I have refrained from giving you the details of the foul offenses perpetrated by the Axis degenerates. I leave that to those who will follow. My only object is to point out to you the essentiality of Congress' interest in this over-all picture. This interest can best be exemplified by passing my resolution.

I feel strongly that the work of the United Nations War Crimes Commission will be barren unless Congress in some way takes a hand. The whole program or lack of program for the punishment of Axis criminals will remain a dark secret just as it was after the last war unless Congress steps in.

This committee may approve my bill with appropriate amendments, if necessary. The proposed commission should be in the nature of a watchdog. As soon as something goes amiss within the United Nations War Crimes Commission, that watchdog may bark and otherwise set up distress signals.

It is not only the right of this Congress, but also the duty of this Congress to play an important part in the question of Axis criminals. If Congress must prod the work of the present Commissio , as it appears it must, then let it prod. The criminal if left unpunished repeats his crime.

We have a stake in this matter; our children and their children have a stake and as guardians of the peace we cannot fail them.

The proposed commission can be composed of some of the members of this committee or in combination with other congressional committees to work in coordination with the United Nations War Crimes Commission, to keep abreast of its work, to keep the Congress informed and through the Congress the people. Remember the punishment of war criminals is inextricably interwoven with the peace.

A copy of the resolution follows:

House Joint Resolution 93

Joint resolution requesting the President to appoint a commission to cooperate with the United Nations War Crimes Commission, or any other agency or agencies of the United Nations in the preparation of definite plans for the punishment of war criminals of the Axis countries

Resolved, etc., That the President is hereby requested to appoint a commission, whose duty it shall be to cooperate with the United Nations War Crimes Commission, or any other agency or agencies of the United Nations in the preparation of definite plans for the punishment of war criminals of the Axis countries.

SEC. 2. Such commission shall proceed as expeditiously as possible to prepare and propose plans for the punishment of such war criminals, regardless of whether their crimes have been against persons who are or were subjects of the Axis nations, and regardless of whether such crimes were committed within territory of the United Nations or that of the Axis countries.

SEC. 3. The sum of $50,000 is hereby authorized to be appropriated for the purpose of defraying salaries and other expenses of such commission.

St. Patrick's Day Address by Paul E. Fitzpatrick

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, March 22, 1945

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address delivered by Hon. Paul E. Fitzpatrick, St. Patrick's American Sons, delivered at the National Democratic Forum, National Democratic Club, New York City, on Saturday, March 17, 1945, and broadcast on a coast-to-coast net-

work over the Mutual Broadcasting System.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a source of deep satisfaction to men and women of Irish blood that all our fellow Americans join with us so generously in the celebration of St. Patrick's Day. We gratefully acknowledge that it puts us in your debt. But we might just as well owe that much more, because the debt which Irish-Americans owe to America is so great that it can never be repaid, anyway. No group that has come to these shores owes more to this country than we do. To America we owe our escape from persecution, our religious and political liberty, freedom to work out our destinies, and the priceless boon of American citizenship.

It is as natural for an Irishman to love liberty as it is for the shamrock to grow in Ireland. And just as natural for him to fight oppression and tyranny. The battlefields of the world are marked with the graves of Irishmen who fell fighting to win freedom and liberty for the men and women of other races. In view of Ireland's own long struggle for freedom, it is easy to understand why Americans of Irish blood are so warmly sympathetic to the aspirations of the Jews for a Palestinian home state, to the hopes of the Poles for a free and independent Poland, and to the desires of all people for freedom and self-determination.

Even a royalist Irishman reacted quickly and surely to the free air of America. Sir Thomas Dongan came to New York as the Royal Governor of the Colony in 1683. He was not here long before he issued the Charter of Liberties and Privileges. Under it there was granted to all freedom of religion, immunity from martial law, a democratic election system, and trial by jury. The charter has served to this day as a pattern for religious tolerance and political freedom.

Thirteen of the signers of the Declaration of Independence were men of Irish blood. It was Patrick Henry who uttered the battle cry of freedom, "Give me liberty or give me death."

The illustrious Gen. John Sullivan began hostilities in the Revolutionary War by charging on Fort William and Mary. John Barry is known as the father of the American Navy. There were at least 20 Irish generals in the Continental Army, and the first general officer killed was the Irish-born Richard Montgomery.

Testimony has been given before the House of Commons that half of Washington's army was composed of Irishmen. And Mountjoy, addressing the British Parliament on the surrender of Cornwallis, exclaimed: "You have lost America by the Irish."

Is it any wonder that Washington made the saint's name his choice for the password on that March 17 when the British evacuated Boston? Or that at Valley Forge in the darkest days of the war he ordered an extra ration of spirits so that the saint's day would not pass without celebration? Or that the Father of our Country promptly became a member of the Friendly Sons of St. Patrick right here in New York?

In the war of 1812, the two naval heroes, Oliver Hazard Perry and Thomas McDonough were of Irish blood, as was that peerless leader, Andrew Jackson.

The rolls of the Civil War were ablaze with Irish names—to name but a few—General Meade, the victor at Gettysburg; Gen. Philip Kearney the hero of "Bloody Antietam"; New York's own Gen. Philip Sheridan; Gen. Patrick Meagher, who commanded the celebrated Irish Brigade which carried the green flag with the Stars and Stripes; and Michael Corcoran of New York's own "Sixty-ninth" which has won undying fame on every field where it fought.

In the Confederate camp were Pat Cleborne, Joseph Finnegan, Billy Mahone, and General Lee's master of strategy, Stonewall Jackson.

No story of the First World War is complete without mention of "Wild Bill" Donovan, Father Duffy, Joyce Kilmer, or your own Gen. Aleck Anderson, who served the "Sixty-ninth" valiantly in the First World War and died in the service of his country in this war.

And so it has been down through the years with these American sons of St. Patrick who have held honor and duty above life itself in their devotion to country and in their abhorrence of tyranny and oppression. Whether it was at Missionary Ridge, in the Argonne, or on far-away Makin, Irish blood was spilled generously. With their country in danger, only two things have counted, loyalty and courage.

Here is a bit of Clark's poetry that was a prime favorite of Theodore Roosevelt:

"Said Shea, 'It's thirty-odd years, bedad,
Since I charged to drum and fife
Up Marye's Heights; and my old canteen
Stopped a rebel ball on its way;
There were blossoms of blood on our sprigs
of green,
Kelly and Burke and Shea—
And the dead didn't brag.'
'Well, here's to the Flag!'
Said Kelly and Burke and Shea."

This country was stunned by the treacherous blow which was struck at Pearl Harbor on December 7, 1941—"that day which will live in infamy." We sensed the magnitude of our loss and rumor and fear made it seem greater than it was. But what heightened our fury was the feeling that we were the victims of foul play and treachery. And with it all came a paralyzing fear that we were dealing with a cruel and cunning foe who could make of our very virtues the weapons for our destruction. We may confess it now. We wondered how our boys who were taught decency and fair-play could be a match for the wily and fanatical Jap. Our boys had not been taught to kill and torture. It looked as if the Fascist poison in the education of youth had produced robots who were invincible. Witness the sad fate of Poland, France, Britain, Norway, Belgium, and Holland up to that time.

December the 10th was a black day for the United Nations forces in the Far East. The British battleships *Repulse* and *Prince of Wales* went down. The Cavite Navy Yard was almost completely destroyed by Japanese air attack. And enemy assault forces landed at three points on Luzon. Any one of these calamities would have been classed as a major catastrophe.

But on that very day when things seemed blackest we were electrified by the magnificent sacrifice of a young lad whom we will never forget—Colin Kelly. When that boy zoomed his plane in a power dive at the 29,000-ton Japanese battleship *Haruna* and destroyed it, then we knew that our boys were more than a match for them, that the courage born of decency, truth and ideals was greater than the fanaticism bred on poisonous lies, cunning and hatred of your fellow men.

One moment the master of youth's green hill with all that life holds dear before him, a wife and a child whom he would never see again, then those few fleeting moments in the furnace of decision forging the noblest of the virtues, loyalty and courage. Then the resolution to die as the eagle dies, alone. He ordered his crew to bail out, but Captain Kelly went down with his ship. One boy's life gone, but there remained an example never to be forgotten so long as courage is valued among men. How well his classmates at West Point had described him: "A combination of Irish blood and southern sunshine."

Colin Kelly's noble sacrifice inspired many another lad to exploits of sheerest grandeur. The Navy produced his rival in Lt. Eddie O'Hare.

We have plenty of aircraft carriers now, but in February 1942, Admiral Leary's southwest Pacific Fleet had only one "fighting lady," the *Lexington*. On the morning of February 20, his task force was intercepted by waves of Japanese bombers. When the last wave appeared on the horizon there was only one tiny wasp of a fighter between the nine Jap bombers and the task force. And the pilot of that lone plane was "Butch" O'Hare. The Jap formation was a V of V's and O'Hare whizzed past them out of gunshot, pivoted on one wingtip and came roaring back from the rear. Two of the enemy planes went down. O'Hare ducked under and came back. Three more went down. The whole affray was over in 4 minutes. In that time O'Hare had shot down five enemy bombers and scored hits on three others. O'Hare's last flight was on a mission so dangerous that he reserved it for himself. His deeds glorified Nathan Hale's proud boast: An American's only regret is that he has but one life to give for his country.

Who is there who heard and could forget President Roosevelt's matchless word picture of John James Powers, the lad who left behind as parting words to his buddies, "We'll lay it on their flight deck."

In the Revolutionary War it was the O'Brien brothers—and there were five of them—who started naval action in that war by the capture of three British warships. How different and yet how the same is the story of the five Sullivans. They enlisted together but with true Celtic stubbornness forced the Navy to waive its rule that brothers could not serve on the same ship. Happy-go-lucky lads united in their devotion to their country and to each other. When their ship was torpedoed all five were lost. In loyalty and courage, the story-tellers never matched this. "Greater love than this hath no man, that he should lay down his life for another."

And "Commando" Kelly, that one-man army and lovable scamp, all heart, courage, and spirit. He volunteered for successive missions of extreme peril. On the third mission he delivered effective and continuous fire until two rifles locked from overheating. He then picked up 60-millimeter mortar shells, pulled the safety pins and used the shells for grenades. When the position had to be evacuated he volunteered, and successfully covered the withdrawal of his detachment. In this action he was credited with killing 40 of the enemy. Just this last week he embarked upon a new and more perilous adventure. He took unto himself a wife, and may he and Mrs. Kelly enjoy long years of happy married life.

"Point Blank" Callaghan, Conroy, McGuire, Devereux, Finn, Flaherty, Walsh, and "Rosie" O'Donnell, who later led the first B-29 raid over Tokyo. The American answer to any call for surrender will always be the same as General McAuliffe gave at Bastogne, "Nuts."

It is only time which begrudges us the right to continue. And it is only because it is St. Patrick's Day that we have singled out his sons. The same can and must be said for men of every national derivation. Meyer Levin, Colin Kelly's bombardier, who returned to seek out glorious death after one miraculous escape. It was his unerring judgment which scored three direct hits on the *Haruna*. "Gabby" Gabreski, Don Gentile, Henry Mucci, John Bulkeley, Ted Lawson, Jimmy Doolittle, Dick Bong, and all those matchless heroes who have proved to

the world that free souls will conquer. Their battle cry has been:

"We shall die but we shall conquer,
By our blood shall freedom live."

Well may it be said in Winston Churchill's words, "Never in the history of the world have so many owed so much to so few."

These are some of the men who have fought, and many have died, to right the world's wrongs. And, because of their deeds, we see the promise of a better world to come. Let us hope that when this war is over no American father will ever again have to write these words to his son, "It is too bad this war could not have been delayed a few years, so that I could grow up again with you and do all the things I planned to do when you were old enough to go to school." This was the first and last letter to his son from Commander John J. Shea, of the ill-fated *Wasp*.

In the Dumbarton Oaks plan we have a promise of world order—a world in which outlaw nations will be bound to the peace.

In the words of the distinguished former Secretary of State, Cordell Hull:

"Peace, like liberty, requires constant devotion and ceaseless vigilance. But peace also requires institutions through which the will to peace can be translated into action. * * * We are fully aware that no institution—especially when it is of as great importance as the one now in our thoughts—will endure unless there is behind it considered and complete support. The will to peace must spring from the hearts and minds of men everywhere, if it is to achieve enduring peace."

Let us all give to the President that complete support which is so necessary to sustain him in the tasks which lie ahead.

There will be trying days to come. When the war in Europe is over, we must redouble our efforts in the Pacific. But may God soon bring final and complete victory to our standards. May He guide our great President in his noble efforts to insure that this holocaust of war will not be visited upon this peace-loving Nation again. And for our fighting forces, for our Commander in Chief and for our beloved country, may I close with this simple, very old-fashioned Irish prayer:

"May the road rise up to meet you
May the wind be always at your back,
And may God hold you
In the hollow of His hand."

Nomination of Aubrey W. Williams

EXTENSION OF REMARKS

OF

HON. ALLEN J. ELLENDER

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Thursday, March 22 (legislative day of Friday, March 16), 1945

Mr. ELLENDER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Test for the Senate," published in the Washington Post of March 22, 1945. The editorial relates to the pending nomination of Aubrey W. Williams.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TEST FOR THE SENATE

When Members of the Senate vote today on confirmation of Aubrey Williams as Administrator of the R. E. A., they should, we think, scrutinize their own consciences with special care. For, among other extraneous issues, the question of conscience has been introduced into the Williams case. It has been introduced in the form of an assault on the orthodoxy of Mr. Williams' religious faith. That such a question should be considered in connection with the Senate's decision on the fitness of a nominee for public office is not only wholly repugnant to American principles, but is also a clear violation of article VI of the Constitution. That article declares that "no religious test shall ever be required as a qualification to any office or public trust under the United States."

Senators who vote on Mr. Williams need to be very sure, therefore, that no question concerning his religious faith influences their own judgment in the smallest degree. Beyond this, it seems to us, they need to be sure that no question concerning his religious faith which may enter into the minds of any of their colleagues results in the defeat of his confirmation. The vote on Aubrey Williams is expected to be very close indeed. It may be decided by a margin of no more than one or two Senators—perhaps by the very Senators who so far forgot their own oath of office as to inject a religious test into the Senate's deliberations. If that should happen, it would reflect discredit upon the Senate as a whole.

The debate has been, in great part, in terms of his personal beliefs and has revealed only that he believes in the doctrine of human equality, in the right of citizens to organize and act collectively for the advancement of their political interests and in the use of the Government as an instrument to promote the general welfare. For these beliefs, he has been, as Senator LUCAS put it, "abused and maligned." The factor about him which, in our judgment, ought to govern the Senate's decision is simply this: Is he a public servant of proven capacity?

American Aid to Russia

EXTENSION OF REMARKS

OF

HON. CLYDE M. REED

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, March 22 (legislative day of Friday, March 16), 1945

Mr. REED. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "We Gave the Red Army Its Speed," by Ernest K. Lindley, from the Newsweek magazine of February 12, 1945.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WE GAVE THE RED ARMY ITS SPEED

(By Ernest K. Lindley)

We, the American people, have a reputation abroad for being boastful. But at times we seem to be beset with the opposite fault. Since the Red armies began rolling again, the admiring inquiry: "How do they do it?" has been audible in Washington. There was nothing in the headlines—or in the dispatches from Moscow, Berlin, or other European capitals—to hint that these Russian victories were not wholly Russian achievements.

At last a few of our official spokesmen were moved to call attention to the fact that the United States was a direct contributor to, and partner of, the Red Army. Foreign Economic Administrator Leo Crowley issued a partial summary of lend-lease aid. Lt. Gen. Ira Eaker made bold to say that but for the work of American and British heavy bombers, the Russians would still be fighting somewhere near Moscow.

As Crowley reported, we have sent the Russians hundreds of thousands of motor vehicles, more than 12,000 planes, many thousands of tanks and self-propelled guns, thousands of railroad cars, more than a thousand locomotives, miles of track, and 60 ingenious rail-borne power plants. We have sent them 11,000,000 pairs of army boots, hundreds of millions of yards of cloth, thousands of machine tools, and many thousand tons of raw and semifinished materials.

Crowley touched only the high spots. In total volume, as he emphasized, we have provided only a small part of the equipment and supplies used by the Russians. But we have provided, in large quantities, critical items—especially transportation—without which the Red armies could not employ blitz tactics and very probably would still be fighting well inside their own country.

Our contribution did not end with the procurement and fabrication of these supplies. With the help of the British we had to deliver them. We had to build and man the cargo ships to carry them. We had to build and man the combat ships and the planes to escort the cargo ships through submarine-infested waters to the Persian Gulf and the White Sea ports. We had to contrive and manufacture devices for averting the U-boat peril. We had to build docks in the Persian Gulf and develop the rail and motor transport lines north through Iran. We had to expand the air ferry route across Africa and blaze the air trail across Canada to Fairbanks.

The exertions required for the delivery of lend-lease aid to the Soviet Union were immense. They involved the use of manpower probably equivalent to several Russian armies.

Then, too, as General Eaker pointed out, Americans and Britons built and flew the planes which beat down the Luftwaffe, steadily sapped Germany's capacity to make war, and, first in the Balkans and now in Germany, have given the Red armies direct tactical support by their attacks on enemy communication lines.

The last two American contributions to the advances of Uncle Joe's boys can be stated briefly: (1) The landing of large American armies in Europe and the destruction or capture by them of some 1,000,000 German fighting men, and (2) the great Pacific offensive beginning with the hair-line gamble on Guadalcanal in August 1942, which kept the Japanese out of Siberia. These enterprises required not only millions of men but a technology which the Russians have not yet attained, as well as skills in warfare and transport on the sea and in the air with which they have only a vague acquaintance. And they cost many American lives.

Of course, we did not do any of this out of altruism. We did it to win a war, or two wars, as quickly and efficiently as possible. The official American conception of the victory over Germany always held that the Russians would carry the major burden of the fighting on the ground. They have proved that this strategic diagnosis was correct and that our faith in their fighting ability, from their dark days in 1941 and 1942 until the present, was well founded.

The man who is carrying the ball on a particular play, especially if he makes a long gain, gets the plaudits of the crowd. Al-

though we give full credit to the fullback in this case, it is in the common interest to remind him, ourselves, and the spectators, including his own relatives, that he is only one man on a powerful, cooperative, and at times even self-effacing team.

The Key to Prosperity

EXTENSION OF REMARKS

OF

HON. HARLAN J. BUSHFIELD

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, March 22 (legislative day of Friday, March 16), 1945

Mr. BUSHFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very striking article entitled "The Key to Prosperity," written by E. H. Taylor, and published recently in the Country Gentleman.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE KEY TO PROSPERITY—NEW RESEARCH FINDINGS SHOW THAT HIGH FARM PRODUCTION AND INCOME ARE THE GUARANTY OF FULL FACTORY EMPLOYMENT AND NATIONAL PROSPERITY

(By E. H. Taylor)

The American people can have a national income of $140,000,000,000, necessary for full employment, after the war. But it depends on one definite requirement. This is an annual total farm income of around $20,000,000,000.

Whatever our after-war national income may be, it will inevitably be very close to seven times the total farm income. Whether we enjoy the prosperity that is possible or suffer a needless depression, this ratio will hold true.

All the major interests in our economy are geared to the same controlling factor. The value of manufactures, labor pay rolls and employment, retail sales, transportation income, and volume of construction work are limited by farm income. They follow its course, for better or worse, at an interval of roughly 3 to 6 months.

Our national balance sheet in any peacetime period, for all practical purposes, is regulated by the amount of farm production and the price levels at which it sells.

These significant findings are the result of a study made under the sponsorship of the National Association of Commissioners, Secretaries, and Directors of Agriculture of the 48 States. Two years ago this bipartisan organization set up an educational and research committee to make a basic study of the American economy. One of the purposes was to determine just what conditions would create the income which would make full employment and the distribution of our factory goods possible. The results are being made fully public for the first time in this article.

It has been known for sometime that total farm income and factory pay rolls averaged practically the same amount over a long peacetime period. Also, that the volume of factory output was governed by the balance maintained between the prices of finished goods and farm products. Farm income was clearly a barometer of purchasing power. These facts were published by Country Gentleman in 1940.

Several men had been carrying on studies, which convinced them that the relationship of raw materials and farm income to the rest of our economic machine went much further and deeper. Among them were Carl H. Wilken, of the Raw Materials National Council, at Sioux City, Iowa; Charles B. Ray, engineer and business counselor, of Chicago; and Dr. John Lee Coulter, former president of North Dakota Agricultural College and one-time member of the United States Tariff Commission. These men were made members of the research staff and did the work that led to these important new findings.

Summed up, they show that raw-material income, most potently that of agriculture, is the prime mover in our national economy. They also demonstrate, for the first time, that there is a natural law—the law of exchange—which controls the whole complex system by which we live.

Raw-material income is the start of the cycle of exchange. It is the new wealth annually created by production. All other money, involved in the processes of manufacture and delivery to the consumers, is money temporarily borrowed from the store of capital already in existence and is returned to it when the finished goods are sold.

This much was fairly well known before. What the research men found is that there is a rate of turn-over to this raw-material income as it passes through the various stages of economic use. This is the key to the whole matter. For the national income is then simply the amount of raw-material income times the rate of turn-over. The Nation's wage fund, the manufacturing output possible, and the amount of public purchasing power are fixed by this turn of raw-material dollars.

Going back into the records for nearly a century, the research men found this rule constantly at work, setting the bounds of the Nation's income. The rule did not vary, but the rate of turn has accelerated, due to the increased efficiency in both raw-material production and manufacturing. In 1850 one-half of our labor force was required in the production of raw materials, and the turn-over was only twice. By 1925–29 our national efficiency had risen so that a much smaller part of our population was required to produce the raw materials and the turn for the 5-year period averaged 3.9. It is now up to a fivefold turn, with only one-fifth of our working population engaged in raw-material production. The other four-fifths are now enabled to earn their living by taking the raw materials to the factories, processing them, distributing the finished goods, and performing other services called for by our standard of living.

But the amount of raw-material production and the prices it brings determine the amount of national income that can be distributed among these other groups. The new income this provides is the starter for the whole machinery of exchange. If large, the machine runs at full speed. If small, the machine slows down and we have bad times. For the rate of turn-over operates as an economic constant.

Agriculture supplies 65 percent of our raw materials and its income is the most sensitive and powerful part of this combination. Its products are mostly the kind that are quickly used up, either in processing or direct consumption Iron, copper, coal, and oil can be held, and the income from them enters more slowly into the process of exchange. But farm products quickly become buying power. Also farm income is distributed among a much greater number of individuals and affects the buying power of vastly more communities over the Nation.

So the dollar of agricultural income has a larger influence and a higher rate of turn-over. For the period from 1921 to 1940 the national income averaged $7 for each dollar of total farm income. This general average held during the good times of the 1920's, the depression and the unsuccessful efforts to restore prosperity in the 1930's. In each case the rise or fall of farm income preceded the same course of the rest of our economy.

Thus farm income appears to be the key factor in our system of making a living. It becomes of tremendous importance to all our after-war plans for the full use of our machines and tools and the employment of an increased labor force. These plans cannot work unless an adequate farm income is provided. For this research shows that the total fund to be distributed among all working groups and to finance the Government's obligations will approximate only seven times the total farm income.

In fact, as Carl H. Wilken, one of the men engaged in the research, remarked, "all other groups should insist on proper farm prices if they wish to have a job at an American price level."

Parity farm prices consequently become a national necessity. The United States has never had a depression when farm prices were at parity. Our troubles always came when farm prices fell out of line with others. And, as the charts accompanying this article graphically show, disaster soon overtook the other major elements in our economy. With a reduced farm income, every industrial and trade group lost its proportionate share of the turn-over that might have been had. The loss of national income or purchasing power, through the failure to maintain proper farm prices over the 1930–41 period, is put by this research study at the gigantic figure of $473,000,000,000—about the cost of the war.

WHEN ALL LOST

If anyone doubts the results of reduced farm income and the sequence of its results, 2 years stand as grim evidence. In 1928 and 1932 the farms of America produced substantially the same volume of all grains and livestock. But the market value or income from these products in 1932 was less than one-half what it was in 1928. The national income also dropped to less than one-half, maintaining an approximate 7-to-1 ratio. Factory pay rolls took a similar drop of more than one-half. Automobile production fell from more than 4,000,000 to 1,186,000 cars. Value of construction fell even more sharply, showing the more durable type of goods are the hardest hit by the loss of purchasing power generated by farm income.

Farm income reached its low in 1932, and started to move up again in 1933. But the other elements in our economy followed the natural lag behind it. Salaries and wages, value added by manufacture, construction, and transportation all reached their low in 1933 and did not start their recovery until the turn-over of increased farm dollars began to take effect. This was true through the whole outlay of consumer expenditures—for clothing, housing, insurance, auto registration fees, amusements, and education. All had to wait until the turn-over of new income reached them.

Another instance is what happened in the 2 years 1937–38. Farm income rose nearly $1,000,000,000 in 1937. National income went up approximately seven billion and we seemed to be pulling out of difficulty. But, with a larger farm production in 1938, prices weakened and farm income dropped almost exactly $1,000,000,000. National income fell almost exactly seven billion, with the loss spread all along the line. Manufacturing, employment, wages and salaries, construction, and transportation all suffered their proportionate cut. All started to rise again with the upturn in farm income in 1939.

WHEN CONSUMERS GAIN

The administration explained the 1938 recession by saying that Government spending had been reduced too soon. But Government spending merely represented money borrowed from the store of capital already in existence. The actual reason was the failure to maintain the flow of new income. It had slackened at its source—on the farms—and consumer purchasing power had fallen accordingly.

Consumers, this research shows, do not gain from low farm prices but always lose. At the bottom of the depression, although farm prices were disastrously low, the share of the consumers' total income required for food was the highest in a decade. This was because their total income was proportionately low. In 1938, when farm prices dropped, consumers did not benefit from lower food prices. The share of their income spent for food remained the same because their total income had declined in ratio with farm income. On the other hand, in 1943–44, although farm prices were at or above parity, the share of consumers' total income required for food has been the lowest in history. Their income has been at the highest level in history. Under normal peacetime conditions, the large balance left after food needs were satisfied would be spread over the whole outlay of employment-making wants—clothing, automobiles, housing and conveniences, radios, amusements, and many other items.

At the close of the war we shall require something like the present national income and balance of consumer purchasing power. These will be necessary to permit our factories to operate at full rate and new industries start up, to provide jobs for an increased working force and to finance the enormous Government debt. There is much debate about how we shall achieve all this.

The relevation of the effects of raw-material production and income on the whole national economy therefore has an especial timeliness. It shows the factor that is indispensable to a prosperous after-war condition. The record it discloses has too relentless a consistency to be merely a matter of coincidence.

Our farm production after the war will have to be higher than in the peacetime past if the growth in population and the food needs of a fully employed population are to be met. At parity prices, it is estimated, such a production would provide sufficient income to employ our full working force. The two requirements go together.

A parity—or equal exchange—price level for farm products, it thus becomes obvious, is not simply a matter of fairness to the people engaged in agriculture. It is a matter of direct self-interest to those in every other group in America. What they make, sell, and earn is equally at stake.

O. P. A. Says "It Isn't Necessary To Go to Church"

REMARKS

OF

HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1945

Mr. WEICHEL. Mr. Speaker, from up in my district I have received a letter concerning the very shabby treatment given by the Office of Price Administration in its allocation of gasoline to the wife of a Great Lakes ship captain.

These men are rendering most high service in the carrying of iron ore from the upper Lakes to Ohio for processing into guns and ammunition.

As you may know, life afloat does not have the convenience of living ashore, and the noble men who are engaged in ore carrying for the war cannot fit their 24-hour ship movements to meet trains and busses. These men who must live afloat for nearly 9 months are surely entitled to the company of their families for the few hours in port.

The wife of one of these men from the Lake port of Huron, Ohio, has made application for gasoline, stating all the facts, and was refused necessary gasoline by the Office of Price Administration.

Mr. Speaker, this is certainly poor treatment to those who are bending every effort to win this war, while at the same time the Office of Price Administration permits the use of untold gallons of gasoline for the lavish entertainment of Italian prisoners who refuse a gun to fight for their own country.

Yet the Office of Price Administration told this woman in refusal, that it isn't necessary to go to church, that it is not necessary to see your husband, and that it is not necessary to see a doctor.

Mr. Speaker, under unanimous consent to extend my remarks in the CONGRESSIONAL RECORD, I include the letters covering the present policy of the Office of Price Administration:

HURON, OHIO, *March 9, 1945.*

Mr. A. F. WEICHEL,
House Office Building.

DEAR MR. WEICHEL: You are certainly very familiar with this territory—and you know what means of transportation we have—but when they come out and tell you that you can't have gas to go to church with—because that isn't necessary—no wonder they make crooks of people.

Now my husband is a lake captain—and you know they get in at all hours of the day and night and isn't he entitled to get home—which he couldn't waiting on transportation. He works long hours from April until December, harder, I dare say than a lot of these O. P. A. guys.

HURON, OHIO, *March 9, 1945.*

Mr. L. R. COXE,
Office of Price Administration,
Cleveland, Ohio.

DEAR MR. COXE: The following (in order) is what the ration board here read to me as having been written by you to them in answer to our request for additional gasoline rations—remember, I didn't read it, they read it to me:

First, that it isn't necessary to go to church.

Second, that it isn't necessary to go to see one's husband.

Third, that it isn't necessary to go to a doctor.

First. I thought that "Freedom of attending the church of one's choice" was one of the freedoms we were fighting for. Now the church of my choice is in Sandusky but I think I'm doing more for the community (and incidentally Christianity) in which we live by serving as organist and choir director, which involves practice, too, at a church here in Huron and you say that it isn't necessary; I wish you'd tell all churches that. A car is very necessary to get to any church on Sunday or any other day in Huron, regardless of the service.

Second. Did you ever try getting transportation, from say, Lorain, Toledo, Sandusky, or even in Huron, to Huron? Three-hour service in the daytime and none at night. How would anyone get from the depot in Sandusky at night? Did you ever try getting to these ore and coal docks without a car? Isn't my husband entitled to a little home life from April to December, and how would he get there if it wasn't for his own car? You go home every night, don't you? If I can't go to see my husband, who can I go to see? Also, did you ever try getting to Norwalk from Huron in a bus? It isn't always convenient for one's friends to bed you and board you; even our friend Eleanor Roosevelt hasn't given up her social activities entirely.

Third. Certainly, I can take a bus and train to Detroit, and I have, but under the following circumstances would you? One must leave Huron at 2:57 p. m., wait until 5:58 p. m., spend the night at a hotel to be at the office by or before noontime. The only train that leaves Detroit in the afternoon, that stops at Sandusky, is around 4:20, and we've never made it. A bus leaves at 11:30 p. m. and arrives in Huron around 3 a. m., then a walk of a quarter of a mile—would you ask your wife or daughter to do that? It's not only inconvenient but expensive. You can go and come in 1 day, whereas it's two nights and a day, the best part of a $50 War bond. Having the investment in the car anyway it costs less than a fifth of that.

MRS. CARLTON WM. YOUNG,
Chaska Beach, Huron, Ohio.

To Pitch Was His Job

REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1945

Mr. GATHINGS. Mr. Speaker, the qualities that make for a good baseball player are the contributing factors in the making of good citizenship or being successful in any undertaking in which one may be engaged.

For many years I have held an extreme admiration for baseball's great stars, Ty Cobb, Rube Waddell, Honus Wagner, Walter Johnson, Tris Speaker, Babe Ruth, Lou Gehrig and many others whose names have been indelibly written in the national pastime's hall of fame. As a boy, although not being able to attend major league games, the records of the outstanding players were followed painstakingly through the newspapers from day to day.

A short time ago, a good friend of mine remarked in the House cloak room that he had been driving out in Maryland frequently on Sundays to visit Walter Johnson, the great Washington pitcher of other years. He stated that he had kept several fox hounds on the Johnson farm, which is about 30 miles from Washington. He asked me to accompany him the following Sunday and due to the high esteem I held for this player, whom history records as being one of the outstanding

performers of all time, I was glad to accept the invitation.

As we drove up to his 552-acre farm near Bethesda, Md., I had in my mind talking baseball to him. We found "the Big Train" out in his dairy barn where he was supervising the milking of 40 fine milk cows. "Do you attend the Washington Senator games often?" I enquired. "Have not been going to baseball games for several years," he came back. "Come in and see my cows. You know I furnish milk and butter to one of the leading Washington distributors." I was anxious to get him to talking about his 20 years as a big league pitcher. I asked him if he remembered the 4th of July 1927 game between the New York Yankees and the Washington Senators at the Yankee Stadium. He stated that he did not recall it. I told him that game was the only one I had seen him pitch. I was still persisting in drawing him out but of no avail. He just does not interest himself in anything except his family of three sons and two daughters, his farm, and his fox hounds. When he hung up his baseball cleats for the last time, he meant to put all he has in his business of being a good farmer and good citizen. He is still pitching just as hard in his work as he did when his blinding fast ball had made him a lasting niche in the hearts of all baseball fans.

Walter Johnson overcame many an obstacle in his early career as a pitcher. While pitching on the west coast in semiprofessional ball as a young man of 19, he was given a trial with the Tacoma, Wash., team. He pitched one game and was released. He was overanxious and nervous, which robbed him of his effectiveness. He tried to get other teams in the league to give him a chance to make good, but was unable to interest any of them. He fought hard to overcome his weaknesses which were discovered in the Tacoma try-out. He analyzed the situation from all sides and concluded that in order to be a successful pitcher he must learn not to worry about anything that may happen during the course of a game. When he came to Washington to pitch he was defeated in his first game by Detroit. The score was 3 to 2. This did not discourage Walter Johnson. He kept bearing down on every pitch while he was in the box. He refused to become rattled or excited. His job was to pitch, and pitch he did.

In September 1908 he exhibited the greatest pitching performance in the annals of the game. He pitched three successive shut-outs in 4 days against the New York Yankees. On Friday, September 4, he held the Yankees to six hits, his team winning 3 to 0; on Saturday, September 5, he volunteered to pitch when his roommate became ill and defeated the Yankees 6 to 0, holding them to four hits; on Monday, September 7—there was no Sunday game—he pitched the first game of a doubleheader, holding the New York team to three hits, Washington winning 4 to 0. He was warming up to pitch the second game of the twin bill when the manager of the team took his glove from his hand, over his protest, and sent him to the showers.

A speed-ball pitcher rarely lasts more than 5 or 6 seasons. Walter Johnson pitched for 20 years for the same major-league team.

As the years wore on, his fire ball had the same zip and his pitching form continued to improve. When every spring training season arrived the great pitcher reported in the pink of condition and stayed in fine condition throughout the season. In all of his years on the mound in the "big show" he never disputed an umpire's decision, he never argued with an opposing player, and was never put out of a game. We can learn much from this master of the diamond who first mastered himself.

Despite the many heart-rending disappointments of poor support from a team which did not win a pennant during 18 years, "the Big Train" never faltered. He fought as hard when he lost as when he won.

When I think of the man, Walter Johnson, who pressed on in the face of adversity, I am reminded of the poem from an unknown author which was found in the pocket of a fallen American doughboy on a French battlefield in World War No. 1:

When trouble slaps you in the face,
Don't turn your back and hide,
For he can find your hiding place,
And stick right by your side.

Slap back and when he sees your grit,
He'll leave without delay,
For he can whip the man who quits,
To fight some other day.

Oil Subsidies Have Failed; Oilmen Ask Price Increase

REMARKS

OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1945

Mr. VURSELL. Mr. Speaker, on February 23 and 24 I had occasion to attend the national conference of the petroleum regulatory authorities in the conference room of the Secretary of the Interior here in Washington.

Many of the ablest oilmen of the Nation, who keep in constant touch with the production and refining of oil products and who are called upon to confer and advise with the Petroleum Administrator for War, Mr. Ickes, discussed in detail at this conference during those 2 days the oil situation as it has developed to date and with reference to civilian and military needs in the prosecution of the war.

Cooperating in this meeting, who helped to lead the discussions, were oil men now serving under the Petroleum Administration for War. These men explained by charts and graphs, as did other men who were not connected with the Secretary's office, the great demand and consumption of the oil of this country during the past 2 years and gave a vivid picture of the entire present oil situation in this country.

They were in general agreement that storage oil above ground had now been reduced to an all time minimum. In this connection they brought out the very important information that there is no longer any unused, untapped back log of oil so far as production is concerned and by that I mean they report that whereas in past years there was a reserve of oil not being used by reason of not allowing the wells to be pumped to capacity that that day has passed and that all of the wells of the Nation are now being pushed to their utmost, even to the detriment of the longevity of these wells in order to produce the necessary crude oil that is now going into civilian use, into the war effort, and in substantial amounts, to our allies.

Mr. Speaker, I am sure the Congress remembers the efforts we have made on the floor of the House in the past in an attempt to get an increase in the price of oil, and they will be interested in the findings of the National Conference of the Petroleum Regulatory Authorities. You will recall, after the House had passed in the Seventy-eighth Congress the bill for an increase in the price of oil, the bill was held up by the opposition of the administration in the Senate. You will also recall that when we attempted to extend the Price Control Act about a year ago that the majority leader of the House warned the Congress that if an increase in the price of oil was voted into the bill the President would veto it. You will also recall that some Members on the floor of the House said that subsidy was the proper relief for those in the production of oil, who were not getting sufficient returns to keep exploration and development going forward in an effort to get greater production for the Nation. And you will recall that the Administration later on, against the will of the Congress and in opposition to practically all of the oil men of the Nation, forced its will upon the industry and upon the Congress and decreed subsidies for oil rather than a raise in the price.

Now, Mr. Speaker, this group of able oil men who met here in Washington on February 23 and 24, unanimously agreed that subsidies have not increased production and that subsidies have not cured the matter complained of by oil producers and we Members of Congress who fought to get greater production of oil. There is practically no one in the Administration today that will even attempt to prove by argument facts or figures that subsidies now in use by the Administration are sufficiently increasing production.

It is a known fact by all of the oilmen of the Nation that the price of crude oil has been held down too low for almost 3 years now and that we must have an increase in price in order to get greater production. In fact, we may find ourselves running into an oil shortage, as we are approaching a meat shortage today, because of the unwise policies of

the O. P. A. and the administration responsible for such officials. Nothing short of a raise in the price of oil will bring about an increase in the production of oil.

Mr. Speaker, without further discussion of this matter, I want to insert a resolution by these oilmen, unanimously passed in their conference, declaring that subsidies have not met the problem and asking in this resolution to meet it as it should be met, with a raise in the price of crude oil.

Mr. Speaker, I hope the Secretary of the Interior, who certainly knows more about oil production than Chester Bowles, at the head of the O. P. A., will keep up his fight which he has carried on for an increase in the price of oil. I hope the President of the United States and those advising him will change their position and grant an increase in the price of oil so that we may get the production that this country needs today and will continue to need to win this war.

I insert herewith the resolution referred to:

Be it resolved by the National Conference of Petroleum Regulatory Authorities at its meeting in Washington, D. C., on this 23d day of February 1945, That this conference reaffirm its position as heretofore expressed on various occasions that an increase in the price of crude oil is an imperative necessity to the petroleum industry in order to meet the necessary increased expenses attendant upon exploratory drilling in the search for new reserves and the cost of maintaining marginal production and secondary recovery operations. It is the further opinion of the conference that the subsidy program inaugurated by the Office of Price Administration is inadequate and is not a substitute for the price increase now so urgently needed; be it further

Resolved, That copies of this resolution, properly attested by the secretary, shall be forwarded to the Honorable Harold L. Ickes, Petroleum Administrator, and Judge Fred M. Vinson, Director of Economic Stabilization.

Attest:

WALKER T. POUND,
Secretary.

Diplomatic Relations With Italy

REMARKS
OF
HON. JAMES M. CURLEY
OF MASSACHUSETIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1945

Mr. CURLEY. Mr. Speaker, early in May of 1944, House Joint Resolution 274 was referred for consideration to the Committee on Rules requesting the President of the United States to establish friendly diplomatic relations with Italy. The resolution read as follows:

Joint resolution requesting the President to establish friendly diplomatic relations with Italy

Whereas the President of the United States, acting with the full consent of the leaders of the United Nations has pledged the Italian people the right to a free and democratic government of their own choosing; and

Whereas the present government of Italy is preponderantly composed of the representatives of the six political parties, comprising every current of anti-Fascist and prodemocratic sentiment in Italy; and

Whereas these political parties therefore reflect the will of the Italian people not only of the liberated areas but of all of Italy; and

Whereas the presence of these Italian anti-Fascist and prodemocratic parties in the government of Italy offers clears assurance to the Italian people and to the world against unwanted forms of government in Italy, whether monarchial, dictatorial, or imperialistic; and

Whereas the resumption of full diplomatic relations between the United States and Italy and the recognition of the present Italian Government as a full and equal ally, entitled to lend-lease aid and to a proper role in the counsels of the United Nations will release untold energies of the Italian people in both the liberated and occupied areas of Italy to give their fullest support to crushing the Axis, thus striking a hard political and military blow against Hitler and his agent, Mussolini, and shortening the war with consequent saving of the lives of thousands of gallant American soldiers now fighting on Italian soil: Therefore be it

Resolved, That the President of the United States be, and is hereby, requested to direct the Secretary of State to resume friendly diplomatic relations between the United States and Italy, to extend lend-lease aid to Italy; and to use his good offices to the end that other United Nations resume diplomatic relations with Italy and that the United Nations recognize Italy as a full and equal ally.

The Secretary of State, the Honorable Cordell Hull, in a radio address delivered April 9, 1944, before the women's division of the National Democratic Committee set forth his views, as follows:

In Italy our interests are likewise in assisting in the development at the earliest moment of a free and democratic Italian Government. Here again we wish to give every opportunity for a free expression of a free Italy. We had hoped that before this enough of Italy would have been freed so that we might have had at least a preliminary expression of that will. Events have not progressed according to our hopes. But there is already promise of success in the activities of the political parties which are currently holding conferences with a view to drawing up a program for the political reconstruction of their country along democratic lines. The Permanent Executive Junta is seeking a resolution which will provide for the cooperation of the liberal political groups within the Government. Thus, after 21 years, we see a rebirth of political consciousness and activity in Italy which points the way to the ultimate free expression of the Italian people in the choice of their government.

Nearly a year has elapsed since the presentation of the resolution and the declaration of the former Secretary of State, Cordell Hull, and it would appear in the light of recent events that have taken place in Italy that the time has arrived for favorable action upon this resolution. The number of persons of Italian origin serving with the Allied armies, plus the importance of providing an incentive for a greater participation by the people of Italy and a more friendly attitude toward our boys serving on the Italian war front would justify early and favorable action. There is ever present the danger of a repetition in Italy of what took place in Greece and the transformation from a friendly to an unfriendly attitude by a large percentage of the residents of Italy. Recent events in the German theater of war have been so encouraging as to justify the belief of a speedy ending of the war with Germany and the importance of full recognition of Italy as an ally justifies the adoption of favorable action upon the pending resolution. The opening of the Italian Embassy in Washington and the extension of a larger measure of lend-lease aid to the Italian people make inevitable the recognition of Italy as an equal ally, and it would appear the sooner this course is embarked upon the more productive of real benefit it should prove to be to our war aims and the safety and security of our boys fighting on the Italian front.

Address of John J. Reilly

EXTENSION OF REMARKS
OF
HON. MICHAEL J. BRADLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1945

Mr. BRADLEY of Pennsylvania. Mr. Speaker, under the unanimous consent which I have received and in compliance with a request from my district, I am submitting for printing in the RECORD an address by Mr. John J. Reilly, a prominent citizen of Philadelphia.

Twenty-four years ago, having battled against the occupying power for 750 years, the Irish won a partial measure of freedom. The island was given the status of a British dominion, but 6 of its 32 counties were excluded and were attached to Great Britain.

This was not what the Irish had hoped for, but they decided to make the best of it. The country they took over was in a sorry plight. The population, which had been 9,000,000 80 years before, was now only 4,250,000, their land had been turned into a grazing ranch, and their industries had almost entirely vanished.

The new rulers took seriously in hand the task of reestablishing the country. They began by harnessing the Shannon to provide electric power. They established hundreds of industries to provide boots, clothes, furniture, building materials, and so forth. By 1940 they had erected more than 120,000 dwelling houses, largely through Government help. They began to utilize the huge turf resources of the country to replace imported coal. They took over the ranches and large estates and divided them into economic holdings, putting back the farmers on the land. They encouraged tillage farming, particularly the growing of wheat, which acreage increased from 20,000 to 600,000 in a few years. They stopped the imports of foodstuffs which had totaled $40,000,000 a year, and produced them from the soil of Ireland. By a guaranteed price they started and encouraged the growing of beets and erected 4 sugar refineries to provide the people with all their sugar requirements.

All this and much more they did mainly on current revenue. Borrowing was on such a small scale that the national debt in 1939

was not over $100,000,000. Mr. Horsfall Carter, an English critic (Atlantic Monthly, September 1938), said that after 17 years of self-government Ireland was economically one of the healthiest countries in Europe.

This progress was very rapid and successful, indeed, but it would have been far more so had it not been for the stupid and disastrous economic war waged against the country by Britain in the thirties. This arose over the dispute about the land annuities, amounting to nearly $30,000,000 annually, extracted by Britain up to 1932. When Mr. De Valera came into office in that year he stopped this payment on the grounds it was not legally due. He offered to submit the question to international arbitration—an offer which was refused. Instead, the British imposed penal tariffs on Irish livestock and produce going to England. The Irish Government retaliated by imposing punitive tariffs on British coal entering Ireland. The dispute lasted 6 years. It inflicted great hardship on the British coal-mining areas and all but ruined the Irish farmers. In 1938 the dispute was settled. The Irish agreed to pay a lump sum—$50,000,000—to Britain, and retained the annuities in the Irish treasury. It was during these negotiations that the British agreed to hand over the Irish ports, about which so much was heard later.

In the period under review the Irish made great strides in the political field. The Irish Government removed one by one the clauses of the 1921 treaty, which were repugnant to the peoples' ideas of freedom and democracy. The right of appeal from the Irish courts to the British Privy Council was removed, the oath of allegiance to the Crown was abolished, and the office of British Governor General in Ireland ceased to exist. All of these had been barriers to a better understanding between the peoples of Britain and Ireland. Only one now remained, namely, partition.

Partition had its origin in the controversy over the abortive Home Rule Act of 1912. The British Parliament enacted a law to give home rule to Ireland. Certain elements of the north-east protested vigorously, and raised a force called the Ulster volunteers, armed with guns imported from Germany, and pledged to resist the British Parliament. The Home Rule Act was suspended for the period of the Great War. Finally, it was never put into operation, although on the strength of it some 350,000 Irishmen, recruited by the Irish nationalist leader, John Redmond, had volunteered for the British forces, and some 50,000 of them had given their lives in France, in Belgium, and in the Dardanelles. Redmond died brokenhearted.

Another Home Rule Act, called the Partition Act, was enacted by the British Parliament in 1920. No Irish Members of Parliament voted for it, and its provisions were contrary to the wishes of four-fifths of the Irish people. In part, it set up as a political unit forming common territory with Great Britain, six of the Northeast counties, namely, Tyrone, Formanagh, Derry, Antrim, Down and Armagh. There was such bitter resentment in Ireland that in the following year a clause was inserted in the treaty, providing for the rectification of the boundary between the six counties and the rest of Ireland in accordance with the wishes of the people in the areas affected. Lloyd George had convinced the sponsors of the treaty, notably Arthur Griffith, that under this clause partition would come to an end. It was clear that if a vote was taken, two whole counties, Tyrone and Formanagh, would vote for union with the South, as would also South Armagh, South Down and Derry City. It was clear too that the remaining areas would be too small to continue on their own. As a matter of fact the vote was never taken, and the Irish rightly concluded that once again they had been deceived.

Mr. Griffith did not know that Lloyd George, the architect of the treaty, had written a secret letter to Eir Edward Carson in 1916 in which he stated that "We must make it clear that at the end of the provisional period Ulster does not, whether she wills it or not, merge in the rest of Ireland." (Life of Lord Carson, vol. 3, p. 166.)

The people who rule the partitioned area have no use for democracy. As soon as they took control, they abolished the proportional representation system of elections—still retained by the Dublin Parliament—because it gave adequate representation to minorities. Furthermore, it so gerrymandered the parliamentary and local government constituencies as to rob the Nationalists of anything like a fair representation. Thus, in Derry City, out of every five voters three are Nationalists, but in the city council, of every five members, three are Partitionists. In some areas it takes ten Nationalist voters to outvote two Partitionists.

There are 450,000 nationalists in the six counties, nearly two-fifths of the entire population. They are debarred from office both in the civil service and local government. The Honorable Frank Pakenham, professor of political economy at Cambridge (England) University, says, "The condition of this minority is unparalleled in any other part of these islands. It would not be tolerated in England for a moment. It is of a character probably conceived by the ordinary Englishman to be confined to central Europe." (English Daily Telegraph, January 20, 1938). Mr. Joseph Driscoll, special correspondent of the New York Herald Tribune, writing in that paper on January 30, 1938, said that one-third of the population of the six counties was virtually debarred from holding public office.

Since the beginning of the six-county regime in 1920, the nationalists in the area have been subject to an almost continuous reign of terror. There is a special armed constabulary. This force, according to a protest submitted to Mr. Winston Churchill in 1940, had "incurred the odium attaching to a political force of the type familiar on the continent of Europe." The signatories to this protest included General Gough, Col. James Fitzmaurice, the Earl of Antrim, the Duke of St. Albans, the Earl of Ossory, Maj. Gen. Charles Grogen, Maj. Gen. Hugh Montgomery, Mr. Shane Leslie, Mr. Robert Lynd, and Mr. Stephen Gwynn.

One of the methods used by this partisan police force is to invade in the dead of night the houses of the nationalists, terrifying women and children at the point of the gun, and arresting every man in the house. Frequently those arrested are released after a few days only to find their employment gone. There have been numerous denunciations of this regime by Catholic bishops in the areas, by Protestant members of the Belfast Parliament and by members of the British Parliament.

Writing in the Progressive, Madison, Wis., on November 30, 1942, Mr. Frank C. Hanighen said, "I am not a Catholic, and therefore I can speak with an impartial nonsectarian viewpoint. My reporting excursion to the six counties before this war convinced me that the Catholic minority in these counties—about 40 percent of the population—is ruthlessly, and the word is 'ruthlessly,' oppressed by the Northern Ireland Government." In 1936 the British Council of Civil Liberties—a purely British body—issued a report by a commission of inquiry in which it was stated that in Northern Island the principle of habeas corpus—a fundamental of the British Constitution—had been completely abrogated and that the executive had been placed in a position paralleled only by continental dictatorships."

It would be strange if the Irish people, daily witnesses of this shameful regime, were not skeptical when they hear mention of the ideals for which this war is being fought. They know that this regime could have been brought to an end and the principles of justice and democracy established any time during the past 24 years without going to war with anyone.

In 1935 Mr. De Valera gave notice to the world that in the event of a European war Ireland would remain neutral. At the same time he gave an unsolicited undertaking that the Irish Government would not allow anyone to use Ireland as a base from which to attack Britain. When the war started the Government issued a formal announcement of neutrality. It was immediately demonstrated that this policy had the support of the entire country. In Britain the announcement was received with equanimity. Indeed, the only opinion voiced in that country was one of satisfaction that at long last England had a genuinely neutral Ireland on her flank. Seventy thousand Britishers took haven in Ireland.

A whole year elapsed and no one questioned the wisdom or sincerity of Ireland's attitude. Then, in November 1940, Mr. Churchill voiced regret that Britain did not have the use of the Irish ports in meeting the submarine menace. Immediately a whole barrage of abuse and misrepresentation of Ireland's position was let loose on both sides of the Atlantic. It was stated that Ireland's attitude was due to hatred of Britain based on past injustices. The Irish knew this was nonsense, and they pointed to the indisputable fact that the pro-British section of the Irish people were at one with all the others on the question.

As a matter of fact, anti-British feeling in Ireland had never been at a lower ebb. The Irish were not unmindful of the fact that Britain had shown due respect for the country's neutrality. They were beginning to look forward to the day when the wrong of partition might be righted and the long, long, dispute between the two peoples brought to an end. They realized, as that day came nearer, that the relationship between the two peoples should be based on mutual respect and good will, and that geography and economics alone could compel such an outcome. Since 1922, succeeding administrations in Ireland had kept that in mind. Mr. de Valera had given a pledge that Ireland would not be used as a base against England, and he and his people had taken steps to implement that pledge. It included, of course, measures to see that no espionage detrimental to British interests should be permitted. The measures taken were very thorough and very efficient. Notwithstanding this, newspapers and radio commentators poured forth the most extravagant stories. The German Legation was described as a vast center of espionage, and its staff was said to have been increased by hundreds. The London Times (July 17, 1940) printed a complete denial of this as a result of an investigation made by one of its special correspondents, who found that the legation staff consisted of not more than half a dozen men, with two or three women typists, and added "the stories of its activities as a vast center of espionage are without foundation."

The story that German submarines were being refueled on the Irish coast was echoed almost down to this day, although it was officially denied in the British House of Lords in 1940.

When America entered the war the alleged espionage activities of the German Legation in Dublin poured forth afresh. Mr. James

Weiland, of the Chicago Sunday Times, made an investigation on the spot. He pointed out there were no means by which the Germans could send secret information to Berlin. He added, "It would not take the British long to protest if they picked up radio messages emanating from Dublin, and there have been no such protests." (Chicago Sunday Times, October 11, 1942.)

The Irish are a brave and tenacious people. They are proud of the record that from the year A. D. 1000 they fought against what seemed overwhelming odds for the principles of liberty, justice, and democracy. And today there are 175,000 Irishmen in the armed forces of the Allies and over 100,000 more in its direct war work in England. Ireland is a small country, just rising from her knees after centuries of subjection.

It has been repeated again and again that the Irish are ungrateful for the services rendered by the Allies, that but for Allied convoys they would have starved. This is not altogether true. All the supplies the Irish receive from overseas, with the exception of gasoline, are carried in their own ships, which do not sail in convoy. In the case of gasoline there was a special arrangement. At the beginning of the war Ireland had seven tankers, which she gave to Britain at Britain's request on the understanding that Ireland would receive her normal supplies of gasoline. This undertaking has not been carried out, but the Irish are generous enough to believe that this is not Britain's fault.

Judged by American standards, Ireland is a poor country, but judged by European standards, Ireland is fairly well off. A poor country could not as Ireland does, supply Britain with 2,000 head of cattle every day, as well as large quantities of poultry and dairy products. The Irish export to Britain $150,000,000 worth of food every year. Her total imports amount to about one-half of that figure. Ireland is not a debtor nation. She has always given more than she received.

Ireland's contribution to the world has not been small. She is a mother country whose children, wherever they have made their homes, are not unworthy citizens of the lands of their adoption. In one respect her service to humanity is perhaps unique. For 1,500 years, sons and daughters of Ireland have sought out every known land to bring to its people God's message of peace and good will. Yesterday, in the darkened medieval cities of Europe, as today in the desert wastes of Africa or the steaming jungles of Asia, they have labored without fee or reward, without even the hope of ever returning to the "fair hills of holy Ireland." They brought with them no bloody sword of conquest, no dream of earthly dominion. They brought only the word of a God of brotherhood, of peace, and of love.

Ireland has no thought of recompense for her sacrifice. From her rich store of spiritual strength she has always given gladly and openhandedly. She asks only the right to be judged fairly.

Dealers Organize Pulp Association

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1945

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks, I am quoting below an article from the Savannah Morning News, of Savannah, Ga., dated Tuesday, March 20, 1945, concerning a resolution adopted by pulpwood dealers to stabilize industry and conserve resources:

About 25 pulpwood dealers from the southern States, after a 2-day session at the Hotel Savannah, yesterday formed an association to be known as the Pulpwood Dealers' Association of the South. This is the first producers' association to be organized in the South.

Albert Ernest, Savannahian, who is owner of the Dixie Wood Co., in Milledgeville, was elected temporary chairman, and James Lawton, of Soperton, acting secretary.

The entire organization will meet again on April 12 in Atlanta by which time the men appointed on the membership committee for the various States expect to have expanded the association to 150 members.

The pulpwood dealers passed the following resolution:

"Whereas the pulp and paper industry has invested in plant facilities more than $200,000,000;

"Whereas the industry's annual pulpwood requirements has a delivery value of approximately $75,000,000;

"Whereas the growing and harvesting of pulpwood is an important factor to southern agriculture; and

"Whereas this responsibility for the production of this critical war material belongs to a group of woodsmen known as the pulpwood dealers: Now, therefore, be it

"*Resolved*, an association of the pulpwood dealers of the South is necessary for the purpose of:

"Increasing and stabilizing pulpwood production.

"Perpetuating forest resources of the South and preserving jobs of 50,000 forest workers engaged in pulpwood harvesting operations.

"Discussing the problems that confront the industry and thereby seeking solution to these problems."

Named on the membership committee and the territory which they are responsible for covering are R. T. Brassell, South Carolina; V. C. Walker, Georgia; Horace Tindal, Alabama; Carlton Stallworth, Mississippi.

On the production advisory committee to make a study of how to increase production are S. A. Allen, Savannah; Harley Langdale, Jr., Valdosta; B. E. Pelham, Ellaville; and Troy Brannan, Bowton, Ala.

The meeting was called by V. C. Walker, of Hazlehurst. The men who attended the sessions are representatives of the 300 pulpwood dealers in the South. The program of procedure will be laid out at the next meeting.

There are over 50,000 workers in the South engaged in this particular phase of the paper industry.

Industry Advisory Committees

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1945

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter from Mr. H. H. Hahn, secretary of the Nebraska Petroleum Marketers, Inc., on the subject of industry advisory committees.

Mr. Speaker, I have many times complained to the O. P. A. that they have failed to take the considered judgment and advice of the advisory committees which the law says must be consulted by the O. P. A. before regulations are put into effect.

The letter I am inserting, from Mr. Hahn, indicates that the Petroleum Industry Advisory Committee has been bypassed by the O. P. A. The members of this board and similar boards are called together to discuss matters that have been already decided upon by certain groups in the Office of Price Administration. I believe the O. P. A. has been violating the law by not first seeking their advice before making orders and directives effective.

NEBRASKA PETROLEUM MARKETERS, INC.,
March 19, 1945.

Congressman A. L. MILLER,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN MILLER: Yesterday's World-Herald carried a story of your reactions to O. P. A.'s reported exclusion of congressional Representatives from the meetings of its so-called advisory committee meetings in Washington, D. C.

This is of particular interest to us because we reached the conclusion that there was too much secrecy attending the meetings and activities of O. P. A.'s industry advisory committees.

The writer has been a member of the Petroleum Industrial Advisory Committee and attended two meetings early in 1944. At that time I tried to find out just who made up the various committees that were supposed to advise O. P. A. regarding the regulations affecting the petroleum industry, particularly the marketing branch. I also endeavored to learn how often the committee met, whether or not I was advised of all meetings, and whether the committees were used to help the Office of Price Administration formulate rules and regulations that would be helpful to the rationing program and reasonable and fair to the small independent oilmen of the Midwest. Also, I have endeavored to obtain reports of the action taken at committee meetings.

My efforts were unsuccessful and our board of directors reached the conclusion that the expense of further participation in the activities of the advisory committee was unjustified under present conditions. The members of our board are convinced that the advisory committees are called together to discuss matters that have already been decided upon by certain elements in the Office of Price Administration and that, consequently, these meetings were simply a "window dressing" stunt.

Some time ago Mr. Chester A. Bowles, Administrator of the Office of Price Administration, made a public statement that thousands of gasoline dealers were engaged in black-market activities because they had accepted counterfeit coupons in the course of trade.

Our organization thought his accusation was unfair and unjustified, and I am enclosing a copy of a resolution and statement adopted by our board of directors commenting on Mr. Bowles' statement and the unfortunate effects of some of O. P. A.'s policies as they affect the small independent dealers and jobbers of petroleum products.

In recent months we have had an industry advisory committee in the Omaha O. P. A. district. The members of this committee have spent several hours each week in assisting O. P. A. to effectuate its new bail-out policy for gasoline retailers. The committee

has served a good purpose and, in my opinion, has done more to encourage compliance with rationing regulations than all the rest of O. P. A.'s activities in this region. The work of this committee was carried on in cooperation with the officials of both the rationing and enforcement divisions of O. P. A. About 10 days ago the regional director of O. P. A. fired the four heads of the enforcement division in the Omaha office.

So far as I know, no member of the industry was given any indication that the Chicago O. P. A. officials were dissatisfied and no member of the industry has any knowledge of why the officials who had worked with our committee were dismissed.

It seems to me that you and other Members of our congressional delegation are on solid ground when you object to being barred from any meeting that has anything to do whatever with the rationing of any article or commodity. Certainly these things affect the daily lives of our people, and that effect alone is enough to justify the presence of our elected representatives of the people at any meeting where policies are adopted and procedures are outlined.

Further, it semes to me that O. P. A. would welcome the presence of Senators and Representatives, especially if they come from the Midwest. After all, it's much more difficult for us to attend meetings in Washington, D. C., than it is for the people living east of the Allegheny Mountains.

I am sure that our people appreciate your interest in these matters, especially in view of the fact that O. P. A. is asking Congress to extend and expand its powers.

Our people are in accord with the purposes of rationing, and we have endeavored to assist the Office of Price Administration to the limit of our ability. In my opinion, our chief difficulty has been to reach those who actually make the policies of O. P. A. and write its regulations.

We believe that your stand with respect to the secrecy of O. P. A. committee meetings will have a salutary effect if it does no more than direct pubic attention to the fact that too much of O. P. A.'s activities are conducted without public knowledge or approval.

We expect to have a meeting to discuss this and other phases of O. P. A.'s work within the next few days, and I will advise you following that meeting. With best personal regards and all good wishes, I remain,

Yours truly,

NEBRASKA PETROLEUM MARKETERS, INC.,
H. H. HAHN, *Secretary.*

Child Labor and School Attendance

EXTENSION OF REMARKS
OF

HON. DONALD L. O'TOOLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1945

Mr. O'TOOLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement on child labor and school attendance issued over the signatures of the Right Reverend Monsignor John O'Grady, executive secretary, National Conference of Catholic Charities; the Right Reverend Monsignor John A. Ryan, director, social action department, N. C. W. C.; the Very Reverend Monsignor Frederick G. Hochwalt, director, department of education, N. C. W. C.; and the Reverend Paul F. Tanner, director, youth department, N. C. W. C.:

Family and child life have endured many severe strains during the war. The call of the services and of war industries had deprived millions of families of their natural leaders. Many mothers have had to assume a dual role in the home. In addition, large numbers of them have wanted to do their part by entering into war work or by taking jobs that have been vacated by men called to the services or to war industry. As a result, these war dislocations have left millions of children and young people with the merest shreds of home life. Children and young people in large numbers have also heeded the call of war industry. They have felt that they too should contribute their share to the war effort. There has been a great exodus of young people between 16 and 17 from school into war industries and general commercial occupations. There has also been a considerable employment of boys and girls between 14 and 16.

Both State and Federal governments have relaxed child-labor standards in order to meet the war emergency. Not only have we had a relaxing of child labor standards, we have also had a very general break-down in the enforcement of existing standards.

As leaders, we may not take a pessimistic view of the influence of war on family and child life. We feel confident that the sufferings and tragedies of the war will bring a new awakening of religious faith; that is will bring man closer to his fellow man and to his God. We feel sure that it will bring the church closer to the lives of the people. We are aware also that the problems growing out of the war offer a new challenge to all our religious leaders, a challenge to develop a heroism that has been so characteristic of religious life in days of great emergency. It will also be a challenge to us to present practical programs for action which will make our people more conscious not only of their religious but also of their civic responsibilities.

In dealing with young boys and girls in our grade schools and high schools we should be conscious of the change that has come over their lives. They have developed a new sense of their own independence and importance. The new attitude of youth presents real problems for our educators. We must think more and more of ways and means of making the liberal arts a part not only of high school but also of grammar-school education. Too much of our discussion in regard to ways and means of making the school more challenging is centered around vocational education. However important or even necessary may be a certain amount of training in specialized vocations, it can never provide the foundation for a genuine democratic society; it can never prepare people to resist the shibboleths that make for a totalitarian order.

Every effort must be made to retain within the educational system students in our grade schools and high schools at the present time. Army and Navy officials have pointed out that those who are about to enter the services should as far as possible complete their high-school curriculum. This should be our attitude in regard to the students in our schools. We must contribute our part to making the present child labor and educational standards as effective as possible. This calls for a strict enforcement of child labor and school attendance laws. During the war many schools have come to take an easy-going attitude toward lack of school attendance. Children are thus greatly encouraged in habits of law-breaking.

One of the most important post-war problems will be that of inducing young people whose education was interrupted by the war to return to school. Many of these young men and women will have become accustomed to high wage standards and lavish spending. The schools must have a program that challenges the interest and imagination of these young people and it cannot be a merely vocational program.

A considerable number of young people who have gone to work prematurely during the war will want to continue in gainful employment and, while they may succeed to a degree, their lot will by no means be easy. Competition for jobs after the war is going to be intense. Discharged servicemen will have preference on every front and this is bound to make it more difficult for the succeeding generation.

Now is the time to prepare our program of post-war employment for children and young people. We must write into the statute books of the various States high standards of child labor and compulsory school attendance. The laws that we now write need not be put into effect until after the war, but we should be ready for after-war problems. We should have our legislation on the statute books and we should also have adequate provision for its enforcement. We should insist on having in our State laws a 16-year minimum age for all employment during school hours and for employment in manufacturing, mechanical, and processing establishments at any time. For all other employment State laws should require a 14-year minimum age for employment outside of school hours. Children under 16 should not be employed between 10 p. m. and 7 a. m. All State child-labor laws should require a maximum 8-hour day for combined school and work; they should also require a maximum 8-hour day, 40-hour week, with a 6-day week for all minors under 18.

One of the most serious child-labor problems in the United States is the employment of children of families engaged in large commercial agriculture. In some areas these families are constantly on the move. Even in places where they remain for a considerable period of time school facilities are inadequate. A number of the camps operated by the Office of Labor, War Food Administration, Department of Agriculture, have school facilities for the children of migratory workers. There is a great need for the extension of such educational facilities.

It is most important that there should be adequate State legislation covering the employment of children of migratory workers. Large numbers of very young children are now employed in harvesting and processing various types of agricultural products. There is no reason why these childen should not be included in State laws. They are vastly different from the children who work with their own fathers on one-family farms and on land owned or leased by their own families. There is no reason, moreover, why people operating large commercial farms should be exempt from the provisions of the Fair Labor Standards Act. They are engaged in the harvesting and processing of goods that enter into interstate commerce. They can no longer be placed in the category of ordinary farmers. They are really large commercial operators, and should be subject to the same legislation as the ordinary industrial enterprises.

Law alone cannot give us high standards of child labor or compulsory school attendance. Without proper understanding and vigilance on the part of the people our legislative standards will never be enforced. Child labor and compulsory school attendance should become topics for discussion in local parish and neighborhood groups. Local parish and neighborhood groups can contribute much toward the thinking of the community in regard to the education and employment of young people. These local groups should study and discuss the educational curricula

that is set up for young people. They should discuss employment opportunities for young people and the relationship of school programs to these opportunities. Education, like employment, cannot be separated from the community. It is something that calls for active participation by all the citizens.

Rt. Rev. Msgr. John O'Grady, executive secretary, National Conference of Catholic Charities; Rt. Rev. Msgr. John A. Ryan, director, Social Action Department, N. C. W. C.; Very Rev. Msgr. Frederick G. Hochwalt, director, Department of Education, N. C. W. C.; Rev. Paul F. Tanner, director, Youth Department, N. C. W. C.

St. Patrick's Day Address

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1945

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following St. Patrick's Day address delivered by Lt. Comdr. Paul A. Dever, United States Naval Reserve, March 17, 1945, before annual banquet of Ancient Order of Hibernians at Mayflower Hotel, Washington, D. C.:

This, the anniversary of the death of St. Patrick, is the day when the sons and the daughters of the Gael gather in every clime and circumstance to express devotion to the isle which gave their fathers birth and to the saint who shattered the shackles of paganism and gave their mothers an undying faith in Him who has been the guide, the consolation, and the sustainer through grief-crowded centuries.

What we annually celebrate as another festival is, indeed, a most significant event.

Is it not typically Irish that it is not the birth, but rather the death of a national patron which we commemorate, showing an instinctive belief that death is not the end of life but truly the beginning; that man does not live for bread alone; that he has a higher destiny than the tradings of the market place and the rancor of the forum?

Is it not significant that the Irish Nation adopts as its hero not a general with the laurels of victory bought at the price of human suffering, not a statesman skilled in the Machiavellian wiles of international intrigue, not a fuehrer who boasts of a super race, but rather the apostle of one who taught "You shall love one another?"

Is it not significant that the idol of those of Irish blood is no Irishman at all? Or let me avoid a controversy. His own great "Confessio" proves he was not one by birth, but he surely was one when he died. His legacy to his adopted land was a rich spirituality which has steadily increased and through Irish missionaries sent to the four corners of the world with the light which was lit on Tara's Hill has banished the darkness of heathenism on all continents.

When he landed on the coast of Wicklow in 432, he defied a wrathful king—his druid advisers—and his pagan hordes—but Patrick sensed his Ireland—he converted the queen and under her patronage he converted the people—symbolic, of course, of the influence of Irish motherhood down through the years.

The little island which Patrick weaned from dark superstition to the foot of the cross is but a speck on the map of the globe—but it has been a treasure chest of Christian culture—a land of saints and scholars—a well-spring of democracy—but at what a price!

We do not gather to open old wounds or bewail ancient fates—but the Irish character defies understanding unless we know of the awful crucible of bloody oppression in which for 700 years its metal was tried—tried in a furnace of persecution seven times heated.

They could have bartered their chains for temporary expediency, they could have gained their beloved liberty at the price of leaving the teachings of Patrick.

"Ireland might have merged her identity and her faith in an alien empire and alien worship. But she fought and died; she starved and agonized; and in defeat she has conquered. He spirit still lives on."

Time will never erase from our memory the unsung heroes of those black decades of despair which Ireland knew in the eighteenth century. The hero priests who offered up their daily masses, even when the penal laws made that act of devotion to their Heavenly King punishable by death; the hedge schoolmasters, those heroes who kept the torch of education burning bright when the law ordained that the man who taught an Irish lad the alphabet should suffer ignominious death. Oh yes; they did hang men and women for no greater crime than the wearing of a sprig of green.

And the women of Ireland, those spiritual descendants of the saintly Bridget, who kept their little families together when their men were on the run, who brought up their children to love God and their fellow men, and to those whose virtue and courage we who gather here tonight owe all that we are and all that we hope to be.

Indeed, oppression and famine sent her sons to the four corners of the earth.

Aptly, indeed, have Irishmen who in the words of Emily Lawless were "fighters in every clime for every cause but our own" been called the wild geese of Ireland, for their talents have flown to every land where freedom needed a champion.

Brown, the Field Marshal of Austria, MacMahon, of France, Dillen and Walsh, Irish Generals of French armies who came with Lafayette to help win American independence, countless others, a Premier of Spain, a Captain General of Cuba, and the George Washington of Chile, Don Bernardo Higgins, of County Sligo.

It was 100 years ago—in 1845—that for the first time the potato crop failed. The great tragedy of the famine did not reach its crescendo until 2 years later. It was at this time that the great emigration to America took place.

It's rather trite to recount achievements of Irish immigrants in America. There is nary a profession, a science, an industry, or a trade but has felt the impact of their infusion into the stream of our national life.

Their brawn built the railroads which gird the Nation—the brains of their sons now guide them.

It is natural that a yearning for government pent up by centuries of denial should find its expression in a full participation in the public affairs of this Republic.

The Supreme Court, the Congress, State and local governments have felt the ancestral urge of those of Irish blood ever interested in bettering the lot of man and making the Jeffersonian pledge of equality of opportunity an economic reality rather than a philosophical dream.

To read the litany of Irish contribution would exceed my power of speech but I can recite a happy coincidence in the recent life of my home State of Massachusetts—illustrative of the sentiment I feel.

In Boston, in the last decade of the nineteenth century, two couples established humble American homes. Patrick Cushing, a blacksmith, and Mary Dahill, a colleen from Cork, were married at St. Eulalia's church in South Boston and to its baptismal font was brought their first son, Richard. James Tobin, a carpenter from Tipperary, and his bride, Margaret Daley from County Cork, lived on the other side of Mission Hill—and to a little wooden church brought their son, Maurice.

In devout American homes these boys were taught to meet the responsibilities of American manhood.

On November 7, 1944, Maurice J. Tobin was elected Governor of Massachusetts, and on November 8, 1944, Richard J. Cushing was installed as archbishop of Boston.

I stress American homes and American manhood because at times the fervor of our devotion to the land of our ancestors is misinterpreted as a dilution of our stalwart and thoroughgoing Americanism.

There is nothing incompatible between devotion to the land which gave our fathers birth and undeviating loyalty to the Republic which gave them and their children opportunity.

A man can love his mother and be faithful to his wife.

No immigrant has ever come to this sanctuary of freedom more willing to renounce foreign kings and potentates, more eager to embrace the opportunities and the obligations of the American way of life, than the grateful sons of Erin. None have more highly valued the ballot than the Hibernian long denied its privilege. His strain has never produced a traitor.

Many years ago John Randolph, of Roanoke, said, "I have seen a white crow and heard of black swans, but an Irish opponent of American liberty I never either saw or heard of."

No Irishman has ever raised the flag of revolution above the Stars and Stripes. They have come upon the platform of democracy with both feet and two fists.

John Boyle O'Reilly, great Irish bard and great American citizen, summed it up when he wrote:

"No treason we bring from Erin—
Nor bring we shame nor guilt!
The sword we hold may be broken,
But we have not dropped the hilt!
The wreath we bear to Columbia is
Twisted of thorns, not bays.
And the songs we sing are saddened
By thoughts of desolate days.
But the hearts we bring for freedom
Are washed in a surge of tears.
And we claim our right by a people's
Fight outliving a thousand years!"

What of the little island which nurtured culture and gave to the world its women and its men?

Is its role all played and its destiny history?

Is it preordained to be ever split and severed one part from another?

In a world propelled into war by the madness of dictators she has played her part. The blood of her sons has made scarlet every battlefield from Dunkerque to the Rhine; the strategy of a Montgomery, an Alexander, and a Dempsey have helped chart the road to victory.

That the courage of the Irish is ever in the spearhead of the cause of right and freedom, listen to history as recorded by "Believe It Or Not" Ripley:

That the first American to shoot a Jap was Mike Murphy.

The first American to sink a Jap battleship was Colin Kelly.

The first American to receive a Presidential citation was James Powers.

The first American pilot to bomb Berlin was William P. Owens.

The first American glider to land on D-day was Lt. Col. Michael Murphy.

The first American flier to down a Jap plane was Edwin O'Hara.

The first American bomber to blast Yawata was Lt. Col. Richard Kenny.

The first shot to liberate Bataan was fired by Lt. John F. Murphy.

The first American mother (and pray God the last) to lose five sons was Mrs. Thomas F. Sullivan.

Yet, while boys of Irish blood fighting under all flags of freedom have given their full measure of sacrifice with those of other strains, with a statesmanship which history will appraise, the defenseless shores and the cities of Eire were spared the ravages of war.

She can again, as in the ninth century, become the repository of western Christian culture—and send her missionaries into a Europe blackened and seared by the destruction of wars.

She again, and speaking as one who was in Belfast a few short months ago, will be a united nation—not through the negotiations of chancelors but by majority rule engendered by birth rate and migration—under the only constitution in the world which in its preamble is dedicated to the name of the Holy Trinity.

So, through her vale of tears, Eire can look confidently to the future.

The day is not far distant when we can repeat the words of a late governor of Tennessee:

"If I were a sculptor I would chisel in marble my ideal of a hero. I would make it the figure of an Irishman sacrificing his hopes and his life on the altar of his country, and I would carve on its pedestal the name of Robert Emmett.

"If I were a painter I would make the canvas eloquent with the deeds of the bravest people who ever lived, whose proud spirit no power can ever conquer and whose loyalty and devotion to the hopes of free government no tryant can ever crush. And I would write under the picture 'Ireland.'

"If I were a poet, I would touch the heart of humanity with the mournful threnody of Ireland's wrongs and Erin's woes. I would weave the shamrock and the rose into garlands of glory for the Emerald Isle, the land of martyrs and memories, the cradle of heroes, the nursery of liberty."

The day is not far distant when no longer shall we sing the jeremiad of Napperandy—"'Tis the most distressful country that ever I have seen."

The day is not far distant when at last the epitaph of Robert Emmett will be written.

The day is not far distant when the prophecy of John Boyle O'Reilly will come true—and let me conclude with it—

"All thy life has been a symbol
We can only read a part
God will flood thee yet with sunshine
For the woes which drench thy heart."

International Monetary Fund

EXTENSION OF REMARKS

OF

HON. BRENT SPENCE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1945

Mr. SPENCE. Mr. Speaker, under leave to extend my remarks, I insert a letter from Hon. M. S. Eccles, chairman of the Board of Governors of the Federal Reserve System, and a statement by the Board of Governors of the Federal Reserve System in regard to the proposed International Monetary Fund and International Bank for Reconstruction and Development:

BOARD OF GOVERNORS OF THE
FEDERAL RESERVE SYSTEM,
Washington, March 21, 1945.

Hon. BRENT SPENCE,
Chairman, House Banking
and Currency Committee,
Washington, D. C.

DEAR MR. SPENCE: For the consideration of your committee in connection with the bill to provide for the participation of the United States in the International Monetary Fund and the International Bank for Reconstruction and Development (H. R. 2211), I am sending you herewith a brief statement by the Board of Governors of the Federal Reserve System of its position in favor of the ratification of the Bretton Woods proposals. It would be appreciated if you would have this statement incorporated in the record of the hearings which are now being conducted by your committee.

Very truly yours,

M. S. ECCLES, *Chairman.*

P. S.—A sufficient number of copies of the statement are enclosed so that each member of your committee can be furnished with a copy.

INTERNATIONAL FUND AND BANK

(Statement by the Board of Governors of the Federal Reserve System)

The Board of Governors of the Federal Reserve System is convinced that ratification of the Bretton Woods agreements would be an important step in the restoration of world trade and in safeguarding the interests of the United States in the post-war world.

I

Without the institutions proposed by these agreements we would be confronted with disrupted currency conditions and with trade and exchange policies and practices which foreign countries might be forced to adopt in self-preservation but which would nevertheless have disorganizing effects on world trade. In rebuilding the machinery of international finance after the war it will be vital to avoid the recurrence of practices which developed after the First World War, and to eliminate abuses which were prevalent in international lending. Effective action in these fields would form a counterpart to essential programs of domestic reconstruction. The greatest contribution to international prosperity and stability that the United States can make is to maintain full employment and a rising standard of living at home. In order to establish international trade on a sound and enduring foundation it must be based upon a balanced exchange of goods and services. On such a basis it will contribute an important steadying influence to our domestic economy.

The International Monetary and Financial Conference of representatives of 44 nations held last summer in Bretton Woods resulted in agreements for the creation of two new international financial institutions, the International Monetary Fund and the International Bank for Reconstruction and Development. The International Monetary Fund would exert an influence toward exchange stability and thus reduce the exchange risks for exporters and importers. It would require member countries to maintain established exchange rates and would provide machinery for making in an orderly manner by mutual agreement such changes in exchange rates as may be necessary. Members undertake to eliminate as soon as possible monetary practices which interfered with the flow of world trade before the war, such as discriminatory exchange restrictions, multiple currency arrangements, and bilateral clearing agreements. It would help to give assurance to member countries that the proceeds of sales to any country could be used for the purchase of goods in any other country.

For the purpose of assisting member countries in maintaining their exchange rates, once they have been established, without resorting to harmful restrictions on trade, the fund would have resources in gold and various currencies which would be available for temporary use by members. It would afford member countries faced with heavy payments abroad a breathing spell during which to make necessary adjustments in their economies with a view to restoring equilibrium in their trade with the world. The fund would not be in essence a lending institution but a mechanism for converting local currencies contributed by members into a pool of international reserves, on which each country could draw in proportion to its contribution. While temporary shortages of foreign exchange could be met through use of the fund, members would be under pressure to restore the exchange to the fund as soon as possible in order to maintain its ability to serve other members.

As a companion institution to the fund, the Bank for Reconstruction and Development would be a lending institution to promote the international flow of long-term capital. It would make loans for productive and developmental purposes out of its own capital or out of funds borrowed in the market and would guarantee such loans offered to private investors. It is intended to make or guarantee such loans as would in the long run increase the borrower's ability to balance its international accounts. It would help to restore economies destroyed or disrupted by war, to reconvert their productive facilities, to peacetime needs, and to develop the resources of less-developed countries.

The bank would have a stabilizing influence on interest rates and other conditions for international loans and would tend to eliminate practices in international investment that have in the past resulted in excessive costs to borrowers and in losses to lenders. It would handle only loans that could not be obtained on reasonable terms without its support and would, therefore, in no way interfere with the flow of private funds into interational investments. At the same time it would make it possible for countries greatly in need of foreign resources to obtain necessary capital which might not otherwise be available to them on reasonable terms. The agreement provides that loans made or guaranteed by the bank must have the approval of the lending country. Consequently, the loans can and should be so timed as to diminish either inflationary or deflationary pressures, and to contribute to the maintenance of economic stability in this country.

II

From the point of view of the board of governors the establishment of the fund and the bank would be desirable because they would contribute to world recovery and to the maintenance of economic stability at a high level which is the main objective of the board's policy. The monetary and credit structure of this country is continually and seriously affected by international transactions. In the past this country's monetary authorities have had to meet difficult situations when our banking system was called upon to absorb an excessive amount of foreign bunds arising out of surplus commodity exports and capital movements from foreign countries. The adoption of the proposed agreements should help to moderate these disturbing influences.

III

In connection with the enabling legislation now before Congress, the board is strongly in favor of the addition of a provision for the establishment of a council or committee to provide the necessary direction and guidance to the representatives of the United States on the governing bodies of the fund and the bank and to interpret to them the international financial and monetary policies of the United States. Members of this council or committee should consist of the heads of the appropriate agencies of the Government to be designated by the President. It should be a small group, comprising not more than five members. Since the proposd institutions are to be permanent, it would be advisable to have the council provided by law rather than by Executive order or informal arrangement. The council would not only advise the American governors and directors on the fund and the bank of its views with respect to the financial and monetary policies of the United States but would also be authorized to act for the United States in matters which require approval under the agreements, except in cases in which the right to decide will be retained by Congress. Establishment of such a council would assure reasonable continuity in the interpretation of American international financial policy to this country's representatives on the bank and the fund. Provision for such a council in the enabling legislation would not call for any change or modification of the articles of agreement of the fund or bank.

Monetary and Credit Agreements Entered Into at Bretton Woods

EXTENSION OF REMARKS

OF

HON. WILLIAM W. LINK

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1945

Mr. LINK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address by the Honorable M. S. Szymczak, member, Board of Governors, Federal Reserve System, entitled "Monetary and Credit Agreements Entered Into at Bretton Woods," delivered before the Illinois Manufacturers Association, at Chicago, Ill., on March 20, 1945:

Last August while in London I had opportunity to study the plans for reconstruction and post-war economic stability of some of the governments in exile—particularly Belgium. The problem is immense, and its solution, or lack of solution, will affect us. It is an international problem.

The American people want to know, and rightly so, what our Government is planning for the post-war era.

As you know, plans are well advanced for the establishment of a food and agricultural organization of the United Nations. The meeting at Yalta has cleared the path between Dumbarton Oaks and San Francisco. And as the President told the country, on March 1 of this year after his return from Yalta, work is progressing on proposals to strengthen the Trade Agreements Act of 1934, to secure international agreement for the reduction of trade barriers, to control cartels, and to provide for the orderly marketing of world surpluses of certain commodities. Within the past few weeks considerable progress has been made at the Mexico City Conference in dealing cooperatively with problems of this hemisphere.

During much of the period between the First and Second World Wars, one of the greatest obstacles to the orderly exchange of goods and services between countries was the uncertainty and difficulty which surrounded payment for these goods and services. The conference held at Bretton Woods last summer—which I had the privilege of attending—agreed on far-reaching proposals designed to remove this obstacle and enabling legislation is now before our Congress.

What were the conditions in the two decades between the wars? Peace after the First World War was precarious and chaotic. In the political field many countries experienced revolutions and counterrevolutions, or at the least frequent changes of government. In the economic field, much industrial plant had to be rebuilt to serve the needs of peace instead of war, and overworked farm land had to be reconditioned. People who had gone without through the war years scrambled for the meager available supplies of consumer goods. Prices shot up and we experienced all over the world a post-war inflation. International exchange was out of joint. Commercial contacts, broken by the war, were difficult to restore. Exchange could not be found to buy the imports needed for reconstruction and to put national economies back into working order. Monetary disorders spread throughout the world. Those who could, shifted their funds about looking for a "sound" currency—one that had some stability.

It is generally known that before 1914 the value of most currencies had been expressed in terms of so many grains of gold. Since gold was a commodity accepted the world over, this as an easy means of comparing the relative values of different currencies. For example, the French franc was fixed by law at about one one-hundredth of an ounce of gold. The English pound sterling was fixed by law at about one-quarter of an ounce of gold. Therefore, by simple arithmetic, 1 pound sterling was the same as 25 francs or 1 franc was one twenty-fifth of a pound. Because of this fact, international trade could effect the exchange in goods based on a known relation between currencies of various countries.

With the outbreak of the First World War, most countries refused to permit the export of gold and their banks ceased to pay out gold to individuals. The gold standard was abandoned. After the war, however, every effort was bent to return to the gold standard. But it was not always possible and in some cases it was not desirable to return to the old values for the various monetary units. England, however, did; so strong was the desire to return to what was considered to be normal relations that, in 1925, a pound was declared to be worth as much in terms of gold as it had been before the war. But this was too high a value for the pound, and it proved a great strain to maintain that value. Unfortunately, there was no international machinery under the gold standard under which the rates could be altered. There was no flexibility. There was rigidity. A change in the par values of currencies was a major operation which had its repercussions on the economic nerve structure of world trade. On the other hand, France did not return to the old value for the franc. The impact of the war and reconstruction upon the French economy had lifted commodity prices and made goods much more expensive in France. That is, it took far more francs than before the war to buy the same quantity of goods. By the same token, it took more francs to buy a pound sterling; the exchange value of the franc fell. Then in 1926, the franc was stabilized at approximately 125 francs to the pound instead of 25, as before the war. There was no possibility of returning to the old parity, and France was realistic is not endeavoring to do so. But a flight of capital had preceded French stabilization and the return flow afterward aggravated the difficulties of other countries, especially England.

You can imagine, if you do not recall, how difficult it was to carry on international commercial and financial business under these changing and uncertain conditions. There was basic uncertainty in values, in prices, in exchange. These conditions were needlessly protracted because each country operated on its own. There was no comprehensive plan for collaboration and cooperative action to restore a functioning international monetary system. Small loans were made to some countries to help them stabilize their currencies; but this assistance was sporadic and uncoordinated. Each case was treated separately. Toward the end of the twenties it was vainly imagined that normalcy had been restored. But the difficulties in the international field were even worse in the thirties than in the preceding decade.

As conditions in the twenties had settled down there had begun to be a considerable volume of international investment. Part of this was in long-term loans on which the interest and amortization charges made a heavy call upon the borrower's foreign exchange resources. Much of it represented short-term lending, partly in the form of deposits in foreign banks and the purchase of speculative securities, partly the financing of trade. Large quantities of goods were imported by the debtor countries on credit. In many cases, borrowing far exceeded the capacity of the country to repay, especially since the funds borrowed were not used to enlarge the productive resources of the country. In time some countries had to pay more for the goods and services they bought, plus net credit charges, than they received from their own goods and services abroad—that is, their balance of payments was said to be unfavorable.

It appeared necessary to impose restrictions upon purchases and sales of foreign exchange and upon international trade because the ability of many countries to maintain their purchases abroad had come to depend on their ability to borrow abroad. Few were able to do so. At the end of 1935, virtually all intergovernmental debts—save that of Finland—and 38 percent of private bond issues were in default. At the end of the twenties, the volume of funds available for foreign investment began to dwindle; and finally, as confidence weakened, short-term funds began to be withdrawn. Debtor countries could not meet these drains except by shipping gold or using available foreign exchange. Obviously, there is a limit to this process. There was no machinery for international cooperative action to deal with such a situation. Each country felt that it was "on its own" and hastened to clamp on exchange and trade restrictions. Some hoped to stimulate their exports by making it cheaper for other countries to buy their goods. They did this by reducing the price of their currency. They depreciated. At the same time they tried to reduce their imports. The result was a general falling off in world trade. Exporting countries began to suffer from declining production and increasing unemployment. Countries whose economies were geared to a high level of imports could not find the exchange to pay for their imports. As a result the value of international trade in 1934 was only about one-half as great as it had been in 1929.

All this added up to the world-wide depression of the thirties which is still fresh in our memories. At that time I was here

in Chicago and well do I remember our situation, for I was then city comptroller. The banks were closed. Tax collection was held up by a reappraisal of real estate. And when we began again to collect taxes the depression was upon us and property holders were unable to pay taxes. People were out of work. Each blamed the other for the difficulties. Back of the domestic depression was a world economic situation.

To keep things moving even on a low level, countries began to make agreements with others on the basis of "I'll buy more from you if you will buy more from me." Trade was forced into bilateral channels. Countries no longer bought in the most advantageous market. They bought wherever they could make a deal through the maze of regulations and restrictions which hampered international exchanges. There is no need to describe here the devices—some of them ingenious and all of them intricate—which were invented in this deadly game of economic war. We know now that it was almost as destructive to national and international well-being as had been the actual hostilities of the First World War. And it laid the basis for the Second World War.

I have taken this much time to recall to you the handicaps which confronted international trade after the last war because some people appear to have forgotten them, or, at least, their memory has dimmed. But those who were alert to the dangers of a repetition of these conditions after this war have devoted time and energy to seeking a way to avoid such a recurrence if possible. Interested individuals began systematic study more than 3 years ago. After many conferences and discussions, preliminary, highly tentative proposals for an international monetary institution were presented to the public in April 1943. A draft for an international stabilization fund was published by the United States Treasury and a draft for an international clearing union was published by Great Britain. Both proposals were put forward to encourage all interested parties to contribute to the solution of the extremely complex problems involved. Both proposals were widely studied, compared, debated, and discussed, orally and in writing, by individuals, and in small and large groups here and abroad. As a result of the wide area of agreement that was found to exist, a joint statement of experts was published in April 1944. Further discussion culminated first in a preliminary meeting of representatives of many nations in Atlantic City in June and finally in the July Conference at Bretton Woods. The Bretton Woods agreements, especially the fund proposal, are designed to aid in achieving reasonable stability in the international monetary sphere in order to make possible a revival and expansion of world trade on a multilateral basis. They are a step—and a long step—in the right direction.

Admittedly the Bretton Woods agreements are not a panacea for all the ills of the world. Unless the major industrial countries, especially the United States, succeed in maintaining reasonable stability of employment at high levels there will be very little chance of avoiding the measures of economic warfare employed in the thirties. In effect, these were measures to "export unemployment." By importing as little as possible and exporting as much as possible, each country hoped to keep its own people working. There is reason to believe that the major countries now are determined by domestic measures to prevent wide fluctuations in employment. Economic stability and full employment in the United States are certainly an accepted aim and purpose. But these should be reenforced by a healthy condition of international trade. The acceptance of the Bretton Woods agreements will contribute in a substantial measure to the ability of countries to maintain employment at high levels without resorting to attempts to "export unemployment" to other countries.

If we are to have a healthy world trade, we need reasonable stability in foreign-exchange rates, and adequate credit distributed where it will do the most good in rebuilding and developing national economies. The Bretton Woods agreements are technical documents, the product of the experts of 44 nations, but they can be summed up simply. They spell out cooperation in the monetary and credit fields, and give detailed ways in which this cooperation can be achieved. The agreements provide for the establishment of two international institutions: An International Monetary Fund, and an International Bank for Reconstruction and Development.

The bank proposal is relatively simple. No serious differences of opinion arose in the negotiation of the bank agreement, which has received widespread support and approval. The bank follows a well-known pattern. Its job is to investigate projects for the reconstruction of war-torn areas, and for the development of backward lands for which long-term international loans are needed. When it is satisfied that a project is productive and that the borrowing country has a reasonable prospect of repaying the loan, the bank will see to it that the loan is forthcoming on reasonable terms. This does not imply the elimination of private investment but it is unlikely that enough private capital will be lent to countries in need of reconstruction or development without some encouragement, especially immediately after the war when conditions will be uncertain. The bank will operate for the most part either by guaranteeing loans made by private investors or by making loans with funds borrowed from private investors.

The benefits of the international bank will be many. It will help members to achieve stable economics. It will distribute the risks of international lending. Although we may furnish most of the loans which the bank guarantees, this country's share in meeting the risks involved will be only $3,000,000,000 as a consequence of its subscription to the bank. If international loans are made through the bank, the dangers of imperialistic lending will be avoided. International supervision of foreign loans will make it difficult for foreign loans to be used as an instrument of political policy. The conditions which surround the issues of debentures by the bank insure that they will be a prime investment security since the total of the bank's loans and guarantees may not exceed the amount of its capital, surplus, and reserves. Only one-fifth of the $9,100,000,000 subscribed by member governments can be used directly for making loans. The rest will remain in the form of unpaid subscriptions as a guarantee fund to meet any losses that the bank may incur.

The International Monetary Fund Agreement deals with a more difficult problem than does the bank. Wider differences of opinion had to be reconciled before the negotiations were concluded. Changes will have to be made in it from experience. There is provision for amendment and there is room through interpretation for adjustment to conditions as they arise. It aims to prevent a repetition of the chaos which followed the last war and of the destructive monetary practices of the thirties, both of which I have reviewed. It substitutes cooperative international decisions and international action for the state of affairs we had in the past when each country made its own decisions and acted alone in what it thought were its own interests.

Under the fund agreement each member establishes the gold value of its currency by agreement with the fund. Gold is still the most widely acceptable means of international payment. But this is not a return to the old gold standard. Although each country undertakes to maintain the established value of its currency at par, there is necessarily provision for altering the parity if it becomes evident that this value is too high or too low (because of changed conditions in the country's international position). The fund will approve only changes that are really necessary, and object to those which are not. This means that no country will be able to sell its currency cheaply—that is, to depreciate its money in order to secure a competitive advantage for its exports. We have learned that if this is done, other countries are not likely to stand by idly but will join in the scramble with disastrous consequences for all.

The agreement also eliminates special exchange rates for particular types of transactions. Germany was the country which developed this device most fully. In the years before the war there were all sorts of reichmarks, representing the receipts from different kinds of business with Germany. The non-German owner could not dispose of these freely since the use of each type was limited to a particular purpose such as to pay tourist expenses in Germany, to buy certain types of goods, and so on, and the value of each kind in terms of other currencies varied greatly. In this way Germany arbitrarily made it cheaper or more expensive to buy particular German goods or to sell particular commodities to Germany, and manipulated this device to obtain a competitive advantage in international trade.

The requirement that the fund approve necessary changes (after the first 10 percent) will also mean greater stability of exchange rates in the long run. Not only will unnecessary changes be eliminated, but necessary changes can be made in an orderly way before the situation is completely out of hand.

If French production costs (wages and other items) for instance, happen to rise much above production costs in England, French producers will gradually lose their foreign markets—both in England and in other countries—to British producers. French producers will lose even in their domestic market, as their high-cost goods are being increasingly displaced by lower-cost goods imported from Britain.

If the basic maladjustment in the cost structure is not the result of a temporary condition, but reflects a fundamental and lasting change. French production will eventually decrease, unemployment will rise and monetary reserves will be drained by the deficit in the balance of payments. The French currency will tend to fall in value, speculators will rush to buy foreign exchange and, in many cases, the resulting monetary depreciation of the French franc will be greater than what was really called for to correct the initial cost maladjustments. If an appropriate change is made in the value of the currency relative to the currencies of other countries before this train of circumstances is set in motion, much confusion and distress will be avoided and the necessary adjustment can be an orderly one.

European currency history between the two wars illustrates this problem in the clearest possible way. As I said before in 1925, England went back on the gold standard at the pre-war gold parity, while continental countries depreciated their currency to a considerable extent. The resulting cost disparities between England and other countries resulted in a severe and protracted economic depression in Great Britain until the devaluation of the pound in 1931. As the pound declined further and further in the

following years, production costs in Europe increased in terms of sterling and, in turn, became completely out of line with British costs. The attempts of the gold block countries to maintain the parity of their currencies in the face of such heavy international cost disparities led to intense depression and unemployment and proved futile in the end. Belgium was the first country to bow to the inevitable. Her relaitvely prompt decision permitted her to limit the devaluation of the Belgian franc to only 28 percent. France meanwhile resisted to the last, with the result that the devaluation, when it came, depreciated the French franc by about 60 percent as compared with the Belgian 28 percent.

Under the agreement, also, all members promise to eliminate restrictions on foreign-exchange transactions as soon as possible. Of course, during the war, each country must keep strict supervision over its international transactions. I am not speaking of wartime controls but of the sort of regulations in effect before the war. Many countries at that time had less foreign exchange than they needed. That meant that importers in those countries were rationed as to the amount of foreign exchange they could use, and exporters were required to turn over their receipts to some governmental agency which parceled them out. This arrangement, as we have seen, interfered with normal trade, which was shifted into particular channels, and often led to the domination of the economy of one country by another for political ends.

The case of Germany and Hungary illustrates what happened. In preparation for war, Germany was anxious to acquire large stocks of goods, and was willing to pay well for them in German marks. The Hungarian Government had subsidized farm output in order to avoid bankruptcy of its farmers when agricultural priced in world markets dropped, and the prices of Hungarian wheat and meat were much higher than Germany would have had to pay elsewhere. But Germany could not buy elsewhere because it did not have the dollars or the pounds or the pesos to do so. An agreement was signed between Hungary and Germany whereby Germany agreed to take Hungarian goods at the high Hungarian prices and sell to Hungary German goods—also at high prices. The transactions were balanced against one another in a "clearing account." Each country tried to prevent an unsatisfied debt from piling up in the clearing account. Under this arrangement both Hungary and Germany were paying more than they should have for the goods which each imported from the other. Hungary lost its other markets because of its high prices and had to concentrate on the German market.

Germany began to dictate trade terms to Hungary, to tell it what sort of goods it must produce if Germany were to take them. When Germany went to war, the Hungarian economy was firmly tied to that of Germany and thus Hungary inevitably became a partner of the Axis.

This is the sort of thing we do not want to have happen again. Under the fund agreement, members undertake to abandon such bilateral clearing arrangements and discriminatory currency practices as give exporters special premiums if they ship goods to countries the currencies of which are particularly desired. This commitment applies to the abandonment of restrictions on foreign exchange transactions on current account; that is, those arising out of shipments of goods, tourists' expenditures, immigrant remittances, and the rendering of services. Members are permitted to control capital transactions such as money sent for deposit in foreign banks or for use in stock-market operations. Real investment can be encouraged and the speculative movement of funds limited; this will contribute substantially to international monetary stability.

It is not expected, of course, that the whole body of regulations over foreign-exchange transactions shall be done away with at once. Only confusion would result. The patient is very sick, and recovery, at best, can be only gradual. On the other hand, unless a concerted effort is made as soon as possible to eliminate such practices, there is grave danger that many countries will fall back on them to balance their international transactions after this war. They must have an alternative which will make such action unnecessary.

However earnestly the member countries may desire to live up to their agreements as far as exchange rates and exchange restrictions are concerned, it will not be easy for them to do so. To help them, a fund of almost $9,000,000,000 is to be established, made up of gold and the currencies of all the countries which are members. This fund will be used to assist member countries faced with temporary balance of payment difficulties such as might follow a bad crop or a loss of a market for a short period. Should the deficit prove to be more than temporary, the fund will continue to give the member assistance only if it takes adequate steps to correct the situation.

I have sketched briefly the mechanism of the fund, and indicated the aims which it is hoped it will achieve. Doubtless, you have all heard and read some criticism of this plan, and I should like to mention the main point around which this criticism centers. During the last 12 or 13 days I have been attending and closely following the hearings on the Bretton Woods proposals in the Banking and Currency Committee of our House of Representatives and feel that the quest for information concentrates mainly on this point.

It has been argued in some quarters that foreign countries will abuse their privilege of drawing on the fund and that the fund's resources will be wasted. The position taken by the critics is that in order to insure that members take advantage of the time during which they are drawing on the fund to correct the unbalance in their international position, aid should be given only after special investigation and agreement as to the conditions under which the funds are to be used. This view misinterprets the very essence and purpose of the fund.

A whole series of automatic and discretionary controls is specifically designed to prevent undue use of the fund by any member country and to insure wise use of the fund's resources.

Take, for example, the important automatic controls. Definite limits are established on the amount of foreign exchange a member may obtain from the fund in any single year or as a maximum over a period of years unless special permission is given to exceed these limits. Secondly, member countries must pay a small service charge on all foreign exchange purchased from the fund. In addition, an annual charge is levied on a member country using the fund. This charge increases, the larger the use of the fund's resources, and the longer the period over which the resources are used by a member country. Thus, constant pressure is put on a member country to reduce its drawing on the fund.

Another automatic control is the obligation of all member countries to repurchase their own currencies from the fund with gold or foreign exchange. This obligation is so framed as to require countries adequately supplied with gold and foreign exchange reserves to draw on them at the same rate that they draw on the fund. And it also requires (with qualifications) countries which are gaining gold and foreign exchange to use half of the amounts gained to reduce their drafts on the fund.

The discretionary controls are even more important than the automatic controls. The fund can postpone the beginning of its exchange operations until it is satisfied that most members are in sufficiently stable condition to warrant use of the fund's resources. Furthermore, once it has commenced general exchange operations it can postpone transactions with any individual country which is not in a position to make appropriate use of the fund's assistance.

Once the fund has begun operations with any member, however, that member can proceed with the assurance that it can come to the fund and receive help in meeting payments due for foreign goods and services without delay. This feature of the fund proposal lies at the very core of the whole agreement. It assures the availability of exchange. Since members can confidently expect assistance from the fund, they will be able to undertake to maintain stable exchange rates and to eliminate restrictions on foreign exchange transactions. In many cases the fact that assistance is forthcoming without delay will prevent temporary disturbances from having serious repercussions on the international position of other countries. If a drop in any single country's exports leads to defensive deflationary measures and restrictions on imports, that country's exchange difficulties will spread to other countries and a vicious circle of restrictions on trade and deflation will ensue.

Should the difficulties of a member country prove to be more than temporary, the fund has a very important discretionary power to insure that the country does take advantage of the time during which it is drawing on the fund to put its house in order and correct its position. The fund can stop a member from drawing on the fund if it is not using its resources in accordance with the purposes of the fund. The purposes as stated in the agreement make it quite clear that the fund is to be used to help countries meet temporary deficits and to give them time to correct more deep-seated maladjustments.

It is evident to me that the period during which the fund and the bank are needed most is the immediate post-war period before individual countries begin to impose new and additional restrictions on foreign exchange and foreign trade. Prompt establishment of the fund and the bank would also give member countries confidence which they must have to place their economic houses in order with the least possible delay.

It therefore seems to me that with the knowledge we have of the problems of the 1920's and the 1930's we have agreed at Bretton Woods with competent representatives of other countries on sound economic principles to help solve these problems and the solution of these problems is in our interest. Therefore the International Monetary Fund and the International Bank for Reconstruction and Development should, after due and proper consideration, be approved by our Congress.

War Manpower Commission at New Bedford, Mass.

REMARKS

OF

HON. CHARLES L. GIFFORD

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1945

Mr. GIFFORD. Mr. Speaker, I read yesterday—many of you probably saw

it—that Executive orders are now the modern version of royal decrees which can bind us, even to treaties without ratification. I have asked to place in the RECORD an informative address relating to the unfortunate conditions in my city of New Bedford brought about by the War Manpower Commission. It is extremely unfortunate that such a situation is created anticipating the powers to be granted in the work-or-fight bill. The President sees fit, through the War Manpower Commission, to compel workers before Congress authorizes it. That is the way it is if Congress lets it be that way."

The address to which I referred follows:

THE TRUTH IN THE CORD MILL CRISIS

(By Duncan Howlett, Minister of the Unitarian Church, New Bedford, Mass.)

The city of New Bedford has been much in the Nation's news of late. The efforts of W. M. C. to transfer workers forcibly from one mill to another has met with determined opposition on the part of the community as a whole. The facts have become confused and often the issues lost sight of. The patriotism of the city is in question.

In view of all this, it seemed to me someone in a neutral position should speak on the situation as a whole, summing up the pertinent facts, and pointing out the issues involved without bias and without partisanship. Insofar as it is possible for humans to be nonpartisan and without bias, I shall attempt to present the situation as best I have been able to determine it after a lengthy investigation and careful thought.

I

WHAT ARE THE FACTS?

Last September the Priorities Committee of W. M. C. granted first priority on manpower to the Fisk and Firestone mills in this city. Early this year the Army and W. P. B. asked all the tire mills to go on a 7-day, 3-shift basis for the next 90 days because there was an impending shortage of tires. This order included the two tire cord mills in New Bedford, Fisk and Firestone. Each was already on a three-shift basis, but schedules were advanced to 7 days a week. A bottleneck occurred, however, when the cord mills were unable to man their third (night or so-called graveyard) shift. This precipitated the trouble.

W. M. C. is not attempting to start a third shift at the tire cord mills. They have always run on 3 shifts and did so even before the defense program was started. Furthermore, until the defense program began, these mills had no trouble manning their third shift. Each had a list of applicants. With the coming of the defense and war programs, other mills increased their first and second shifts, new mills came into operation, and many workers were drawn off into more attractive positions with more attractive hours.

New Bedford is not the only city in which tire cord is manufactured. Its output is but a small percent of the total. Elsewhere the third shift is no better manned than it is here. But New Bedford is the only city where a large number of other textile mills are also present, which creates a labor pool from which to draw. This is why the crisis arose here rather than elsewhere. W. M. C. chose this city as the one best suited to the forcible transfer of workers.

New Bedford men, capital and labor alike, maintain that workers could have been provided for the tire cord mills on a voluntary basis. When it became apparent that Fisk and Firestone could not man their third shifts, the New Bedford Cotton Manufacturers Association amassed a list by name, address and job classification of 3,700 former workers who had worked within the last 14 months, not now employed in any of the mills of the association, and in conference with a W. P. B. representative and the unions, agreed to a plan to canvass the workers, the C. I. O. carrying the brunt of the canvass.

Blizzard occurred

This agreement was concluded on Friday, February 9, at a conference at which representatives of the New Bedford Cotton Manufacturers Association, the unions, W. P. B. and the Fisk and Firestone mills were present. Representatives of W. M. C. did not appear. The canvass was made Saturday. Out of the first 60 people canvassed, 20 agreed to report to work Monday. On Sunday came the blizzard which halted traffic everywhere. None of the workers showed up Monday. Tuesday, before there was any opportunity for a check back, W. M. C. ordered forced transfers which brought to an end the efforts of a voluntary solution of the problem.

But the forced transfers produced few, if any, recruits for the tire and cord mills. Why? What is a forced transfer anyway? It is an order by W. M. C. that a certain plant release a certain worker. The worker is then required to report to U. S. E. S. for a new assignment, and he must take the job to which he is assigned or he cannot work at all, for no one else is permitted to hire him, including his old employer.

A worker can appeal a forced transfer, however, which is the stage the tire cord situation reached in New Bedford last week. One of the chief grounds of appeal is that the conditions surrounding the new work are substandard. This has been the chief ground of the appeals of the workers in New Bedford from assignment in the tire-cord mills. They allege that the work load is heavier; the yarn is heavier, the bobbins much larger, the laps are larger and have to be changed more often, the slubber bobbins are much heavier, the doffing is more frequent, the frames are much higher and longer, making a greater distance for the worker to travel. Yet they allege a worker usually must man more sides than in a fine goods mill where the work is much lighter. Moreover it is alleged that the use of the heavier yarn makes very much more lint in the air. All these factors tend to make work at the cord mills less desirable in the eyes of the workers. They say the 7-cent differential which W. L. B. has allowed is not enough to make the work attractive. Many of the workers (about three-eighths whom W. M. C. seeks to transfer) are women who would feel the increased work load greatly. And many of these have only returned to the work they are now doing on a patriotic basis. Many are unable to do the heavier work.

Move fundamental

W. M. C. has also recognized the inability of a worker to undertake a job assigned to him because of his health as a valid ground of appeal. This might seem an easy explanation of the W. M. C. complaint that only cripples had been referred to it, but all these so-called cripples were at work in other mills in the city when referred. It should also be said that referrals have in every case been made from the bottom of the seniority lists according to the union contract. The mills had no power to select the infirm for referral even if they had wanted to.

Down beneath a worker's natural aversion to leave his present job, down beneath the usual aversion to carrying a heavier work load than necessary, there are motives far more fundamental which are keeping the workers out of the night shift at the tire cord mills. Most of these workers have men very close to them facing the enemy overseas. Iwo Jima is not so far from New Bedford as some might think. Brothers, fathers, husbands, and sweethearts of New Bedford workers are there, and they are with Eisenhower and MacArthur, too. The workers know what production means to the fighting man overseas.

Consider the record of this city for patriotism: Almost complete freedom from strikes, Army and Navy E's flying everywhere, some plants having been awarded several; War bonds oversubscribed in each drive, and the Red Cross blood bank more than supplied on its quarterly visits. Why in view of all this, and with the rest of the Nation calling in question its patriotism, has New Bedford failed even under duress to transfer workers to the tire cord mills?

The real reasons are these: The workers are not reassured by the fact that labor disputes at both mills are now pending before W. L. B. Workers at these mills are not given company-provided insurance as they are at the other textile mills in the city.

Means great deal

Most important of all the deep-seated complaints of the workers, however, is the fact that the transferees have no assurance they will not lose their seniority rights. Seniority means a great deal to the worker. It can only be built up through long and faithful service at one plant. It gives him all sorts of privileges, among them vacations with pay and promotion status. Seniority gives the worker a right to keep his job if the mill cuts down production and has to lay off some of the help. The longer a worker remains in a plant, the higher his rating against a lay-off. Many of the proposed transferees already have several years of work accumulated for their seniority status.

Some people have forgotten the depression in the midst of this war boom. But it is so recent, that when I came to this city only 7 years ago, members of this parish who could not find employment were begging me to try to help them get work on W. P. A. During that awful period, New Bedford people were hungry and they were cold and there is a lively fear that those days may come again.

But I do not believe even these factors would dissuade New Bedford workers from manning the third shift at the tire-cord mills if they believed that the lives of their loved ones depended upon it. They are not convinced that these forcible transfers are necessary, and for two reasons. In the first place they know from its past record that when W. P. B. wants a product and at once, it has been able to get it. The fact that the demand for more cord was made some weeks ago and W. P. B. has not caused an uproar because of the delay makes them feel that the need is not as immediate and pressing as it would seem.

In the second place, the fact that other mills have held themselves ready to make the cord, first at the rate of 50,000 pounds a week and now at 100,000 pounds a week, and that this offer was not taken up, at least pending a solution of the cord-mill manpower problem, and has now been refused, makes the workers feel the need is not as immediate as they have been told. New Bedford citizens, workers and employers alike, have the impression that the issue is not really tire cord at all. To this community, the issue seems to be the right and need of a Government agency forcibly to transfer workers from one job to another, to the great disadvantage of the worker.

To sum up, New Bedford believes this whole thing could have been done voluntarily. New Bedford wants to know why it was not done voluntarily and why the workers' rights are not safeguarded. This is why New Bedford has opposed and continues to oppose the

forced transferrals of its workers under a directive of W. M. C.

II

The stand which has been taken by the people of New Bedford in this controversy is on a fundamental issue. It is an issue involving the rights of American citizens; it is an issue involving the rights of men. Let us look at this issue for a moment.

A Government like ours exists to protect the rights of the governed, the inalienable rights with which the people are endowed by their Creator. This is why governments are instituted among men. We hold this to be self-evident, and have so held since the signing of the Declaration of Independence.

To protect the rights of the governed, that is to say, the citizens, such a government must regulate the lives of all its citizens to some extent. But how much? This is the question. At some point, regulation shifts from the protection of the rights of the many to the advancing of the rights of a few. Advancing regulation means shrinking liberties and shrinking rights after a certain point. At what point does this occur? At what point does the protection of the rights of some become the infringement of rights of others?

Are like evils

A democracy must provide enough regulation of the affairs of its citizens to maintain the rights of all. Too little regulation is as bad as too much. They are like evils. There must be a delicate balance between the two. Who is wise enough to draw so fine a line? Yet the line must be drawn. It has had to be drawn thousands and thousands of times in the history of this country. This line must be drawn as long as democracy endures, for democracy is nothing more than government where there is neither too little regulation nor too much, but just enough to maintain the general welfare.

In wartime the same rules do not apply. Human rights are everywhere suspended, some in part, some completely. In the drafting of men for the armed services, for example, there is a virtually complete suspension of human rights. There is no talk of the rights of a man pulled out of his job, interrupted in his career, torn from his family, and sent wherever the common defense finds it expedient for him to go. We do not talk of the rights of men in the armed services to freedom of speech, freedom from want, or freedom from fear. But we completely suspend his rights to all these things just the same.

The right to life, liberty, and the pursuit of happiness we regard as most fundamental of all. But where are the rights of a soldier to any of these? They are suspended for the duration. He surrenders his liberty, he pursues anything but happiness, and he may be called upon to forfeit his right to life. Thousands of our young men already have. No one knows better than our fighting men how utterly fantastic the assertion of individual human rights within the miiltary system would be. We who remain safely behind on the home front cannot imagine the change in point of view we require of our young men and women when they enter the service of their country.

Obviously such regulation of the lives of a segment of the population is necessary or we would not do it in a democratic state. We are still living in an age of barbarism. The only way we can assure ourselves of the fundamental rights we cherish in the long years to come is to force our youth to surrender them utterly for the time being. But it is only for the time being, and both we and they know it.

Little in comparison

How dire is the necessity is shown by the segment of our citizenry of whom we ask this sacrifice. It is the segment we love the best to which we turn, our youth, our sons and daughters, our husbands and young womanhood with all the rich power and promise of life still before them. These whom we love the most we force to yield all that we ourselves hold most dear. Civilian rights are drastically curtailed in war-time too, but it is so little in comparison we feel small even to mention it.

I say we ask our youth to surrender all their rights now in order that the Nation as a whole may repossess these rights in the future. There could be no other justification. The possession of these rights by the citizen in the America of tomorrow is all that can justify us before God for the sacrifice we ask of our children today. Let us then be sure we are faithful to this trust.

There are those who say a drastic suspension of civilian rights must soon come also. Perhaps we have already arrived at a juncture in our war effort where labor too must be drafted. I do not know, but before so drastic a measure is taken, we ought to be certain every voluntary means available has first been exhausted. The suspension of rights is too serious a matter. It is the suspending of the very things in defense of which we have asked our young men to offer their lives.

If we have come to that junction in our Nation's history, we at least ought to be willing to say so, and then draft everybody, not a half hundred patriotic if bewildered workers in New Bedford. We ought to put civilian draftees in the same status in which the Army puts its men, pay them on the same basis and make no distinctions. For our Government to select 150 people out of its 130,000,000 population and compel them to work where and when it wills is an arbitrary suspension of the rights of individuals and sets a precedent of an ominous nature.

Is different

Drafting a man for labor is quite different from drafting him for the Army. The Army and Navy are branches of the Government, subject in the last analysis to civilian regulation. A citizen subject to a labor draft would be set to work in private industry, assigned to the place where he was most needed, at whatever job was chosen for him, at whatever shift his superiors designated. His hours and his pay likewise would be fixed.

Meanwhile, the industry for which he works remains in private hands, and is operated for a profit. What has happened to all the checks and balances between capital and labor we have built up in this country through long, troublesome years? The employee is at the mercy of the employer, for he has no redress. He can no longer quit or strike or work elsewhere. The law of supply and demand now forces the improvement of working conditions. But a labor draft law would be a green light for industrial tyrants. Now don't misunderstand me. All industrialists are not tyrants, but like the rest of us they probably have their fair share of them, and the working man needs as much protection from them as the employer needs from the labor leader who becomes a tyrant.

The unions are right. If labor is drafted, capital should be drafted too. You can't draft the one without making the other autonomous. The Government has got to take over completely or not at all. And if the Government regulates capital and labor to this extent, we shall have the corporate state in place of the American democracy which we inherited from our forefathers. Well, perhaps we ought to have that, too; some people think so. Logically there is no reason why all of us shouldn't be compelled to surrender our rights to the Government, exactly as our brothers and sisters in the armed services have done.

The need for a corporate state in America has yet to be demonstrated, it seems to me. Our sudden and overwhelming production of war materials has surpassed the expectations of the most sanguine. Our ability to operate a free economy under conditions of total war still amazes the world. Our relative freedom from strikes by voluntary agreement and without coercion leaves the cynics speechless. A heavy burden of proof lies on those who would change our form of government even in wartime, and even if only for the duration.

Thinks it impossible

Undoubtedly the day is dawning when a more highly integrated society will emerge from the social structure we have known. This will happen in America as elsewhere. Probably more, not less, regulation will be required to protect the rights of all as our political economy grows more complex. But let us never forget that we grow into the thing we most desperately hate—we grow to be like the monsters with which we are locked in mortal combat in the east and in the west, if we do not restrict every regulation however necessary in order to preserve fundamental human rights.

How do you do this in a corporate state? I think it is impossible. When regulation is added to regulation and official is added to official, you finally arrive at the point where the lives of all are regulated, and officials become agents to carry out the orders of those above them. The checks are gone, the balances destroyed. The door to tryranny is open to whomever has the will and the skill to seize the power. Our enemies have provided us with ample evidence of what can happen in the corporate state, to the citizens of that state and to its neighbors as well.

III

We have wandered far from the cord-mill crisis here in New Bedford, haven't we? But perhaps not farther than we ought to look. We are living through great days. We have seen empires fall; we see others falling; and the end of it all no man can see. We sense also that the social and economic changes of our day will be as great, if not greater, than the political upheavals. We are watching history in the making. The path our country follows will directly or indirectly influence the rest of the world. It is a breath-taking thought. The struggle to force workers into the cord mills here may play an important part in determining which way America will go. I repeat, it is a breath-taking thought.

Dimly, perhaps, we sense all this. Without looking quite so far ahead we sense the importance of the events transpiring in our midst. We believe the forced transfers of workers here is unnecessary and unfair and down underneath we sense we are resisting for reasons beyond our own workers, and beyond our own needs. High principle is involved, in the upholding of which this city is united, capital and labor, all races, sects, creeds, and parties.

When we sent our young men to the front, those young men in whose names we are bidden to submit to the forced transfer of workers, we, like all Americans, made them a promise. It was the only thing they have openly asked of us. "Keep America the same," they said. "Let us come back to the same kind of a country we left. It's the greatest one of them all." We made that promise to them, and, God willing, we shall keep it.

Most precious heritage

Among the things that characterized the country they left behind was freedom. Freedom is the most precious heritage of the American citizen. Freedom is the most precious possession of man, for without it he

is not a man but a beast of burden. Freedom is our best guaranty of selfhood, it is the essence of democracy, the antithesis of dictatorship; it is the spirit of America.

Then let us have equal rights to freedom for all. Let us not single out a few people and take their independence and their small gains from them when the ends we seek to achieve can be reached without encroaching upon the rights of citizens. Let us preserve at least as many rights as we can. Let us put human personality first always. Let us not forget the endowment of our Creator to each of us. Let us remember, in fine, that we do God's will insofar as we care for His children, that is to say, insofar as we guard the rights of our fellow man. Remembering this, let us continue in the faith of our forefathers, faith rooted in the wisdom, power, and majesty of Almighty God, issuing in the rights of man.

[From the Washington Post of March 21, 1945]

ATTEMPT TO SHIFT MEN TO NEW JOBS HELD PROPAGANDA MOVE

The War Manpower Commission's national management-labor policy committee charged last night that the forced labor-release plan for New Bedford, Mass., textile workers was deliberately planned to create a "failure" which could be used as propaganda for national service legislation.

The committee, announcing a break with War Manpower Commissioner Paul V. McNutt, in its attempt to throw out the controversial W. M. C. program in the New England city, charged that the manpower agency was used as a cat's-paw in the alleged propaganda scheme.

The committee said the New Bedford plan was put into effect by Government officials in Washington "who favored national service legislation," adding that at one stage W. M. C. compromise proposals affecting New Bedford "were ruled out by a War Department representative."

IN FORCE ABOUT A MONTH

The New Bedford plan, similar to W. M. C. programs in Allentown, Pa., and other cities, has been enforced approximately a month.

It was designed to force textile workers out of fine-goods mills in the area into labor-short tire-cord mills, but met with determined resistance.

Fine-goods workers refused to go to the lower-paying tire-cord mills with their lack of workers' benefits, and New Bedford labor, management, and civic representatives united in opposition to the program.

In a statement signed by six policy committee alternate members, the committee urged McNutt "to revoke immediately the 'forced release' order in New Bedford, wipe the slate clean and start out again on a fresh basis—a basis which is most likely to produce the necessary tire fabric and duck yarn."

McNutt later issued a statement in reply, advising that he would continue his New Bedford program until the community submits an acceptable substitute plan.

"Until such time as the local community of New Bedford submits a plan which gives concrete evidence that the staffing of the critical tire plants will be accomplished without delay," he said, "I have no alternative but to continue the application of the W. M. C. national program of war service transfers in New Bedford."

SHARES COMMITTEE'S REGRET

He joined with committee members in their "feeling of deep regret that after almost 3 years of harmonious agreement we have not been able to resolve differences of opinion in this instance."

He made no mention in his retort to the committee of its charge that the manpower agency was used as a cat's-paw in the alleged propaganda scheme.

The committee's statement, although signed by alternates, was said to be binding on the full committee. The group is the W. M. C. tool policy-making organization for management and labor.

"The committee feels," the statement said, "that applications of the 'forced release' program in New Bedford was for the purpose of lobbying the Congress in support of compulsory service legislation.

"We are convinced from the clear evidence, painstakingly reviewed during half a dozen long meetings that there was an attempt to create a situation which could be called failure of the (W. M. C.) voluntary method, so that force could be used.

"We resent this attempt to involve conscientious citizens of New Bedford in what they were told was a true recruitment program, only to have them find in the middle of their efforts that such was not the case."

SIGN FOR THREE GROUPS

The committee's statement was signed as follows:

For labor: Frank P. Fenton, director of organization, American Federation of Labor, and Ted F. Silvey, representing the Union of Marine and Shipbuilding Workers, C. I. O.

For management: Joyce O'Hara, assistant to the president of the United States Chamber of Commerce; S. Duncan Black, president, Black & Decker Manufacturing Co., and Dr. J. H. Parmalee, director of bureau of economics, Association of American Railroads.

For agriculture: Paul Sifton, director of public relations, National Farmers Union.

The Global Alphabet and the World Language Foundation

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1945

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to reprint the very excellent letter of ex-Senator Robert L. Owen, president of the World Language Foundation. Senator Owen ably outlines the support and enthusiasm that has come from both the educators and the average citizens for the use of the global alphabet to make possible international understanding of all races and creeds. The letter of Senator Owen follows:

WORLD LANGUAGE FOUNDATION,
Washington, D. C., March 21, 1945.

Hon. A. S. MIKE MONRONEY,
Member of Congress,
House Office Building.

MY DEAR MR. MONRONEY: Answering your inquiry with regard to the global alphabet and the World Language Foundation endorsed by the Oklahoma Delegation in their letter to Gov. Robert S. Kerr, Oklahoma, on February 10, I reply that the endorsements of the global alphabet come from those who make no pretense to learning as well as from the most learned.

John R. Carter, Eureka, Calif., who describes himself as an "ordinary workman of 63 years" who saw the global alphabet in Labor, of February 3, writes that he learned it with ease, can write it as rapidly as he can English, and wishes to devote the rest of his life to teaching it.

I quote from a letter from a master of arts and doctor of philosophy of the University of Virginia, Dr. Mead, who is devoting her life to this plan and has prepared the pattern for our language text.

"I regard the global alphabet as a miracle of prodigious value in advancing the cause of human knowledge, abolishing illiteracy, multiplying human production, and bringing about mutual understanding and brotherhood, and am dedicating myself to that cause. By using the phonetic alphabet, all the leading nations can be taught conversational English quickly, economically, using the 'each one teach one' system of Frank C. Laubach, Ph. D."

Mrs. Frances D. Dorman, teacher of the Ben Murch School, Washington, D. C., in a letter to me said:

"I have taught two classes of children to read and write the global alphabet. They could read it after a few hours of instruction and have been pleased with it. I have found no word in the English language that I could not write in the letters of the global alphabet.

"One of my children of 10 years of age speaks Portuguese, and I had her write in Portuguese the phrase, 'Can we go home?' I translated this in the global alphabet and found that my children could immediately read and intelligibly pronounce the Portuguese sentence. They were delighted to read the Portuguese. Of course, you would know this, but it surprised and pleased them because they could not read and intelligibly pronounce the Portuguese as written in Roman letters."

I expect to have ready for the compositor the texts teaching Spanish, Portuguese, and German by April 1, the Spanish being finished now. The Russian, English, and Chinese texts will be ready about the middle of May. The compositor's copy of all leading languages could be prepared within 60 days if properly financed. Such books could be sold at a very low price and yet sufficient to cover production, distribution, and expansion.

The global alphabet speaks for itself. It can be taught to an intelligent person in less than 2 hours of instruction. With it every language in the world can be written at high speed, printed, and correctly pronounced. Books in the global alphabet in all languages can be printed at half the cost in paper, doubling the service of available paper, requiring one-half the storage space, saving half the cost of transportation.

I am delighted with the endorsement of the Governor of Oklahoma, the president of the Agricultural and Mechanical College, by the president of the University of Oklahoma, and the approval of other educational authorities in that great progressive State.

I have the advice of a number of expert Chinese, including two obtained through the Chinese Embassy here, who regard the global alphabet as adequate for Chinese. The Chinese and Japanese experts of the War Information Board endorsed it. Dr. R. Walker Scott, professor of Japanese at Trinity College, who taught English 10 years in Tokyo to the Japanese, is one of my sponsors covering the Japanese language. Dr. Laubach, who has taught 84 languages, including the leading dialects of India, sponsors the global alphabet.

The global alphabet has been submitted to over a hundred expert linguists, none of whom have challenged the adequacy of the global alphabet for the purposes intended. Professor Pei, who had 60 experts cooperating with him, is one of my sponsors and has given his approval to the global alphabet.

With infinite pains and thousands of hours of study, I have made the letters of the global alphabet of the simplest forms humanly possible. No global letter conflicts with any other global letter. No global letter is ever silent. No global letter uses the form employed by any other alphabet in the world. Each global letter begins and ends on the center line of writing and is capable of high speed in writing with the pen. It can be learned by a child of 10 years of age in 2 hours.

Any language in the world can be intelligibly pronounced when written with the global alphabet. The letter of Chiang Kai-shek to me takes six times the amount of paper required for writing the same words in global letters.

Of no other alphabet in the world can these things be truly said. I challenge any responsible person to question the accuracy of my statements in this letter to you.

You will recall that the ministers of education of eight different nations in London last summer passed resolutions urgently recommending one world language after the war as a means of mutual understanding and of establishing durable peace.

Let me quote further the views of Mrs. Eleanor Roosevelt recently expressed:

"Some time I hope that everywhere throughout the world we will all learn one universal language in addition to our own, and that language, whatever it may be, will be a language which makes it possible for us to talk together no matter what our racial origin may be. At present, languages are so frequently a barrier that, if we could decide on one language which is learned all over the world, it would mean a great deal to the future understanding among people."

May I not invite your attention to the importance of these declarations from high sources, and suggest that you advise the people of Oklahoma of the facts supporting the sponsorship of the Oklahoma delegation. If our Government authorities and our leading businessmen should realize the colossal importance of this matter and give it adequate backing, I would predict that the English language could be made known conversationally to the majority of the people of the world within 2 years by a campaign which would pay its own way.

With kindest regards,

Your friend,

ROBERT L. OWEN.

Bretton Woods Agreement

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1945

Mr. HOOK. Mr. Speaker, one of the crucial decisions we will have to make here within the next few weeks will be on the question of the ratification of the agreement reached at the United Nations Monetary and Financial Conference—the Bretton Woods agreement. I hope that when we make our decision on this agreement that we do it with an eye to history. I cannot pretend to be an expert in monetary problems. The ways of international finance are as mysterious to me as they are to most people. But it is obvious that the countries of the world must work a new program of international financing if we are not to enter into the tremendous job of world reconstruction and rehabilitation in an atmosphere of economic antagonism. Unless some workable way of outlawing economic aggression is found, our hopes for the end of military aggression are futile. The Bretton Woods agreement, reached after conferences and discussion between representatives of 44 nations, recognizes the fact that an unbalanced international economy leads to war, and it seeks to achieve a greater balance through the creation of international monetary machinery. There may be disagreements as to the effectiveness of the proposals, there may be feelings that we didn't drive as hard a bargain as we should have, but a plan was agreed to, a plan that does work at least in the direction of international economic stability.

Linwood I. Noyes, publisher of one of the fine newspapers in my district, the Ironwood Daily Globe, and president of the American Newspaper Publishers Association, recently wrote a very fine editorial which, it seemed to me, caught the essence of the problem confronting the Congress when it considers the ratification of the Bretton Woods agreement. I think this editorial is worthy of being reprinted in the CONGRESSIONAL RECORD and under unanimous consent, include it in my remarks:

BRETTON WOODS FIGHT

Wall Street is showing increased interest in the struggle in Congress over the acceptance of the Bretton Woods plan.

Financial leaders suggest that instead of a total commitment of $5,900,000,000 for the combined international bank and monetary fund the United States should subscribe only a little over three billions to the bank and its authority should be broadened to negotiate currency stabilization agreements. This arrangement would eliminate the monetary fund set-up entirely and thus save taxpayers' money. Another group recommends postponement of action on the fund "until basic conditions have become sufficiently stable."

Still a third group challenges these views, and these bankers are backed up by Treasury experts. They contend that the functions of the two institutions must be kept entirely separate; that the nature of banking activities—such as passing on loans—is very different from that of stabilization operations. If the two departments are merged, it will result in the wasteful practice of "the bank bailing out the fund."

Mr. Morgenthau's representatives in New York declare that Congress should either vote for the project without change or kill the entire program. Revisions now offered had already come before the Bretton Woods delegates and had been turned down; the nations will not take today exactly what they rejected yesterday. If lawmakers junk the plan, they may be held responsible by the public for wrecking the program for economic rehabilitation and mass employment set up by the fiscal authorities of 44 countries.

As we are the major financial power, Britain, Russia, and the others are waiting to take their cue from us. Financiers supporting the administration declare this is the first concrete test of American willingness to sign on the dotted line a document for permanent international organization.

The action of Congress will be a significant portent on the eve of the San Francisco Conference. If we back out now, it will be the tip-off to other governments that we are unwilling to play a leading role in world collaboration.

European chancelleries know our record on the League of Nations and the World Court. They recall that after the economic conference, instigated by Herbert Hoover, met in London in 1933 to stabilize international currencies and remove trade barriers—objectives of the Bretton Woods proposals—Franklin D. Roosevelt, the incoming President, withdrew his approval. Without us the affair was meaningless and the gathering failed to accomplish anything. From then on it was "every man for himself."

Treasury officials warn "this must not happen again."

Difficulties of Impounding Retirement Funds en Bloc

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1945

Mr. CASE of South Dakota. Mr. Speaker, in the Seventy-eighth Congress, I introduced a bill which proposed to make a blanket impounding or disbursement of salary funds in any regular appropriation bill for the retirement fund with a view to saving considerable bookkeeping, time, and effort.

In November, toward the close of that Congress, I discussed the matter in some detail with Mr. Harry B. Mitchell, the president of the Civil Service Commission, who agreed to undertake a study to determine the practicability of the idea and the possible savings that would result. I now have a letter from Mr. Mitchell, transmitting a report of that study which, while disappointing in the results indicated, will be of interest to any Member of the House, or any student of governmental expenditures.

On the other hand, the inquiry, it is evident, has strengthened a conviction in the Civil Service Commission that steps should be taken to reduce the expense of maintaining individual retirement accounts.

The result has been to institute a survey by the Commission, the General Accounting Office, and the Bureau of the Budget to find a more satisfactory system for maintaining Federal employee service and retirement records as well as a more economical method of obtaining statistical records on personnel required by the various Federal agencies.

I, therefore, place it in the CONGRESSIONAL RECORD, in accordance with permission previously granted by the House. The matter referred to follows:

UNITED STATES CIVIL SERVICE COMMISSION,
Washington, D. C., March 20, 1945.

Hon. FRANCIS CASE,
House of Representatives.

DEAR MR. CASE: In response to your letter of November 29, I asked our Retirement Division to go into the subject of possible saving as

a result of impounding 5 percent of appropriations for deposit in the civil service retirement and disability fund in order to eliminate the necessity for maintaining individual retirement accounts. The results of this inquiry are disappointing to me, as I know they will be to you. When I first spoke to the head of the Retirement Division on the subject, which was before my conversation with you, he expressed the opinion that a considerable saving could be made; but apparently research further into the plan proposed indicates that no saving would result, but rather the reverse.

For the first 2 years of the civil service retirement system I have now learned, the impounding system was in effect on an estimated basis. It was not satisfactory and was abandoned.

While the situation at that time was different, as only persons having a civil-service status were under its provisions, it is contended that the experience then and since indicate that as long as the Civil Service Retirement Act is a contributory system, records must be maintained to determine each employee's contributions. This is true even if all employees not covered by another retirement system were covered under the Civil Service Retirement Act.

Even though the impounding method, if otherwise practical, could eliminate the necessity for currently maintaining these records, experience with the impounding method in 1920–22 indicates that the deferred construction of individual retirement accounts from service information is far more expensive and time-consuming and the results are much less correct than currently maintaining these records from pay-roll data.

However, even if the impounding method could eliminate the necessity for maintaining individual retirement accounts on a current basis, the study made indicates that the departments and agencies would have to determine each year how much was impounded for retirement from the salary of each employee for income-tax purposes. Once the amount of the deductions is determined, the expense of posting these amounts to retirement accounts is small.

Further difficulties in the impounding method arise due to the fact that appropriations are not usually made for salaries alone but include expenses, materials, and in some cases, funds for private contract work.

Finally, even if it were practical to make appropriations for salaries only, the difficulty of impounding the exact amounts due the fund would have to be overcome, inasmuch as these appropriations may not necessarily be spent or may be spent in part for terminal leave not covered by the Civil Service Retirement Act.

The Commission realizes that some definite steps should be taken to reduce the expense of maintaining individual retirement accounts under the Civil Service Retirement Act. Consequently, the Commission in cooperation with the General Accounting Office and the Bureau of the Budget is now making a survey not only to establish a more satisfactory system for maintaining Federal employee service records and retirement records, but also to obtain more economically the statistics on Federal personnel required by Federal departments and agencies and the Congress.

I regret that a more favorable report cannot be made in response to your letter of November 29. Detailed reasons for the conclusion reached are contained in the report enclosed.

With kindest personal regards.

Sincerely,

HARRY B. MITCHELL, *President.*

REPORT ON THE PRACTICABILITY OF IMPOUNDING 5 PERCENT OF SALARY APPROPRIATIONS FOR DEPOSIT TO THE CREDIT OF THE CIVIL SERVICE RETIREMENT AND DISABILITY FUND

I. NECESSITY FOR INDIVIDUAL RETIREMENT ACCOUNTS UNDER A CONTRIBUTORY RETIREMENT SYSTEM

As long as the Civil Service Retirement Act continues to be a contributory retirement system, some record of the amounts deducted from the salary or compensation of individual employees must be maintained.

A. These accounts can either be established and maintained currently from pay-roll deduction accounts or be constructed when required. The disadvantages of constructing these individual retirement accounts after a period of time are as follows:

1. The construction of a retirement account from reports of personnel actions years after such service occurred would be difficult, time-consuming, expensive, and inaccurate. It would be necessary to increase greatly the number of reports of personnel actions which would be submitted to the Service Record Division of the Commission. Considerable expense would be involved in receiving and filing numerous reports of personnel actions which are not now received in the Commission. These would include reports of automatic salary promotions under the Classification Act of January 1923, as amended, reports of the number of hours worked each day at each pay rate, reports of the number of days worked at each daily rate, and reports of the amount earned each day at each piece-work rate. The volume of these additional reports would be very considerable, as over one-third of the employees in the Federal service are paid on a per diem, per hour, or piece work basis. Also, reports of all leave without pay of 1 hour or more would have to be sent to the Commission.

2. The construction of a record of retirement deductions from an employee record of service would require that an expensive control be established and maintained in the Commission to be sure that all reports of personnel actions are submitted. This would involve the return by departments and agencies of all reports of personnel actions, including spoiled forms, in order to account for all prenumbered forms which are issued.

3. Employees would be able to obtain only with great difficulty information as to amounts actually to their credit in the civil-service retirement and disability fund.

4. The Retirement Division of the Commission and the Board of Actuaries would not have the information required to administer properly the Civil Service Retirement Act.

B. Even if individual retirement accounts were constructed only when required for the payment of claims, the amount impounded from each employee's compensation would be required each year for income-tax purposes. Under the income-tax law, it is necessary for the departments and agencies to determine the total amount paid to an employee each calendar year or fraction thereof. If the impounding method were used, it would be necessary to determine the amount impounded from each employee's salary or compensation to obtain the total amount paid to him, including overtime. With the total impounded for each employee determined for income-tax purposes, the additional cost of posting this amount to an individual retirement account would be small.

C. The impounding method does not give an exact accounting control of the amounts actually due the civil-service retirement and disability fund.

1. If the impounding method were put into effect, pay-roll officials in the various departments and agencies stated that they would establish adjustment accounts in order to collect from the civil-service retirement and disability fund amounts impounded from their appropriations in excess of amounts due the fund. These adjustments could be determined either by maintaining individual retirement accounts for each employee (which would defeat the objective of impounding), or by establishing two types of pay rolls—one for those employees subject to the retirement act and one for those employees not subject to the Retirement Act. In the latter method, the amount due the retirement fund would be determined from pay-roll totals rather than from the deductions from the salary and wages of individual employees.

2. Under the impounding method interest would be paid as of the date the funds were impounded and deposited to the credit of the civil-service retirement and disability fund. This would result in considerable additional interest being paid to this fund. Under the present method, deposits are made to the fund only after the salary or compensation has been earned and paid.

3. Appropriations for salaries, if available, include funds which may be available for overtime pay. The impounding of these appropriations would result in overpayments to the retirement fund.

II. UNAVAILABILITY OF APPROPRIATIONS TO IMPOUND

In order to impound 5 percent of salary appropriations for deposit in the civil-service retirement and disability fund, it would be necessary that separate individual appropriations be made for salaries or personal services performed by employees. At present separate appropriations for salaries or personal services are not available in many departments and agencies for the following reasons:

A. In some departments and agencies it is not practical to make separate appropriations for salaries or personal services. For example, approriations for the navy yards (which now employ 600,000 workers) are made for the maintenance, construction, or repair of naval vessels. These funds are expended in varying proportions on each job for labor, material, and private-contract work.

B. In other departments and agencies, appropriations are made to cover both salaries and expenses in order to permit the maximum flexibility in the expenditure of the funds.

C. Certain appropriations in some departments and agencies, such as the Navy Department, are authorized to be expended over a period of several years.

D. Some corporations or agencies operate without appropriated funds. The present individual retirement account system, or a modification thereof, would necessarily have to be maintained for such corporations or agencies if the impounding method were used.

E. In some agencies the employees are subject to two or more retirement systems and separate appropriations are not made for those subject to the Civil Service Retirement Act. Such agencies include the Tennessee Valley Authority, Board of Governors of the Federal Reserve System, the District of Columbia government, the Department of Commerce, the Department of State, and the Panama Canal.

III. EVEN ASSUMING THAT A SEPARATE APPROPRIATION FOR SALARIES MIGHT BE PRACTICAL, DIFFICULTIES OR DISADVANTAGES WOULD ARISE IN IMPOUNDING THE EXACT AMOUNT DUE THE CIVIL SERVICE RETIREMENT AND DISABILITY FUND

A. All moneys appropriated for salaries would not necessarily be expended in full during any fiscal year.

B. No retirement deductions are now taken from amounts paid separated employees or their estates for annual leave to their credit at date of separation.

C. With a separate appropriation for salaries and another for expenses, departments and agencies would find it more expensive to maintain two appropriation accounts than the one account now required.

D. Less freedom of administrative action would result if separate appropriation accounts for salaries and expenses were maintained. Under the current system of appropriations for salaries and expenses, administrators can choose the most effective means to accomplish their work. Witah separate appropriations for salaries and expenses, they might be forced to hire labor because of a fully encumbered expense appropriation account when it would be preferable to rent or buy machines or vice versa.

A Serviceman's Solution

EXTENSION OF REMARKS

OF

HON. W. STERLING COLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1945

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Evening Times of Sayre, Pa., entitled "A Serviceman's Solution":

A SERVICEMAN'S SOLUTION

This is an editorial by a young valley marine on the eve of D-day at Iwo Jima. It was written as a letter to his parents—a letter that he had good reason to know might be his last one. For that reason, and because of the fact that it treats of some serious national problems from the viewpoint of a man in the service, it deserves wholehearted attention, regardless of whether you agree or disagree with his conclusions. The letter follows:

"Note the date. Well, from here on in, the Japs will wish they never stuck out their neck, cause we are going to whack off every one we can find.

"I have your letter and although the present ship board facilities are not the best nor the mind in any reflective mood, there are a number of things I want to get on the record that I've been reading and mulling over recently.

"Aboard ship and going into combat again. You can see 'our side' is giving no quarter and we expect none. The basic rules of land warfare haven't changed. So should basic thinking and acting on parts of individuals at home remain constant. Unfortunately, for most people in war time, they do not. They earn large salaries, live in a world of 'Heaven-only-knows-what-will-happen-next' and off they go to live high, wide, and handsome—and I say it's wrong.

"And that's why I want to get the record straight and you to do me a favor or at least express my desires and thoughts to the Congressmen and Senators who allegedly represent me and the rest of us out here.

"First of all, I'm in favor of national legislation making military training compulsory. Compulsory for all kids 18 years old—2 years of it—and 2 full years. If I had had it and many of the rest of us there would have been a second thought given by aggressors and we would have been better able to deal with them—quicker. So let's see that law passed and now, quick.

"Secondly, a 'work or fight' law. Put on pressure for this. If we are required by law to do as we are told in the service, why not a 'IV-F'er' working where he is told, or needed most? Why should he enjoy such freedom in wartime? The sooner people in the United States realize that there is no democracy in wartime the sooner we will get home and get the war over. Certainly there is little democracy in service.

"In any event, let's stop this stalling around, wasting time. Russia has the answers while the United States still flounders around. Can democracy survive under such slowness? I for one think it can if our legislators move—and you are one to prod them—for me.

"Quit this discrimination against 'drafting nurses.' Draft all labor in the United States at once—'work or fight.' There is no middle way. How many years will it take for the average man to wake up? I say, he must be told. Not asked—told. Told now so the whole may survive."

State Sickness Pay

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Christian Science Monitor of March 20, 1945:

STATE SICKNESS PAY

When the State pays wage earners for being sick, it runs into some of the frailties of human nature, as Rhode Island's 2-year venture into cash sickness insurance evidences. Many more workers there have put in claims for payments than were found by medical examination to be justified. More checks have been issued during the past two Junes than in any other months, numerous employees apparently finding it handy to claim sickness and draw insurance money with the opening of the vacation season.

A number of workers have been prosecuted for fraud because, when receiving sickness benefits, they were caught at work, either on their regular jobs or at other employment. Despite official desire for change, much pressure has also developed for maintaining the present possibility of double payments. Besides receiving the cash sickness benefits, a person may draw workmen's compensation, group insurance, or other payments. Thus in some instances it may prove more profitable for a claimant to stay at home than go to work. Malingering has showed up. Whether payments should be made for nervousness, headaches, and alcoholism, or whether the official definition of sickness should be limited, is debated.

Some of the handicaps that have appeared in the cash sickness insurance system of Rhode Island are inherent. Others are peculiar to its newness and may be adjusted with longer operation. Up to now the experience with this American experiment hardly entitles it to be held up as a model for widespread adoption.

Up Front With Mauldin

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1945

Mr. MONRONEY. Mr. Speaker, I would like to call the attention of the Congress to an article in this week's Saturday Evening Post regarding Sgt. Bill Mauldin, the outstanding cartoonist of the war.

Sergeant Mauldin has given the people at home a vivid picture of the real and terrible conditions under which the men who win the battles must fight with his drawings. They are more than cartoons—they are pictorial stories of the grim hardships and the everlasting sense of humor of the American fighting man.

Mauldin was discovered by the Forty-fifth Division News, edited by Sgt. Don Robinson. Lt. Col. Walter M. Harrison, public relations officer of the division while it was in training at Fort Sill, Okla., and Camp Barkeley, Tex., was the first to recognize the unusual talents of Sergeant Mauldin and was instrumental in having his first cartoons published commercially.

The story on Mauldin from the Washington News, reviewing the Saturday Evening Post article follows:

"AMONG THE GREAT OF THIS EARTH"

"The thousands of veterans of combat who have come home are trying hard to teach their wives and friends how to appreciate Bill Mauldin," says Frederick C. Painton in an article Up Front With Mauldin in the March 17 issue of the Saturday Evening Post. "If they succeed, a lot of people are going to understand for the first time what the war is really like to the men up there doing the shooting." Mauldin's cartoon appears exclusively in Washington in the Washington Daily News.

Referring to the Mauldin characters, Joe and Willie, Painton writes:

"In these two hollow-eyed, unshaven infantry characters he has immortalized the misery, the grandeur and the godlike patience—as well as the grim humor—of the front-line fighting man. Most of us in Italy and southern France knew long ago that Bill was a top-drawer cartoonist, but recently on a day in northern Italy, watching the Yanks slug their way through the Gothic line, I realized that Bill is among the great of this earth."

Mr. Painton gives a vivid picture of tragic-looking soldiers in the front line roaring with laughter at the sight of some Mauldin cartoons, and adds:

"I knew then Mauldin was great, because only his sardonic humor seems able to make these men, in constant peril of their lives, laugh at the torment of their own existence. And that genius has made him, in a little more than a year, the idol of combat men in north Africa and Italy, Sardinia, and Corsica, and now, at last, in France."

Painton points out that in this war and the last, Americans have been conditioned to war humor built around traditional gags that have little relation to war's reality, but Mauldin's drawings and humor portray for the first time the essential truth of front-

line life. It is through the understanding of these cartoons that there lies the best hope of understanding the returned veterans. He goes into detail about the absolute accuracy of the Mauldin drawings and says that the art staff of The Stars and Stripes have concluded "that Bill is in direct line of the great cartoonists who go back to Cruikshank and Tom Nast, and the famous cartoonists of the last war, Wallgren and Bruce Bairnsfather, creator of The Better 'Ole." He quotes Mauldin as saying he is very glad his cartoons are syndicated in the papers back home, and not only for the money.

"I want the people to know the front-line guys," Mauldin said. "We've been away from home a long, long time, and the combat troops don't realize things change. They think they'll find it just like it was and as they remember it. They're going to get a shock—many of the girls married, guys they knew going up in better jobs, towns changing. It's going to be tough on Joe and Willie when they come home. They have to adjust themselves. So, after the parades and the whoopee are over, I hope my cartoons will inspire the people to help these bewildered guys back into peacetime life."

Federal Reserve and the Bretton Woods Proposals

EXTENSION OF REMARKS

OF

HON. WILLIAM W. LINK

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1945

Mr. LINK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address by the Honorable M. S. Szymczak, member, Board of Governors, Federal Reserve System, entitled "Federal Reserve and the Bretton Woods Proposals," delivered before the Chicago chapters of the American Statistical Association and the American Marketing Association, at Chicago, Ill., on March 21, 1945:

The Bretton Woods agreements which are now being considered by the Congress are concerned with the international flow of money. This flow plays directly into the American money market. The agreements are, therefore, of great importance to the Federal Reserve System which is concerned primarily with our domestic monetary and credit problems. The Reserve System, especially through the Board of Governors, has participated in the development of the Bretton Woods proposals practically from the beginning. Interestingly enough, the history of the agreements thus far is not unlike the history of the Federal Reserve itself.

First of all, both the Bretton Woods agreements and the Federal Reserve Act arose out of inadequacies of existing institutions to meet pressing monetary and credit problems. The Federal Reserve System grew out of experience with periodic crises and money panics because there was something lacking in our banking system. There was no central banking authority. The Bretton Woods proposals grew out of experience between the First and Second World Wars when it became evident that the gold standard was also subject to crises and break-downs and that some new system of centralized resources was needed.

The banks in our country before the Federal Reserve Act was enacted were pretty much dependent on their own ability to survive a panic—especially as the panic hit the money centers where reserves from all over the country accumulated through correspondent bank relationships. In a crisis it was each bank for itself. Banks withdrew their funds from one another and, further than that, they began to call loans for payment—adopted a liquidation policy—at the very time when a policy of confidence was needed to weather the economic storm. The Federal Reserve gave such confidence by making credit available to the banks and this power, after the experience of 1929–32 was expanded by the Banking Act of 1935. The Federal Reserve Act is not perfect even now—after many years of experience and many amendments—but that the system is helpful to our economy, no informed person will deny.

Under the gold standard each country was pretty much dependent on its own ability to survive periods of difficulties. Individual countries adopted restrictive and deflationary measures in an attempt to weather their own crises. Such measures reduced other countries' sales abroad and aggravated the difficulties of other countries. The Bretton Woods agreements aim to give confidence to individual countries by making assistance available to meet difficulties when they occur.

Both the Federal Reserve and the Bretton Woods agreements marked the culmination of years of preparation. Intensive inquiry followed the panic of 1907. Important milestones on the long road were the Pujo investigation, the work of the National Monetary Commission, and extensive hearings before the Senate and the House Committees on Banking and Currency—the latter newly organized for the purpose. In addition, there were countless conversations, discussions, conferences, books, pamphlets, and articles. Out of all these emerged the original Federal Reserve Act.

Similarly, the idea of the Bretton Woods agreements is more than 3 years old. Sufficient preliminary work had been done to permit private circulation of a very rough draft of the fund proposal about 3 years ago. In April of 1943 a proposal for an international stabilization fund was published by the United States Treasury and a proposal for an international clearing union was published by the British. Both documents were offered to the public with the hope that all interested parties would contribute to the solution of the problems with which the proposals were concerned. Criticisms and suggestions were reflected in a revised draft of the fund published in August 1943. November of that year saw the first published version of the plan for an international bank. Conferences, including many with foreign experts and representatives, were held. As a result of the wide area of agreement that was found to exist, a joint statement of experts of many nations was issued in April 1944. Discussions culminated in a preliminary meeting in Atlantic City and finally in the 3-week conference of representatives of 44 nations at Bretton Woods in July 1944.

The Federal Reserve System has been intimately associated with the Bretton Woods proposals virtually from the beginning. Experts of the board's staff have conferred with experts from the Treasury and other governmental departments and have also participated in discussions with foreign representatives. Technicians of a number of Reserve banks joined them in the meetings at Atlantic City and Bretton Woods. The chairman of our board was a delegate to the Bretton Woods Conference.

The Bretton Woods proposals have repeated the history of the Federal Reserve in another respect. Although there has been all but universal agreement on objectives, there has not been universal agreement on a method of achieving the objectives. Opponents of the Reserve Act in 1913 argued that we should establish a single central banking institution. They also asserted that control should be by bankers, as experienced lenders, rather than by the public, which includes borrowers as well (industry, commerce, and agriculture). It was also argued that the proposed system was too complex to be understood or to be operated efficiently. Similar arguments over control and procedure have been leveled against the Bretton Woods agreements. It is argued that the fund is complex and that it will be controlled by borrowers (debtor countries) who will dissipate its resources.

It has also been argued that the directives of the fund agreement are too broad and vague to be of much significance. For instance, the term "fundamental disequilibrium" is not precisely defined in the agreement. But we have learned from our Federal Reserve experience that it is a mistake to make the basic terms of the law too detailed and restrictive. The history of the Federal Reserve Act has reflected the necessity of broadening its terms. It is only under general directives that effective operations and procedures can be evolved to deal with changing conditions. The place for precise definition is in administrative regulations and rulings, not in the basic law.

We should view the Bretton Woods proposals not as a perfect document but as an honest, intelligent, cooperative effort to deal with certain developments that may arise. We should remember also that even our Constitution required subsequent amendments as a result of experience. The same has been true of the Federal Reserve Act. It will be true of the Bretton Woods agreements. These agreements should be viewed in the spirit expressed by Woodrow Wilson in his first inaugural address:

"We shall deal with our economic system as it is and as it may be modified, not as it might be if we had a clean sheet of paper to write upon; and step by step we shall make it what it should be."

The Bretton Woods agreements are an attempt at international collaboration designed to help achieve monetary stability and extension of productive credit. They provide two international institutions to accomplish these objectives: an international monetary fund to promote currency stability and multilateral payments and an international bank for reconstruction and development to facilitate productive international loans.

Since the bank proposal represents no great deviation from traditional lending principles and practices, it is considered comparatively simple and has received widespread support and approval. The bank would make or guarantee at reasonable rates specific loans for productive purposes which the private market would be unwilling to make without a guaranty. Since the benefits of such loans for reconstruction and development would be world-wide, the bank would distribute any losses among its members in proportion to their stock ownership.

The International Monetary Fund would break new ground and this is the very reason why it is considered complicated. A good bit of the complexity arises from the desire to prevent abuse of this institution which would operate in a new field. The basic principles of the fund are not difficult to understand. The fund establishes rules of the game which are designed to promote interchangeability among member currencies at stable rates so that the international flow of goods may be kept at a high level. These rules are designed to achieve stability

such as once was provided by the gold standard and yet avoid the rigidities that led to periodic collapse of that standard. Each member would undertake to maintain the parity of its currency so long as underlying conditions made it possible but when a fundamental disequilibrium developed it would be permitted to make an appropriate change. The fund agreement recognizes that the undertaking of members to abide by the rules of the game would be difficult unless some means were provided to enable them to meet temporary adverse balances in their accounts with other countries. To meet this need each member would contribute to the fund an amount of gold and domestic currency equal to its quota and would receive in return a conditional right of access to the fund for limited amounts of foreign exchange. Although fear has been expressed in some quarters that the resources of the fund would be dissipated, adequate controls, both automatic and discretionary, are included in the agreement to prevent unwise use of the fund's resources.

The Federal Reserve is necessarily interested in both the technical and the policy aspects of the Bretton Woods agreements. The technical aspects, though important, need be mentioned only briefly. Both the fund and the bank, whose head offices would be in this country, would receive and make payments. They would possess valuable assets such as gold and securities that must be kept safe. There will be a multitude of transactions to be handled and recorded. It is difficult to imagine all the household details connected with the fiscal agency and depositary functions of the fund and the bank, but they are many and varied, and require the special and technical skill of trained and experienced executives. In the United States they would be handled by the Federal Reserve banks under the supervision and direction of our Board of Governors.

But the Federal Reserve has a much more fundamental interest in the operation of the proposed institutions. Broadly stated, the goal of the Federal Reserve is to help maintain through monetary and credit action a high level of production and employment. The monetary and credit structure of this country, however, is continually affected by international transactions. The fund and the bank would work toward a high and stable level of world trade and would, therefore, help attain our goal.

The disruptive practices that attended the reduction of world trade by about one-half between 1929 and 1934 and the periodic flights of "hot money" in the period between the wars contributed greatly to our difficulties and aggravated the monetary and credit problems of the Federal Reserve System. Through achieving a better international balance, the fund will help prevent a recurrence of the great gold in-flows of the 1930's with their attendant problems for the Federal Reserve System.

Precisely how the fund's operations will affect our monetary reserves depends on several factors. One of these is the form of the initial subscription.

The effect of the initial subscription depends on the source of the funds. The total subscription quota of the United States amounts to $2,750,000,000, one-quarter of which must be paid in gold. The enabling legislation now before Congress proposes that ultimately we should pay $1,800,000,000 of the subscription from our stabilization fund and the remaining $900,000,000 by Treasury borrowing in the market. At the outset, however, the fund agreement permits members to deposit non-interest-bearing demand notes in place of that portion of their currency which is not needed by the fund in current operations. The initial payment of our subscription, out of the $1,800,000,000 in our stabilization fund and by means of the special Treasury notes will not affect our money market, since funds will be neither withdrawn from nor transferred to the market.

If other members use the funds they own here to pay for the gold portion of their subscription, they might affect our market. There would be no effect, of course, if they simply utilized gold held here under earmark since that has already been removed from our gold stock. Use of any deposits they might have at the Federal Reserve banks would result in a reduction in the gold reserves of the Reserve banks, but would have no direct effect on our money market. To the extent that they draw funds from our money market, however—either directly through drafts on deposits at commercial banks, or indirectly, as through sales of United States Government securities they own—their gold subscriptions would have the same effect as an export of gold through commercial channels.

Such operations might call for Federal Reserve action in the open market or elsewhere in order to prevent disturbances in the credit situation.

More interesting are the possible effects of the fund's activities as a going concern. Over the long run, of course, it is hoped that the fund's holdings of member currencies would maintain relative stability, and there are numerous automatic and discretionary controls in the fund to achieve this result. But there would certainly be substantial use of the fund's dollars from time to time.

When other members in their current transactions pay the United States with dollars acquired from the fund, the effect is to increase our money supply. The fund may acquire the dollars from our initial currency subscription or sales of gold to us, or, to mention a somewhat remote possibility, by borrowing. To borrow in this country, the fund will need our Government's consent.

Use of our initial currency subscription, to the extent that it would be provided from the one and eight-tenths billion dollars in our stabilization fund, would increase the supply of money in our market. To the extent that it was provided by the Treasury borrowing from the market, no net effect would be produced since the fund would, through its members, return the money to the market. Similarly, provision of dollars through the fund's borrowing in our market would have no net effect. Acquisition of dollars through sales of gold would have the same effect on our money market as an import of gold.

The effects of operations of the International Bank in our money market would be less complicated than those of the fund and would in general leave the money supply and member bank reserves unaffected. They would, however, influence the capital market and the course of the business cycle. To use American resources the bank would need to have the consent of this country; and before consent was granted, presumably full consideration would be given by the monetary authorities to the effect of the proposed borrowing on the credit situation in the United States.

This analysis should make clear the great interest of the Federal Reserve in the plans, policies, and operations of the proposed institutions. If the fund and the bank achieve their objectives the Federal Reserve authorities will be greatly assisted in their tasks. The Federal Reserve System will not only be deeply concerned with the proper administration and success of the fund and the bank, but it will be immediately affected in many ways by their technical operations. It must be fully informed with regard to such operations and the Federal Reserve authorities must be in position to present their considered views to the United States Governors and Executive Directors of these two institutions in sufficient time.

From our Board's point of view, the establishment of the fund and the bank is highly desirable, because they would contribute to world recovery and to the maintenance of economic stability at a high level, which is the main objective of our System's policy.

Federal Government to Claim Tidelands and Submerged Lands

REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 16, 1945

Mr. DOYLE. Mr. Speaker, having previously received unanimous consent to extend my remarks on this vital subject, I call attention to all Members of the House to House Joint Resolution 122, filed by me on March 13, 1945. I also call attention to House Joint Resolution 118 and all resolutions which have recently been filed dealing with the important subject of tidelands and submerged lands and the quieting of titles, in the respective States of our great Union, to the lands beneath the tidewaters thereof, and also to lands beneath the navigable waters within the boundaries of the respective States.

House Joint Resolution 122, filed by me as Congressman from the great Eighteenth Congressional District of my native State of California, was prepared by William Clary, acting as special assistant to the attorney general of the State of California.

Recently the honorable Secretary of the Interior personally stated to me in substance that as soon as the descriptions in certain applications on file in his office were made definite and certain, so as to eliminate overlapping, that he intended to grant applications for the purpose of drilling for oil in the Long Beach, Calif., area, as well as elsewhere; that he intended to let the courts determine the respective rights of the Federal and the State Governments; that he had felt for a long time that it was his duty to allow the courts to finally determine whether the jurisdiction and ownership of the tidelands under salt water and the submerged lands under fresh water were Federal or State owned; that if the courts of the last jurisdiction held that such lands were Federal owned, then, of course, the Federal Government might well expect that royalties already paid or accumulated would be Federal property. Gentlemen, in my district alone such royalties amount to several million dollars. Our Long Beach Harbor bonds, which are voted many years ago to begin and continue the construction of our great municipal harbor, are being paid off as they mature by income

from oil wells drilled within the corporate limits of the city of Long Beach on tidewater lands granted the city of Long Beach many years ago by the sovereign State of California. Furthermore, the present monthly income from wells on these lands to my city amounts to close to one-half million dollars. Furthermore, there are piers, docks, wharves, warehouses, and other harbor buildings and improvements, all of which are located on these tidelands involved. Furthermore, expensive, comprehensive plans for developing the greatest breakwater harbor in the Nation have already been made, and these anticipated expenses, as well as other budgetary items, have taken into account receipt of millions of dollars from oil wells on tidelands which were granted this city of mine by the State of California in its exclusive sovereignty over such matters.

Practically every State in the United States is vitally concerned. It is not a California problem—it is a Nation-wide problem. Not only the States on the Atlantic seaboard as well as the Pacific seaboard and the Gulf coast are concerned, but States having submerged lands under great rivers are likewise concerned.

Secretary of the Interior Ickes could not have been more prompt, courteous, or considerate than he was in seeing me, personally, on two occasions within several days, on this momentous matter. He was likewise frank and courteously emphatic that he, as Secretary of the Interior, had a duty to perform and that he intended to take such steps as would have the matter promptly determined.

I discovered this situation shortly after coming to Congress, January 3. There had been many rumors and reports current for many months before I came here it is said; but back in Long Beach, Calif., they had not been notified of any such emergency, and so had made their great harbor and other large municipal budgetary plans without taking into account the possibility of such a Federal claim being finally found valid by our courts of last jurisdiction.

Tideland oil income for many years has been and is presently of utmost importance to the city of Long Beach, Calif. I have heretofore said and now restate, that exclusive jurisdiction over tidelands to the 3-mile limit within the State of California boundaries rests exclusively within the sovereign State of California. This is true because such sovereignty over such lands was reserved by the sovereign State of California when admitted to the great Union of States. Likewise all other States upon entering the Union reserved like sovereignty in such matters. Therefore, it is of momentous concern to practically every State in our Union. Also, it not only concerns our tidelands and submerged waterways, as relates to drilling for oil or the extraction of other minerals; it relates to millions upon millions of dollars worth of harbor improvements and installations wherever constructed on such lands.

Acting as promptly as possible in ascertaining the actual facts from the office of the Secretary of the Interior, I immediately transmitted same to my home city of Long Beach, the Governor of the State of California, and to the attorney general of the State of California. Our attorney general promptly sent an able assistant attorney general to Washington to do whatever was necessary. House Joint Resolution 122 is the final result of his prompt work.

It is the established and unanimous judicial policy of our highest court decisions in the respective States and by the United States Supreme Court that at the conclusion of the Revolution each of the 13 States originally shaping our Republic became and was, in its own right and sovereignty, absolute owner of all lands beneath its tidewaters and of all lands beneath its navigable fresh waters within its own boundaries. Such has been the clear declaration of our highest courts for more than 100 years. Except, of course, unless there had previously been granted into different ownership, by the sovereignty having dominion over said territorial rights in such tidelands, previous to their acquisition or purchase by the United States of America.

Furthermore, the admitted record speaks loudly and clearly, that for over 100 years all executive departments of our great Government has likewise acted in accordance with this established and recognized rule of law and which rule has been uniformly declared by our highest courts. This complete uniformity, Mr. Speaker and Members, has therefore quite normally and naturally resulted in an established and accepted rule of property. On this established rule of property, States, cities, counties, harbor and port authorities, and hundreds of thousands of private citizens have accepted the same and have acted in good faith upon this rule of property. They have invested millions of dollars in reliance thereupon. They have shaped their property matters and their public policies and procedures upon this rule of property. Mr. Speaker, a rule of property once firmly accepted and established and relied upon over a long term of years in the history of a people is entitled to continue to be relied upon. There is no claim of fraud concerned here.

Under the Mineral Leasing Act of 1920, it appears in the years of 1937 and 1938, that about fifty applications were filed with the Department of the Interior to drill for oil on the California coast. Some of these were on tidelands within the city of Long Beach or immediate vicinity thereof. It is under some of these long pending applications that the honorable Secretary indicates he is going to grant drilling permits. Mr. Ickes reiterated to Mr. Vickers, our worthy city manager of Long Beach, and to me, together, substantially the same statements previously made to me alone.

Clearly, if the State of California and other States situated exactly the same in such matters, did not reserve unto themselves the exclusive ownership of these tideland waters along the coasts and the submerged waterways along the rivers, then clearly none of these States have since made any grants, leases or permits which are valid without Federal approval. These States, cities, counties and private parties, who have spent millions of dollars in improvements and developments on such tidelands and submerged lands, have made these improvements on Federal property; if this long established rule of law and property is now for the first time discarded, and the sovereignty of these States taken from them by judicial decision. To my home city of Long Beach, Calif., it means just this, to-wit: The sovereign State of California believing and in good faith, acting on this belief that it owned such tidelands, granted to the city of Long Beach tidelands within its corporate limits for the purpose of harbor, and park, recreational developments. The city of Long Beach accepted the grant in good faith and spent many millions of dollars in developing its tidelands. But Mr. Speaker and gentlemen, if the sovereign State of California did not own these tidelands, then it could not grant these lands to Long Beach for any purpose. What applies to the municipality of Long Beach applies to the municipalities on both seaboards and to other great harbors and ports both on salt-water frontage and on fresh-water frontage.

Having promptly notified the city attorney of Long Beach, Calif., of my discovery of the actual facts as they were, I received from him an important communication, a part of which I wish to include in my closing remarks. I quote from letter dated February 26, 1945, from Irving M. Smith, city attorney:

> I have received a copy of your letter addressed to Mayor Clarence Wagner, dated February 21, 1945, wherein you state that Secretary Ickes informed you that he intends to grant applications for oil leases under the Oil Leasing Act of 1920 upon tide and submerged lands within the city of Long Beach, and thereby leave it to the courts to determine as to whether the Federal Government or the States and grantees of the States own the tide and submerged lands within 3 miles offshore. Your letter indicates that the Secretary has some question in his mind as to the legal ownership of such lands not being in the Federal Government and that some attorneys have represented to him that there is grave question but what the title to said lands vests in the Federal Government.
>
> To me it seems very odd indeed that these gentlemen or any member of the bar should at this time honestly question that the legal title to all tide and submerged lands within 3 miles of the mean high tide line vests in the States adjoining the same or their grantees. This question was first decided 100 years ago in the opinion rendered by the Supreme Court of the United States in the case of *Pollard's Lessee* v. *Hogan* (3 How. 212, 44 U. S. 219), decided in 1845. In this case the United States had attempted to patent certain tide lands, and in this opinion by the Supreme Court it was held that the Federal Government could not convey title to such lands as the title thereto was in the State of Alabama. The Court stated:
>
> "First. The shores of navigable waters, and the soils under them were not granted by the Constitution of the United States, but were reserved to the States respectively.
>
> "Second. The new States have the same rights, sovereignty, and jurisdiction over this subject as the original States."

Since this decision by the United States Supreme Court, in the past 100 years said Court has repeatedly held that title to the tide and submerged lands is in the States and not the Federal Government. You might be interested in also reading a more recent decision upon the subject in the case of *Shively* v. *Bowlby* (152 U. S. 1).

Some specious contentions have been made and will again be made that the law with regard to the tide and submerged lands affecting those lying adjacent to California is different from that affecting said lands adjacent to the Gulf and Atlantic coast States. This argument is based upon a contention that in determining the title to the submerged lands lying adjacent to California, the old Spanish law must be applied and not the common law of England, and that due to some differences between the civil and Spanish law based upon the Napoleonic Code, the State of California did not, like the original colonial States and the States bordering the gulf, acquire title to its tide and submerged lands upon admission to the Union.

These gentlemen are attempting by some nefarious plan, hoping to gain title to our tide and submerged lands, to infer that California's title to its tide and submerged lands has never been litigated by the Supreme Court of the United States, and this is just as fallacious as their contentions. The Supreme Court of the United States, in the case of *Knight* v. *United States Land Association* (142 U. S. 161), decided in 1891, held that California, by admission to the Union, like all new States was admitted on equal footing with the Thirteen Original States, and acquired title to all the tide and submerged lands within 3 miles from shore. This decision was reaffirmed by said Court in the case of *Borax Consolidated, Ltd.* v. *Los Angeles*, (296 U. S. 10), decided in 1935. The Supreme Court of the State of California has rendered a number of decisions concurring with the opinions of the United States Supreme Court, one of said decisions being *Ord Land Co.* v. *Alamitos Land Co.* (199 Calif. 380). The above I am sure will suffice to convince you of the fallacy of the position of those who assert Federal ownership to California's tide and submerged lands, and I will therefore not burden you with citations of many decisions handed down over the past 100 years, repeatedly reaffirming our title.

I have asked the harbor department to forward to you a copy of maps relating to reclaimed tide and submerged lands of Long Beach and other ports of the Nation. This data will portray to you the tremendous scope of the question involved. Many billions of dollars have been expended by local governmental bodies, constructing improvements upon tide and submerged lands, to say nothing of the millions of dollars expended by our own city of Long Beach. One would surely think that the equity of the proposition militates against any litigation on the subject matter. If the Federal Government is now decreed to be the owner of tide and submerged lands, obviously it always was the owner of said lands. The city of Long Beach and every other port of the Nation will lose all their harbor improvements built upon reclaimed tide and submerged lands. If the Federal Government can legally grant oil leases on tide and submerged lands to private operators, I am sure you personally will vision the disastrous results affecting the public recreational beach areas in Long Beach and elsewhere throughout the State. The constant effort by land-grabbing schemers through some nefarious method to obtain possession of the greatest public asset that we and all other States have, i. e., our tide and submerged lands, in my opinion is not only clearly illegal but also lacking in morality. I cannot conceive of any person taking the position of these individuals without definitely having larceny in his heart. They definitely seek to obtain property rights without paying for them, and all of this regardless of the end result and effect upon the general welfare of our citizenry affected thereby.

May I congratulate you upon your interest and vigilance regarding this subject matter that so vitally affects not only the entire Nation but your own home city, and urge you to do everything within your power to arrest and defeat the apparent movement in Washington, through the Secretary of the Interior or any other channel, to attack the city's and the State's title to their tide and submerged lands.

IRVING M. SMITH,
City Attorney.

Mr. Speaker and Members, it is clearly not a case wherein it is necessary that these tide and submerged lands be thus claimed by the Federal Government in order to have same producing oil for war needs. These lands are already producing oil under the Petroleum Administration's jurisdiction, and if more oil is needed, I am told it can be efficiently and promptly produced. None of us are interested in keeping our great Nation from any need it has in war or peace of God-given resources, and in making this declaration of my own fundamental thinking, I still declare, nevertheless, it is not essentially in the public's interest that our Federal Government now undertake to recede from its established judicial and procedural policy and practices of over 100 years, and upset a fundamental property right and ownership which has naturally evolved out of the foundation principles of good faith and performance by the States of our Nation and by those who have subsequently, also in good faith and with reliance, acted upon and in accordance with these firmly established standards of human conduct as relates to this momentous matter.

From the very beginning of my discovering the proposals of the Department of the Interior, I began activating your interests against this proposal. I feel it my duty to urge you to fully inform yourselves at the earliest possible date and to join forces to enact the foundation principles as enunciated in this group of bills which have been recently filed, not only by myself and other Congressmen from California but by Congressmen from several other States as well.

O. P. A. Rulings

EXTENSION OF REMARKS

OF

HON. HAROLD H. EARTHMAN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1945

Mr. EARTHMAN. Mr. Speaker, on certain occasions I have previously inserted news items which have shown the disastrous effect of O. P. A. rulings on various industries. Under leave to insert my remarks, I wish to include an article taken from the Nashville Banner of March 15 which gives a vivid picture of the effect of the O. P. A. price-setting on the laundry industry. It would seem that a senseless waste of manpower and time, together with the curtailment of a very useful service is being brought about by a brilliant O. P. A. decision to force the owners of the Babies' Valet Service to charge $1.45 to launder nine dozen rental diapers and at the same time permit them to charge $1.62 to launder nine dozen customer-owned diapers. In an effort to remain in business the owner must employ legal aid for endless conferences with O. P. A. attorneys whose bureaucratic jargon merely brings about a rehearing and another appeal.

We are sitting idly by while thousands of small businesses that could render a great service to their community are being forced out of business, not to aid in the winning of the war, but to satisfy the whims of these self-evaluated demigods who have fastened themselves upon the independent businesses of our Nation as the tentacles of a giant octopus.

DIAPER SERVICE MAY CLOSE UP—BLAMES O. P. A. RULING ON PRICES

A serious situation threatened Nashville today as the only rental diaper service in the city was expected to go out of business due to refusal of O. P. A. to give requested adjustment in the laundering prices of privately owned and rental diapers.

Mrs. E. G. Saverio, owner and operator of Babies' Valet Service at 318 Meridian Street, said she intended to sell her 50,000 rental diapers, as the maximum laundering price she was allowed to charge was far below the standard laundering price here.

She explained that her service afforded diapers for supply and laundry, and in order to maintain that service she had to pay taxes, insurance, etc., for their general maintenance.

Hundreds of people are being served daily, Mrs. Saverio said, with service being rendered to hospitals, day nurseries, children of war workers and other working mothers, mothers certified by doctors as unable to do their own laundry, and many other cases, according to War Production Board regulations.

REGULATIONS CITED

Mrs. Saverio stated that under O. P. A. regulations she was allowed to charge $1.62 to launder nine dozen customer-owned diapers, and that she was allowed to charge only $1.45 to launder a similar amount of her rental diapers.

Having appealed to O. P. A. about the middle of January to make an adjustment, she was informed by that agency yesterday afternoon that she might place a 10-percent blanket charge on both services, one service, or none.

In order to level the prices between the two services, Mrs. Saverio explained that she had suggested to the governmental agency to allow her a 20-percent increase on her rental diapers.

This she was refused, she said, with O. P. A. allowing her a 10-percent increase in her services which would bring her $1.59 to launder 9 dozens of her rental diapers.

This, she contends, is still below the standard laundering price in Nashville, and definitely below the $1.62 she is allowed to charge to launder privately owned diapers without the 10-percent increase included that she was granted by O. P. A.

If she accepted the agency's decision and placed a 10-percent increase on laundering privately owned diapers, Mrs. Saverio reasoned that it would throw her out of line with standard laundry prices in Nashville, and her customers owning diapers would take their business elsewhere.

"Under no circumstances do I intend to raise standard laundry prices," Mrs. Saverio asserted, declaring that "I can see no rhyme or reason why one group of people should be made to pay for what another group uses."

She explained that the reason she had suggested the adjustment was due to increased expenses with the operation of four trucks and installation of available machinery from time to time.

In the winter months, she declared, approximately 50,000 diapers were laundered in a week, with the number slacking off during the summer months.

A. H. Roberts, attorney for Mrs. Saverio, said he had been in conference with O. P. A. attorneys this morning and expected to be in conference with them again this afternoon, with decision of further action being delayed until after 3 p. m.

He explained that a rehearing of the case may be had here, and if that is unsatisfactory, another appeal may be made to the regional O. P. A. office in Atlanta, from where the first decision originated.

Meat Shortages

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1945

Mr. BECKWORTH. Mr. Speaker, I wish to extend my remarks and include in the CONGRESSIONAL RECORD an article which appeared in the Washington Post March 19, 1945.

Many months ago Mr. J. D. Shaw, owner of the Rose City Packing Co., Tyler, Tex., and I discussed the problems that face the small packers in particular with Mr. Chester Bowles, Mr. Greenlee, and Mr. Madigan. We were told the Office of Price Administration would make an effort to help small packers. We have had no decisive or definite answer from the Office of Price Administration that indicates that the agency has reached a decision on the case we presented them even though it has been more than a year since we presented our problem to them. I surely feel the Office of Price Administration should endeavor to take some action to eliminate some of the difficulties which are faced by small packers.

The article follows:

MEAT SHORTAGE ALMOST FAMINE, PACKERS' ORGANIZATION REPORTS

CHICAGO, March 18.—Severe and growing shortages of all kinds of meat for the American public, so serious that they are "bordering on a meat famine in many parts of the country," was reported today by the American Meat Institute.

Announcing results of a Nation-wide survey made for the Office of Price Administration, the Institute said:

"For the first time since meat rationing began, many meat items now are reported for the country as a whole as being 100 percent in short supply in relation to the needs of the trade; most beef and pork cuts reported as being over 97 percent in short supply.

"The severe and growing shortages * * * border on a meat famine in many parts of the country.

"The only exceptions to the extreme shortage are some sausage and variety meats, but even these are shorter than a month ago. * * *

"It is true, too, that the supply of meat for vital war purposes—for our Army and Navy—and for domestic consumers, undoubtedly will continue to get much worse before it gets any better. Reasons for this are:

"1. Uncontrolled, extensive and growing black market in all kinds of meat.

"2. Diversion of large quantities of meat from normal, legitimate commercial channels of trade—from which supplies for war purposes must be obtained.

"3. Regulations which have the effect of discouraging cattle feeders from taking more young range animals and bringing them to the maturity and weight of finished beef.

"4. Government price controls which have resulted in wholesale ceiling prices for meat—especially beef and pork—not being sufficient, in the case of legitimate operators, to reflect the prices paid currently for livestock."

Resolution of Peabody (Mass.) Lodge, No. 1409, B. P. O. E.

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1945

Mr. LANE. Mr. Speaker, under leave to include my remarks in the CONGRESSIONAL RECORD, I wish to insert the following resolution adopted February 12, 1945, by the Peabody Lodge, No. 1409, of the Benevolent and Protective Order of Elks, Peabody, Mass., condemning any public celebration of cessation of hostilities until the complete downfall of Japan:

"Whereas many persons and communities in the United States apparently are planning or at least expecting a great celebration when news of the surrender of Germany is received; and

"Whereas the cessation of hostilities against Germany does not signify the end of the war, but merely the opportunity to turn the entire resources of our Nation against the Japanese; and

"Whereas one or more years of desperate combat will still be required to totally defeat the Japanese after our entire resources can be turned against them, in which combat many fine Americans will be killed or maimed; and

"Whereas many people in the United States apparently do not realize the absolute necessity of destroying for at least a generation the capacity of the Japanese people and nation to wage wars of aggression, if any reasonable assurance of world peace is to be obtained for our children and grandchildren, nor do such people appear to realize that we were forced into the present war because the Japanese attacked us; and

"Whereas any celebration of the surrender of Germany would tend to plant in the minds of thoughtless people the erroneous idea that the war is practically over, and such celebration would tend to hamper the war effort and so give aid and comfort to our arch enemy, Japan: Now, therefore, be it

"*Resolved*, That Peabody Lodge, No. 1409, of the Benevolent and Protective Order of Elks, a patriotic organization of American citizens, does hereby petition the Senators from Massachusetts and the Congressman from this district to immediately introduce into Congress a joint resolution condemning any public celebration of cessation of hostilities until the bestial, dastardly Japanese have been totally defeated and have surrendered unconditionally, such joint resolution to also request that the President of the United States, the Governors of the several States, and the mayors of all cities issue proclamations to this general effect, and calling upon all the people to rededicate themselves and their best efforts to furtherance of the war effort until we have accomplished the complete downfall of Japan; and be it further

"*Resolved*, That copies of this resolution be immediately sent by air mail special delivery to the Senators and Congressman stated herein, to the President of the United States, to the Governor of Massachusetts, and to the mayor and city council of Peabody."

The foregoing resolution was introduced at a regular meeting of Peabody Lodge, No. 1409, Benevolent and Protective Order of Elks, at Peabody, Mass., on Monday, February 12, 1945, under suspension of the rules, and duly passed upon recorded vote at said session.

FRANCIS W. HAYES,
Exalted Ruler.

Attest:

HENRY I. YALE,
Secretary.

How Poland Rallied To Fight Nazis Alone

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1945

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Ann Su Cardwell, which appeared in the Detroit News of March 21, 1945:

HOW POLAND RALLIED TO FIGHT NAZIS ALONE—MISS CARDWELL DESCRIBES THE 35 DAYS OF HEROISM; ASSAILS RUSSIA'S PERFIDY

(By Ann Su Cardwell)

Before the ink was dry on the 1919 peace treaties Germany was plotting to get back surrendered territories, first on the list being the Polish Corridor.

The Poles, fully realizing the dangers of their situation and the inevitability of another war, hoped for time to prepare. Meanwhile, to the extent of their financial ability they equipped and trained an army.

Military service was compulsory but during my long residence in Poland I never heard a young man complain of it—and my acquaintance with young men was extensive. Civilian

organizations to cooperate actively with the army in time of war were formed. Membership was voluntary but regarded as an honor and a civic duty. Practically every adult and teen-age youth I knew belonged to one.

When in 1933 Marshal Pilsudski—one of the few statesmen of our time understanding central and eastern European historical currents—seeing what was ahead offered to attack Germany before the latter had attained too great strength. Britain and France refused. Events proved Pilsudski right. Hitler occupied one country after another. The Poles knew their time was coming; and they meant to fight.

Hitler pressed them to join him in attacking Russia and dividing the spoils; they refused. They had a nonaggression pact with the Soviets, proposed, be it noted, by the latter. They had a mutual assistance treaty with France, and in August 1939, they signed one with Britain.

POLAND FIGHTS ALONE

French diplomatic correspondence of 1939 shows that Germany was preparing to attack Poland that August. But Britain and France, unready, hoping to avoid war even when they knew that German troops were concentrating along Polish frontiers, bound Poland not to mobilize until last efforts toward peace had failed. Thus without declaration of war, Poland, only beginning mobilization, was invaded in the gray dawn of September 1, 1939.

The Poles faced the first blitzkrieg in history utterly alone.

Men, women, and children dug trenches, prepared shelters, got first-aid kits ready, followed instructions constantly coming over the radio. Men in the reserve hurried off to join their regiments.

The home defense, long since perfected, went on duty. Discipline was extraordinary. Class and party lines ceased to exist. In this war that had to come, as was universally agreed, these people were all Polish citizens fighting a hated enemy.

The only exceptions were members of the fifth column, which was organized down to the smallest detail, widespread, efficient, base and treacherous beyond description. Men and women who for years had passed as loyal Poles now showed their true colors.

From our Warsaw balcony I watched a man being taken from an adjoining building; he had been shooting at Polish pursuit planes during a raid just ended.

WHOLESALE SLAUGHTER

Cities and villages all over Poland were bombed the first day. Children at play, people on the roads, and in the fields were machine-gunned.

This was not war but wholesale slaughter and destruction.

Polish troops were forced back; but read what a Berlin magazine (The Signal, November 1943, 2 years and more after the invasion of Russia) says of the war in Poland: "It was worst of all, for they were an enemy who fought with incredible fury, unimaginable fanaticism and grim endurance."

"We can hold for a month," said the Poles. "By that time the British and French will be in." But British and French help never materialized.

Poles fit for military service were ordered east, preparatory to a second mobilization. With a committee from the ministry of social welfare organizing help for refugees from overrun western provinces, my husband and I were in the midst of that immense stream of young and middle-aged men heading east as fast as they could go.

THE RUSSIANS COME IN

Then Stalin struck. The nonaggression pact, the promise given in May that the Soviets would stand aside if Germany attacked Poland, were forgotten. And Poland, in the grip of two powerful antagonists, was helpless. Under "Stefan the Stubborn," the dauntless mayor of Warsaw, the capital fought for 27 days. The last battle of the Polish-German War, excluding guerrilla warfare which never stopped, occurred October 5.

Alone and attacked in the rear by a second predatory power, Poland fought Germany 35 days. In 1940, France, Belgium, and Holland, with Britain's help could hold but 39 days, despite the 8 months' time and valuable experience the Poles had given them.

After the Soviet perfidy the Poles had to think and act fast. The problem was—to get to their ally, France, and fight beside her. The Polish Government had been moving from place to place in order to carry on.

Pushed into southeastern Poland, between the Germans and Russians, it crossed into Rumania, with which it had treaty arrangements, expecting to pass to a friendly land and there establish itself. Rumania, dictated to by Germany, refused to honor the agreement and interned the Poles—Government officials, soldiers, aviators, and private citizens.

WORKERS FLEE, TOO

I watched thousands and thousands of men from the Polish forces, ordered out of Poland by the Polish Government, march across the Polish-Rumanian frontier on the night of September 17, while I waited my turn.

There were other thousands not yet in uniform, for the Soviet invasion had prevented further mobilization.

The September Polish contribution to what later became the United Nations' cause was very considerable. The Allies gained terribly needed time and experience. The Germans lost 91,279 men killed and 98,355 wounded, 1,000 planes shot down, 1,400 tanks destroyed and 2,600 so badly damaged that they required complete overhauling. After meeting the Poles, the Germans had to take many months to lick their wounds before turning west.

One further thought: Suppose Poland had agreed to join Hitler against the Soviet Union. What would have been the fate of that country and of unready Britain and France?
